This breed took precedence in the catalogue, and was judged by Major H. Wickham, of Barnwell Castle, Oundle. There were eleven foals entered, one of which was absent. Of the remaining ten that faced the judges, first honour was accorded Mr. H. R. Roe's filly foal by Lucifer II., out of the well-known breeding mare Finale by Omega, a foal with power, good bone, and well coupled together, also enough quality. Mr. John Hack came second with a colt foal by Wise Ruler, with head and neck of beautiful character, good shoulders, and of generally good hunter type. Mr. J. E. L. Whitehead followed for third place with a colt foal by Ballymena that has good quality and hunter style, and the reserve card was given to Mr. W. T. Hayr for a well-shaped and well-bred colt by Barbarian out of the fine-shouldered mare Mrs. O'Shea, a colt that looks as much like making a high-class hunter as anything in the class.

Hackneys.

This breed came next in order of catalogue, and were judged by Mr. L. Rodwell, East Rudham, King's Lynn. There were nine entries, the majority of which presented a fair amount of growth and future promise of developing into big and useful carriage horses. Several of them were rather faulty in their hind action, otherwise the quality and breeding displayed were very satisfactory. The first prize was awarded to Mr. A. C. Beck's colt foal (sire Copalder Cadet), a well-grown one with good shoulders, and the right sort of style and quality. Second came Mr. G. Carver's foal by Lord Socks, out of a mare by Copalder Cadet, that showed very fair hind action and good shape. Third honour was given to Mr. John Tibbett for a youngish but good-looking foal by Halloo Garton Dane; and reserve fell to the lot of Mr. A. Rowell, of West Rudham, for a growing, smart foal by Orangeman from Fashion by Cadet.

Shires.

This breed formed by far the greatest portion of the display, and were an excellent show in each of their respective classes. They were judged by Mr. S. Cartwright, of Keddington Grange, Louth, and Mr. James Gould, of Lymm, Warrington. The colt foal class came first with eighteen entries, all of which, save one, were in their places. The winner was a weighty, good-quality colt of Mr. Craig's, with the best possible feet and joints under him that has been winning at several shows in Leicestershire and the district. He was sired by Lockinge Forest King. Second prize was awarded Mr. Hamer Towgood for a colt of great promise, excellent build, and quality, by Lockinge Albert, out of the well-known mare Rolleston Fuchsia, and third to a weighty, good-limbed colt of Sir A. Henderson's out of Blythwood Nora Creina, one of the best Shire mares of the day, and got by Markeaton Royal Harold. A fourth prize is given, and this fell to Mr. J. J. Gilbert's well-built, famous quality, and weighty colt by Dunsmore Jameson, Mr. W. Richardson taking reserve with a very early and promising foal by Normoor Statesman, that has been very successful on the Cambridge side. Minor honours were also bestowed upon a Lockinge Forest King foal of Mr. McCreery's, and upon very useful foals shown by Mr. W. Gee and Mr. G. L. Morris.

Filly foals had eleven entries, and these were a very level, good class, full of Shire character, quality, and weight, and no less than four out of the five leading foals were got by the renowned Dunsmore sire, Dunsmore Jameson. The first prize went pretty readily to Earl Egerton's filly by Tatton Friar, a very shapely and exquisite-limbed foal, and with growth and general quality. The second and succeeding ones were as previously stated by Dunsmore Jameson, the first of these being Mr. Crawford's rare-backed and beautiful-jointed filly, with quality, out of the famous mare Somesby Ruth, by Paxton. Next, Mr. J. Hodson's foal, one of the best of the season, out of the big and good mare Thorny Blossom, and that has done well recently in Derbyshire. Next, Mr. Tom Kay's, out of the sweet mare Darby, and with fine shape and quality, and reserve Mr. W. B. Blundell's, also a weighty, well-built, and all-round good foal. Minor honours were again given to Mr. McCreery and to Sir A. Henderson for very fine foals.

The tenant farmer's class was capitally filled, the prizes going to Mr. Craig, Mr. Crawford, Mr. Richardson, and Mr. W. Gee for foals that have been already mentioned. Sir Walter Gilby also offers special prizes for the get of his famous stallion Blythwood Conqueror, bred by the Peterborough Society. This class was filled by several very fine quality foals shown by Mr. Vergette, Mr. F. W. Griffin, and Messrs. Wyles and Hunting.

A champion prize, given by Messrs. Barford and Perkins, and a handsome challenge cup, presented by Sir P. A. Muntz, were both awarded to Mr. Craig's Lockinge Forest King foal, first in the open and local colt foal classes; and the reserve for these honours was accorded to Lord Egerton's first-prize filly foal by Tatton Friar, the contest being a very close one. The result was generally approved.

Bath Horse

Bath Horse Show, held on Wednesday and Thursday, was for the third year in succession marked by inclement weather, and the organisers are to be commiserated with on their ill fortune. The grand stand had been fully booked up, proving the stability of the event as a social fixture, but the attendance was, of course, affected, and the entry was far from being up to the average. There were 214 horses entered, against 265 in 1904 and 288 in 1903, and the falling off was almost entirely in the hunters, which numbered only sixty-five, against ninety-four last year and 114 in 1901, which constituted a record. The judges were:—Hunter classes, Messrs. Digby Collins, Newton Ferriers, Callington, and W. A. Harford, Petty France, Badminton; hack and harness classes, Messrs. A. Fewson, Hedon, Hull, and J. McMeeken, Moss Park, Dumbreck, N.B.

In the hunter classes, Mr. J. Drage, of Chapel Brampton, Northampton, who was the principal winner last year, had on the present occasion to play second fiddle to Mr. J. H. Stokes, of Great Bowden, Market Harborough, who practically swept the board of the prizes, Mr. Drage having to be content with one first prize, three seconds, and a third. Mr. Stokes won the £25 silver cup, given by Captain Forester for the champion hunter, with his six-year-old bay, Whiskey, which was champion at Richmond this summer, and at Buxton. Whiskey was shown in the open class for horses four years old and upwards, and here was first, beating Mr. Stanley Webb's Viking, fourth at Dublin. Mr. Stokes also won the open weight-carrying class with his six-year-old brown gelding Baronet, who beat Mr. Drage's Carlow. There was a large class of four-year-olds—one of the few really wellfilled hunter classes—and here again Mr. J. H. Stokes had first with the white-legged Madrid, and was also reserve with Goldfinch, Mr. Drage again being second with Klondyke, and Mr. J. C. Barton, of Fairford, was third with Williamstrip III. Madrid won two other firsts—the novice class and that for four-year-olds and upwards to carry 15 st. and upwards—and thus in the six hunter classes judged in the morning of the first day Mr. Stokes had five firsts; Mr. Drage took the odd one, Klondyke being first in the class for four-year-olds and upwards to carry 14 st. In the latter class Mr. Barton's Williamstrip was second. Mr. Drage was second in the novice class with Carlow, and Mr. Stokes third with Goldfinch.

The yearling hunter class attracted a very satisfactory entry, and from among a number of promising animals the judges selected for premier position a chestnut gelding, Juggler, shown by Mr. R. Hoddinott of Springfield, Gillingham, Dorset; Mr. W. Butler, of Ellesmere, Salop, securing second prize with a brown gelding, Ian Hamilton. The best among two-year-olds suitable for making hunters was a chestnut filly, Paleface, exhibited by Mr. J. A. Mullens, of Longcross, Surrey; second prize going to Mr. W. J. Tatem's Penylan Ormerod, from Cardiff. Mr. Mullens also showed the best three-year-old, a dark bay gelding, Sheen. A bay mare, Surprise, the property of Mr. J. H. Watson, of Greenhill, Kidderminster, which was second in this class, also secured two silver medals offered under certain scheduled conditions by the Hunter's Improvement Society. In the open class for hunter brood mares in foal or with foal at foot, the chief prize went to Golden Stream, shown by Mr. Leonard Taylor, of Biddlestone, Chippenham. Second place was given to Mr. James Moore's bay mare, Bandy, from Wellington, Salop, which also won the gold medal offered under certain conditions by the Hunters' Improvement Society.

The hunter judges this year dealt with the covert hacks, and placed Mrs. W. C. N. Chapman, of Hippington, Canterbury, first with Marion, and Mr. Stokes second with Gem, while Mr. Stanley Webb, of Studeley Court, Stourbridge, was third with his bay, Kinver. Midland horses were to the fore in the weight-carrying cob class (not over 14 hands). Mr. F. J. Batchelor, of Hopwood, Alvechurch, won with May Hopwood, and Mr. T. Smith, of the Shirley Stud, Hall Green, was second with his chestnut Shirley Defiance, by Manfred. Mrs. Chapman's Marion won again in the open class for riding horses not less than 14 hands. The class for horses over 13.2 hands and under 14.2 hands was won by Mr. Sydney Pethick, Tiverton, with Qui Vive, and Mr. Walter Winans took a third with Popgun. The pony class was won by the celebrated old mare, formerly the property of Mr. Franklin, of Derby, Lady Go Bang, now shown by Mr. Griffiths, of Smethwick. Mr. Foster, of Moseley, was second with Mel Valley Treasure.

The open double harness class attracted some well-known winners, and the judge's task was not easy. Eventually they placed first the stylish pair of black chestnuts, Sam Weller and Beckingham Gentleman, exhibited and driven by Miss E. K. Cunliffe, of Tyrrels Wood, Leatherhead. Mrs. Hartley Batt, of Westbourne Street, Hyde Park, London, was second with the bays Hopwood Horace and Hopwood Spark, while the third prize went to Dr. Francis, of Brecon. The single-harness classes were filled, and in the open contest for cob or pony Phœbe Watton, shown by Mr. C. Radcliffe, of Cardiff, and driven by Mr. Butcher, the well-known whip, was first, Mr. W. Winans, of Surrenden Park, Pluckley, Kent, taking second prize. In the class for smaller horses, premier honours went to Mrs. Batts' Heathfield Squire, which won at Richmond this year the 20-gs. cup for single-harness horses. Mr. Radcliffe's Bravo was second, and Mr. T. Smith's Shirley Defiance, from Worcester, third. Of three tandems, Mr. Radcliffe's pair, Marie Tempest and Phœbe Watton, were first, Mr. W. Foster, Moseley, being second, and Mr. Cunard, of Hawthorn Hill, Bracknell, third.

The first prize in the open class for single-harness ponies went to the first prize riding pony Lady Gobang, belonging to Mr. G. Griffiths. Mr. W. Foster's Mel Valley Treasure, from Moseley, was second, and Ryburn Masher, the property of Mr. W. S. Cunard, of Bracknell, third. Mel Valley Treasure had several other successes. In the open double-harness class Mr. Cunard's Wild Lucy and Jenny Lind were first. Mrs. Batt, of Hyde Park, London, added to her previous successes by taking first in a restricted class with Hopwood Horace, which, with the companion bay gelding, Hopwood Spark, also took the first prize in the large tandem class. This pair was second in double harness. The second-best tandem was Miss E. S. Ross's black pair Rowton Blackthorn and Rowton Vinca, from Sale, Cheshire. Mr. S. Rice, of Knowle, won with the chestnut gelding Lord Dash, in a single-harness class restricted to exhibitors living within nine miles of Bath. The Hackney Horse Society's silver medal was won by Dr. Francis's Lady Dandy, a brown mare bred at the Royal stables at Sandringham, whilst Mr. T. Smith, of Hall Green, near Birmingham, secured the same Society's gold medal with the chestnut gelding Shirley Defiance, which was second as a weight-carrying cob. There was a capital show of ponies, ridden by children under thirteen, the verdict being in favour of Peauty, a very smart little bay, shown by Mr. T. Lindrea, of Westbury, Bristol, to which a silver cup was awarded. The jumping competitions were as popular as ever, but were badly affected by the rain.

The Chemical Works (late H. and E. Albert), London, have hit upon a capital idea for making known the value of their basic slag. At some of the big agricultural shows this season they have given souvenirs, which are in the form of handy pocket pamphlets, freely and well illustrated, in which are demonstrated the advantages arising from the use of basic slag, and photos are given of pastures grown in various counties surrounding the show, with and without basic slag. The difference is truly remarkable, and the souvenirs have doubtless proved instructive to those who have perused them carefully.

SHOWS IN BRIEF.

Abergavenny.

The sixty-first annual show of the Abergavenny Agricultural Society took place on Thursday, and unfortunately the weather was showery, this having a bad effect on the attendance. The entries were five more than last year, and, generally speaking, the quality of the exhibits, more especially in the horse classes, showed a great improvement. In the cattle section Herefords were very prominent, and were the best collection ever seen in Abergavenny. They supplied the best bull in the show in Sirdar, shown by Mr. Rees Keene, who secured the championship medal. Sheep and pigs were a creditable lot.

Gillingham.

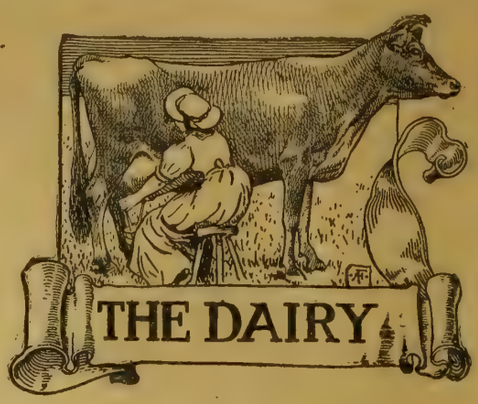
The annual show of Gillingham Agricultural Society took place on Monday, and was attended with more than usual success. There were about 250 entries, and in each section the quality was on the whole good. Dairy produce, however, was hardly up to the average, but the seven classes for horn stock were all well filled, and, as there was not a weak class in this department, either numerically or in point of quality, it was regarded as one of the most satisfactory features of the show. Horses were not great, but a creditable lot; whilst in the classes for pigs of any breed the two noted Motcombe breeders, Mr. N. Benjafield, of Shorts Green Farm, and Mr. A. Hiscock, of the Manor Farm, shared the honours in a thin entry.

Mid Somerset.

The show of the Mid Somerset Agricultural Society increases in popularity each year, both entries and attendance showing improvements. At Shepton Mallet last Tuesday there were no fewer than 821 entries, as against 780 last year, and the patronage of the exhibitor left little to be desired. The entries of cheese for four years in succession have advanced rapidly, and during the last two years there has been an advance of 30 entries each year. An excellent lot of cheese was sent in for competition in the first class, which was for Cheddars, and open to the world, and a keen contest ensued for the £20 prize, which was eventually awarded to Mr. H. White, of Mapowder, who also was fortunate enough to obtain the handsome silver champion bowl given by Mr. B. G. Falle for the best lot of Cheddar cheese in the show. There was a capital exhibition of butter from various parts of the country, about seven counties being represented altogether. The cattle classes were in numbers slightly above the average, but this department hardly showed the advance this year which other sections of the show have done; quality was, however, quite up to the usual high standard. Fat cattle made a nice show, and so also did dairy cows and Channel Island cattle. There was a very fine entry in the horse sections. Only on one occasion—1902, the jubilee of the Society—were the entries exceeded, and some of the classes which came before the judges were good in point of quality as well as numbers. In the general produce classes there was a fair entry, but for some reason the cider-makers did not respond quite so well as usual, or as had been anticipated from the excellent vintage of last season. There were also the usual competitions for long service for agricultural labourers and for practical farm work, and a milking competition to encourage young milkers employed on farms in the district.

Rutland

Situated in the midst of a wide agricultural district, Oakham is always the scene of a highly interesting gathering upon the occasion of the annual show promoted by the Rutland Agricultural Society, and the seventy fifth exhibition held there on Thursday was as good as any of its predecessors. For the success of Thursday's show everything promised well with the exception of the weather, which was very dull in the morning, with occasional heavy showers sweeping over the ground. As usual, the show was held in two portions, the horses being dealt with in the limekiln field, while the cattle and sheep were more comfortably stalled and judged in the covered Poultry Market, about a quarter of a mile away. Each section was capitally represented, the classes including many animals which have been seen out at district shows during the summer, and the quality was high in all departments. The total entries numbered 317, as compared with 320 last year, the detailed figures being as follow:—Cattle, 67, against 81 in 1904; sheep, 70, against 15; Shires, 96, against 105; light horses, 120, against 119. The average, therefore, was fairly well maintained.



Staffordshire Farmers and Surplus Milk.

The Earl of Lichfield presided over a large and influential meeting of farmers from all parts of Staffordshire held at Uttoxeter, on Wednesday, to consider what steps should be taken to deal with the surplus milk question, and to secure bettter prices for milk by the establishment of a factory or factories or by other means.

The Uttoxeter Committee had recommended that a company be formed to be called the Staffordshire Farmers' Dairy Company with a capital of £20,000 divided into 2,000 debenture shares of £5 each, entitled to a cumulative dividend of 5 per cent. per annum. This capital it was not proposed to issue at once, but in instalments as the directors might deem advisable. One half, it was anticipated, would be subscribed by the landowners, and the other half by the farmers. The factory, to be specially erected, would be fitted with all the most modern appliances capable of dealing with a very large quantity of milk in the most profitable way, according to the requirements of the current market. The whole scheme was to be worked and managed on the co-operative principle, and the surplus profits after payment of dividends on capital were to be divided among those dealers who were shareholders in the company *pro rata*. As to the price paid for milk advice would be given by the Farmers' Association. It was noted by the Uttoxeter Committee that satisfactory dividends were paid by many proprietary companies, and that they therefore saw no reason why a co-operative factory, worked as suggested by men of business capabilities, should not be equally satisfactory.

The Chairman, whilst fully recognising the importance of farmers co-operating to deal with the question of dealing with their milk, did not altogether approve of the scheme as put forth by the Uttoxeter branch on the ground that it was too ambitious, and he doubted if it would altogether solve the question which had occupied the minds of the Executive Committee and the county association for fully three years. He, personally, was more in favour of factories confined to limited areas, so that farmers would be able to take back the by-product. Three or four years ago the starting of such factories was proposed, and he now repeated promises of support to such projects which he had given. Moreover, he believed the other landowners of the county were ready to do the same, because they believed in the management of these small factories by the farmers themselves. By such means there was a chance at small expense of doing well and getting reasonable prices. They could only be comparatively successful if they had the support of the Association with regard to the sale of their produce in the large towns.

In the discussion which afterwards took place Mr. Woolridge urged strongly that the surplus milk could be most efficiently and at least expense dealt with by a large factory. It would be very well to have small factories if the milk had to be kept at home.

Mr. White, a Derbyshire farmer, was of opinion that farmers could deal themsleves with the milk more satisfactorily than any factory could, and this point was emphasised by Mr. George Heaton, who, with others, had visited Ireland to see how such work was done. He cautioned his brother farmers against risking £20,000, and suggested that if such an experiment were to be made it should be in a small way.

Some reply to this criticism was made by Mr. Ellaway Smith, who remarked that farmers would have been able to make use of the surplus milk if farming methods had not changed. But how many farmers were able properly to make use of their surplus milk in the production of cheese or butter? They wanted the top price for the product, and that was why they wanted the best machinery and the best men. Mr. Smith submitted a formal resolution, and as subsequently amended this read:—

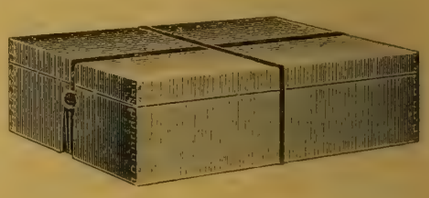
"That a factory be established at Uttoxeter to serve such an area as may be found advisable on co-operative lines, a certain price for the milk to be paid monthly, and the balance of profits (if any) after payment of interest on capital and working expenses to be divided yearly amongst the suppliers of the factory *pro rata* per gallon."

This having found a seconder in Mr. E. Gibbs, the Earl of Lichfield intimated that in his view the resolution might be adopted in this amended form by all present. As he read it, the proposal was not to erect a large central factory for the county. The resolution was then adopted.

A New Method of Fruit Packing.

To meet the demand by fruit-growers and salesmen for an inexpensive and attractive, yet thoroughly reliable method of packing fruit, a new fruit-box has been manufactured by Messrs. Edward Spencer and Co., London. In this box, as will be seen from the illustration, each fruit is contained in a wooden cylinder, which obviates any chance of the fruit being bruised.

These cylinders add very little to the weight, yet greatly increase the strength of the whole box. The box is entirely machine-made, dovetailed and rebated together so as not to depend on glue. No nails, or metal of any kind, are used. The box is fitted with a drop-over lid, flush with the frame, and is grooved at the end for sealing with wax or lead. It is rectangular in shape. The illustration shows a handy size of box made to take a dozen peaches. This size is retailed at 6s. each, and can be used repeatedly.



A great variety of sizes can be had to hold any quantity of the cylinders, which are also made in six sizes from 2⅜ to 6¼ in. diameter. The boxes can also be supplied without the cylinders either with drop-over lids or with slide lids. By using these boxes growers should save a considerable amount in carriage, in addition to having easy minds as to their fruit arriving at its destination in perfect condition.

Milk and Phthisis —Dr. Greenhalgh, medical officer of Accrington, has called attention to the serious death rate in the town arising from phthisis and other forms of tubercular disease, one cause of which he believes to be the use of milk of cows suffering from tuberculosis. He has, therefore, advised the veterinary inspection of all the cows supplying milk for the borough. The Health Committee recommend the Town Council to take the course proposed, so far, in the first instance, as the cows within the borough itself are concerned. A good deal of milk comes from places outside the town, and special arrangements would have to be made for the examination of the cows in those districts. No insurmountable obstacles would be likely to arise in this regard, however, because the owners of the animals would feel compelled to fall in with the desires of the municipal authority.

By Lupulin.

Home Notes.

The Hop Year.

The publication of the August records of over-sea trade marks a point from which we can fitly review the course of our transactions for the trade year commencing with each new season on September 1. Statistics are interesting enough, as by them facts are brought to light which otherwise might remain in the region of speculative obscurity. Whether they are satisfactory or not depends mainly upon the character of their revelations. If they are in accord with our wishes or predictions, we are inclined to approve and trust them, but we are quite as ready to question their accuracy when we find that they upset our calculations, or, in their stubborn way, prove that our estimates have been unsoundly based. The figures now before me tell a distasteful story, and I have anxiously examined them with the object of extracting some possible comfort therefrom, but am compelled regretfully to conclude that they are too convincing, and that, unpalatable as they are, I must accept the lessons they so emphatically teach. Twelve months ago we opened our market with confidence. With very few exceptions, the expectations of all engaged in the English hop trade favoured the probability of a steady run of high prices. Growers, factors, and merchants were alike influenced by the circumstances which then appeared to be sufficiently safe to warrant the profitable outlook. The knowledge of a short English crop provided an apparently solid foundation, upon which was erected a conjectural structure of assured success, supported by faith in the shortage of foreign supplies. The extent of our self-deception in this latter particular is abundantly demonstrated by the following striking figures. During the hop year of 1903-4 our gross imports amounted to 159,671 cwt. The first four months brought in comparatively few foreign hops, but about two-thirds of the whole were shipped into our market during the later period of that season. No sooner had the 1904-5 season commenced than the good figures then realised for English growths attracted the attention of foreign traders, and within the months of September to December, 1904, we received from America and the Continent no less than 209,394 cwt., an unprecedented quantity for so limited a period. This enormous and unexpected burden speedily put a stop to our pleasant hopes for a steadily remunerative season. Values were necessarily reduced, as customers naturally took advantage of the foreign supplies, and with the holders of English hops elation was displaced by depression. Then occurred a singular change. The foreigner had apparently exhausted himself, for during the eight months that followed imports have fallen down to a total of only 34,337 cwt., making the aggregate for the hop year ending August 31 last 243,731 cwt. But the damage had been completed. Our stronghold had been shattered by the early furious bombardment, and despite the combined efforts of some of our brave men, we have not been able to rebuild it. Unfortunately we have not been assisted by our export trade, which has fallen from 31,691 cwt. in 1903-4 to 21,547 cwt in 1904-5, so that the net increase of imports, on the comparison of the two seasons, is shown to be not far short of 100,000 cwt.

In this weighty fact, taken in connection with the prospects of an abundant crop in England, as well as in all other hop-growing districts of the world, we find the chief explanation of the low quotations now generally prevailing. Our statistics are disappointing, but we are bound to "face the music," and make the best of the trying times that are apparently in front of us. Our growers have, however, passed through a similar experience before, and have successfully surmounted it. I have confidence that their indomitable determination will stand them in good stead now, and that they will overcome their present difficulties, and come out of the fight as victors in the end. One bit of consolation is suggested. If our prices remain at a low level the foreign competitor will hardly find room to come in, and so long as he does not intrude, there is hope for the betterment of our position. Would that his unwelcome advances could be checked by a measure of fiscal reform, in which the interests of our industry were fairly considered and provide for.

All official reports and notices of the National Association of English Hop Growers are printed in the MARK LANE EXPRESS, *and current information from all parts of the world, likely to be of interest and benefit to the members of the society, and Hop Growers generally.*

The New Crop.

I am pleased to read in a circular issued this week by one of our leading merchant firms the following words: "The general opinion is that about 600,000 cwt. will be secured from English plantations if the whole crop is harvested." I trust that in the interest of the hop growing industry this opinion is well founded, as the quantity named will amply suffice for our requirements, and if this is the limit of our production, there is a much more promising season in front of our planters than we have hitherto been led to anticipate. But if one is to be guided by the reports of the results of picking thus far to hand, I fear that the final record may exceed the figure quoted. There is, however, much virtue in that little word "if," which qualifies all the estimates hitherto made. The picking is certainly being hindered by a proportion of unfavourable weather. Delay means maturity in advance of the speed of the gathering, and there are signs that in some heavily-fruited gardens it will be almost impossible to keep pace. Again, a moist atmosphere retards the drying process, and other dangers, such as a run of mould, etc., may arise from the same cause. Therefore uncertainty is still an element to be considered. Judging by the prices at which new hops are being sold this week, it should be advantageous to planters if all inferior qualities were left to blow away. There is some talk that this may be done, but I can quite appreciate the hesitancy of a grower to voluntarily sacrifice the fruits of any part of his year's work and outlay. The practice of past years suggests that every effort will be exerted to gather the whole crop, and, if this be accomplished, we must, I fear, be prepared for a big yield, with its necessary accompaniment of slow sale at very low and unremunerative prices. If talking or writing could improve the position, I would willingly exercise my voice and pen in the furtherance of so good a cause. But facts are facts, and truth is truth, and I cannot see that anything is gained by present concealment or distortion of what we are bound eventually to admit. Therefore we can only hold on to the finish, and endeavour to make the best of whatever is in store for us.

The Borough.

is daily crowded with country visitors, whose anxiety to realise is unfortunately too evident. The more desirous they are to sell, the more reticent are the buyers. Therefore, though a fair amount of trade has been done this week, it cannot be called brisk. Prices are consequently very unsatisfactory. Poor stuff, which is offered at 30s. to 35s., is neglected, the usual run of business being upon decent qualities that can be bought at 40s. to 50s. Here and there a few choice lots have realised 55s., but, as a factor said to me, "60s. takes some making." Such money cannot pay growers, whatever their crop may be, and it is to be sincerely hoped that, after the subsidence of the first wave of selling pressure, the market will settle down into a better condition and the trade become sounder than it now appears.

The Weald of Kent.

Though there are some gardens in the Weald of Kent and Sussex that have no bine in them at present, picking may be described as general, and from the earlier pickings waggons laden with pockets of the new crop may already be seen on the way to the railway stations, although present prices do not encourage early sales.

The weather of the past few days has been anything but favourable. The heavy rains have well-nigh brought operations to a standstill, and, being accompanied by strong wind and a low temperature, damage to the crop is a certainty. I have not had many opportunities of inspecting the gardens in the Weald.

No doubt, the crop is very much larger than that of last year; but, as far as my observation has enabled me to judge, I take leave to doubt whether it will equal the estimate of 15 cwt. an acre. It is too much of a top crop. Laterals in many cases are scarce, and of the few that were thrown out a large proportion are blind. Therefor, apart from consideration of weather, I think a 15 cwt. average estimate beyond what will be realised; and should such weather as that of the latter end of this week continue for any length of time, the quantity sent to market will be considerably less.

There has been no lack of pickers. The London contingent was much larger than usual; and among those who tramped down on the chance of finding a job, hundreds have had to face disappointment. Without work, without money, and in many cases exposed to inclement weather, their condition is deplorable. M.

September 9.

Hop Reports.

Messrs. Weeks, Jones, and Co.'s annual circular runs as follows: "The present year will doubtless be remembered as a very exceptional one in regard to the production of the hop crop, owing to the remarkable absence, from the start of the plant to the present time, of any serious attack on the plantations by the usual enemies of the plant. At no time has there been any real anxiety in regard to the prospects of the growth which is now being ingathered, with the exception of a tendency to premature ripeness, which has lately shown itself in many grounds, but which has been checked by the recent rains and dull weather. The result is a sound, naturally-grown crop which, in our opinion, although considerably smaller than the growths of 1899 and 1901, is still a plentiful one.

The English acreage is returned at 48,968 acres, a slight increase over last year's return, which was the smallest for nearly a century. After an extensive inspection of the plantations, we cannot point to any particular district as being specially favoured, indeed the feature of the year appears to be the comparative evenness of the growth. Many of the grounds which were good last year will show very little increase this season; the increased production being brought about mainly by the larger yield from the grounds which last year grew only small quantities.

A few parcels of new hops have changed hands; these have been principally "earlies," and the prices realised have been disappointing.

We feel confident that brewers will use English hops again in increasing quantities, and if so, instead of the consumption of beer further decreasing, we may anticipate an improvement in the brewing trade which will eventually react favourably upon our market. It is, therefore, not unreasonable to anticipate that the combination of short stocks, exceptionally good hops, and moderate prices, will bring about a brisk demand for all descriptions when once the trade has fairly opened. The needs of the brewers must be very large, and with the positive certainty that small crops will come again, they will no doubt be glad of the opportunity of buying the present growth at prices which will prevent a reduction of acreage. Any further reduction would be fatal to their own interests, as well as to those of all who are connected with the industry.

Foreign Notes.

America.

A letter dated August 22 gives final estimates of the United States hop crop. These, being furnished by a correspondent whose information I have always found reliable, may, I think, be accepted as an approximately true statement. He now puts Oregon at 110,000 bales, California at 70,000, Washington at 48,000, and New York at 65,000 bales; showing a total of 293,000. With respect to New York there appears to be a little uncertainty, some estimates running much higher than the figure given, but, taking an impartial view, the quantity named is doubtless very nearly correct. This shows that the 1905 crop will exceed that of last year, by something like 40,000 bales, and, with recent experience in front of us, we may fairly conclude that an important surplus will be available for export. A cable message re-

Nuremberg.

The market is now well supplied with new hops, which are taken up by dealers and brewers nearly as fast as they arrive. The quality and condition are generally reported as satisfactory, although the supplies from some districts are not sufficiently dry to please buyers, who, being surrounded by an almost unlimited variety to select from, are naturally reserved and critical in their operations. Latest quotations range from about 50s. for medium market qualities to 70s. and 85s. for best Hallertans, and 80s. to 95s. for best Wurtembergs. My readers may again be reminded that these figures represent the values of the produce as they are placed on the market in a partially dried state, and that 20s. to 25s. must be added for cost of further drying, the loss of weight incurred in the process, and the outlay for cloth, packing, etc.

Belgium.

Some bad weather during the picking has had an effect upon the market in causing a slight reaction in the direction of firmness. It is not expected, however, that the final output will be materially reduced, although the completion of the harvest may be delayed. In the meantime quotations for the 1905 crop for next month delivery remain at about 45 francs for Alosts, and 40 francs for Pops, these figures representing in English money 32s. to 36s. There is not much interest in yearlings, but their scarcity is demonstrated by their current value of 48s. to 56s. The new crop is reported as coming down in fulfilment of expectations, and likely to total a heavier weight than last year.

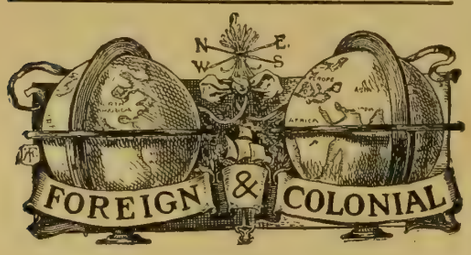
AND THEIR

London Representatives.

NOVA SCOTIA.

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.



Canadian Wheat Production.

On the subject of wheat production in North-West Canada, a report in the form of a Blue-book has been presented to the Board of Trade by Mr. James Mavor, Professor of Political Economy in the University of Toronto. The publication is accompanied by a number of excellent maps and charts. Pages one to eleven furnish a brief outline of the geology, physical geography, and climatology of the region, while pages twelve to thirty-four give an account of the settlement of the North-West. Then follows an account of the history, present conditions, and prospects of agriculture, with special reference to wheat-growing. There is also included a discussion of certain estimates of the potential area of wheat-growing and the possible production and export of wheat in the future.

That discussion is supplemented by two sections treating of the question of population and of prices in relation to productivity, while another division has reference to transportation by road, railway, and internal waterways, the report being completed with a summary of general conclusions. The comparative smallness of the population of the United Kingdom which is now engaged in agriculture seems to preclude the possibility of immigration at once effective enough and numerically considerable enough to occupy the country before colonists from other countries have already possessed themselves of at least a great part of it. Recruiting of the western towns from the United Kingdom may occur, but only in the teeth of opposition from the trades unions, whose members look upon every newcomer into a town in search of work as an interloper, and only with a certain disadvantage to the North-West, where the demand at present is for farmers and not for artisans. From these considerations it seems fair to conclude that the bulk of the immigration is more likely to be from the United States and from Continental Europe than from the United Kingdom.

While the suitability of a large proportion of the area in question for agricultural production may be regarded as quite undoubted, the extent to which a particular crop wheat, for instance will be grown in the future must depend upon a series of complex influences, the precise weight of which cannot be predicted, especially for remote periods of time. It would appear, says the report, that Great Britain and the United States and perhaps also in the future to an important extent, Japan must enter into purchasing competition for Canadian wheat. Tariffs would in each case require to be taken into account.

It is obvious, however, as the report points out, that should the United States admit Canadian wheat for milling purposes duty free (in the interests of the United States and without any quid pro quo on the part of Canada), two results would follow: First, that there would be a stimulus to wheat production in Canada, and second, that the United States would be placed in as favourable a situation for purchasing as any other country, with the added advantages of close proximity and with the added advantages of close proxmity and cheap carriage. A relaxation of the "drawback" regulations, which would have had the effect of admitting Canadian wheat intended to be milled for export at a net duty of 1 per cent., was urged at the end of 1904, but the United States Senate refused to sanction the arrangement. Very great improvements in the productive power of the country, and a very considerable increase in the effective population, as well as a more exclusive regard to wheat cultivation, would have to take place before the North-West could be regarded as being in a position to be relied upon to produce for export to Great Britain a quantity of wheat even nearly sufficient for the growing requirements of this country.

POULTRY.

Utility Poultry Club Laying Competition.

The Utility Poultry Club will, as usual, hold a four months' laying competition, commencing on October 16, 1905, and ending on February 4, 1906.

The competition, which will be held at Royston, Herts, under the management of Miss M. Yates, is for the purpose of determining those breeds and strains of fowls which are capable of producing a fair number of eggs during the winter months.

Miss Yates, who managed the competition last year, has made certain alterations and improvements in the arrangements of the houses for the comfort of the birds, and the nests have been placed inside the houses, instead of opening outside, as before.

Pens of birds entered for competition must consist of four pullets of a recognised breed hatched during 1905. Trap nests will be used, and a careful record of the individual laying of each pullet recorded.

A number of prizes, amounting in value to £22, will be awarded to the successful pens, and the prize-list will probably be still further increased. The Utility Poultry Club will, in addition, give its gold medals and first-class certificates to pens producing 240 eggs in the sixteen weeks, and silver medals and certificates to pens producing 200 eggs.

Applications for particulars, which are now ready, should be made to Mr. Cyril Dunkley, Wednesfield, Wolverhampton, to whom all communications with regard to the laying competition should be addressed.

Entries close on Saturday, September 16, 1905.

Particulars as to membership of the club may be obtained from the Hon. Secretary, Mr. E. W. Richardson, 260, Nantwich-road, Crewe.

RAILWAY ANNOUNCEMENT.

LONDON AND NORTH WESTERN RAILWAY.
DAIRY SHOW,
To be held at the
AGRICULTURAL HALL, LONDON,
OCTOBER 3rd to 6th, 1905.

For the convenience of exhibitors at the above Show, the London and North Western Railway Company have made arrangements for Through Vans for the conveyance of Exhibits to be run to London on Monday, October 2nd, by the trains leaving Carlisle at 8.30 a.m., Liverpool (Lime Street) at 12.0 noon, Manchester (London Road) at 12.10 noon, Shrewsbury at 12 35 p.m., Northampton (Castle) at 3.16 and 3.38 p m. These will be in addition to the vans running regularly on the Through Trains to London.

Consignments from the Branch Lines, and from Nottingham, Peterboro', Oxford, Cambridge, &c, will be placed in these vans at the various Junctions, thus ensuring direct transit to the Show.

Rates for the conveyance of Exhibits, which in no case exceed those charged by any other route, can be obtained at the various Stations on the Line.

Arrangements will also be made for the return of the traffic in Through Vans at the close of the Show, and Exhibitors wishing to avail themselves of these facilities are requested to order their consignments "Per London and North Western Railway."

Exhibitors are requested to be careful to write their names and addresses distinctly on the backs of the direction labels issued by the Show Committee.

The Company's representatives will be at the Show to answer enquiries with regard to the arrangements for the return journey.

All information can be obtained of Mr. Robert Turnbull, Superintendent of the Line, Euston Station, London; the Company's District Superintendent, Mr. H. A. Walker, Euston Station, London; or Mr. F. H. Dent, Broad Street Station, London, E.C.

FREDERICK HARRISON,
General Manager.

General Manager's Office,
Euston Station, London, N.W.
September, 1905.

These Three Tests:

APPEARANCE
ANALYSIS
PRICE

Are they Conclusive Guides for Valuing and Buying Compound Cakes and Meals.

?CAKES

WE ANSWER—MOST DECIDEDLY, NO!

For here the old proverb—that "Appearances are deceptive," is often true.

Analysis by itself cannot be relied upon, for damaged and inferior material analyses the same as sound fresh stuff, although the feeding value is very much poorer. Also it is often difficult to detect damaged ingredients when spiced and mixed with other stuff.

SILCOCK'S

Is the lowest priced article the cheapest? We are continually in competition with compound foods having as high, or nearly as high, an analysis as our brands, sold in some cases at 10/- or 15/- per ton less, and claimed to be "just as good as Silcock's." **This is not possible,** considering our exceptional facilities for manufacturing cheaply on a large scale, our extensive experience, and the many valuable patents we own for labour-saving machinery.

There will invariably be found a greater deficiency in feeding value than the difference in price implies.

We have no difficulty in retaining customers who have used our Cakes and Meals regularly, as the more our brands are known the better they are liked, but we have the difficulty of price to contend with in those feeders who do not know our goods. We specially invite such to make a comparative feeding test, feeling sure that it will bring us new customers and also benefit the buyer.

NOTE THIS.

Our first principle has always been to supply the best possible quality, and sell large quantities at a small margin of profit. In feeding stuffs the lowest priced article is certainly not the cheapest. SILCOCK'S brands are the highest standard of Compound Foods. Linseed Cake and Maize are at present priced above their feeding value, and by using Silcock's Cakes and Meals you will obtain really first-class articles and save money.

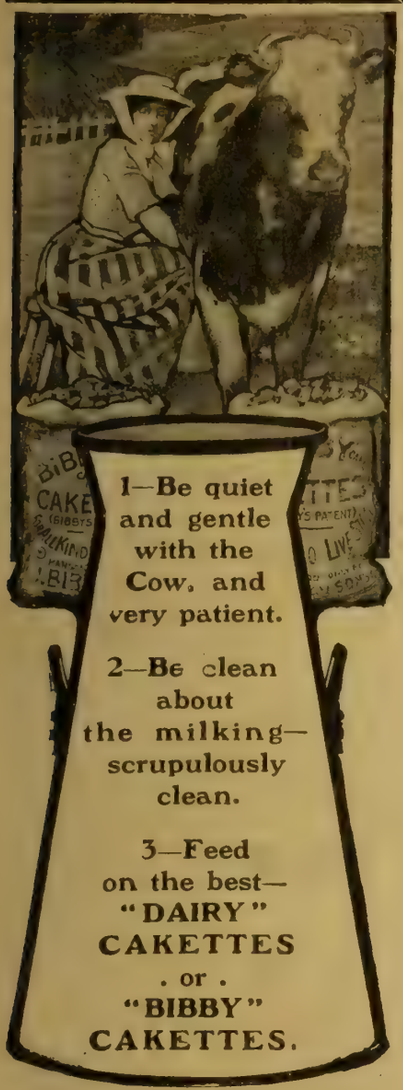
HOW TO FILL THE KIT
.. WITH ..
WHOLESOME MILK.



1—Be quiet and gentle with the Cow, and very patient.
2—Be clean about the milking—scrupulously clean.
3—Feed on the best—
"DAIRY" CAKETTES
. or .
"BIBBY" CAKETTES.

NOTE.

If Dairy Cows are allowed to go off their milk at this time of the year, nothing will bring them on again; hence the importance of keeping up the supply by timely attention to Rule 3.

YOUNG STEERS and HEIFERS.

NOW is the time for the farmer to give a little Cake to the young Steers, if he wants them to come into the auction-ring in the autumn in fresh, thriving condition, with good bright coats on them, and looking big and well. It pays to do them well.

The Heifers, also, which are intended for the dairy, should have a little . . .

BIBBY'S "FEEDING" CAKE or the "BIBBY" CAKE,

to make them thrive and get some size and stamina before the strain of milking comes on them.

THE CEREAL YEAR.

II.

Feeding Stuffs.

The interaction of wheat and flour supplies on one another is obvious, and, demand for bread remaining wonderfully constant from year to year, the business done by the English mills can be estimated by the simple process of deducting the imported flour from the total food wants. When we come to the trade in feeding stuffs the problem is much more complex. Our annual consumption of these staples is exceedingly hard to reckon, and we are as yet very far from knowing at all clearly what quantity of each cereal is likely to be bought in any given cereal year. The imports of maize show the greatest approach to uniformity.

In a year when we import less than ten million quarters of Indian corn the price is pretty sure to rise, and if there is at any time less than half a million quarters on passage it is safe to hold for an advance. On the other hand, the fact of there being over a million quarters on passage at any moment is almost always a warning to sell before the cargoes come tumbling in. That maize will always keep in this fairly equable condition nobody would, however, venture to prophesy, for in 1896-7, in 1898-9, and in 1899-1900 the cereal year saw over thirteen million quarters consumed. On the other hand, in 1894-5 we managed with 6,444,000 quarters. The cereal year just concluded has imported 9,917,000 quarters, and the average value has been between 22s. and 23s. per quarter for yellow and flat corn. The extreme scarcity of the round variety has been a feature of the recent campaign.

The maize trade is so far clear sailing that it is exclusively a foreign product. When we come to barley and oats the case is different. In the past cereal year sales of British barley have been estimated at 6,251,479 quarters, as compared with a ten years' average of 7,275,532 quarters. Thus there has been a decidedly increased call, or so one might suppose, for imported barley. When, however, we turn to the actual imports we find them to have been 5,839,000 quarters only, against 8,792,000 quarters in the preceding season. It is manifest that the whole barley trade of the past cereal year has shown a considerable shrinkage. Oats appears to have gained. The estimated sales of British have been 11,438,123 quarters, against a decennial average of 10,629,624 quarters, and the ascertained imports of foreign have been 6,324,000 quarters, against 5,707,000 quarters in the previous year.

These figures are fairly clear to the mere statistician, but the practical farmer has great difficulty in accepting this transference of demand from barley to oats. How many farmers of our acquaintance have bought oatmeal in 1904-5 where in 1903-4 they bought barley-meal? How many people fed their horses on barley in 1903-4? Yet the great increase in the use of both English and foreign oats in the cereal year just closed argues that some cause for the increased sale must exist. Of course, the consumption of hay by all our equine and bovine stock has to be weighed, and the use of oilcake for cattle, and the keeping of meal-fed pigs. It is all but impossible to "average up" the total provisioning of our live stock. With respect to prices, barley has averaged 24s. 4d., which

is 3d. above the average of the past ten years. Oats have averaged 17s. 1d., which is the exact mean of ten years' sales. The average price of linseed for the cereal year has been 37s. 8d. per quarter. High prices prevailed in May, June, and July, but the liberal shipments from Argentina have since then brought about a decline.

There has been a moderate demand for beans and peas, but lentils have fallen off in request, and the good business done in dari and millet in 1903-4 has not been maintained in 1904-5. Tares have shown first-rate quality, and have sold at really good prices, while buckwheat has been in improved request, and has risen to 30s. per quarter. The cheapness of rye has led to increased sales, and a larger business than formerly has been done in haricots, of which Burma is now a very prominent exporter. A quiet and steady trade has passed in rice, increasing quantities of which are now imported in the ground form.

Seasonable Topics.

The heavy rains which have fallen of late are responsible for a marked change in the appearance of potato tops, and there can no longer be any doubt about the presence of the dreaded blight. Late potatoes a few weeks ago were all green and growing; but now the leaves are seared and black, as if they had been burnt, and the streaks of decay in the stems mark the means of progress of the disease down to the tubers. Various opinions are expressed as to the advisability of cutting off the tops of potatoes when stems and leaves are diseased. For our own part we do not advocate doing this if the disease appears before the tubers are fully developed, as the cutting of the top has a check on further swelling; but at this time of the year it is another matter. Tubers are not likely to swell much more now, and in the case of crops which cannot be lifted just yet, the cutting away of the tops will have a tendency to check the spread of the disease. The tops, however, should be burnt as soon as dry, and not be left in a rotting heap to foster the germs of the fungus, as is too often the case. We know of no task more pleasant than digging potatoes when big crops of sound tubers turn out; but what a sickening job it is when one-half of the potatoes are rotten masses of decay, and have to be written off as dead loss. A year or two ago, when the boom was on, we heard a lot about disease-resisting potatoes. What a lot of moonshine it all is! We have had opportunities of testing varieties, which a few seasons ago were worth more than their weight in gold, and have come to the conclusion that if ever they possessed disease-proof powers, they have quickly lost them. Great care will have to be exercised this season in sorting potatoes on the ground before they are put away in the clamps. Many of the tubers we have already lifted are slightly tainted with disease, and if stored in a dry place they may be of some use for home consumption, if not for sale; but to store such tubers in the moist conditions of a clamp would mean further decay in themselves, and the contamination of sound ware.

Potato Disease.

❦ ❦ ❦

It is hardly to be expected that a lady of such notoriety as the Countess of Warwick would be able to manage her affairs privately, and a short time ago the daily press made it known to the world that there had been a split in the female camp at the Agricultural and Horticultural College at Studley Castle, and, as a result, the whole teaching staff had resigned en bloc. We are not in a position to discuss the cause of the trouble, but we know the Countess of Warwick to be a lady who is not easily thwarted, and we learn now that the next term will open with a new staff. Miss Mabel Faithfull, who hails from Winchester, has been appointed warden. The teaching staff has been revised, and several former students have returned to the college to take up appointments as instructors. The time has arrived, by the way, when establishments of this kind can no longer be looked upon as experimental, and it would be interesting to know what percentage of the young ladies who have received college training are now making a living from the land.

A Split in the Camp.

❦ ❦ ❦

It is hoped and expected that in the next Parliament the agriculturist will receive a little more attention than he has in the present, and, probably, with the object of doing something for him, the Unionist candidate for the Louth Division of Lincolnshire, Mr. Comyn Platt, seems bent on learning for himself the conditions of the life of an agricultural labourer. We learn that Mr. Comyn Platt has just done a day's work in the harvest field, taking his share of [illegible] for which he received a shilling, and slept the night in a barn. We do not know how the gentleman enjoyed his experience, particularly the sleeping part; but if the barn was any worse than some of the so-called cottages in which the sons of toil take their rest, we do not envy him. After all, if you are to know, there is nothing like seeing for yourself; but a few weeks do not constitute a lifetime, and, if the agricultural labourer is to be represented in Parliament, we should prefer a man of the Joseph Arch type, who was a labourer born and bred, and knew from experience what it is to work hard and live hard on the land.

Seeing for Himself.

❦ ❦ ❦

There are signs on every hand that the spirit of co-operation is spreading in this country, and an instance of it is given in a scheme that has been set on foot in Wiltshire for the co-operative insurance of pigs. The movement is in the form of a county association, which has for its object the amalgamation of existing pig insurance clubs, and the formation of new clubs is villages where they do not at present exist. The following extracts from the rules give an idea of the worthy objects of the association:—1. To afford means by which members may, upon strictly mutual principles, insure against loss of their pigs through disease, accident, or other causes. 2. To use every available means to encourage improvement in the quality of pigs in the county. 3. To secure the best conditions for their health and well-being and profitable keeping. There are already some 100 pig clubs in Wiltshire, but it was to introduce a better method, and widen the basis of insurance that the Wiltshire Pig Insurance and Provident Association was formed. The association will be duly registered under the Friendly Societies Act; each branch elects its own officers, manages its own affairs under the supervision of a central council, composed of representatives from each club, and issues insurance certificates to its members. The insurance premiums are paid into a central fund, out of which all claims for compensation are paid. In connection with the association, a co-operative trading society is being formed, whereby pig-keepers will be enabled to secure feeding-stuffs of reliable quality at cheaper rates. The supply of suitable styes, and the collection of store pigs for delivery to factories and markets are also matters to be undertaken. In other words, the objects of the movement are to prevent loss to pig-keepers by insurance; by co-operation to make pig-keeping cost less and pay better; by directdealing to retain in the pockets of pig-keepers the profits now made by middlemen; to reduce the cost of marketing; to maintain a uniform quality in bacon pigs; and assist pig-keepers to compete with the tremendous influx of foreign bacon. Mr. F. Rayner, of 16, St. John Street, Devizes, is responsible for starting the movement in Wilts, and he has had the hearty co-operation of the Agricultural Organisation Society, Dacre Street, Westminster, S.W.

Pig Insurance Clubs.

❦ ❦ ❦

The instance mentioned in the foregoing paragraph of insurance and co-operation, leads one to wonder whether the same kind of thing could not be carried out for the benefit, particularly of small holders in various branches of agriculture. There are hundreds of small places in this country on which many dozen sparrow-grass up to half a dozen cows, with, perhaps, a few calves. In the case of the majority of small holders, the whole of a man's capital is invested in his stock, and, in some cases, he has to borrow a little money in order to purchase his cow when he starts farming. So long as the stock thrives, all is well, but every cowkeeper is subject to losses, and, if a cow dies, the small holder stands in a fair way of being ruined. Indeed, it is no uncommon thing in country villages, for a public collection to be made to enable some small holder to replace a cow that has died, and this speaks well for the neighbourly spirit which prevails; but, after all, it is charity. If associations could be started on Friendly Society principles, in which small holders could insure their stock for a small outlay, the everlasting bugbear as to what would happen if they lost a cow would be removed. A sad, but not exceptional case came before our notice some time ago. A labouring man, by dint of his own industry, saved up a few pounds which enabled him to buy a cow or two, and set up on a small holding. Soon after beginning he had a run of bad luck to which all farmers are liable, and, after losing his cow, and seeing his hard-earned savings vanish, he had to relinquish the little holding on which his heart had been fixed for so many years, and go back to a labourer's cottage. Had that man been in a position to insure his little all, the disaster might have been averted.

Insurance for Small Holders.

❦ ❦ ❦

There appears to be little room for sentiment in the agriculture of these days, and many of the old customs which had associations with the harvest have passed away. It used to be a kind of red-letter day when the reaping of the corn began, and a still greater event when the last load was brought home, and master and man, mistress and maid, joined hands in the festivities of harvest home. Now it is all taken as a matter of course, the modern machine has knocked all the sentiment out of reaping, and robbed the gleaner of her occupation and little perquisite. The last load differs in no particular from any of the rest, except that the farmer heaves a sigh of relief that all the corn is gathered in. A familiar sound in the countryside just now is the buzzing of the threshing machine, which has little connection with the bang, bang, all the winter through of the flail being swung in the barn. It is true that some farmers belonging to the old school still stick to the customs of their fathers, and join their workmen in a friendly supper when the harvest is over, but as the years roll on, there seems to be less of that friendly sympathy which was once characteristic of masters and men. But even if the old customs were revived, we doubt whether they would satisfy the demands of this age, which are all for change and excitement. One thinks of the old days when men gathered round the festive board on the occasion of harvest home, sung the same songs that they did last year and many a year before, and joined in the choruses with the same enthusiasm as if the whole thing were new and novel. The farm hand learnt his one song as a boy, and sang it every harvest home till at last he could only creak it out, and then, when he was gone, and, perhaps, partly forgotten, he was remembered at the annual harvest supper, if only by the recollection of his song. We say that much of this sentiment has gone out of farming, but we like to think and talk sometimes about the old customs which our forefathers held so dear.

Harvest Home.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Sept. 9, 1905, together with the quantities imported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905.

Agricultural Politics.

By a LOBBYIST.

"It would be a great mistake to send special delegate members to the House of Commons. . . . . The man who was an avowed representative of a certain interest might be listened to with attention as an expert, but not to such an extent as an independent member." Thus Mr. A. H. Lee, M.P., to the Fareham Farmers' Club in reference to the suggested organised representation of agriculture in the House of Commons. But why, Mr. Lee? It is not, of course, proposed that this organised representation should hold aloof from ordinary partisan sentiments and purposes. It is not suggested that these agricultural M.P.'s should refuse to associate themselves with the party machinery of the Liberals or the Conservatives. All that is advised is that on subjects affecting agriculture this special representation should act in harmony with a defined rural programme formulated by the most practical minds in the interests, and act in such a cohesive manner that it must compel Parliamentary appreciation and attention. Can it be for a moment assumed that an intelligent politician holding definite views affecting agriculture, and himself possessing knowledge of its needs, will have less weight than a politician reflecting no accepted propaganda and programme, and himself only susceptible, even on matters affecting the interest, to the convenience of his party chiefs? Let me take an illustration from a favoured source of mine—from the ranks of the Labour men. Has Mr. John Burns, or Mr. Keir Hardie, or Mr. Bell, or Mr. Will Crooks any less significance with the House of Commons because they are known to represent a mass of opinion among the workers, and because they are known to have a certain delegated authority? Mr. Lee knows they have not. Would they have more importance if they refused to subscribe to a definite programme for the benefit of their class? Mr. Lee knows they would not. Agriculture is the Cinderella among our economic interests. It has been so long disregarded that the indignation of observant men has reached an explosive height. Would this disregard, the first fruit of the system of which Mr. Lee is the apologist, have been possible with a body of stalwart agricultural M.P.'s subscribing to a definite programme, and seeking, by united effort and by responsible constitutional means, to realise it?

• • •

What does Mr. Lee mean by "independent Member?" What does he mean by his contrast of the "independent Member" with the "expert"? After all, an expert in this matter is simply a man possessing scientific and practical knowledge of a specific subject. If an "independent Member"—who, I assume, would be a personage without this particular equipment—would possess more influence with the Assembly, then we have at once a revelation of the source of the inutility and fallowness of Parliament, so far as agriculture is concerned. But for a moment let us inquire into the right of this "independent Member" to his own description. The title is simply a usurpation. The so-called "independent Member" is the obedient vassal of his party on all subjects, he does its behests in pleasure or in pain; he follows the bell-wether. It is the expert who is the real "independent Member." He would be in our special instance no political Pharisee; he would not gather his cloak around him, and thank God he is not as other men; he would not profess to be untouched by the ordinary political predilections on Imperial subjects which move the general mass of frail political humanity. He would on the question affecting his own interest—confessedly a derided and neglected interest—act in obedience not merely to his own practical knowledge, but in accordance with what the farmers' representatives in special conferences assembled, regard as just, necessary, and moderate. If the "independent Member"—the gentleman with no special mission or representative authority—were to wield more influence than these men, then our Parliamentary institution possesses a character which does not entirely justify the reverence we give it.

• • •

I commend Mr. Ailwyn-Fellowes's action in intervening on behalf of the farmers with the railway companies to the hearty appreciation of the interest. Of course, it would be a mistake to assume that this sympathetic act can have the importance or influence which would attach to specific Governmental action. Railways only exist by the sanction of the State, and the State should see to it that not merely is there no preferential rate to the advantage of the foreigner, but that no section of the trading community should be unfairly penalised—nay, that the railways should deliberately seek to facilitate and cheapen transit to the markets. The fact that railway companies are willing to discuss the complaints of over-charge with the farmers is of more moment than all the protestations made before the Committee at present inquiring into the question. It is a confession of the justice of the general contention of the farmers that the discrimination of the railway companies has been to their disadvantage, and that the absence of a sufficient sympathetic temper has been a discouragement. Now, may I make a suggestion to the Minister for Agriculture as a corollary to the more friendly attitude on the part of the companies? Could not the Board adopt a more distinctive affirmative policy—a policy which would go beyond the utterance of soothing platitudes—towards the proposal to call into existence a co-operative system of distribution? The companies affirm that if such a system existed—and it would inevitably have associated with it a more scientific method of packing—they could materially cheapen the cost of transit. Should not such an assurance from the companies evoke a disciplined attempt, an attempt which would not depend upon an ill-regulated individual impulse, to call such a system into existence? Mr. Ailwyn-Fellowes' practical mind will appreciate the point.

• • •

A Conservative M.P. has written me in support of his contention that the Conservative party must inevitably be the Agricultural party. "Why," says the hon. Member, "there is not a proposal of the Darlington Conference that is not acceptable to the Conservative party." Well, let it be so. The word "acceptable" provides, however, the touchstone of Conservative enthusiasm. What we want is not mere acceptation, not a mere lay profession of inactive sympathy, not a mere academic approval. What we want is the crystallisation of this sympathy, this academic approval, in legislation. Supposing there had been a body of stalwart agricultural representatives pledged to this programme, and resolved to support it at all hazards, and despite any inconveniences to partisan calculations, would the Butter Bill have been shelved as it was shelved, and would Professor James Long have had the opportunity of accusing Mr. Balfour of disloyalty to the rural interest? Organisation for a specific purpose, organisation permeated with the resolute spirit, is the best goad to apply to the laggard spirit of statesmen. This Conservative M.P. is not by any means, as Mr. Lee's utterance has shown, an isolated antagonist of this policy of agricultural organisation. Frankly, I am glad of the sentiment of fear which has been aroused. We do not want to be demagogic in our Parliamentary methods; but the ruffling of the dovecots cannot but be provocative of good. When Conservative and Liberal officialdom understands that it cannot command agricultural support under all and any conditions, then that officialdom will offer agricultural M.P.'s a gratifying bait. In Parliamentary life the spoils go only to the assertive.

• • •

"Are you certain, after all, that Mr. George Lambert or Mr. Channing is destined for the Liberal portfolio of agriculture? Both of these men are associated with a defined policy of tenant-right and land reform; and the appointment of either to this position would be accepted by the country as a pledge that the party is resolved to realise this policy. This would be an undeniable embarrassment to the Liberal leaders, already beset by clamorous sections anxious that they should have the premier place in the official party programme." This remark was made to me by a politician who is in close touch with the Liberal headquarters. I admitted the force of the observation, but asked whom else the Liberal chieftains could appoint to the position with any assurance that the appointment would be sympathetically received. "Have you forgotten Earl Carrington," inquired he. I had. Certainly Lord Carrington—whose appointment to Cabinet-rank is more assured than is that of either Mr. Lambert or Mr Channing—has yielded many evidences of his interest in tenant-reform and in practical agriculture. The land court composed of his own tenants was a bold experiment, which has been more than justified by the fact that his estates are among the best-controlled and most contented in the kingdom. His experiments in connection with the creation of small holdings would be in itself an assurance to the small holders that their weal would be a consideration of the Ministry. A land reformer, he has not been regarded as a herald of a distinctive policy; an enlightened landlord, he has never sought to embody his own practice in a strenuous Bill. Lord Carrington would thus be generously welcomed in the position without being regarded as a portent of the immediate adoption of a wide-reaching scheme of economic and land reform.

• • •

The reports received at the Liberal headquarters from their registration agents in the counties has filled the Liberal chief officials with a great joy. They are chortling fervently over what they describe as their improved positions in the rural constituencies. They aver that for any parallel to the assured satisfactory state (that if from their point of view) of the forthcoming register they must go back to the early eighties before the advent of Liberal-Unionism. Their gratification is all the keener because, as they assert, this improvement will be found to have the best expression in the southern counties, in East Anglia, and in the Midlands—in other words, in the areas in which they fared badly at the general election. Pantingly-eager as they have been and are for another election, they aver—I am, in fact, quoting the language of one of their number—that they will have some compensation for their disappointment in the greater electoral strength which they will secure in the new year in these areas. I heard another of their number declare that even in a county like Somersetshire, where family traditions are so influential, and where inherited ties are not loosely retained, it is by no means certain that the Conservative party will be able to hold its own. "I should not be surprised," said this official, "to see Sir Alexander Acland-Hood beaten, despite his personal popularity and his territorial significance." How far these jubilant anticipations are justified I do not pretend to estimate. At all events, that the Liberals are in a state of self-hugging satisfaction I can personally vouch. It may be that the Conservative officials are cultivating the reticence of real strength, that in sparing their breath wasted by their rivals in bold optimism they are really husbanding their strength. Still, the fact remains: the Liberals are confident that the new register will mean a much-improved party position in the rural constituencies.

Farm Stock Sale at Framfield.—Mr. F. H. Baxendale, J.P., Hailwell Farm, Framfield, Sussex, instructed Messrs. Drawbridge and Ansell to dispose of his live and dead farm stock, and the sale took place on Thursday in the presence of a goodly company of buyers. The chief item of the sale was the herd of pedigree Red Polled cattle, and for these there was a good demand at prices up to £26 10s. Cross-bred heifers made up to £14, and Sussex heifers to £20. Of the Southdown flock ten full-mouth ewes sold at 34s. and 32s. 6d. each, ten broken-mouth ewes at 25s. 6d., eight broken-mouth ewes at 20s., ten ewe lambs at 29s. 6d., ten wether lambs at 26s., ten ewe and wether lambs at 26s., and fourteen ewe and wether lambs at 20s.

Midland Notes.

There was an interesting feature at the recent Ashby Show in the form of a Swepstone exhibitor's exact imitations of some of the Continental cheeses which are doing so much to make things harder for the dairy farmer at home. In the present state of the trade there is not much inducement for anybody who can find a steady sale for whole milk to embark on cheese-making, and it may be doubted whether Sir Charles McLaren's plea for a revival of the Leicestershire cheese industry will have much effect. Leicestershire can produce some of the finest cheese in England, but the treatment it meets in the market is discouraging. Why Gruyère and Gorgonzola and Camembert and the rest should be preferred to the fine native makes which are among the best in the world is one of those things which are hard to understand; but so it is, and in the circumstances cheese-making is Leicestershire seems likely to be sacrificed more and more to the milk trade. But what a pity!

Mr. J. E. Farmer may congratulate himself on the success attending the recent dispersion of his Shropshire flock, but there were some regretful faces to be seen at the ring-side. We have had so many similar dispersions in the last year or two—the Mansell sale, for instance, that of Mrs. Barrs's Odstone flock, Mr. Harry Williams's, the Sherlowe sale, Mr. T. Fenn's, and others that will readily occur to mind. The breed has lost another strong supporter, too, in the late Mr. P. L. Mills. Yet, as breeders, one by one, drop out, others are constantly coming forward: the crack flocks are scattered, but in a season or two those they have put in the shade by their successes are found occupying their places and winning just as much of admiration. One could not have more striking testimony to the general evenness and all-round merits of the breed.

As time goes on it becomes increasingly evident that the first optimistic accounts of the corn harvest need some little modification. The *Times* reports, which credits Nottingham with practically a perfect wheat crop, and Staffordshire with one 6 per cent. better still, will not commend themselves as expressing the whole truth to the owners of grain which has been lying out exposed to wet for many days together; and even the well saved crops are showing curious and disappointing variations in yield. In the case of spring corn differences in the date of sowing, which have affected the welfare of the crop right through the season, are enough to account for it; but the wheats looked so uniformly healthy and well ripened, that the irregularity of the threshing results is rather remarkable, and one hears much speculation as to the cause.

Round about North Nottinghamshire, and in other places where it has been tried, the Banner oat, which was introduced into England a few seasons ago, has again proved itself well worth attention. Though it is not yet much known in the Midlands, the Banner seems to thrive here, and its plump, nicely skinned grain is attractive in the market. The Wide Awake, which gave such good results in the Midland Dairy Institute's tests last season, is also well reported upon. So good a cropper ought certainly to be profitable, even though the grain is far from remarkable in quality.

Whatever else may be laid to their charge, Midland farmers have not been slow to recognise the possibilities of co-operation, in which respect they have set a fine example to some other parts of the country. The motor waggon service which has been started in the Teme valley looks like proving a great boon, and, considering the amount of produce to be carried, ought to pay the Great Western Railway Company handsomely, as well as the farmers. Great things are hoped, too, of the new Herefordshire experiment which is on altogether novel lines. If it were only for the grading of the fruit which it is to undertake, the society would more than justify its existence, for when they are attractively and carefully packed, the few tip-top fruits out of a big consignment will often make pretty nearly as much as the whole unassorted lot together. But the packing must be neat and attractive to the eye, and it is here that the Herefordshire and Worcestershire growers so often fail. If the society can also manage to improve the orchards by inducing owners to clear out some of the indifferent varieties and worn-out trees, there will be further cause for gratefulness, but the old difficulty—insecurity of tenure—stands too often in the way of progress in that direction.

September 15, 1905.

THE DAIRY.

Butter-Faking in Manchester.

It seems that butter-faking is being carried on somewhat extensively by the grocery and provision trades in Manchester. The Northern Council of Grocers' Associations have had the matter under consideration, and at a recent meeting serious allegations were made to the effect that certain dealers were using machinery and mixing butter with an article which, while it does not absolutely defy analysis, has given rise to very few prosecutions. It is stated that butter has been seen to go into business premises in certain quantities, and those who witnessed this have been surprised to see it come out in increased bulk.

It is asserted that the Government are aware of this practice, and that they also know that foreign butter is taken in, and beautiful grass butter imported from New Zealand which, owing to its waxiness and freedom from water and the high quality of its constituents, lends itself to this mixture better than any other. It is regarded as a shame and a scandal that while people in this country receive butter in a perfect state from New Zealand it should be manipulated on this side and palmed on the public as being something which it is not. It is also contended that, in addition to butter from New Zealand, Canadian and even English creameries, as well as Danish butter, has been subjected to manipulation with the same article.

At a recent meeting of the Northern Grocers' Council a resolution was passed sincerely regretting that although the Government have full knowledge of the frauds being perpetrated on the public in regard to the sale of butter they failed to pass the Butter Bill last session, and as the passing of the measure is of the highest possible importance to the trade, which almost unanimously desires to sell the genuine article, every effort should be put forth to secure the passing of the Bill in order to put an end to the practice now going on. It is said that the so-called fresh butters are sold at a less price than that for which the grocers can sell Kiel butter.

The Hon. A. E. Fellowes on Railway Rates for Farm Produce.

The President of the Board of Agriculture (the Hon. A. E. Fellowes, M.P.) attended the luncheon held in connection with the show of the Waveney Valley Agricultural Association, held on Tuesday, at Harleston, and in the course of a speech made reference to the subject of railway rates for agricultural produce. He said that he had found, since he had been connected with the Department of Agriculture, that there were an increasing number of complaints as to the exhorbitant rates of the companies, and he had been able during the past few months to come to such an understanding with the great railway companies that, if there was any feeling of dissatisfaction in a district as to the rates, the farmers had only to lay the matter before the Board, and they would talk matters over with representatives of the company, and see if something could be arranged that would be more satisfactory to the farmer.

Some four or five months ago there was a big meeting of farmers—four or five hundred—and the Goods Manager of the Great Eastern Railway Company, and it had done an enormous amount of good, having got rid of the feeling of animosity, which he was afraid had existed between agriculturists and the railway companies. If there was any dissatisfaction in the Harleston district in regard to the railway rates, or anything of the sort, if they would communicate with the Board of Agriculture, they would do their best to arrange a meeting at Harleston between a local deputation of farmers and an official of the company. He thought that was a move in the right direction, and he hoped it would bear fruit in the future, bringing the railway companies and farmers together, to their mutual benefit.

Barnstaple Fair. At this fair on Wednesday the trade for cattle was very poor. Barely 500 head of cattle were driven in, and the average quotations were: Beef, 10s. 6d. to 11s. per score; two to two and a half years old steers, £14; younger ditto, £10 10s.; one and a half to two years old heifers, £10 10s.; barreners, £10 to £13; cows and calves, £13 to £16. Trade in the sheep market was better, but the big prices asked early in the day were not realised, although most of the 2,500 head driven in changed hands later. The majority were breeding ewes in good condition. Best Notts made 40s. to 45s.; mongrels, 36s. to 40s.; horned, 33s. to 36s.; whilst a few fat lambs made 8d. to 8½d. per lb., and fat ewes 6d.

EAST ANGLIAN NOTES.

Blackberries are the cause of the patch-worked appearance of the hedgerows of our Suffolk lanes in the interval of school hours, for the children, with their many-coloured hats and white pinafores, now that the first blackberries have put in an appearance, linger on their way home to meals to gather this delicious fruit of our sunny lanes; while the fields themselves, since the rains, have put on quite a new garb. For example, the clover, which appeared short and brown in the drought that ripened the corn harvest, is now pellicled with green and dotted with pink, while the shrunken turnips are swelling, and the ground is nice and soft for the plough. Where clover seed was sown in spring between the barleys the young growth of fodder has turned the fields of golden stubbles to green, and there where the wheat stubble was dotted over with heaps of manure a fortnight ago the ploughs upturned the rich brown soil, so that the colouring of our landscape is again changed as the season passes.

The stormy character of the past three weeks has done much towards preventing farmers from rushing their thrashed corns on to the market, and it is to be hoped that they will not glut the market when more favourable thrashing weather comes; on the other hand, owners of thrashing machines report that they are overcrowded with orders. The different corn exchanges in East Anglia have been much better attended of late, so the knowledge gained by the farmers may arrest their desire to market the grain at a reduction in price, although many were anxious to get some idea concerning the price maltsters are going to give for their barley. In this connection many complaints are heard of the yield of barley this season, while many samples shown on 'Change last week were thin and hard-looking, although more even in colour than might have been expected so early in the season.

It is sad to record, especially when we remember the splendid harvest weather that we have had this autumn, that in some parts of the Eastern counties corn is *yet* to be seen in the field. And so it is not surprising to learn that at Burton Pedwardine, Lincolnshire, a flock of sheep broke into a field of wheat the other day and ate so freely of the grain that seventeen have died from stomachic distension.

It would be impossible, by reason of the limited space granted to the writer of these "Notes," and the number of agricultural shows and meetings that have taken place during the past week, to do justice to these exhibitions, but one cannot but help noting the fact that there is a distinct revival in British agriculture. Ploughing competitions are takng place this and next month throughout East Anglia, and it is hoped by these means to instil a desire in young men to learn to plough as their ancestors were proud to do. In this connection we hear that the Dunmow District Agricultural Competitions Association is this year to be revived. These competitions have not been carried out since 1840.

Yesterday the seventeenth annual show of the Romford and South Essex Horse Breeders' Association was held at Ingatestone. About £112 was offered in prizes, as well as several silver cups, and the number of entries was well maintained, but it is noteworthy than an improvement is perceptible at this show nearly every year.

A meeting was held at the Lecture Hall, Beccles, on Friday last, with the object of bringing the advantages of co-operation to the notice of those who were not members of the Eastern Counties Farmers' Co-operative Association, Ltd., and to discuss the desirability of forming a local trading committee. Mr. F. W. D. Robinson, J.P., occupied the chair, and was supported by Sir R. P. Beauchamp and Mr. E. J. Cheney, of Brockford Hall, as well as many influential farmers in the district. After an interesting discussion, it was decided to form a local trading committee, and eleven gentlemen were thereupon elected to serve.

September 15, 1905.

Buxton September Fair took place on Monday, when there was the largest attendance known for some years. Prices: Calving cows, up to £22; ditto, heifers, £12 to £15; bulls, year old, £5; two years old, up to £14; fat wethers, 6½d.; ewes, 6d. to 7d.; fat lambs, up to 8¼d. per lb.; store ditto, 20s. to 30s. each. Only a few horses were shown.

From Bucks to Scotland.

SIR,—The harvest is about finished just in this district, but I hear there is a good deal out on and under the Chiltern Hills. I hear of rather disappointing yields of wheat generally, as I expected, for I always thought the wheat crop overestimated. We have had nice rains for the roots and young clovers, but none too much for the pastures, which were got very dry. Work will be well forward, and plenty of rye and vetches can be done at once. Although the late swedes have grown immensely, the root crop cannot be a heavy one.

I have been over a vast tract of country during the past week from here to Norfolk, and thence to Scotland—and although the roots look healthy, there are a good many fields that are patchy and not very heavy, but they say in Norfolk that they have a record crop of mangolds, whilst swedes are vastly improved.

The harvest in Scotland is very much of it to cart; they have had such hindering wet weather for three weeks, which has much improved their root crops, which were previously indifferent. To see the women pitching the sheaves on to the carts in Scotland seems curious to a Southern eye.

The lamb trade, they say, is improving, which stimulated the ram trade at their great sale at Kelso; the quantity shown there is immense, over 900 Oxford Down rams, besides their border, Leicester, and half-breds, which numbered over 1,200. It is a wonderful sight to see the Kelso Fair field, and sales going on at seven rings at the same time; yet the best sheep sold well of all breeds, whilst inferior ones were not wanted, and made but little more than butchers' price. J. T.

Sept. 4, 1905.

The Position in Berkshire.

SIR,—The harvest is now finished, excepting a very few pieces of backward planted barley and oats, and although we have had some heavy rains lately, the greater part was put together in good condition.

Wheat is the best crop of the year, and as thrashing proceeds it proves to be rather above an average both in quantity and quality.

Barley is about an average crop, but it went off rather too quickly during the hot weather in July, and although not a fine quality for malting purposes, it is very heavy.

Oats are a disappointing crop, and are under an average; beans and peas are various, but nearly an average.

Potatoes are turning out well, and there is very little disease. Roots are not so good as expected, mangolds and swedes have done best, but the later turnips did very badly during July, and are a poor crop.

The late rains made the lattermath clover grow very fast, and there will be rather a large quantity saved for feed, but this is a very precarious crop if it should become bad weather.

All kinds of stock have done well, and although trade is not very fast for young cattle, they are selling at moderate prices. Mutton is dear, and sheep are selling well, but pigs are a dull trade.

The wheat markets have gone back, and the average price is considerably less, but we do not hear of a reduction in the price of bread, and yet wheat is heavier and the quality better.

Straw is cheaper and difficult to sell, but hay keeps about the same price. J. L.

Sept. 14, 1905.

Light Crops in Breconshire.

SIR,—The past fortnight has been continuously wet, and a large amount of oats and barley on the highland farms had been severely damaged. Most of the wheat crops in the county were secured before the change in the weather, and a large quantity of oats and barley in the lowest parts of the country was also housed.

Crops generally are very light, especially oats and barley, but the wheat crop is a fair average crop. Grass is very plentiful after the last rain, and the late turnips are very much improved.

Sept. 12, 1905. OWEN PRICE.

Beer—Malt, Hops, and other things.

SIR,—No doubt many of your readers have seen the correspondence going on in a daily paper on the question, "Why is Beer Dwindling?" and, perhaps, some (like myself) have been amused at the subterfuges to which some of the brewers have been driven in their attempts to justify their practices. They argue:

1st. That light beers, such as are now in favour, cannot be brewed from malt and hops alone.—This is effectually proved to be untrue by the fact that the best brewers of such beer do not use substitutes of any kind.

2nd. That malt and hop beer is not so wholesome as that containing glucose, because the process of preparing this article destroys the bacteriological impurities found in malt and hop beer!—The experience of our forefathers, and that of present day consumers of the genuine product of malt and hops, sufficiently refute this ingenious defence of adulteration. But, further, is not beer boiled? and is not boiling well known to be the best means of destroying all disease germs? No bacteria could survive five minutes in the brewing copper. Therefore, the theory of unwholesome malt and hop beer may be dismissed as unworthy of a serious thought.

3rd. That substitutes are not used to any appreciable extent. This does not appear to harmonise entirely with the arguments of the numerous correspondents who have endeavoured to justify their use. In support of his denial, the brewer who says they are not much used gives certain figures which, he says, were obtained from a Parliamentary paper. He does not say what paper, or on what authority the figures are based. Probably your readers do not require much enlightenment on this question, but if they do, they have only to examine a copy of the *Brewers' Journal*, and notice the large number of pages occupied by the advertisements of the manufacturers of substitutes for malt and hops. Are we seriously asked to believe that these manufacturers pay the high rates charged for such advertisements without recouping themselves out of the profits of their business? And how can this be done if such a multitude of them have to divide such a very small amount of trade? Many brewers are ready to declare that they never use anything but malt and hops, and, no doubt, the statement is correct in some cases; but, if so, why their uncompromising opposition to a Pure Beer Bill, which would give legal sanction to their practice, and prevent others from undermining their trade by adulteration? One would have thought they had a larger interest than anybody in giving a kind of Protection to malt and hop beer; but their attitude on this question appears to be utterly inconsistent with their practice.

4th. That chemicals are not generally used in brewing. If so, let me ask why a chemist is found on the staff at so many large breweries? A scientific man must be well paid; and if no chemicals are used, what can he find to do? and why does the brewer pay him a good salary for doing nothing? Nobody would suggest that the brewers are such bad men of business as to throw away money in this fashion. It is another instance of assertion and practice contradicting each other.

Various causes have been suggested for the diminution in the consumption of beer. It may be due to the bad quality of the "stuff" (as it is called by some) sold at the public-houses; or to the scarcity of money compelling people to drink less; or to the spread of temperance principles. Probably all three of these causes have had some effect; but I am not personally concerned about this aspect of the question. I am neither a farmer, a hop grower, a brewer, nor a publican, and I have not the slightest conceivable interest in the beer trade; but I feel very strongly on all points connected with honesty in business, and I am convinced that this trade will never be on a satisfactory footing until the law declares that "beer" shall be the product of malt and hops only, and that no beverage extracted from other materials shall be sold as such. Let people be free to make any kind of drink they like, and let those drink it who choose; but stop the sale of it under a false designation. It is not beer, and should not be sold as beer. M.

Tunbridge Wells, September 13, 1905.

Cheerful Aspects in West Sussex.

SIR,—The weather during the past month has been all we could desire; first a fine time to clear up the harvest, then a week or two of showers, which have made keen prospects much brighter. Wheat thrashes out over an average crop, barley is a good crop where it was sown in good time, oats are very varied, the earliest sowings are good, both in yield and quality, the backwarder sowings are poor.

Work is well forward, the foul stubbles have nearly all been cleared, ploughing and sowing catch crops and winter oats are in full swing, and most farmers will be ready to begin wheat sowing at the proper time; a great contrast to two years ago.

Mangolds are growing fair, and will be a fair crop, swedes and turnips grow very rapidly and have much improved the grass in the pasture, has made another start, and altogether keep prospects for the coming winter are much better than a month ago, and are reflected in the store markets, sheep selling well and a fair inquiry for grazing beast.

Not so many farms as usual are being given up this Michaelmas, and all are let again, which, in my opinion, is one of the best tests of the condition of the farming interest. H. W. D.

September 14, 1905.

Effect of the Continued Wet in South Hampshire.

SIR,—Hay: Seed hay, rye, grass, and clover first year were generally good, two and three years old hardly any. First year's sainfoin very heavy; old leys, nothing on them to cut.

The corn harvest, taking it all round, has been an average one and no more; much of the wheat very good indeed—the crop of the year. Barley where sown early good; but late sowing very bad, the cold, dry May had a prejudicial effect upon vegetation; cereal crops on light land suffered to a greater extent than heavy soil.

Winter oats an average crop, but spring sown irregular, some pieces very good, and some very thin, many acres not more than knee high. I think wheat will be about 20 per cent. above average, barley average, oats 20 per cent. below average. In this neighbourhood harvest was practically finished by August 25, all the corn was ricked in good order. We had some heavy rains in August, but drying winds saved the corn from growing.

Roots were generally backward, but since the early part of August turnips and swedes have done well; but, unfortunately, there are numerous farms to be seen throughout the county where the prospects of a useful crop are very far from rosy. Mangolds are good, but fly was very troublesome, and a good many fields had to be sown twice, and some three times. Indeed, there are many farms where the crop of roots will be particularly light. Owing to recent rains, the country is now better off for keep than at any time during the season.

Sheep and cattle have done well, and prices for sheep and wool are much better. Beef has not been a good trade. Stores were very difficult to buy in the spring, and, I am afraid, beef graziers will not look back on 1905 with any very pleasant feelings. Sheep breeders have had the best of it this year. The much higher price for wool, with a continued fair price for mutton all along, have rendered this department much more agreeable. Lambs have sold, and continue to sell, very well about 3s. above last year.

The continued wet weather has seriously interfered with autumn cultivation, as the land is now too wet for couching and cleaning stubble. I am afraid this will not be the good year everyone expected, and a man who can more than make two ends meet with ordinary farming and average luck, even this year, would succeed in any walk of life. S. T.

September 15, 1905.

North Herefordshire.

SIR,—In this district the crops of wheat and barley are good, above an average where the land is properly looked after, but on some farms it's the average, and crops bad and full of weeds, which rob the soil and crops of the moisture and the manure. That the crop should feel the benefit of oats are the worst crop of the year, and this neglect applies to the root crop. I see some that were planted a second time, and are good when cleaned, and those that are neglected are bad and spoiled before anything is done at them.

The hops are a heavy crop, plenty that will produce a ton to the acre, and every little hopyard seems full of hops, but the price will be very low, and cause acres to be done away with, probably though thi swould be unfortunate on account of the quantity of labour employed in the growth of hops. All kinds of stock are healthy, and the sheep are selling well, but cattle, both fat and stores, are low in price.

Our pasture are a good bite at present, but the feeding stock will soon require a little help.

The fruit of all kinds are not half a crop.

September 15, 1905. H. W.

Carmarthen.

SIR,—Serious weather, rain every day for more than three weeks, and our corn in many places spoiling. There is much not cut, and what is

cut and bound, and put in pin field mows, are blown about by the wind and storms and is wet. Very few have cut all in this county, and little has been carried. Labourers are scarce, for every half-day that is fine they are wanted in many places. The crops are good, and the yield found by the little that has been thrashed, to be fairly good.

The fine and warm weather we had in June and July filled the ears well, and are full and plump, and is a pity to see it growing and rotting.

Potatoes are a good crop, slightly diseased now with this rain, and green crops are improving. Fruit are a failure; few apples or pears this year after heavy crop last year; stone fruit are also scarce.

Grass is plentiful, and cattle are looking well, but meet a slow sale at our fairs, as the Canadian store and fat cattle are allowed to enter our ports free, and will lessen the price of our cattle. Our best fat cattle fetch 6d. per lb., and inferious 4d. to 5d. per lb. Two-year-old from £9 to £11 each, and yearling from £5 to £8, according to size and quality. Our sheep sell better, and wool is advancing. D. P.

September 15, 1905.

Foreign Crop Prospects.

FRANCE.—The fact that harvesting is now completed in France still leaves the question of yield undetermined, the situation being complicated by the irregular quality shown in the threshings, departments hitherto sending in faultless quality now giving samples leaving considerable to be desired. The wet weather which has of late interfered with harvesting operations has by way of compensation thoroughly saturated the soil and put it in excellent condition for beginning autumn work.

HOLLAND AND BELGIUM.—Threshing returns are not yielding satisfactory results in quality at any rate, and it is clear that during the later stages the grain crops suffered from too much rain.

GERMANY.—Reports, while conflicting to some extent, are on the whole unfavourable so far as the ungathered balance of the crops is concerned. weather conditions ruling adverse in nearly all parts of the Empire. The rainfall in some parts has been so persistent that the root crops are suffering.

AUSTRIA-HUNGARY.—The weather has been favourable for vegetables, pasture lands, and feeding stuffs, but complaints are prevalent of the unsatisfactory quality of the new wheat coming into sight. In some quarters also the outturn in quantity is disappointing, and as a whole results are short of early expectations.

ITALY.—Conditions have not undergone any change of moment, and except in the North, where the yield is deficient and lacking in quality, results are regarded as quite satisfactory in both wheat and maize.

RUSSIA.—The estimates of the Central Committee fix the yield of wheat in 72 governments at 66,675,000 qrs., against 82,817,720 qrs. last year; of rye at 78,000,000 qrs., against 117,280,000 qrs.; of barley at 34,110,000 qrs., against 41,148,000 qrs.; and of maize at 5,775,000 qrs., against 3,031,950 qrs. A still later estimate published in the *Gazette of Trade and Industry*, of a semi-official character, but for only sixty-four provinces gives wheat 55,625,000 qrs.; winter rye, 69,000,000 qrs.; oats, 75,197,000 qrs.; and barley 32,220,000 qrs. These, while still leaving siderable to conjecture, seem to determine that while wheat is about an average crop, others are short.

ROUMANIA.—Now that harvest results can be fairly estimated it is seen that they have not realised early expectations. The wheat outturn, while sufficient in quantity is lacking in quality, while maize, owing to the damage done by prolonged drought, will hardly average 55 per. cent. of an average crop. In many districts the crop is an entire failure. It is reported that the rape harvest has been entirely sold, and there is a free outward movement of wheat at satisfactory prices.

UNITED STATES.—The Washington Agricultural Bureau in its September report gives the condition of Spring wheat at 87.5, about 2 points down from the August report, against 66.2 September last year: of maize, 89.5 against 89.0 last month, and 84.6 last year, and of oats 90.3 against 90.8 and 85.6. The New York Produce Exchange statistician on the foregoing basis calculates the following yields: Spring wheat 280,047,000 bushels, maize 2,716,918,000 bushels, and oats 930,317,000 bushels. His estimate of winter and Spring wheat combined is 704,447,000 bushels, against 552,400,000 bushels for last harvest. Mr. Snow, of Chicago, estimates the total wheat crop at 740,000,000 bushels. These estimates have only once been exceeded by actual views, viz., in 1901, when the crop reached 759,062,000 bushels. No gathered crop of maize has ever been as large as the foregoing estimate.

ARGENTINA.—Our cable from Buenos Aires this morning says that advices from the interior regarding the crop situation could hardly be better so far as weather conditions are concerned, while so far no damage of any moment has been done by locusts.

CANADA.—Advices coming to hand lose nothing in optimism, and they are so uniform that it is difficult to avoid the conviction that they are entirely trustworthy. Estimates up to 100,000,000 bushels are now appearing, with a general disposition to accept 90,000,000 bushels as by no means extravagant.

INDIA.—The much needed rains have fallen in the drought affected districts, and although too late to prevent bad effects, they have entirely removed fears of famine, and general prospects have been materially brightened. It may not yet be too late in the Punjaub and Rajputana to insure some food grain crops.

AUSTRALIA.—The latest mail advices from our Sydney correspondent predict that with continued favourable weather another record yield of wheat is likely, prospects being of a glowing character. Cable reports received this week confirm the foregoing, saying that owing to the copious rainfall, harvest prospects are exceptionally good, and the pastoral outlook very promising.—*Dornbusch*, (September 15).

Cheap Model Cottage Awards.

The *County Gentleman* has issued the following list of prize winners in the Cheap Cottages Exhibition now being held at Letchworth, Herts:—

Class 1.—One cottage to cost not more than £150: First prize, £100, Messrs. Green Brothers, Whittington, near Chesterfield, architect, Percy Houfton, Chesterfield; second, £50, Messrs. Bennett and Bidwell, Letchworth; third, £25, Messrs. Potter and Co., London.

Class 2.—For the best pair of five-roomed cottages, including scullery or kitchen scullery, erected at a cost not to exceed £300: First, £50, Messrs. Potter and Company, London; second, £30, A. H. Clough, Burley Ringwood; third, £20, The Co-Partnership Tenants Housing Council, London.

Class 3. For the best group of three of four cottages, no one cottage to contain more than six rooms, including scullery, and erected at a cost not to exceed £35 per room. A prize of £25 is awarded to Geoffrey Lucas, A.R.I.B.A., of London, and Hitchin, Herts.

Class 4.—For the best detached cottage or pair of cottages, each containing not more than six rooms, including scullery, and erected at a cost not to exceed £35 per room: A prize of £100 is awarded to A. Randall Wells, of Hastings.

Prize of £100 offered by anonymous donor for the cheapest cottage for value: A. H. Clough, of Burley Ringwood.

Prizes for wooden cottages: First, £50, F. W. Troup, London; second, £25, Messrs. Smith and Brewer, London, two designs.

Prizes for best designs of cottages, etc., on same lines: Class 1: First, £10, Messrs. Bennett and Bidwell, Letchworth; second, £5, W. A. T. Carter, Wimbledon. Class 2: First, £10, W. R. Mosley, Slough; second, £5, W. Marshall, Hatfield. Class 3: First, £10, L. F. Crane, London. Class 4, £10, G. Lucas.

The special prize of £10 offered by Mr. H. G. Elwes, F.R.S., for best design and specification of a wooden cottage to be constructed entirely of English timber, has been awarded for a design submitted conjointly by Mr. Ditmar Blow, King's Bench Walk, London, and Mr. Ernest Gimson, of Sapperton, Glos.

Good Cider from Poor Apples.

We are officially informed that the Committee of Governors of the National Fruit and Cider Institute have decided this season to carry out a series of experiments to determine how far apples, which are known ordinarily to produce very poor cider, can be made to yield an improved cider by careful and scientific treatment of the juice, i.e., how to obtain the best results from inferior fruit, and try to discover wherein lies the difficulty of converting the juice of such fruit into good cider.

The committee will be prepared to receive from any grower of such apples a quantity of not less than half a ton for such experiments, and will be willing either to pay a reasonable price for the apples, or to return the cider to the grower on payment of such a sum as would partly compensate them for the expense of making the cider. The committee will be glad to receive offers of such apples from bona fide cider makers, and letters should be addressed to the National Fruit and Cider Institute, Long Ashton, Bristol.

A profitable undertaking of the Tonbridge Board of Guardians is pig-keeping at the workhouse. During the past year a profit of £250 has been derived from this source. The pigs, which are bought when young, are practically no expense, eating the waste from the establishment. They are afterwards killed, and received into the workhouse stores.

MILLING.

Flour still maintains a quiet tone, but, if anything, prices are more firm. There has been little doing in forward selling, but bakers are taking deliveries of old contracts, so that most mills are kept fairly clear. It is said that a great deal less flour was sold at the Bakers' Exhibition than has been the case during recent years.

In many parts offals are making more money, and as oil-cake and other feeding stuffs of the kind are comparatively dear millers should do well in these products.

English wheat varies a great deal in quality. Some which was harvested early is in very fine condition and gives great satisfaction. Other samples, however, are a bit "off," and it is necessary to make purchases with caution. A good deal needs conditioning, and in many cases it is only safe to put a small portion in the grist. In fact, few millers have yet found out the amount which it is safe to use without seriously lowering the strength of the flour. Matters will improve, however, as time goes on. The same wheats are available on British markets as has been the case for some time:—Manitoba, of lower grades, Indians, Red Winter, Russian, Plate, and Australian. Where White English can be obtained, there is no need to pay a fancy price for the last-named, and a good mixture should be made with a little Manitoba, Russian, if clean and of good quality, Plate, and a little Red and White English.

Scottish Chamber of Agriculture.

At a meeting of the Directors of the Scottish Chamber of Agriculture, held on Wednesday, a letter was submitted from Sir T. Elliott, K.C.B., Secretary to the Board of Agriculture, in reply to an inquiry by the Directors of the Chamber, intimating that the Departmental Committee on Abortion understand that their reference extends to any form of abortion in cattle or other live stock sufficiently widespread to raise the possibility of contagion, an interpretation in which the Board of Agriculture fully concur. It was remitted to the Chairman's Committee to arrange about leading evidence before that Committee, and also before the Departmental Committee on Small Holdings. Mr. Hutcheson, Beechwood, reported, on behalf of a Sub-committee in connection with the forthcoming conferences with the President of the Board of Agriculture, that sufficient contributions have been received to enable the Chamber to entertain the Directors and delegates from associated societies to luncheon, and that the halls of the West United Free Church, Perth, have been placed at the disposal of the Directors for the conferences. The programmes both for the forenoon and afternoon conferences to be held on 27th prox., and also for the luncheon, were adjusted, and include resolutions on the following, among other subjects, namely:—

Sheep-dipping regulations, motor-car restrictions, use of studs in the wheels of traction engines, the Dogs Regulation Bill, the Butter Bill, the Fertilisers and Feeding Stuffs Act, the amendment of the Ground Game Act, the sale of poisonous compounds for agricultural and horticultural purposes, model regulations regarding dairies, etc., the amendment of the Workmen's Compensation Act.

It is anticipated that, in addition to the President of the Board of Agriculture, Sir Thomas Elliott, the Secretary to the Board of Agriculture, and also Lord Mansfield, Mr. Dewar, M.P., Mr. Buchanan, M.P., and others will be present and take part. Mr. John Stroyan, M.P., as honorary president of the Chamber, will preside at the afternoon conference and at dinner.

Mr. Thomas Blossom Oliver, of Fir Tree House, Spaldrington, near Howden, a well-known East Riding farmer and stock breeder, died in a nursing home at Hull on Wednesday. Mr. Oliver, who was 54 years of age, farmed a large acreage in Yorkshire and Nottinghamshire. He was the guardian of the poor and rural district councillor at Howden for many years, and on highways was an authority of some repute.

The Irish Potato Crop.—In view of recent alarming statements about the condition of the Irish potato crop, the Irish "Farmers' Gazette" has obtained reports on the subject from trustworthy correspondents in the various western counties. These reports show not only that the rumours of a potato famine on a large scale are entirely without foundation, but that there is every prospect of an uncommonly good harvest. The general tendency of the various reports is to show that, except in very low-lying districts, and in places where spraying is still neglected, the Irish potato crop of 1905 will compare very favourably with those of recent years.

Harvest Weather.

1, Essex Street, Strand, Monday, September 18th, 1905.

SPECIAL THREE-DAY FORECAST. GENERAL PREDICTION.

The general distribution of barometric pressure may be described as a belt of fair anti-cyclone over the British Isles between two cyclonic belts, one between Iceland and Norway, and the other over France and the Mediterranean. Just now the anti-cyclonic belt is narrowing, and temporary showers are probable later over Scotland and Northern England and along our Southern borders. After this the belt will probably expand, and give another fair spell over most of the area. The temperature will be cool over the East and South, and about normal over the West and North. The winds will be chiefly Easterly and fresh in the South, and Westerly and moderate in the North. As the conditions vary considerably locally, it will be better to refer to the Local Predictions for more definite information.

LOCAL PREDICTIONS.

No 1.—Scotland:—At first, W. to S.W. moderate winds, fair to cloudy, and some showers, chiefly over the Western borders; later, mostly fair with variable to N.W. winds.

,, 2.—England (N.E.) and part of Scotland:—Peebles, Selkirk, Durham, Lincoln, Northumberland, Roxburgh, Yorkshire, (N. & E. Ridings).—**At first, mostly fair with S.W. to variable freshening winds; later, some temporary coastal showers, and then fairer with E. to N.W. winds.**

,, 3—England (East):—Bedford, Cambridge, Essex, Hertfordshire, Huntingdonshire, Norfolk.—**At first, E. by N.E. fresh to strong winds, fair to cloudy; later, some showers; finally fairer. Temperature cool.**

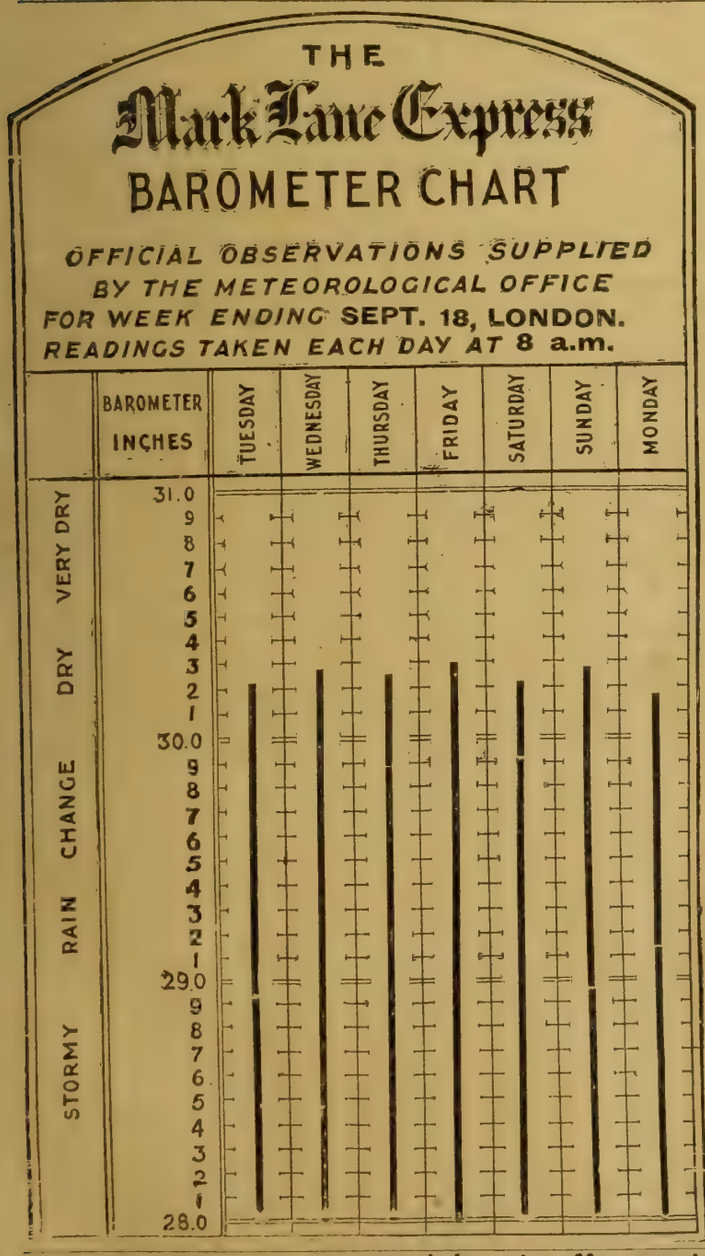
,, 4—Midland Counties:—Buckingham, Derby, Gloucester (part), Hereford, Leicester, Northampton, Nottinghamshire, Oxford, Rutland, Shropshire, Stafford, Warwick, Worcestershire, Yorkshire (West Riding).—**At first, E. or N.E. fresh or strong winds, mostly fair and cool; later, some temporary light showers in the Eastern section; finally, fairer with wind tending to shift to N.W. and W.**

No. 5.—England (South):—Middlesex, Berkshire, Kent, Surrey, Sussex, Wiltshire, Channel Islands, Hampshire. The same as No. 4.

,, 6.—Ireland.—**At first S.W. winds moderate. Some rain, chiefly in the West and North; fair in the South and East. Later, fairer generally. Wind Easterly to Northerly in the South and North-Westerly in the North.**

,, 7.—England (North-West) and North Wales. Cheshire, Lancashire, Westmorland, Anglesey, Carnarvon, Denbigh, Flint, Merioneth, Montgomery.—**At first, Easterly or South-Easterly fresh winds, fair to cloudy. Later some temporary light showers. Finally fairer with N.W. winds. Temperature about normal.**

,, 8.—England (South-West) and South Wales:—Brecon, Cardigan, Carmarthen, Glamorgan, Pembroke, Radnor, Cornwall, Devon, Gloucester (part), Monmouth, Somerset.—**Mostly fair throughout with a chance of some temporary light showers after after the first day; wind E.'ly to N.'ly and W.'ly; fresh or strong to moderate. Temperature cool.**



Map of the British Isles showing groups of Counties representing the above Meteorological Districts.

THE SUN AND MOON.

Sun Rises	...	5.40 a.m.
,, Sets...	...	6.[illegible] p.m.
Moon Rises	...	8.27 p.m.
,, Sets	...	10.11 p.m.

Age of Moon—Twenty days.

One-Day Forecast prepared by the Meteorological Office at 11 a.m. on Monday, Sept. 18th.

GENERAL INFERENCE.—The anticyclone appears to be gradually moving eastwards or north-eastwards, while our Islands are coming under the influence of two low pressure systems—one over France and the other off our north-west coasts. Less settled weather is probable shortly, but to-day it will be fair in most places.

SCOTLAND, N.—Southerly and South Westerly winds, freshening; dull, some rain.

SCOTLAND, E.; ENGLAND, N.E.—Rather variable winds; cloudy or dull; fair to day; some rain to-morrow.

ENGLAND, E.—Same as England, S.

MIDLAND COUNTIES.—Light winds, mainly Easterly; cloudy or overcast; moderate temperature.

ENGLAND, S. (London and Channel).—Easterly or North-Easterly winds, fresh or strong in places; fair, then unsettled, with some rain; moderate temperature.

SCOTLAND, W.—Same as Scotland, N.

ENGLAND, N.W. (and N. Wales).—Same as Scotland, E.

ENGLAND, S.W. (and S. Wales).—Same as England, S.

IRELAND, N. & S.—Southerly and South-Westerly winds, freshening; cloudy or overcast, some rain; moderate temperature.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Very poor attendance. Wheat, both English and foreign, steadily held at Monday's rates, but demand very limited. South Russian quoted at 31s to 35s; No. 2 Club Calcutta, 31s 6d; No. 3 Northern Manitoba, at 33s 6d. Flour quiet, unchanged. Maize steady at late rates. Mixed American ex ship quoted at 23s 4½d, and River Plate landed at 23s 6d. Barley firm to the turn in sellers' favour. Odessa Nico ex ship to arrive quoted at 18s 4½d to 18s 6d, and ex quay at 19s. Oats firmer. Small business passing at 1½d to 3d advance. Common sorts quoted 14s 3d to 14s 6d.

Mark Lane, Friday.—Though the tone of the market was a little better shaped, and business gradually broadens, complacency was once more the general order of things at the London Corn Exchange, rises and falls being well divided at present. The market for oats was even more pronounced, and flat maize responded since Wednesday, barley being well held; otherwise no particular changes have occurred on the week to alter the price list. Supplies of new English wheat, so far, are by no means large, threshings being still impeded by recent unsettled weather. Meanwhile millers remain sufficiently stocked, and only buy for actual requirements. Quotations unaltered, whites, delivered up, ranging at 29s to 32s, and reds 28s 6d to 31s per qr., 504lb., according to sample. Imported descriptions dull, but in holders' favour. No. 3 Northern Manitoba 33s ex ship, 33s 6d ex quay. No. 2 Club Calcutta 31s 6d ex store, and scarcely offered, as there is so little expected for some months ahead. Australian and New Zealand remain neglected, the former being named at 33s, and latter at 29s to 32s, according to sample, both ex store, 496lb. Good to fine South Russian ex granary 31s 6d to 34s 6d. Plate nominal. American flour remains scarce on spot, but consumers were again indifferent. Operators are waiting for the first arrivals of spring, due in about two months. Flat maize 3d firmer since Wednesday, round corn being at a similar decline. Mixed American 23s 3d ex ship, 24s ex quay. Plate 23s, 23s 6d landed, subject to sample.

COUNTRY.

Ashford, Tuesday.—Wheat trade improved, and sales made at 27s to 29s, or perhaps 30s. English malting barley met a poor demand, and new samples made 26s to 28s per quarter. New oats rose 1s, and made 16s to 19s. New beans were comparatively cheap. Mazagins made 28s to 29s; and ticks, 31s to 33s. New peas rose 1s, and were quoted at 29s to 30s. Maize firm at 26s to 28s; and foreign barley unchanged at 21s to 22s.

Banbury, Thursday.—Wheat, red, new, 27s to 28s; barley, 23s to 30s; beans, new, 29s to 30s; ditto old, 31s to 32s; oats, 16s to 18s; ditto old, 20s to 23s; peas, 29s to 31s per qr.

Berwick, Saturday.—Good attendance. Larger supplies of grain. Prices for all qualities of barley remain unchanged. Oats scarce. Wheat made 28s to 30s; new oats, 19s to 20s 6d; barley, 23s 6d to 29s per qr.

Birmingham, Thursday.—There was a good attendance at this market, but trade generally was quiet, buyers being very scarce. Foreign wheats met with a poor demand at the following quotations:—Russians, 31s 6d to 33s per qr. (496lb.); Indians, 30s 6d to 31s; River Plates, 31s to 32s per qr., all at Sharpness. Both flat and Plate maize were unchanged in value, as also was grinding barley. There was a good supply of English wheats, which made from 28s to 30s 6d per qr. (496lb.) delivered. Oats, 17s 3d to 18s per 312lb.; beans, 12s 6d per bag (196lb.) delivered.

Brighton, Thursday.—Quiet trade, and small attendance. New white wheat, 29s to 31s 6d; new red ditto, 28s to 30s; barley, 28s to 35s; grinding ditto, 21s to 23s; oats, English, 15s to 18s; rye, 23s to 24s; peas, 30s to 31s; beans, 30s to 31s.

Bristol, Thursday. — Trade remains quiet. English wheat remains unchanged, not so much offering on to-day's market. Foreign wheats, 3d to 6d dearer. Barley, 3d dearer. Maize and oats unchanged. More inquiry for flour at recent rates. GRACE BROTHERS.

Bury St. Edmunds, Wednesday.—Wheat was in fair average supply, with a steady demand, and no quotable change in values on the week. Reds, 27s to 28s 6d; whites, 27s to 29s; revets, 27s to 28s per qr. Barley: There was more offering, and buying has fairly commenced, although maltsters will hardly begin wetting until we get colder weather. The demand for medium grades was fairly healthy but at only the moderate prices of 25s to 31s per qr. The buyers of better class stuff were operating at 31s to 34s per qr. the latter price appearing to be their limit. A sample of exceptional quality, however, attracted some attention, and was ultimately sold at the satisfactory price of 36s per qr. Oats meet a steady demand at late rates of 16s to 17s 6d per qr. Beans also firm at 28s to 29s per 36 stones.

Worksop, Wednesday. Reduced attendance. Rather larger show of new grain in very fair condition. Last week's prices were fully maintained. Quotations:—White wheat, 27s 6d to 28s 6d; red ditto, 27s to 28s. A very indifferent show of barleys, a few malting samples, mostly of moderate quality, being shewn, and quoted at 27s to 30s per qr.; feeding barleys made 24s to 25s; oats, black, 15s to 16s 6d, white ditto, 16s to 18s; maize, flat, 26s; ditto round, 27s to 28s per qr.; bran, £4 10s to £5 1s; fine sharps, £5 to £6 10s; barley meal, £6 to £6 10s per ton.

Cambridge, Saturday.—Rather less wheat and more barley shown. Wheat sold steadily at last Saturday's rates. Barley was more in evidence, and prices showed very little change on the week. Beans and oats quite firm in value. Wheat: Reds, 27s to 28s, and white up to 29s per 504lb.

Canterbury, Saturday.—Steady trade in wheat, 65lb samples ranging up to 31s. English oats continue dearer. Milling lots making 16s 9d, and 45lb samples up to 19s. Barley plentiful, but little inquiry yet.

Carlisle, Saturday.—Large supply of oats in our market to-day, good demand at last week's prices. New, 14s to 15s 6d per 336lb.; old, 22s 3d to 24s per 336lb.—Thomas Robinson.

Chester, Saturday.—Small attendance. English grain in moderate supply. Wheat nothing doing, but best samples would be firmer. Indian corn in fair demand at last week's rates. Quotations:—Wheat, white, 4s 5d to 4s 5½d, red, 4s 4d to 4s 6d per 75lb; barley, grinding, 4s to 4s 2d per 60lb, 5 qrs. sold 4s 3d to 4s per 60lb; oats, new, 3s 6d to 3s 8d, old 3s 9d to 3s 10d per 45lb; Indian corn, 3s 6d to 3s 7d per 480lb.

Chichester, Wednesday.—Good attendance and trade quiet. Wheat in small supply, but not a large quantity offered. New white wheat 28s 6d to 29s 6d, new red 28s 6d to 29s, grinding barley 25s 6d to 26s 6d; [illegible] 24s to 25s, peas, 28s to 29s; beans, 31s to 32s; tares, 6s 6d to 7s 6d; maize, 25s 6d to 25s 6d.

Colchester, Saturday.—With a moderate supply of wheat the tendency was to firmness, and the full prices of last week were readily obtainable. More barley offering, best samples sold readily, but the lower qualitites were a dull sale. Beans and peas scarce and inquired for. Oats sold readily at full prices.—JOSEPH WILES AND SON, LTD.

Coventry, Friday. Small supply; spring corn very scarce, and prices about the same as last week. Quotations:—Wheat, old, 11s 6d to 12s per 186lb.; new, 10s 6d to 11s 3d per 186lb.; barley, 29s to 33s per 448lb.; oats, old, 25s to 25s per 352lb.; new, 18s 6d to 20s per 352lb.; beans, 12s 6d to 13s per 196lb.; peas, 11s 6d to 14s per 196lb.

Derby, Friday.—New wheat firm at last week's full rates; spring corn unchanged. New white wheat, 28s to 29s; red, 27s to 28s; malting barley, 24s to 28s; old beans, 33s to 34s; new, 30s to 31s; old oats, 23s to 24s; new, 17s to 18s.

Devizes, Thursday.—There was a small quantity of new corn at market to-day, and the prices show no alteration in value. The following were the quotations:—Best old wheat, 16s to 17s 6d; secondary ditto, 13s 6d to 14s 6d; new wheat, 14s 6d to 15s 6d; best barley, 26s to 32s; secondary, 20s to 24s; rye, 22s to 24s; old black oats, 21s to 23s; white ditto, 20s to 23s; malting barley, 26s to 32s; beans, 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday.—Fair supply of English wheat, and prices firm at 10s to 11s per load. Foreign was also firm at late rates. Only a small supply of oats, and last week's prices repeated. Maize made 3d per qr. less. Other things unchanged.

Dorchester, Saturday.—The corn market was largely attended to-day, supplies of wheat being scarcely as large as previous markets; a firm trade pervaded, business at unchanged rates, and foreign was equally firmly held. Malting barley included some very good samples, for which there was a fairly brisk sale at late values, whilst grinding showed a rise of 3d to 6d per qr. All kinds of feeding stuffs tending to higher values.

Dublin, Friday.—Wheat, 15s to 18s; malting barley, 15s to 15s 6d; grinding ditto, 13s 6d to 14s 6d; malt, 18s 6d to 20s; oats, 10s to 13s 3d; oatmeal, extra pinhead, 12s 6d to 14s 6d; pollard and bran, 6s 4d to 6s 6d.

Exeter, Friday.—Good attendance; trade fairly brisk. English wheat plentiful, best sorts 3s 3d to 3s 6d. English barley ruled about 3s 6d for good quality. Grinding barley 3d dearer. Maize unchanged. Oats rather firmer. Flour steady. English wheat, 3s 3d to 3s 6d; English barley, 3s 6d to 4s; superfine flour, 25s to 28s; fine, 23s to 25s.

Glasgow, Friday.—Wheat firm, and the turn against buyers, who, however, refuse to follow. Flour a slow sale at late rates. Mixed American maize dull at 13s 7½d to 13s 9d and round 14s per 280lb. Foreign oats and barley held for 3d advance. Home oats slow. Medium bran steady at 82s 6d per ton; broad qualities 10s more. Market closed on Monday next.

Glasgow, Wednesday.—There was the usual attendance at our Corn Exchange to-day. Wheat and flour quiet, with slow sale. Maize, 3d per boll cheaper on the week. Beans and peas quiet and unchanged. Oats (Scotch), 3d to 6d per boll down on the week. Oatmeal, 6d per sack cheaper since Wednesday. Other articles unchanged.—GIBSON AND CLARK.

Gloucester, Saturday.—English wheat rather more freely offered, and prices favour buyers. Foreign firmly held, and occasionally 3d dearer. Grinding barley strong at 3d advance. Maize unaltered. Oats held for 3d more money.—WAIT, JAMES AND CO.

Grantham, Saturday. — A large attendance, and business generally was of a brisk description. Wheat was in fair supply, dry samples making fully last week's prices, 27s to 29s per qr.; samples out of condition easier in price. Barley was also a fair representation, making 25s to 33s per qr. Beans sold at 30s to 32s; blue peas, 35s to 45s; and oats, 17s to 19s per qr.

Hereford, Wednesday.—Attendance moderate. Wheats in plentiful supply, but buyers were not eager, and values showed a tendency to flag, especially for the lower grades. A few samples of English barleys were on offer, but the condition was generally unsatisfactory. Oats in fair supply. Trade slow at recent rates. Beans same as last week. Wholesale quotations:—Wheat, 3s 3d to 3s 6d per 62lb.; barley, 2s 9d to 3s 9d per 56lb.; oats, old, 2s 6d to 3s per 40lb; new, 2s to 2s 6d per 40lb; beans, old, 4s to 4s 6d per 65 1-3lb; new, 3s 6d to 3s 9d per 65 1-3lb; vetches, 5s 6d to 6s 6d per 65 1-3lb.

Ipswich, Tuesday.—Wheat was in fair supply and a steady demand, at last week's prices, of 28s to 29s 6d per 504lbs, delivered at Ipswich. There was a small supply of malting barley, generally in good condition, but often rather small in the grain, especially from the lighter lands. Most of the business was done at prices varying from 25s to 31s per quarter, but a few finer parcels changed hands at 32s to 33s per quarter. Oats steady, at 16s. to 17s 6d per quarter. Beans steady, at 29s to 29s 6d per quarter. Indian corn, including lentils, gram, and green peas, were 6d per quarter better. Maize the turn easier; flat at 24s, and Plate at 23s 6d to 24s per quarter. Linseed cakes were 5s per ton dearer. Cotton cakes firm. Other feeding stuffs firm, with bran £4 15s to £5 per ton.

Leeds, Tuesday. — The wheat trade has ruled firm throughout the past week, the tendency of prices being slightly in sellers' favour, and although the demand has been far from active, a fair business has passed in all approved qualities, values of English depending largely on the condition. Indians slightly easier on reported rains. Malting barley meets some inquiry, but prices can scarcely be quoted yet. Spot maize, 9d lower. Other articles unchanged. DUNNS AND CO.

Leicester, Saturday. Good attendance of buyers and dealers, with larger supplies of home-grown wheat, which met a ready sale at firm rates. Red wheat made 28s to 29s, and white wheat 29s to 31s per 36 stones; barley steady at 25s to 34s per 32 stones; new oats, 18s to 20s, and old oats 24s to 25s per 26 stones; flour, 24s 6d to 28s 6d per 280 lb.

Lincoln, Friday. There was a fair show of English wheat in tolerably good condition, and selling readily at last week's prices. Not enough doing in barleys to test prices. Oats a small show and firm trade.

Liverpool, Friday.—Wheat: The market has had a fair attendance, and wheat meets more demand, red sorts being the turn dearer but Indian is 3d lower. Flour in rather better demand for foreign, but home-milled brands rule quiet; no change is quoted in values of either. Maize: Mixed meets a better demand, but prices are 3d below last Tuesday. Plate is quiet at 3d decline. European sorts are very dull and occasionally 1d dearer. Barley: Malting firm, but quiet at quotations; feeding steady without change. Beans continue strong, and again 3d dearer. Peas in rather better demand, and held occasionally rather firmer. Oats: Foreign move steadily at recent currencies, but English are in fair demand and more steadily held at the quotations. Oatmeal firm, but inactive. Oilcake in fair demand for English cottonseed cakes; foreign makes quiet, but no change of moment is quoted in prices.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—The wheat trade to-day was without alteration from last week, the tone is firm, but no rise in prices. Barley is in good request for really good samples, which are not plentiful. Oats held up well, as the English are not abundant, and corn from London is dearer than of late. Not any change in the cost of other grain.

Manchester, Thursday.—Again a rather scanty attendance at to-day's weekly market. English wheat had an upward tendency, but ruled unchanged on the week; foreign wheat slightly dearer for most sorts; Australian about 1d per cental higher. Flour slow and unchanged. Indian corn in buyers' favour; American mixed 1d and Plate occasionally 1d lower. English oats in small supply, and dearer at 4s 2d to 4s 6d here; foreign firmer. Barley, foreign, unchanged. Peas easier. Beans unchanged. Bran and thirds quietly steady.

Newark, Wednesday.—Wheat varied in condition, and sold slowly at last week's prices. Barley in increased supply, but prices were irregular. Oats supported previous prices. Beans rather less money. Wheat, 27s to 28s. Malting baley, 25s to 28s. Oats, 16s to 18s. Beans, 23s to 31s per qr.

Newcastle-on-Tyne, Saturday.—Fine qualities of wheats was held firmly at last week's prices. Maize steady at last week's quotations, for mixed American; Plate easier; beans favouring buyers; peas unchanged; the trade for barley was irregular, and prices ranged from 23s 6d to 27s, according to qualities; old oats firm; new samples in the favour of buyers.—JOSEPH POLLARD AND CO.

Northampton, Saturday.—There was a larger attendance, but supplies were moderate. There was little more inquiry for barley, but no material change in prices. New wheat, 27s to 28s; malting barley, 26s to 32s; barley, 24s to 26s; new white oats, 17s to 18s; new black oats, 16s to 17s; beans, 28s to 30s; peas, 27s to 28s; flour, 24s 6d to 28s 6d.

Norwich, Saturday.—There was a good supply of wheat at our market to-day, with a firm trade at late rates. Barley was in fair supply, with a slow trade, prices very various. The weather has been fine and bright during the past week. Wheat, red, 28s to 29s per qr., weight 63lb. per imperial bushel. Corn inspector's return for the week ending September 11, 1905: Wheat, 2,251, 27s 1½d; barley, 1,346, 22s 10d.—J. ARTHUR MILLS.

Nottingham, Saturday.—Wheat in good supply, condition of some parcels not good; a fair business passed at about 6d per qr. decline. Barley: A few samples of the new crop offering of varying qualities; values not fixed. Oats were held for firm rates; beans the same. —ROBT. HUBBLE.

Reading, Saturday.—The attendance and the supply were rather on the small side, and business was somewhat slack. Last week's prices were maintained. Wheat, 28s to 31s; new barley, 24s to 30s; old barley, 21s to 24s; new oats, 16s to 19s; old oats, 18s 6d to 22s 6d; flour, 21s to 23s 6d.

Retford, Saturday.—Only a small supply of wheat, the samples being generally in good condition. Demand improved, especially as there is already the commencement of an inquiry for seed, and currencies were slightly stiffened, being 27s to 28s per qr. More malting barley on offer, but the demand was not great. A fair amount of business was transacted, the best lots making 28s to 31s; secondary, 25s to 27s per qr. Shortage of oats and moderate trade at 16s to 17s for white, and 15s 6d to 16s 6d for black. Round maize, 26s per 34 stones; no flat maize on offer; rye, 19s to 20s per 34 stones; new English beans, 23s 6d to 30s 6d per 38 stones.

Shrewsbury, Saturday.—Wheat, 14s to 14s 6d; new wheat, 12s to 12s 9d; old white oats, 16s to 17s; new oats, 11s 6d to 12s 6d per 225lb. Peas, 11s 6d to 12s 6d. Beans, 13s. to 14s. per 240lb.

Sunderland, Saturday.—Little grain on offer at this day's market. Wheat rather lower to sell. Barley and oats quiet. Arrivals, nil.—E. AND F. RICHARDSON.

Tunbridge, Friday.—New white wheat, 28s 6d to 29s; new red ditto, 28s to 28s 6d; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 16s to 19s; rye, 23s to 24s; peas, 31s to 36s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 28s.

Plymouth, Thursday.—There was only a fair attendance on our market to-day, owing to Kingsbridge Show. Wheat firm. Barley 6d dearer. Maize and oats steady. —ORLANDO DAVIS AND CO.

Preston, Saturday.—The market to-day was again thinly attended. Last week's quotations for new grain must be repeated, but there is a quiet trade, and for best qualities only. Flour unchanged. Quotations:—Wheat, white, new, per windle of 220lb., 12s 6d to 13s; ditto red, 12s to 12s 6d; oats, old, per bushel, 3s to 3s 2d; ditto new, 2s 6d to 2s 8d; beans, per windle of 220lb., 16s 6d to 17s; bran, 10s 6d to 11s.

Peterborough, Saturday.—A fair supply of wheat, trade steady; the best samples making quite as much money. Barley not active, but there is more disposition to buy the better qualities. Not many oats offering and they are rather dearer.—THOMAS HILL AND SON.

Ripon, Thursday.—Inquiries are being made for wheat for seed purposes, and good samples are making full prices. With a rather better attendance a fair trade is being done. Prices:—New wheat, 27s to 28s 6d; ditto foreign, 32s to 35s; barley, grinding, 23s to 24s; ditto malting, 26s to 28s; new oats, 17s to 17s 6d; maize, round, 25s to 26s; ditto flat, 25s 6d to 26s 6d per qr.; bran, £4 15s to £5 10s per ton.

Stamford, Friday. A very humdrum predominated, and there was an almost imperceptible difference in the trend of the market from last week. Wheats could not command quite so much, making 27s to 27s 6d; 17s to 18s per quarter was obtained for new oats. New beans made 29s to 31s, whilst old samples fetched 31s up to 33s 6d. Barleys still vary greatly, but the price has got within a much smaller compass, viz., 25s to 30s.

Warwick, Saturday. Fair supply of wheat, which sold at the full prices of last week; condition is rather variable. A few samples of malting barley on offer; prices not yet fixed. Good demand for feeding stuffs; prices rather higher.

Winchester, Saturday.—English wheat fair supply, demand rather quiet at last week's prices; foreign a shade dearer. Barley and oats unaltered. Maize, 3d to 6d easier. Flour, steady trade at late rates.—FEAR, COLEBROOK, AND CO., LTD.

Wisbech, Saturday.—A moderate supply of grain; full prices paid for best dry samples of wheat; reds, 28s to 28s 6d. Oats quite firm, 16s 6d to 17s 6d. Barley, 24s to 27s. JAMES FLETCHER.

Yeovil, Friday.—English wheat, 30s to 32s; secondary, 27s 6d to 29s; foreign, 30s to 36s; malting barley, 30s to 34s; feeding, 24s to 25s 6d; foreign, 19s to 19s 6d; beans, 35s to 36s 6d; oats, black, 18s to 19s; white, 19s to 18s 6d; bush, black, 16s to 17s; maize, 25s to 25s; rye, 20s 6d to 21s 6d; vetches, 6s to 7s per bushel. Improved demand for flour, particularly millings from old wheat; fine made 24s to 26s; extra fine, 27s to 30s per sack. Good inquiry for meals and offals at about recent rates.

Wolverhampton. Wednesday.—A good attendance and a fair amount of business was transacted. Quotations: New wheat, 11s to 12s per 216lb.; flat corn, 27s 6d per 480lb.; English beans, 13s 6d per 196lb.; new oats, 10s to 11s per 196lb.; old oats, 13s to 14s per 196lb.

York. Saturday.—A better supply of wheat, and dry samples sold at last week's rates, fine white making 28s to 29s, and red and mixed 27s to 28s per qr. of 36 stones. Good samples of barley were in demand at 27s to 29s. Middling made 25s to 27s, and feeding 23s to 25s per qr. of 32 stones. Oats firm but scarce, white Tartary quoted 16s to 17s, black 16s 6d to 19s 6d; and white Garton 17s to 18s per qr. of 24 stones. Rye, 20s to 21s per qr. of 36 stones; and beans, 11d to 1s per stone.

FOREIGN.

Hamburg. Saturday.—Weather changeable, heavy rains and fine sunshine alternating. Trade animative, and prices of most articles tend in sellers' favour. There is a brisk demand for maize and feeding barley. The imports from September 1 till September 13 amounted to 31,638 tons wheat, 10,914 tons rye, 30,385 tons barley, 33,310 tons maize. Fine red Holstein and Mecklenburg wheat is selling at 30s 6d to 31s 6d per 504 lb., f.o.b.; American hard winter No. 2, 30s 6d, 78-80, Ko Danubian afloat, 29s. 80, Ko; River Plate, 30s 3d to 30s 9d per 480 lb. c.i.f. Hamburg. Rye quiet, 9 15-20 South Russian September-October is offering at 23s per 480 lb. c.i.f. Hamburg. The demand for malting barley is improving; considerable quantities of good Bohemian have been taken at 32s 6d to 34s; fine at 34s 6d to 36s; fine Stoeakians are selling at 35s 6d to 37s 6d; good Saale is held at 33s 6d to 36s; East Prussian at 29s to 30s per 448 lb. f.o.b. The late heavy arrivals of Russian feeding barley are quickly cleared off, and 60-61 Ko quality is now held at 17s 3d to 17s 6d per 400 lb. ex. ship here. American and Russian white oats meet a free sale at 15s to 16s 3d per 320 lb. c.i.f. Hamburg. There is a good consumptive demand for maize, also for later delivery. Mixed prompt is held at 23s 9d to 24s; January shipment at 21s; River Plate afloat, 22s 6d per 480 lb. c.i.f. Hamburg.—THOS. TATLOCK.

Hamburg. Saturday.—Barley report: Business remains rather quiet here, as quality is generally disappointing, and our local maltsters and brewers do not care to lay in any stocks, but buy only for immediate requirements. Prices are fairly well maintained, and choice lots are held at former returned figures. The export of Hungarian barley from France has been limited so far, but, as the quality is good, would undoubtedly increase if holders would reduce prices.—FRANCIS M. TH. DUHNE.

Paris. Wednesday.—Prices tend to stiffen in the leading provincial markets, as offers of wheat are falling off, and qualities are gradually deteriorating. At the Bourse de Commerce, under the influence of the small offers at the spot market, the opening tendency was calm, but subsequently stiffened. Prices, nevertheless, do not show any marked change on those ruling yesterday for flour and wheat. Business was a little steadier, though the total turnover was not large. Rye: Nothing doing; prices nominal. Oats are in good demand; the tendency is firm, and prices have recovered from 10 to 25c., according to month. At the weekly spot market the bad weather has hampered the trade in home grown wheat. There is plenty of wheat, but the qualities are such that millers will have to be careful in making their purchases. In foreign wheat there is still nothing doing. In consumption marks of flour business is quiet, and prices remain unchanged. In rice flour the rise continues, due to the lack of arrivals. Of oats there is nothing new to report. In barley the fall continues, as qualities are getting worse instead of better. Maize is quiet.—*Dornbusch.*

THE BALTIC.

The cargo market for wheat has recently been firm, and the enquiry is up to an average. Sales have included South Australian at 33s. per 480 lb., Blue Stem at 32s. per 500 lb., White Walla at 31s. 3d. per 500 lb., Red Walla at 30s. 9d. per 480 lb., Entre Rios at 29s. per 472 lb., Santa Fé at 29s. 3d. per 480 lb., Roumanian at 29s. 9d. per 492 lb., Fine Russian Winter at 33s. per 492 lb., and Odessa Ghurka at 31s. 3d. per 492 lb.

Maize cargoes are held for 3d. advance, but buyers will not admit any rise, and trade is temporarily at a standstill

Barley cargoes are advancing. Californian has made 25s. per 448 lb., Odessa 18s. 3d. per 400 lb., and Nicolaieff 18s. 6d. per 400 lb.

Oats are in excellent demand, and the following transactions are reported:—White Libau cargoes at 15s. 6d. per 320 lb., No. 2 Mixed American at 14s. 9d. per 304 lb., White Clipped American at 15s. 6d. per 320 lb., and Canadian at 15s. 3d. per 320 lb.

A cargo of White Calcutta peas has made 28s. 3d. per 504 lb., and one of Smyrna beans has realised 32s. 6d. per 480 lb.

The Secretary of the London Corn Trade Association announces that the following standards (June shipments) have been made up, viz.:—Wheat.—Choice White Kurrachee, Soft Red ditto, Choice White Bombay, Choice White Delhi from Kurrachee, Albara from Calcutta, No. 2 Club Calcutta. Lentils.—Bombay. Gram.—Calcutta. Peas.—Calcutta White, Calcutta Green.

The arrivals of grain and seed-laden vessels at Ports-of-Call for the week were 10 wheat (3 B. Blanca, 1 Buenos Aires, 1 Concepcion, 1 Geelong, 2 Melbourne, 1 Rosario, 1 Wallaroo), 1 barley (Valparaiso)—Total 11.

The sailings of grain and seed-laden vessels from Ports-of-Call for the week were 6 wheat (1 Antwerp, 2 Cork, 2 Dublin, 1 Rotterdam), 1 barley (Gloucester)—Total 7.

Since January 1, 1905, the total arrivals have been 282 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 5 maize, 1 beans, 4 locust beans, and 46 linseed.—Total 367.

Last year during the same time the arrivals were 222 wheat, 1 wheat and maize, 2 barley and wheat, 17 barley, 4 maize, 4 beans, 4 locust beans

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The English wheat crop is threshing out well, but the quality is a little less uniform than at first expected. Locally there are some very big oat crops, but the yield of that cereal as a whole is not up to the average. Barley deliveries show an extraordinary variability, mellow and harsh types coming from contiguous fields, and the amount of discoloration being also extremely varied. Careful selection will be needed, but we do not yet despair of the crop showing, after such selection, an average quantity of fit malting grain.

The American wheat crop is estimated by the New York Produce Exchange at 88,000,000 qr. This is an estimate which is likely to stand examination. In Canada a very good yield is reported

The Russian Government published on the 15th inst. its first official estimate of crops for the whole Empire. Converted into English measures it is as follows:—

	Quarters.
Wheat	66,675,000
Barley	34,110,000
Rye	78,000,000

Of oats it is reported that 64 provinces have yielded 75,197,000 qr. From eight provinces returns are not yet available.

The supply of wheat on passage being now 20 to 30 per cent. below the mean, holders of foreign wheat on spot have manifested a firmer spirit of late, and from the 12th to the 16th inclusive the markets where foreign wheat plays a leading rôle were upholding the purely country markets. It is very difficult to lay down any hard and fast rule on buying and selling, but when less than two million qr. of foreign wheat is on passage to the United Kingdom it is scarcely ever expedient to press sales of the home crop. It is practically impossible for the wheat markets to be over-supplied with foreign wheat between now and the end of October, so that a really resolute attitude on the part of British farmers must cause a rally in prices between now and then. That such an attitude will actually be adopted is our strong hope. The quantity of wheat on passage to the United Kingdom on the 16th inst. was only 1,800,000 qr., against an average of perhaps 2,500,000 qr., and the expectations of foreign flour, 250,000 sacks, were just half an average.

Our expectations of foreign barley are moderate, but of maize, linseed, and oats they exceed an average. Of rice they are only 38,000 tons, against 57,000 tons a year ago. Of cottonseed they are also moderate, viz., 12,000 tons, against 21,000 tons a year ago.

Stocks of wheat in various foreign ports on September 1 thus compare with a year ago:—

Quarters.	1905.	1904.
Paris	90,000	75,000
Other French towns	275,000	150,000
Antwerp	120,000	150,000
Ten chief German towns	175,000	300,000
Fifteen Russian ports	950,000	1,000,000
Four chief Argentine ports	310,000	430,000

It will be seen that France alone holds an increased quantity of foreign wheat and that the decrease elsewhere more than counterbalances the French increase. Supplies of breadstuffs on passage on the Continent on September 16 were as follows:—

	Quarters.
1905	1,925,000
1904	1,510,000
1903	1,310,000

Flour prices at the mid-month thus compare with recent seasons:—

Sept. 15.	1905.	1904.	1903.
Top Price	29s 0d	32s 0d	30s 0d
Best American	29s 0d	32s 0d	27s 6d
Iron Duke	28s 0d	28s 0d	28s 0d
Town Whites	27s 0d	30s 0d	25s 6d
Household	24s 6d	27s 0d	25s 6d

It will be seen that while American is still dearer than in 1905, Whites and Households are cheaper.

Last week's imports were as follows:

Wheat, 524,000 quarters; a large supply.
Flour, 117,000 sacks; a moderate supply.
Barley, 126,000 quarters; an average supply.
Oats, 157,000 quarters; above an average.
Maize, 49,000 quarters; very large arrivals.

The sales of English wheat at the statute markets were large, but not quite so heavy as in the preceding week. The total imports and home supplies of breadstuffs may be reckoned as follows:

	Quarters.
English wheat	196,000
Imported breadstuffs	621,000
Total breadstuffs	817,000

According to the latest returns, wheat stocks include 620,000 qr. in Liverpool and Fleetwood, 69,000 qr. in Manchester, 142,000 qr. in Bristol, 21,000 qr. in Hull, 146,000 qr. in Gloucester, 102,000 qr. in Leith and Edinburgh, and 56,000 qr. in the Clyde Estuary, including, of course, Glasgow. London is said to hold 200,000 qr. of wheat, but no returns will be published until early in October. The cry for regular monthly Board of Trade returns of London wheat stocks is loud, but, incredible as it may appear, we believe that an Act of Parliament is requisite before the authorities can do anything.

Last week's shipments from America were 56,000 qr. of wheat, 12,000 qr. of barley, 107,000 qr. of oats, 138,000 qr. of maize, and 108,000 sacks of flour. These figures show a considerable increase in the case of oats and flour, but remain exceedingly small for wheat and barley.

South America last week shipped 84,000 qr. of wheat, 270,000 qr. of maize, and 61,000 qr. of linseed. These exports show a slight but general decline on the week.

Canadian wheat exports to British ports for the three last cereal years have been as follows:—

September 1, 1904—August 31, 1905 .. 1,248,000 qrs.
September 1, 1903—August 31, 1904 .. 2,928,000 qrs.
September 1, 1902—August 31, 1903 .. 3,304,000 qrs.

These are not satisfactory figures but the new cereal year is expected to show a material improvement.

Indian wheat shipments to the United Kingdom for the same three cereal years have been as follows:—

September 1, 1904—August 31, 1905 .. 6,787,000 qrs.
September 1, 1903—August 31, 1904 .. 5,401,000 qrs.
September 1, 1902—August 31, 1903 .. 2,778,000 qrs.

These figures show that India has done remarkably well, and though the crop of 1905 reaped in April was smaller than that of 1904 by eight million qr., the shipments since May 1 have been liberal.

Australasia shipped wheat to the United Kingdom as follows:—

September 1, 1904—August 31, 1905 .. 3,042,000 qrs.
September 1, 1903—August 31, 1904 .. 1,534,000 qrs.
September 1, 1902—August 31, 1903 .. 19,000 qrs.

Our South African colonies are, we regret to say, importers and not exporters of wheat.

Maize shipments from January 1 to September 15 were as follows:—

America to U.K.	3,800,000 qrs.
America to Cont.	5,050,000 qrs.
Argentina to U.K.	4,600,000 qrs.
Argentina to Cont.	2,500,000 qrs.
Russia to U.K.	215,000 qrs.
Russia to Cont.	460,000 qrs.
Various to U.K.	200,000 qrs.
Various to Cont.	150,000 qrs.
Total	16,975,000 qrs.

This is a larger total than in the like period of 1904, but a good deal less than in the season of 1903. La Plata this year has surpassed her previous exports—even those of 1903, but America has shipped less to the United Kingdom though more to the Continent. The absence of Roumania from the list of maize shippers is a remarkable fact of the present season. In 1903 over two million qr. of maize left Roumanian ports and contributed materially to the good total of that export campaign.

Rye shipments for the period August 1-September 16 have been as folows:—

Qrs.—Russia.	Other Countries.	Total.
1905 570,000	.. 60,000 ..	630,000
1904 500,000	.. 3,000 ..	503,000
1903 475,000	.. 110,000 ..	585,000

It will be seen that despite the falling-off in the "various" item since 1903, the total trade in rye has increased. The American and Roumanian rye crops this season are said to leave no exportable surpluses.

Russian linseed shipments for August are ascertained to have been as follows:—

1905	53,000 qrs.
1904	21,000 qrs.
1903	45,000 qrs.

Very little wild rapeseed or ravison is being shipped this season. In August the total clearances for all Euxine ports were under 4,000 qr., against 13,905 qr. in the month of August, 1904, and about ten thousand qr. in an average month.

London imports of rapeseed have been:—

January 1—September 15, 1905 .... 40,400 qrs.
January 1—September 15, 1904 .... 30,800 qrs. ..

TO-DAY'S MARKETS.

MARK LANE, MONDAY, September 18.

[FIRST REPORT.]

English wheat to-day was freely offered. Good dry samples fit for early use in the mill made 30s. and upwards per 504 lb. but damp and secondary grain was rather pressed on sale at 27s. to 28s. for the same good weight, 25s. to 27s. for light weight. Meyer wheat was the turn dearer from the 15th. Russian, Argentine, and Australian sold well, and Indian was quite as good a trade as formerly. American wheat does not move off very well. Maize was decidedly steadier from the 11th, but business was not brisk. Oats were 3d. dearer for Russian sorts, and firm for American. No changes were quoted in new English. Malting barley was a larger show of samples, but very few of them reached really fine quality. Feeding barley was the turn in sellers' favour. Beans and peas were quiet at previous prices. There is a decline of 1s. per qr. on the week on Calcutta, Argentine, and Persian linseed, and of 2s. per qr. on poppyseed. Prices for rapeseed and cottonseed are as good as they were a week ago.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH STEADINESS IN ALL THE LEADING STAPLES, AND THERE WAS A VERY FAIR GENERAL BUSINESS DOING.

THE FLOUR TRADE.

MARK LANE, Monday, September 18.

There was a fair business doing in household flour at 24s. cash, and a modest trade in London whites at 27s. also cash. Country flour was a big business at prices as given. The Cambridge, Ipswich, and Norwich millers, always of importance on the London market, have latterly been more than ever to the front. American flour was weak and in buyers' favour. Hungarian flour also looked like going lower very shortly. Australian flour was slow at previous prices. French flour was neglected. Hardly any Argentine flour was obtainable. There was no special change in middlings, pollard, or bran. Whole meal contined to command a steady sale at currencies.

LONDON TERM MARKET.

This market is open to elected members only, and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were :—

WHEAT (per cental).

No. 2 American Red	6s. 9d.	Sept. delivery.	
,, ,,	6s. 7d.	Nov.	,,
,, ,,	6s. 7d.	Jan.	,,
,, ,,	6s. 7d.	Mar.	,,

MAIZE (per cental).

American	4s. 9d.	Nov. delivery.	
,,	4s. 3d.	Jan.	,,
,,	4s. 3d.	Mar.	,,

Futures to-day Futures to-day are quiet for American red winter wheat, at 6s 8d for December delivery. Maize, at 4s 4d for January delivery, is rather dearer from Saturday.

GAME AND POULTRY.

Smithfield, Saturday.—A fairly good demand for a fair supply. Prices: Young grouse, 4s 6d to 5s; old, 2s 9d to 3s 3d; young partridges, 3s 6d to 4s; old, 1s 6d to 2s per brace; Surrey fowls, 2s 9d to 3s 6d; Lincolnshire fowls, 2s to 2s 9d; Essex fowls, 2s to 3s; Irish fowls, 1s 9d to 2s; geese, 6s to 7s 6d; country ducks, 2s to 2s 6d; Aylesbury ducks, 2s to 2s 9d; wild ducks, 1s 6d; black game, 1s 2d; snipe, 6d to 8d; quails, 1s to 1s 4d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s; English hares, 2s 3d to 2s 9d; leverets, 1s 9d; Scottish hares, 1s 6d; tame rabbits, 1s 4d; wild rabbits, 9d to 1s; live hens, 1s 9d to 2s 3d each; Australian rabbits, 6s to 7s 6d per dozen.

GRAIN AND FLOUR FACTORS REPORT.

Flour. Trade continues slow, with rather more firmness on the part of sellers. Grain. Indian corn quiet at 1s. 7½d. per 280 lb. Shipping prices of oats are higher, which helps the sale of spot lots at prices in sellers' favour. Barley again in small compass, and is held at 9d. to 1s. per boll advance. Pease steady. Beans very firm. Oil-cake in fair demand. Mill Stuffs.—Bran and Thirds unchanged at 82s. 6d. to 87s. 6d. per ton. McKINNON AND McDONALD (Glasgow).

Offals.—Bran in fairly good demand; no further change to report in prices. GREENHILL BROS. (Belfast).

Flour. Trade quiet, and prices practically unchanged. GREENHILL BROS. (Belfast).

THE AMERICAN MAIZE CROP. By mid-September the American maize crop is regarded as safe in all the principal States. The yield is expected to be 327,500,000 qr. on the ascertained acreage. If it reaches this total, it will constitute a record. The above is the essence of two cablegrams which reached Mark Lane in the course of to-day's market.—(Special to M. L. E., September 18, 1905).

Wheat arrivals are small. The trade is firm at full prices of last Monday. Flour unchanged. Maize meets a better demand at full prices. Barley 3d. per qr. dearer. Oats in good demand at an improvment of 9d. to 1s. per qr.—COVENTRY AND CO.

Milling Offals.—The demand just about keeps mills clear; no change in prices.—JOHN BAWCOMB AND CO.

FEEDING STUFFS.

London, Monday.—The demand for trifolium still drags along, in spite of the high price stocks exceptionally. Prices firm. Rape, mustard, rye, and winter tares moving off at unchanged prices. Samples of the new spring seeds coming out slowly.—JOHN PICARD AND CO.

London, Monday.—Linseed cake: The demand is a little better. American made continues in favour at present prices, though shippers now ask considerably more money. There is no change to report in London-made values. Undecorticated cotton cake: Trade dull, and hardly any business passing whatever. Market is lower. Decorticated cotton cake meal: The inquiry is very good and with continued scarcity of stocks prices are well maintained. Linseed steady at last quotations.

ROBERT AND JOHN HEWETSON

THE BALTIC, 1 p.m.

STATE OF TRADE.

All cereals seem hardening for future shipment, the cargo sales put through since Saturday inclining to higher prices for wheat, barley, oats, maize, and beans.

BUSINESS DONE.

WHEAT.—Rosaria, 29s 6d per 480 lb. prompt shipment; Walla Walla, 31s 6d per 500 lb, prompt shipment; Red Walla, 31s per 500 lb., prompt shipment; Blue Stem, 32s per 500 lb., prompt shipment; Roumanian, 30s per 492 lb., October shipment; Roumanian, 29s 3d per 480 lb., October shipment; White Calcutta, 31s 9d per 492 lb., on passage; White Kurrachee, 31s 3d per 492 lb., on passage.

BARLEY.—Roumanian, 20s 3d per 416 lb., October shipment; Kustendje, 20s per 416 lb., October shipment.

OATS.—Petersburg, 14s 9d per 312 lb., prompt shipment; Volojda, 15s 6d per 320 lb., October shipment.

MAIZE.—Argentine, 23s per 480 lb., November shipment; American, 20s per 480 lb., January shipment.

BEANS.—Smyrna, 32s 9d per 480 lb., November shipment.

LINSEED.—Argentine, 35s 3d per 416 lb., arrived; Bombay, 38s per 416 lb., October shipment.

COTTONSEED.—Egyptian, £5 7s 6d per 2,240 lb., October shipment.

HOPS.

London, Monday.—W. H. and H. Le May, 67, Borough, report:—There has been a considerable clearance of English hops during the past week. Choice hops are being particularly inquired for.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were, from Ireland 1,752 bales, and from foreign ports 13,767 bales. The prices for bacon were generally reduced last week, resulting in a steadier trade with more demand, prices ranging: Irish, 58s to 63s. up to 66s; Danish, 52s to 59s. up to 64s; Canadian, 52s to 56s up to 58s, and quoted 60s. Butter: The butter market was generally slow, with French, 90s. to 110s; Danish, 118s to 121s; Russian, 96s to 106s; Irish, 98s to 112s; Canadian, 90s to 112s; Australian, 96s to 112s; American, 86s to 104s. Lard: The lard market was quiet. Irish, 44s to 64s; Danish, 58s; American, 38s 3d to 40s 6d.

CATTLE.

Metropolitan Market, Islington.

	Monday, Sept. 18, 1905 Between.	Total, Sept. 18, 1905	Monday Sept. 19, 1904
Beasts	1,200	1,245	1,130
Sheep and Lambs	6,200	6,200	7,100
Calves	5	5	5
Milch Cows	60	60	60

Quotations per 8 lb. (sinking the offal):—

ENGLISH

	Inferior.	Second.	First.
Beasts	3s 10d	4s 0d	4s 2d
Sheep	3s 10d	4s 4d	4s 6d
Lambs	4s 10d	5s 4d	6s 2d

Milch cows, per head, £17 to £22.

British arrivals include as follows: Scotland, nil; Eastern Counties, 50; Midland, Home, and Western Counties, 1,000; Devon, 25; Ireland, 104.

We note to-day an increase of 150 head compared with the corresponding day last week, the majority of the supply being drawn from the Midland counties. Trade was of a steady nature in the early morning, but became slower as the day advanced. Nevertheless, late currencies gave neat all transactions. The Irish arrivals consisted of 91 Dublins and 13 Waterfords, this class of cattle meeting with one of the slowest trades noted for several weeks, consequently a decline of 2d. had to be accepted to effect sales. Fat butchering cows and bulls, of which too many middling quality were on offer, met with a limited demand by country buyers, rates falling in consequence 2d. per 8 lb. A clearance is, however, expected to be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Sept. 19, 1904.
Devons	4s 6d to 4s 8d	
Herefords	4s 6d to 4s 8d	4s 6d to 4s 8d
Runts	4s 4d ex 4s 6d	4s 4d ex 4s 6d
Lincolns	3s 10d to 4s 0d	3s 10d to 4s 0d
Irish	3s 10d to 4s 0d	
Fat Cows	3s 4d to 3s 6d	3s 6d ex 3s 8d

There was an increase of 770 in the number of sheep and lambs penned compared with Monday last. Trade for both wethers and ewes was of a steady nature, both in regard to tone and value, the tendency being an upward one. Scotch descriptions met with a good demand at late currencies; the same remark applies to the Irish trade, with an advance in value of 2d. per 8 lb. Lambs were in short supply and met with little inquiry, the season being now practically over; consequently neither trade nor prices are worth quoting. The supply included 300 Scotch, 1,730 Irish, and 464 from the Eastern Counties.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Sept. 19, 1904.
7½ to 8 st Downs	5s 10d to 6s 0d	5s 8d to 5s 10d
9 st Downs	5s 8d to 5s 10d	5s 8d to 5s 10d
10 st Half-breds	5s 4d to 5s 6d	5s 4d to 5s 6d
10 st Irish	5s 4d to 5s 6d	5s 4d to 5s 6d
10 st Down Ewes	4s 0d to 4s 2d	4s 2d to 4s 4d
11 st Half-bred ditto	3s 10d to 4s 0d	4s 0d to 4s 2d
5 st Down Lambs	—	5s 8d to 5s 10d
6 st Half-bred ditto	—	5s 6d to 5s 8d

Calf trade nominal.

No pigs on the market.

London (Central), Monday. — Fair supply, trade quiet. Beef: Scotch, 4s to 4s 8d; English, 3s 9d to 3s 9d; American, 3s 4d to 3s 8d. Mutton: Scotch wethers, 4s 6d to 5s 2d; ewes, 3s 6d to 3s 8d; English wethers, 4s 6d to 5s; ewes, 3s 4d to 3s 6d. Scotch lamb, 5s to 5s 4d; Dutch, 4s 6d to 4s 8d. Veal, 3s to 4s 8d. Pork, 4s 4d to 5s per 8 pounds.

St. Ives (Hunts), Monday.—Beasts 324, sheep 2,119, pigs 383, horses 16. Beef, 7s to 7s 9d; mutton, 8s 2d to 10s 6d; pork, 6s 9d to 7s 6d. Fat and store cattle fair; fat sheep good demand, stores fair; fat and store pigs good demand; milch cows fair show, trade, prices £15 to £22.

FOREIGN.

Deptford, Monday.—Beasts, 1,150. To-day's supply of beasts compared with Monday last showed an increase of 219 head, the supply consisting of 516 from the United States and 620 from Canada. Trade was of a slightly slower nature, rates favouring the buyer to the extent of 1d per 8 lb. The best States on offer to quote from 3s 11d to 4s 1d; seconds, 3s 9d to 3s 10d; and Canadians, 3s 9d to 3s 11d; seconds, 3s 7d per 8 lb. (sinking the offal). On Saturday 1,889 beasts from the United States were offered for sale, and with a firm and steady trade were quoted at from 4s to 4s 2d per 8 lb. (offal given in.)

Liverpool, Monday.—Supply of cattle practically unaltered, demand slow and prices unchanged. Considerable decrease in number of sheep on offer, notwithstanding this, trade was of a dragging character for all classes; strong and middling sheep 2s lower, though lamb descriptions did not suffer to quite the same extent. Beef, 5½d to 5d per lb.; mutton, 8d to 6d. At market—1,274 cattle and 8,441 sheep.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Trade fairly brisk, a plentiful supply of fruit and greenstuffs being on offer. Quotations: Grapes, 0d to 3s; pears, 2s 6d to 6s 6d per half-sieve; ditto, 4s. 6d to 7s 6d per box; blackberries, 1s 6d to 2s per peck; apples, 3s to 7s 6d per bushel; plums, 1s 6d to 4s; damsons, 2s to 2s 6d per half-sieve; pinecapples, 1s 6d to 3s each; melons, 0d to 1s 6d; peaches, 1s to 1s; nectarines, 1s to 1s 6d; green figs, 6d to 1s 6d per doz.; cob nuts, 4s to 5s 6d; filberts, 3s 6d to 4s 6d; walnuts, 4s to 4s 6d per 12 lb; tomatoes, 1s 6d to 2s 9d; onions (green), 2s to 3s per dozen bunches; ditto (picklers), 5s to 6s per cwt.; marrows, 3s to 5s 6d; cabbages, 3s to 5s per tally; scarlet runners, 9d to 1s 6d; [illegible] 1s 6d to 2s per bushel; green artichokes, 1s 6d to [illegible] per dozen; carrots, 1s 6d to 3s; turnips, 1s 6d to [illegible]; parsley, 1s 6d to 2s; mint, 1s 6d to 2s per dozen bunches; horseradish, 3s 6d to 12s; celery, 8s to 10s per dozen rolls; mushrooms, 6s to 10s per 12 lb; cucumbers, 2s 6d to 3s; endive, 9d to 1s 3d; cauliflowers, 1s to 2s per dozen; cos lettuce, 9d to 1s 3d per score; potatoes, 45s to 70s per ton.

CHEESE.

Newport, Wednesday. A good supply, and trade quiet. Quotations: Caerphillies, 4s to 5s per cwt.; dairies, 54s to 56s; truckles, 58s to 60s; Derbies, 52s to 63s.; and Cheddars, 58s to 58s.

Glasgow, Wednesday.—The arrivals of cheese were not so liberal to-day. A quieter tone pervaded the market, sellers being disposed to meet buyers. Dealers were not inclined to buy till they work off a portion of the stock they possess. Business generally goes quieter from now till the Kilmarnock cheese takes place. Cheddars varied from 54s to 60s, and Dunlops from 52s to 58s per cwt.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

At the Islington Cattle Market during the week there was an increase in the number of beasts offered for sale. Trade for fat beasts of both prime and second quality, which consisted chiefly of Midlands and Irish (these latter comprising 30 Dublins and 27 Waterfords) was, taken as a whole, of a firmer and steadier nature; the tendency in regard to value favouring the sellers. Irish cattle though slow of sale, were firm and steady, late rates being well maintained. On Thursday, trade as usual was entirely confined to fat butchering cows and bulls from the Midlands, trade for which, though slow, was firm in regard to value, late currencies governing all transactions. At Deptford there was an increase in the supply compared with the previous week, trade notwithstanding this was firm and steady, at a slight advance in value. The total number of beasts on offer at both markets was 5,196, as against 4,561 during the preceding week, consisting of 1,090 British, and 4,106 foreign (increase 635), these latter consisted of 3,418 from the United States, and 688 from Canada. The following were the top rates paid per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s 6d to 4s 8d; 90 to 95 stone Herefords, 4s. 6d. to 4s. 8d.; 95 stone runts, 4s. 4d., exception, 4s. 6d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 3s. 10d. to 4s. 2d.; 90 stone States, 4s. to 4s. 2d.; 95 stone Canadian, 3s. 10d. to 4s.; 90 stone fat cows, 3s. 6d., exception, 3s. 8d.

The sheep trade at Islington, with an increase in the supply, was decidedly firmer, in some cases, sellers both asking and obtaining 2d. per 8 lb. more money, this remark being applicable to both wethers and ewes. Scotch were in average supply and shared in the generally better tone of the trade. Irish met a steady inquiry at a similar advance of 2d. Lambs were in excess of the demand, nevertheless no decline in value is quotable. At Deptford a few Canadian sheep were offered for sale and met with a fairly steady trade. The total number penned at both markets was 8,117 (increase 797), consisting of 7,450 British (increase 130), and 667 Canadians. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Downs, 5s. 10d. to 6s.; 8 stone Scotch, 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone Irish, 5s. 2d. to 5s. 4d.; 10 stone Downs, 5s. 4d. to 5s. 6d.; 10 stone Half-breds, 5s. 4d. to 5s. 6d.; 10 stone ewes, 4s. to 4s. 2d.; 8½ stone Canadians, 4s. to 4s. 2d.; 5 stone fat Down lambs, 6s. to 6s. 2d.; 6 stone half-bred ditto, 5s. 10d. to 6s.

Calves numbered 30 and met with a slow, but firm, trade at from 5s. 2d. to 5s. 4d.

Pigs—80, trade fairly steady; top value, small breeds, were quoted at from 4s. 4d. to 4s. 6d. per 8 lb. (offal given in).

Trade in the West.

Just at present interest centres largely in the great sheep sales now in progress or about to take place, and although sales, except occasionally, have scarcely come up to expectations, still there is not any great room for discouragement, working lambs being the most notable exception to this, as in some cases, and for ewes as well, they are hardly making the money they did last June. Some flockmasters consider there has been a decline of from 1s. to 2s. a head, but whether this is so or not, one thing is certain, and that is that sheep, as a ruel, are worth no more, even if so much, as two or three months since. A general run in these parts for regular draft ewes may be given as from about 38s. to 50s.; two-teeth ewes, 44s. to 52s.; grazing ewes, 37s. to 43s.; wether lambs, 34s. to 42s., and those for butchering purposes 44s. to 54s.; Chilver lambs, 29s. to 37s.; mixed lambs, 27s. to 34s. Many thousands have changed hands at these prices during the past week, and still larger numbers are down for sale during the next fortnight, which will practically see the end of most of the off-going sheep, what is sold later being mostly culls.

Amongst store cattle milch beasts are just now selling more freely than anything else, and prices are steadily moving upwards, the best now selling from £17 to £20, or £21, and seconds from £13 to £16. Young stock, especially those calving down early, are also in active request, at steadily hardening values. Barreners, though relatively not much dearer than they were last week, are, with the rapid growth of the pastures after the rain, also finding a much readier sale, but only the least, so far, are making up to £26 or £27 per pair, as many are not yet in a position to buy, a more ordinary range for the bulk of the animals now on the market being from about £20 to £25, and for very plain bullocks or poor class cows there is a very quiet sale at from £16 to £18, or £19, this class of animal, as yet, not being wanted, though they may be later on.

In fat stock there are a few good steers, and heifers occasionally to be met with, and these command a fairly active sale at from 54s. to 58s. per cwt. for the very primest qualities, and for anything not possessing quite the finish 46s. to 50s.; inferior, with a more restricted demand, from 44s. to 45s., this quotation applying to old cows and coarse bulls. Calves, though still saleable, are back again for anything, but the very choicest for these 7½d. to 8¼d. is the current value, and for those not quite so well turned out of hand 6d. to 7d., with a much quieter sale at the price. Choice wether mutton, of which there is some exceptionally good now coming out, is very firm in price, making up to 8½d. for the ripest meaty lambs, but seconds are not bringing the price they were, and cannot be quoted more than 7d. to 7½d., and the rougher grades not quite so much. Young, well-furnished ewes continue to find a steady sale at 7½d., but old sheep meet a very poor sale of 6d. to 6½d., very little of this class being wanted, purveyors centering their attention almost entirely on the better-class meat. Pigs are not selling as well as they were, prices once more favouring the buyer, even for the best the outside value of which is 9s. to 10s. per score for the very neatest gilts; baconers, 8s. to 8s. 6d.; and coarse, heavy, which are lacking in demand compared with a few weeks back, 7s. 6d. to 8s.

Trade in Scotland.

The number of cattle on offer has been a fair average. For everything of good quality decidedly higher prices have been got, while secondary descriptions also made rather more money. Sheep have been shown in fair numbers, but there was a scarcity of good quality, and high prices have been realised, with a satisfactory clearance. Fat lambs also command a ready sale. Fat calves considerably dearer, while pigs have also shown an upward tendency. Rather more store cattle on offer. There was a good demand and a nearly total clearance effected at fully previous prices. For half-bred ewes there has been an active inquiry, and last year's prices exxceeded by 1s. to 2s. a head. Lambs also in good demand, and everything of a fair class got sold out. Milch cows met a rather better trade.

Quotation:—Top price of best cattle per live cwt., 39s. 9d.; current from 35s. to 37s. 6d.; Irish from 32s. to 35s. 6d.; mutton from 8d. to 9d. per lb.

John Swan and Sons, Limited.

Trade in Ireland.

Business was pretty much on the same lines as on the previous Thursday, except that rough and lean animals were more difficult to move. For prime bullocks and heifers there was a brisk inquiry, and for the choicest descriptions a quick sale. A great deal of very indifferent beef is being at present pressed on the Dublin market, owners seeming determined to get rid of surplus stock before the winter sets in, and seem to ignore the fact that these cattle are heavily handicapped in having to compete with the splendid American, etc., frozen beef now being so largely landed at English ports. Prime ox and heifer beef made from 54s. to 56s., and, in the case of a few extra lots, up to 58s. per cwt; good second-class beef from 47s. to 52s. 6d.; and other sorts from 45s. per cwt. upwards. In the mutton department, best qualities of aged wethers met with a good sale at about former rates, and shipping hoggets also sold well. For ewes—particularly those of a coarser sort—there was a very slack demand at lower prices. The season for lamb is practically over, and though there are plenty of lambs in market, there was a very disappointing inquiry, except for choice ones purchased by local victuallers. For prime wether mutton from 7d. to 7½d. per lb. was given; ewe ditto, 6d. to 7d.; and coarse sheep from 5d. to 5½d. Large, heavy hoggets sold at from 45s. to 56s. each, and small to medium ditto from 32s. to 42s. Lambs made from 20s. up to 40s. each, with a slow sale. Really good veal calves sold readily at from 7½d. to 8½d. per lb., but coarse calves were neglected at from 5d. per lb. upwards.

For milch cows trade was much the same as the previous day. For large, young springers there was a good demand at full prices, but other sorts sold slowly, with prices tending downwards.

The store cattle trade seems to be on the look up, and at the various sales held in Dublin the transactions were satisfactory. The great fair of Banagher, which opened on Friday, September 15, gives the tone to the trade for autumn, so the business done there is anxiously looked to. In the north of Ireland the fairs all appear to have an upward tendency so far as cattle are concerned. In the pig market there was a further decrease in supplies, and with a fairly good attendance of buyers, business was supported with more vigour, and for the best quality terms were better, but, taken as a whole, it could not be said that prices were in advance of the previous week, but an early clearance was effected. Best light-weight pigs made from 52s. to 54s. per cwt.; coarse at from 35s. per cwt. upwards.

LONDON.

Islington, Thursday.—Beast supply, compared with Thursday last, showed an increase of thirty head, and consisted almost entirely of fat butchering cows and bulls, for which trade was slow but firm, late currencies governing all transactions. The few fat beasts offered met little or no inquiry, consequently quotations not worth recording. Top prices: Fat cows, 3s 6d to 3s 8d; fat bulls, 2s 10d to 3s 2d per 8lb. Sheep trade ruled fairly firm, late rates being well upheld, choice small weights finding ready purchasers; this remark applies equally to Scotch sheep. Lambs were in very little request, the season being over. Best pens made per 8lb. as follows: 7½st to 8st Down sheep, 5s 10d to 6s; 8st. Scotch, 5s 10d; 9st Downs, 5s 8d to 5s 10d; 10st. ditto, 5s 6d; 10st. half-breds, 5s 4d to 5s 6d; 10st. Down ewes, 4s to 4s 2d; 5st fat Down lambs, 6s to 6s 2d. Calf trade slow, but firm. First consignment of pigs this season, for which trade ruled fairly steady, neat small porkers being quoted at 4s 6d per 8lb. Quotations per 8lb., sinking the offal: Beasts, 2s 10d to 3s 8d; sheep, 4s 8d to 6s; calves, 3s 10d to 5s 4d; pigs, 2s 10d to 4s 6d; lambs, 4s 10d to 6s 2d. Total supply: Beasts, 60; sheep and lambs, 1,330; calves, 20; pigs, 80; milch cows, 5.

London (Central), Friday.—Heavy supplies were on the market, for which a fair inquiry prevailed, at firm prices. Arrivals of beef included 70 tons Scottish, 230 Liverpool sides, 2,000 hindquarters, and 1,500 forequarters American refrigerated, also 2,400 Argentine chilled hindquarters and forequarters. Quotations:—Beef: Scotch short sides, 4s 4d to 4s 8d; long sides, 4s to 4s 2d; English, 3s 8d to 3s 9d; American Deptford killed, 3s 6d to 3s 8d; Liverpool sides, 3s 4d to 3s 7d; American refrigerated hindquarters, best, 3s 8d to 4s; forequarters, 2s 5d to 2s 6d; New Zealand, 2s 3d to 2s 4d; forequarters, 1s 7d to 1s 8d; River Plate, frozen, 2s 2d to 2s 4d; forequarters, 1s 7d to 1s 8d; Argentine chilled hindquarters, 2s 4d to 2s 8d; forequarters, 1s 10d to 2s. Mutton: Scotch wethers, 4s 6d to 5s 2d; ewes, 3s 6d to 3s 8d; English wethers, 4s 6d to 5s; ewes, 3s 4d to 3s 6d. Lamb: Scotch, 5s to 5s 4d; New Zealand, 3s 2d to 3s 8d; Dutch, 4s 6d to 4s 8d. Veal: English and Dutch, 3s to 4s 8d. Pork: English, 4s 6d to 5s; Dutch, 4s 4d to 4s 10d per 8lb.

COUNTRY.

Ashford, Tuesday.—Fair trade for good beef at 4s 6d to 4s 8d; cows, at 3s 8d to 4s; mutton rather cheaper for inferior grades; Downs, 5s 2d to 5s 10d; Kents, up to 5s; ewes, 3s 8d to 4s per stone. Lamb, veal, and pork unchanged.

Basingstoke, Wednesday.—At Raynbird and Sons' sale-yard there was a fair attendance of buyers to meet a supply of 45 fat beasts, 59 calves, 359 fat sheep and lambs, 114 pigs, and 208 head of dairy and store cattle, for which the following prices were realised:—Fat shorthorn steers made up to £22, heifers £19, cows £15, bulls £14 10s, Devon steers up to £18 15s, and prime West Highland steers £18 to £22 10s, black polled cows £13 5s, fat calves 75s to £5 10s, small 20s to 60s, fat hogs 70s to 97s 6d, fat porkers 26s to 57s, store pigs 14s to 21s 6d, dairy cows £8 10s to £20, prime quality Down wethers and ewes 52s to 57s, small ditto 45s to 50s, eight months' old Down lambs 46s to 50s, small 35s to 42s, old ewes 36s to 42s, rams 45s to 52s, three months old sucking lambs 28s to 36s, black-faced Scotch wethers 33s 6d to 37s 6d, Welsh sheep 22s to 23s 6d. Prime quality fat beasts in demand, and full prices paid for them. Second-class and inferior a slow trade. Fat sheep and lambs met a good inquiry, and a clearance very nearly made, and prices well maintained. The best class milch cows found a ready sale at late rates. Store cattle continued a slow business. Fat calves met a fair trade at reduced prices. Fat porkers, with a short entry, made high prices. Store pigs also met with a good inquiry. Ruling values: Best quality fat beasts, 6½d to 7d; secondary ditto, 6d to 6½d; cows, bulls, and interior beasts, 5d to 5½d; best fat sheep and lambs, 8¼d to 9d; secondary ditto, 7½d to 8d per lb.; old ewes, rams, and inferior, 6d to 6½d; three months' old sucking lambs, 9d to 10d per lb; fat calves, 6d to 8¼d; fat porkers, 9s 6d to 10s 6d per score.

Berwick, Saturday.—Only 33 cattle offered, but this was an advance of 25 on the previous Saturday. Quality of stock good. Trade slow. Prices per head:—Heifers, £9 10s to £11 10s; ball polled-bullocks, £12 10s; cows, £16 10s to £23.

Birmingham, Thursday.—Small supply of beasts, sheep, and pigs; trade good for pigs, and slow for beasts and sheep. Beef, 5¾d to 6¾d per lb.; mutton, 6¾d to 7½d per lb.; lamb, 8d to 8¾d per lb.; bacon pigs, 10s per score; porkets, 10s 3d per score; cutting, 9s 9d to 10s per score; sows, 8s per score.

Bristol, Thursday.—Business quiet, and prices practically the same as those last week. Beef was in moderate supply, and trade slow at current rates. There was rather less mutton than usual, and with trade steady values were unchanged, though the lamb trade, which is nearly over, was quiet, and prices declined to 8d and 8½d per lb.; pigs were not numerous, and there was an average demand at last week's prices.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s.	d.
8sc. 10 lb. to 9 sc. 10 lb.	2½ in. and under	9	0
Under 10 sc.	Not exceeding 2¼ in. ...	9	0
Under 11 sc. 10 lb. ...	,, 2⅜ in. ...	8	6
Under 12 sc.	,, 3 in. ...	8	0

C. and T. Harris and Co., Ltd.

Canterbury, Saturday. A steady trade. Lambs, 21s to 33s each; wether tegs, up to 44s 6d; and ewe tegs, up to 50s; useful ewes ranged from 33s to 38s, and a few special animals up to 45s. Some Shropshire ram tegs were making £5 apiece.

Carlisle, Saturday.—In view of Carlisle Latter Fair on Tuesday there was an exceptionally large supply of Irish cattle on the Sands to-day, chiefly heifers of a good class. Buyers were numerous, and a steady trade was experienced. Small heifers made £6 10s to £10 10s, wintering heifers £10 10s to £14, and those for finishing off purposes £15 10s each.

Chester, Thursday.—Large supplies of stock in excellent condition. Buyers attended in good numbers, and the market opened with a better demand all round. Later on business became a little quieter, but prices were decidedly firmer. Sheep pens were well filled, and a

considerable trade was done at satisfactory prices. Milch cows made £16 to £22, calves £14 to £20, barrens £10 to £13, heifers £9 to £15, stirks £6 to £10, and sheep 17s to 41s each.

Chichester, Wednesday. Trade for store cattle was dragging, and many lots were turned out unsold. Good fresh calved cows and heifers sold well, and late prices were maintained. There was more demand for fat cattle and a slight advance in rates. Quotations: Prime Devon steers, 4s 4d to 4s 8d; prime Southdown wether sheep, 6s 4d to 6s 8d; prime West Country ditto, 6s 2d to 6s; fat ewes, 4s 4d to 4s 8d; veal, 4s 6d to 5s; porkers, 3s 8d to 4s.

Dorchester, Wednesday.—Calves, £4 to £6 each; seconds, 64s to 78s; and rearers, 16s to 38s. Wether mutton met a quick sale at 8d to 8½d per lb. (or 46s to 53s per head); ewes, 36s to 50s (or 7d to 7½d). Lambs, 35s to 43s (or 10d); seconds, 32s to 34s (or 9d). Pigs brought extreme rates; porkers, 44s to 58s (or 10s to 10s 3d per score); baconers, 60s to 65s (or 9s to 9s 6d); cows, £4 to £7 5s; stores, 25s to 48s; slips, 14s to 22s.

Dorchester. Saturday. Very good offers of most things came to hand at to-day's market, at which sales were held by Messrs. Duke and Son and by Messrs. Symonds and Sampson. Good things met a ready sale at full prices, but secondary things were in restricted demand at prices scarcely as good as of late. Milch beasts made up to £21 for the best heifers, others making £16 10s to £21; secondary, £11 15s to £15 15s. Good fat beasts sold very well, heifers and steers bringing £15 15s; heifers to £22 15s. Limited offer of mutton, but quite enough for the trade, late rates ruling; wethers selling up to 44s (or 7d per lb.), and wethers to 48s 6d each (or 8d).

Doncaster, Saturday.—Moderate supply of cattle, and plenty of sheep, but no improvement in trade. Cattle sold at late rates, milch beasts making £17 to £22, bullocks £12 to £17, heifers and drapes £11 to £16, stirks £6 to £8, and young stores £4 to £6 each. Lambs a slower sale at 30s to 37s, and Lincolnshire ewes 42s to 54s each.

Leicester, Saturday.—With the greatly improved pastures there were large consignments of home-bred stock, which came to hand in very fair condition, and trade showed a slight improvement, buyers and dealers being better represented. Choice milch cows were scarce, and sold freely at £20 to £22 per head. Good lots made £17 to £19, secondary £15 to £16, Irish bullocks £12 to £15, Welsh cattle £9 to £13, and calves 16s to 35s each. Sheep were a large supply, and sold readily, lamb hoggs making 25s to 34s, and breeding ewes 38s to 45s per head.

Dublin, Thursday. — Numbers in market:—Beasts 3,823, increase 342; sheep 9,162, decrease 862; calves 46, increase 1. Choice cattle very scarce and in good demand at last week's top quotation. Middling and inferior sorts much in excess of requirements; demand for these slow and prices lower. Sheep, quieter trade at late rates. Lambs, except the very choicest, getting out of season. Cattle, live weight, best, 29s to 32s per cwt.; exceptional for Angus crosses up to 34s per cwt.; secondary and inferior qualities, 26s to 28s 6d per cwt. Mutton, dead weight, 5½d to 7½d per lb.—GANLY, SONS, AND CO.

Edinburgh, Wednesday. — There was a fair show and a slightly better demand. Cheviot sheep sold at 30s to 36s, Cheviot lambs 22s to 30s, Cheviot ewes to 32s, horned bullocks £13 to £14 10s, polled bullocks to £15, stirks to £9, shorthorned cows £22 to £28, and Ayrshire £15 15s to £18 18s.

Exeter, Friday.—Large supply of beef; trade slow. Steers and maiden heifers, 11s per score; cows, 9s to 10s. Good many remained unsold. Immense supply of sheep, quality not generally good; wethers, 7½d to 8d per lb.; ewes, 6d to 6½d; lambs, 10d. All the best cleared out. Breeding ewes, 36s to 42s. Large number on offer, but a good many remained unsold. Very slow sale for Bridgwater class of sheep, 36s to 42s. Good number failed to find purchasers. Calves, 7½d per lb.

Glasgow, Wednesday.—Trade was fairly good for live stock. Sheep and lambs inclined to ease. Top hoggs, 9d; secondary, 8½d to 8¾d; top wedders, 8d to 8½d; secondary, 7½d to 8d; top lambs, 9d to 9½d per lb; top Scotch cattle, 64s; current, 60s to 62s; top Irish, 57s to 58s; secondary, 53s to 55s per cwt. Dead meat firm; Scotch beef, 6d; Staffs, 5½d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles, and Co. report their sales as follows:—A good supply of cows and calves and in-calvers, which sold very readily at advanced prices. A moderate supply of store cattle and fair trade.

Hereford, Wednesday.—A moderate supply of beef, which maintained late rates; best heifer and bullock up to 6½d per lb., and cow beef at about 4½d per lb., trade for which was slow. Veal, a fair supply for the time of year, made up to 7d. per lb. Sheep were a big supply, mostly store ewes, the best lots of which sold at satisfactory prices. There were but few wethers or ewes, the prices for which were 8d and 6d per lb. respectively. Fat and store lambs were a moderate market, the former at about 8½d per lb., and the latter making from 25s up to 32s and 33s apiece. Pigs were a larger supply than last week. Porks realised 5½d per lb., bacons 5d per lb. Store pigs met with a firm trade. Store cattle slow. The highest prices for Shropshire rams was 10 guineas, and Shropshire ewes 51s. Ryeland and cross-bred ewes sold fairly well up to 42s each.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report a good supply of fat cattle, half of which were yarded and the remainder grass cattle from the Midland Counties and Ireland. The home-fed animals were of medium weight and first-class quality, and met a sharp trade up to 9s per stone. Grass cattle were not so much in request as last week, and prices were lower, 7s 9d being the top quotation. More grazing steers were on offer; trade was slow, but several changed hands; shorthorn steers, 18 months' old, £9 to £8 10s; polled ditto, £9 2s 6d to £8 15s; shorthorn steers, 16 months, £8 10s to £8. At the special sale of cows about forty were offered; good cows were scarce and in fair demand, up to £21 10s for fresh-calved shorthorns, red polled to £18 10s, polled to £17 10s. Secondary sorts and heifers were very dull, and prices ruled lower. In the sheep market there was a brisk demand for all descriptions; half-bred shearlings to 65s, Suffolk hoggets to 58s. Suffolk-breeding ewes were shown in good numbers, and realised more money, several being wanted for the Midlands; three-shear ewes, 52s 6d to 60s; full mouth, 52s to 45s; Lincoln rams, 7½ to 6½ guineas. More fat swine were penned, and a sharp trade was experienced at fully last week's prices, ranging from 6s 9d to 6s per stone, according to size and quality. Numbers at sales and market: 879 cattle, 2,061 sheep, and 1,206 swine.

Lincoln, Friday.—The sheep pens were well filled, and good prices were realised, young ewes making 50s to 60s, drape ewes up to 40s, lambs 22s to 36s, and gimmers 60s to 70s per head. There was a poor show of beasts, and trade was bad.

Lynn, Tuesday. Few store beasts, trade slow, £6 to £12 each; fat beasts short supply and dearer, 7s to 8s per stone; store sheep average supply, 38s to 44s each; fat sheep firm trade at 9s 6d a stone; breeding ewes, 45s to 66s; rams, £5 to £8 each; store lambs, 28s to 36s; fat lambs, 25s to 36s each.

Manchester, Friday. Beef: Firsts, 5¼d; seconds, 4¼d to 4¾d; thirds, 3¼d to 3¾d. Mutton: First Cheviots, Scotch, 7¾d, and others 7d; seconds, 6d to 6¾d; thirds, 5d to 5¼d. Veal: Firsts, 6¾d; seconds, 5¾d to 6d; thirds, 4¾d to 5. Bacon pigs: Firsts, 5¾d; seconds, 4¾d to 5¼d; thirds, 3¾d to 4¼d. Porket pigs: Firsts, 7d; seconds, 6¼d to 6¾d; thirds, 6d to 6¼d.

Norwich, Saturday. Average supply of fat beasts, trade being firm at 7s to 8s per 14lb; more store cattle offered and better demand, values ranging from £5 to £17 per head. Large number of store sheep and lambs penned, and slight advance in prices recorded, lambs making from 28s to 42s per head, and breeding ewes 25s to 60s. Trade firm, and prices showed a hardening tendency for fat sheep, which were in somewhat short supply, choicest lots making 11s per stone, others being quoted at 10s to 10s 6d. Fat pigs made 6s 6d to 6s 9d per stone, with extra 3d for best. Animals in average supply.

Nottingham, Saturday. Better supply of stock all round, and an improved trade resulted. Best in-calf cows made £18 to £24, in-calf heifers £15 to £17, strong steers (2½ years old) up to £16, and smaller quality £7 to £10 each. Calves were a better trade, and made from 35s up to 70s each. There were no sheep or pigs.

Preston, Wednesday.—Only a moderate attendance of buyers, although a capital show of both cattle and sheep was seen. Consequently trade was slow in both departments, while calves were also in moderate demand. Cows and bulls made 5d to 5½d; heifers and bullocks, 6d to 6¼d, with a few choice heifers at 6¾d; hoggs, 8¼d to 8¾d; lambs, 8¾d to 8¾d; ewes, 6d to 6¾d; tups, 5d to 5¾d; and calves, 6d to 7¼d per lb.

Retford, Saturday.—There were very few beasts, and only a poor muster of dealers and farmers. Milch cows were a dragging trade, the best not making more than £18, and ordinary sorts £15 to £16 per head. There was a fair inquiry for two-year-old steers and heifers at £10 to £12, yearlings £6 to £8, and calves 35s to 40s per head.

Colchester, Saturday.—Trade was quiet, and both beef and mutton were in short supply. Grass beef, 4s 4d to 4s 6d per stone of 8lb; mutton, 5s 6d to 6s; pork, 9s per score of 20lb.

Romford, Wednesday. Average supply of fat beasts; trade slow; best animals, 4s 4d to 4s 6d; middlings, 4s to 4s 2d per stone. Calves scarce; average trade at 5s 2d to 5s 4d per stone. Good supply of sheep; trade fair; best sheep, 5s 4d to 5s 6d; middlings, 5s to 5s 2d; ewes, 4s to 4s 2d per stone. Slow demand for store beasts. Pigs in good supply; trade better.

Thame, Tuesday.—There was again a capital supply of all descriptions of stock, although cattle were not of such high quality as usually seen in this market. Choice fat beasts continue to sell well, middling and secondary quality a dragging trade throughout. Mutton was decidedly better, a clearance being effected. Veal, bacon, and pork, continue to sell well. Messrs. Bond and Burrows' sale comprised 131 fat beasts, 222 fat sheep, 92 fat and weaning calves, and 110 fat and store pigs. Fat oxen made from £16 to £21 17s 6d; fat heifers, £15 to £20 12s 6d; fat wethers, 48s to 60s; fat ewes, 40s to 53s; fat lambs, 30s to 38s; fat calves, £3 to £4 10s; weaning cow calves, 30s to 65s; bull calves, 10s to 55s; bacon hogs, £3 to £5 5s; porkers, 26s to 42s; stores, 10s to 28s.

Truro, Wednesday. — Business fairly brisk; attendance very good. Fat bullocks, 56s to 60s per cwt.; barreners and store bullocks, 40s to 45s; cows and calves, £11 to £18 each; rearing calves, 20s to 35s; wethers, 7d to 7½d per lb.; ewes, 5½d to 6d; lambs, 7½d to 8d; large and small pigs and suckers, 10s to 42s each. Beef, 6d to 8d per lb.; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon (uncured), 6d to 7½d; ditto (cured), 7d to 9d; pork (carcasses), 4½d to 5½d. Number in cattle market:—Bullocks, 266; calves, 62; sheep, 1,579; pigs, 130; horses, 5.

Wolverhampton, Wednesday. — Fewer animals penned and only a quiet trade. Quotations:—Beef, 5d to 6¾d per lb.; mutton, 8d to 8½d per lb.; veal, 6d to 7d per lb.; bacon pigs, 9s to 10s per score; porkets, 10s to 10s 6d per score; sows, 7s to 8s per score.

Worksop, Wednesday.—The attendance of buyers and the show of stock of all kinds were alike small. Good mutton, however, retained its recent high price. Beef was a very small show, and prices generally were 6d down on the week. Best qualities made 6s 6d to 6s 9d, and secondary sorts 6s to 6s 6d per stone. A large number of cross-bred store lambs were penned, and fetched 27s to 36s per head. Best Southdown and cross-bred wethers made 8d to 9d, ewes and other sorts from 5d to 7d per lb.

Yeovil, Friday.—First quality cows and heifers with calves, £18 10s to £20; secondary quality, £15 10s to £17 10s; in-calvers, £16 17s 6d to £19 5s; fresh barreners, £13 to £16; stirks, £7 5s to £8 10s; steers, £8 10s to £9 5s; ewes, 37s 6d to 45s; wethers, 40s to 50s; wether lambs, 35s to 40s; ewe lambs, 33s to 38s.

FOREIGN

Yorkhill, Monday.—Good average supplies of American and Canadian cattle were on offer to-day, 912 head being penned in the lairages, the majority (697) being from Montreal. There was a large attendance of buyers, and for good quality bullocks a steady demand was experienced at top quotations, but secondary, middling, and inferior descriptions were in no great request, and sold slowly at late rates. Bulls were scarce and dear at a shade over last week's values for prime beasts, while heavier animals were cashed at about recent quotations. Canadian bullocks of light, useful weights and sizes made up to 57s per cwt. deadweight, with secondary qualities from 54s to 56s per cwt. Bulls met an exceptionally good demand, prime beasts making up to 50s per cwt., and heavier sorts down to 43s per cwt.

Irish Live Weight Quotations.

(Department of Agriculture and Technical Instruction for Ireland.)

The following returns are those of actual sales made in Robson's Cattle Mart, Belfast, the stock being weighed either before or after sale, for week ending Sept. 12, 1905.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals for linseed for the week are 16 quarters from Harlingen, 4,992 Russian, 4,832 St. Petersburg, 1,961 San Pedro, 1,241 Calcutta, 4,247 quarters. The shipments for week ending September 16 are Plate 24,000 Hull, 15,000 Orders, 7,000 Continent; Bombay, 5,000 Continent; total 49,000 quarters. Linseed has been moderately offered from both the Argentine and North America, resulting in a further drop in the Plate spot, 32s 9d the value Aug Sept 32s 3d, Sept Oct 32s 3d nearest. Duluth Sept Oct 37s quoted. Continental The market showed more steadiness on Tuesday and values advanced to £5 2s 3d per quarter, and the month's shipment, but the business passing has been restricted, and yesterday £5 2s 6d again quoted spot. New crop for October and November January shipments after being held to the close of last week for £5 2s 6d, are easier at £5 1s 3d. Bombays has offered sparingly at £4 15s, September-October, and one or two re-sales, January February, transpired at £4 14s 6d, of which none there are sellers to-day. Oilseed cakes: A very quiet trade for all kinds, pending completion of harvest, but prices remain steady owing to the low prices current for oils. KEIGHLEY MAXSTED AND CO.

London, Thursday. Linseed: The market has been very depressed this week, the beneficial rains reported in India having induced shippers to offer freely, closing steady. Calcutta London Spot, 37s; and Aug Sept., 37s; Sept.-Oct., 37s.; La Plata, Aug.-Sept., 36s. Hull flat, with scarcely any demand; La Plata spot, 35s 7½d., passage 35s 6d; Sept. Oct., 35s 3d. Rapeseed meets with a rather better demand, but prices in India are still almost prohibitive, and business is much restricted. Brown Cawnpore, Sept. Oct., 36s; Brown Calcutta, Sept. Oct., 35s 9d. Cottonseed: The market has continued steady in Egypt but in Hull prices have declined, owing to the action of local operators. London: September, £5 11s 3d. September Fayoumi, £5 16s 3d sellers; Nov.-Jan., £5 16s 3d. Hull Spot, passage and August, £5 7s 6d to £5 6s 3d. September, £5 8s 9d; September Fayoumi, £5 12s 6d; October to January, £5 12s 6d. Linseed oil has experienced a considerable decline in value, but closes rather steadier. We quote spot and month in pipes, £16; barrels, £16 5s; Sept.-Dec., £16 7s 6d; Jan.-April, £16 12s 6d; Hull naked spot, £15 2s 6d; Sept.-Dec £15 15s; Jan.-April, £15 7s 6d. Oil cakes: Linseed cakes firm. London made £7 15s to £7 17s 6d. Cotton cakes quiet. London made £4 12s 6d.—THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday. Linseed cakes: In spite of a firmer attitude on the part of shippers, values are with difficulty maintained, and there are to-day second-hand sellers at last week's lowest quotations, which, however, meet with a poor response, especially on the part of country dealers, who refuse to operate beyond their immediate requirements. Russian may be bought without change in value. American offer for prompt and winter shipments at 5s per ton more money. East India seed pures unaltered. London made continue to find a dragging trade at last week's prices. Cotton Cakes: The trade is particularly disappointing, and in view of some fairly heavy arrivals of Egyptians, the market is depressed, holders being willing to accept a small reduction. English meet a slow sale at 1s 3d per ton less money. Decorticated: London-made move off steadily at £6 17s 6d for cake and meal; and £5 5s for special digestive meal, while American "Open Hand" brand is quoted at £6 17s 6d, and meal at £6 12s 6d. Rape cakes neglected; East India and ravison unchanged. Maize Germ meal: Some quantity of white American for winter despatch has changed hands at £5 2s 6d c.i.f., which is about present value. English remain quiet and without alteration. Maize Gluten meal is firmly held at £5 15s per ton. Rice meal: Very little offers in warehouse, and for this full prices of £4 17s 6d to £5 are demanded, while shippers are unwilling to accept less than £4 15s ex-ship terms for parcels to come along. Broken Rangoon rice, in bags, may still be bought at the low figure of £4 15s per ton. Locust beans are again the turn dearer, at £5 5s per ton for whole, and £5 10s per ton for kibbled. Nitrate of soda is unchanged, at £10 15s per ton ex-quay.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: The market for salted Canadian continues dull, but for saltless there is a good demand. Prices, however, are weaker, at 106s to 108s for "Choicest" Easterns, and 104s to 106s for "Choice" parcels of saltless. Western brands are trending 104s to 106s for salt, and 108s to 110s for saltless. The receipts of Australian butter during the second week of this month have been most exceptionally large, owing to four vessels arriving virtually together, two of which, with large cargoes, were considerably overdue, but "Choicest" brands of winter grass made goods are realising 108s to 110s per cwt., with an occasional 112s. Cheese: There has been only a fair demand for Canadian at unchanged prices. C.i.f. quotations, however, are coming easier.—W. WEDDEL AND CO.

Sale of the Late Sir Jacob Wilson's Shorthorns.

The entire herd of pure-bred Shorthorns bred by the late Sir Jacob Wilson, of Chillingham Barns, Belford, Northumberland, was dispersed on Friday by Messrs. Thornton and Co. About half a score of heifers from Lord Polwarth's well-known herd at Mertoun were also included in the sale, as well as a couple of bulls, the property of the Earl of Tankerville. There was a large and distinguished company to see the last of the herd which had been bred for so many years from the old Booth lines of blood by the late Sir Jacob Wilson. The cows were brought out in ordinary breeding condition, and not in any way made up for sale. The calves were a very good lot, rich in colour and full of promise. They were all by the fine bull, White Czar, bred by Mrs. Grey at Callaby, by Mr. Duthie's Pride of Freedom. He is a fine, handsome, white bull, and, having proved himself a first-class sire, was sold very cheaply to Mr. S. Wilson at 27 gs. The calves made high prices, in many cases more than their dams. Mr. Tait, representing the Windsor herd of his Majesty the King, and after a rare struggle with the Duke of Northumberland's agent, secured the gem of the sale in Lady Hetha Studley, a six-months-old heifer calf, at 110 gs., her dam making 80 gs. to Lord Polwarth. Another beautiful calf in Alpine Queen was purchased for the Windsor herd at 76 gs., Lord Polwarth again being the buyer of her dam at 30 gs. The Duke of Northumberland gave 56 gs. for Lady Maisie, a January heifer calf, and Sir Oswald Mosley 42 gs. for Strawberry Bloom 13th, calved in February. It was considered a most successful sale, an average of £30 13s. 8d. being obtained for the forty-seven head sold:—

The following is a list of the best prices, with buyers' names:—

COWS, HEIFERS, AND CALVES.

Sheep Fairs and Sales.

Bristol.

Messrs. George Nichols, Howes, Young, Arder, and Co., held a sale of rams at Bristol fair on the 8th inst., the catalogue including consignments from the eminent flockmasters. The first lot offered were the Hampshire Downs, belonging to Mr. J. Matthews, for which there was a ready sale, the prices ranging up to 10½gs. Mr. J. Bucknell's were the next offered. These were a nice class of lamb, and much appreciated. Mr. Howes then proceeded to offer the cross-breds, the first lot being Mr. Jeffery Matthews', several of which realised 10gs., there being a good demand for this class of sheep. Mr. Large's Oxford Downs were then put up, and met with a very good sale. The last consignment to be offered were the rams from Cleve Hill Farm, the property of Mr. Bridgman. These rams attracted great attention, and it was quite clear there would be no trouble in disposing of them, as they possessed great size, without sacrificing quality. There were 36 offered, all of which sold, the highest price being 13gs., and they made the good average of £9.

Mr. S. Brock's Southdowns.

The pure-bred Southdown flock belonging to Mr. Seaward Brock, Manor Farm, East Dean, near Eastbourne, was dispersed by auction on Friday by Mr. H. J. Burt, in the presence of a goodly company of breeders. The home of the flock had been on the most exposed part of the East Dean hills, and by using some of the best blood, notably Toop, Tompkins, Emery, and Stanford, Mr. Brock had very much improved the character of his sheep. The ewes were in a natural breeding condition, never having been fed upon an ounce of cake, and were a good lot, fit to go to any part of the county. The fact that it was intended to clear all lots without reserve gave bidders the advantage. The highest price obtained for full-mouthed ewes was 46s., and for six-toothed ewes 55s. Four-toothed ewes were knocked down at 61s., and two-toother ewes 60s. The price for rams went up to 5 gs., the lowest price being 32s. 6d. Seventy six-tooth ewes, the property of Mrs. Hale, of Crowlink Farm, were also included in the sale, and were sold at prices averaging from 53s. to 51s. The following figures will show the total realised under the various headings, the extra lots which were sold at the end of the sale being included in the first three totals:—

Seventy-nine full-mouthed ewes, £159 19s.; 115 six-tooth ewes, £296 5s.; 108 four-tooth ewes. £300 10s.; 111 two-tooth ewes. £321 14s.; 105 ewe lambs, £185 10s.; 111 wether lambs. £192 1s. 6d.; 9 two-tooth rams, £22 3s. 6d.; 70 six-tooth ewes. £182 10s.

Carlisle.

At Carlisle on Friday Messrs. Harrison held a special sale of Border Leicester and Oxford Down rams, half-bred and cross-bred ewes and gimmers, and cross lambs. The entries comprised 160 rams and between 8,000 and 9,000 sheep and lambs. Buyers attended in large numbers. A good demand was experienced for all classes at satisfactory prices, the chief of which are as follows:—Border Leicester rams—Oak Bank, Longtown, £12 5s; Manor House, Oughterby, £12; Kirkoswald, £9 10s.; Kirkoswald Demesne, £8 10s.; Stone House, Hayton, £7 7s. 6d.; Ivegill Grange, £7 5s.; Grinsdale, £6 12s. 6d. Oxford Down rams—Low House, £5 5s.; The Bank, £5; Holme Wrangle, £4 15s.; Scales Hall, £4 10s. Sheep.—Half-bred ewes made to 37s. 3d.; cross ewes, 35s.; half-bred gimmers, 36s.; cross gimmers, 43s. 6d. and 37s. 3d.; Cheviot gimmers, 27s.; and cross lambs, 31s. 6d.

Kidderminster.

Messrs. Nock and Joseland held their 18th annual sale of sheep at Kidderminster on the 8th inst., when the supply of stock in quantity and quality surpassed all previous records. The entry numbered nearly 5,500 sheep and lambs, and included entries from some of the leading prize-winning flocks at the Royal and various county shows. In consequence of the increasing popularity of the Oxford and Hampshire breeds for crossing purposes, the ram sale commenced with these classes, the first consignment to be offered being 25 capital Oxford lambs from Mr. George Adams, Faringdon, which made up to 7gs. each, 15 from Mr. G. Corbishley, Pershore, up to 7½gs., whilst from the noted prize-winning flock of Mr. W. A. Treweeke, Ryne Hill, Chipping Norton, 3 shearlings made from 10gs. to 11½gs., and 15 lambs made up to 11½gs., and others 7gs., 8½gs., and 9gs. each; from Mr. J. ...orlick, Cheltenham, shearlings made 11gs. and lambs 5gs.; 6 shearlings from Mr. Phipps Smith, Abbots Salford, made up to 10gs each.

Amongst the Hampshires the only entry was 2 shearlings and 22 lambs from Mr. Simpson Jay, Wimbledon, which elicited keen competition, the shearlings making 8gs. and 10gs., and the 22 lambs making up to 12gs. each, and averaging nearly £9 per head; 9 Shropshire shearlings from Mr. J. W. Dee, Wollas Hill, make up to 8½gs. each, and 15 from the old-established flock of Mr. Geo. Gerrard, Offerton, up to 6½gs. each. Others sold up to 8gs. The great entry of ewes included all the favourite breeds and were a very level lot; with a very large company of buyers, very few pens were unsold and those only of second quality.

Lincoln.

Lincoln September Ram Fair was held on Friday in favourable weather, and, as usual, attracted a large company of breeders and dealers. There was a good show of Lincoln Longwool sheep, and both the rams and the breeding sheep were in demand at prices which compare very favourably with those made at the last fair. The sheep were in excellent condition, as were also a number of Hampshire Down rams. The latter, however, were in less favour than the Longwools, though a clearance was effected before the fair closed.

Messrs. T. B. Richardson and Son sold 100 Lincoln Longwool rams. Sixteen pure-bred shearlings, from the flock of Mr. J. Pears, The Mere, made 177 gs., the highest price being 20 gs. Twenty shearlings, also pure-bred, belonging to Mr. J. Evens, Burton, sold for £155 2s. 9d., the top price being 15 gs. Mr. F. Smith, of Navenby, sent ten pedigree shearlings, which averaged £14 5s. 6d., the highest price being 16½ gs. Five shearlings, bred by Mr. S. G. Wildsmith, Harmston, made from 7 gs. to 9 gs. each, and numerous others up to 9 gs., whilst three, bred by Mr. C. E. Howard, Naton Rise, made 8 gs., 8½ gs., and 16 gs. respectively. Messrs. Richardson and Son also sold about 500 ewes, gimmers, and lambs, which made up to 67s. 6d. per head, this price being obtained by Messrs. Dean and Sons, Dowsby Hall, for Longwool gimmers.

Mr. J. E. Walter sold 120 Longwool rams and 1,200 head of breeding sheep. Of the rams the highest prices were realised by those bred by Mr. W. Bayles, Welton. One made 33 gs., another 18½ gs., and a third 17 gs. Mr. C. S. Dickinson, Branston, sent 20 rams, which sold at prices up to 14½ gs.; whilst 18 gs. was paid for a ram from the Birley Moor flock, near Sheffield. Others made up to 12 gs. Of the gimmers, the best in the fair were those bred by Mr. G. E. Saunders, Scampton, which made up to £3 10s. 6d. each, the highest price of the day.

Late Col. Wisden's Southdowns.

By order of the executors of the late Colonel Wisden, Mr. H. J. Burt, of Steyning, on Monday, at Warren Home Farm, Broadwater, disposed of the pure-bred Southdown herd flock, numbering over 800, and made up of 160 two-tooth ewes, 148 four-tooth ewes, 136 six-tooth ewes, 124 full-mouth ewes, 234 ewe and wether lambs, and three rams. The flock was established at Warren Farm 31 years ago by the late Lieutenant-Colonel T. F. Wisden, J.P., D.L., the foundation being 400 grand ewes which he purchased out of the Duke of Richmond's flock at Goodwood. Up till some six years ago the sheep were frequently shown, and were successful in winning prizes at Horsham, Hailsham, Steyning, Henfield, and Lewes. The home of the flock has been on Cissbury Hill, and the animals were recommended as an extremely hardy, healthy, and good rent-paying lot of ewes, fit to go to any part of the country.

Despite the wet weather there was a very good attendance of well-known flock farmers from all parts of the country, and business was always brisk. The highest price obtained for full-mouthed ewes was 43s., the lowest 26s.; six-tooth ewes ranged from 47s. to 40s.; four-tooth ewes from 57s. to 45s.; two-tooth ewes from 59s. to 31s.; ewe lambs from 36s. to 27s.; wether lambs from 34s. to 26s.; and rams from 6½ gs. to 2½ gs. The totals realised for the various ages were:—124 full-mouthed ewes, £245 13s.; 136 six-tooth ewes, £300 3s.; 148 four-tooth ewes, £388; 160 two-tooth ewes, £376 13s.; 173 ewe lambs, £275 4s.; 61 wether lambs, £60 6s.; and three rams, £14 3s. 6d. Total, £1,660 2s. 6d.

York.

The first of the large autumn ewe fairs at York took place on Thursday, when fully 20,000 sheep of all classes were penned. For North country ewes a very slow trade prevailed on account of the high prices asked, and the comparative earliness of this year's fairs. The best made up to 50s., and others 42s. to 48s. each. North country lambs, shown in small number, made up to 32s. The best twice-crossed shearlings met with a very good trade at 46s. to 52s.; Masham shearlings, 30s. to 44s.; and Masham ewes, 36s. to 44s. each. Two or three special lots of twice-crossed lambs made up to 40s., and others from 30s. to 35s. each. A few Masham lambs were on offer, and made from 22s. to 25s., and a few South country ewes were selling at 35s. to 45s. each.

[*The remainder of Sheep Sales will be found on page 345.*]

Live Stock Record.

SWINE ERYSIPELAS.

The epidemic which has recently been making such terrible havoc among the pigs of the Chatteris district in Cambridgeshire was at first mistaken locally and reported as swine fever. But veterinary authorities have pronounced it to be swine erysipelas, a malady well known in France and Germany, and, according to some statements, there have been a few previous outbreaks in this country. But, if so, it was a much milder and less infectious type of the disease, for the only cases the Board of Agriculture had any previous knowledge of were isolated ones, readily suppressed without spreading beyond the farms of the outbreaks, and the animals that were attacked recovered. A Hunts farmer, it is true, states that he remembers two instances of a very similar malady causing great mortality—the one in Beds, the other in Hunts—but infection did not extend beyond the attacked parishes. The present outbreak appears to have assumed a virulent form on Midsummer Day in the parish of Doddington, whence it spread to Chatteris, and now fresh outbreaks have been recorded at Tydd and Thorney.

The farmers of the Chatteris district have scarcely any pigs left. When the mortality got to be rife pigs were sent away from the adjoining farms to those attacked "at the rate of four or five truck-loads at a time," according to one local paper. But death took them off from the stricken farms wholesale with great rapidity. When the Board of Agriculture sent Mr. A. W. Landon to officiate as chief inspector, one farmer had lost seventy-one and another thirty-seven pigs, the deaths on several other farms ranging from ten or a dozen to eighteen. The cottagers of Doddington had lost about fifty, and the death-roll a week since was over four hundred, for which not a farthing compensation was to be expected. Mr. F. W. Seward, of Chatteris, told a newspaper interviewer that he had lost £70 worth of pigs, and all the Board of Agriculture had allowed him was 8s. 6d. to defray the cost of burying them. All the outbreaks have as yet been dealt with as swine fever cases, in which the Board only pays compensation when it orders pigs to be killed. If they die before any orders are given for their slaughter the entire loss falls on the owners of the animals. Only half their value is allowed if found to be infected by disease when the Board does issue orders for slaughter, and this inadequacy of compensation has caused numerous bitter complaints before to-day.

In vain does the Chief Inspector tell the suffering farmers and cottagers that the Board has no funds to give compensation in any other way, or more liberally than it does at present. The air has been full of discontent and angry complaints because, while compensation is withheld, a cordon is drawn around the district so that even fat pigs cannot be moved from one place to another for slaughter except by special licence. Mr. Seward, one of the greatest sufferers, says that he applied to the Board to allow his unaffected pigs to be sent to Leicester for slaughter. But the special licence he received only allowed him to remove them to another part of Chatteris, which licence he did not avail himself of, because he knew that "the carcases could not be sold there." The Board has also been censured for delay in its proceedings owing to the red-tape formalities which have to be gone through. On the owner of an attacked pig finding something amiss he has to seek the police-constable, who inspects the animal, and has to send a report to his superior officer that he suspects it to be a case of swine fever. Then a series of what the men of Chatteris have not been slow in terming "useless" communications and transactions have to take place, and the animal most likely dies before the authorised veterinary inspector visits the place. Mr. Landon, on being told by a Press interviewer that people were reasoning thus, replied, "The disease was so terribly and fatally swift, what could we do?" He had good reason to declare the fatal scourge to be of this character certainly, for when the local inspector first inspected Mr. Heading's farm he found 19 pigs dead, but five succumbed next day, and fifteen the next, and "they continued to go off like flies," it was said, until very few of the large herd survived.

The cause of this pestilence breaking out in Cambridgeshire is popularly believed to be due to the use of foreign meal, in which the psora of it had presence, and that it was thus imported. This view is not, however, entertained by the Chief Veterinary Inspector. That it has been imported in some way or other appears tolerably certain, because in the past so rare here, but often breaking out there. The Board of Agriculture is making every effort to trace the outbreak to its source, and is about to issue a leaflet on the disease, in which it will be fully described, together with the experiences of French pig-owners in treating it. They inoculate their pigs with a preventive serum, it appears; and the Veterinary Department of the Board is making this remedy its particular study, and making every possible inquiry to ascertain how far it has proved effective as a preventive. Meantime, it is to be fervently hoped the malady itself will be speedily stamped out in the Eastern Counties. During the past fortnight there were fewer outbreaks in the Chatteris district; but that was not held to be of much import, it was said, as the farms thereabout had so very few left to be attacked. On the other hand, the outbreaks in these districts of Tydd and Thorner were regarded very seriously.

Practical Experience.—Mr. T. Comyn Platt, the Conservative candidate for the Louth Division, has just had some interesting experiences in the harvest field. Being at North Ormsby on the farm of Mr. W. M. Casswell, where extra hands were needed, Mr. Platt offered his services, and was accepted. He therefore began first thing in the morning, stopped the ordinary half-hour for breakfast, dinner, and tea, and finished up at 7.30 with the rest of the men. Mr. Platt has formed a favourable opinion of the agricultural labourer as the result of his closer acquaintance with him in his daily work, for, in the course of a letter to a friend, he said, "As luck would have it, we were loading wheat all day. . . . Never have I known such a heavy sheaf as is this year to be found in Lincolnshire. However, I did my day's work, got my money, and feel all the better for the experience. I have heard it said that these men don't know what it is to work! I can only say that I have tramped across Africa, have harvested in Greece, and helped to unload a ship on the Caspian Sea, but never have I done a bigger day's work; certainly I have never met men who worked harder, more continuously, or with a better will than the Lincolnshire labourer.

STOCK AND SHOW NOTES.

By Herdsman.

I received during the past week catalogues of two important Shorthorn sales, to be held this month by Messrs. J. Thornton and Co., viz., on the 19th inst. at Tring Park, Herts, and on the 27th inst. at Buscot Park, Faringdon, Berks. It is hardly necessary to add that the animals belong respectively to Lord Rothschild and Sir Alexander Henderson, Bart., two of our most prominent Shorthorn breeders. Like good wine, the animals to be sold "need no bush," for they are worthy representatives of notable herds, and descendants from the very best blood. What more can an intending purchaser require?

The Buscot herd, which has been in existence about fifteen years, was founded by judicious purchases from those famous herds established at the Royal farms at Windsor and Sandringham; also from the late Duke of Devonshire at Holker, Lord Fitzhardinge at Berkeley, Lord Rosebery at Dalmeny, as well as from the capital stocks bred by Messrs. Garne, Edmonds, and Hobbs in Gloucestershire. It has been kept up to the fashionable taste of the day by the use of high-class bulls from the late Mr. W. S. Marr's herd at Uppermill, Aberdeenshire. Wanderer's Prince 78105, purchased when a calf seven months old for 180 gs., has proved a most fortunate investment, especially when crossed with those large-framed cows of the old Bates strain, of which the herd contains a large number of grand animals. Although not a show bull himself, his great substance and quick feeding properties as well as his robust constitution have rendered him an excellent and impressive sire; he grazes out daily with the cows, most of which are in calf to him. His stock have been exhibited with remarkable success. Baron Buscot 30497, his son from Mr. J. T. Hobbs's Quicksilver 31st, won several prizes, and was placed first at the first R.A.S.E. Show at Park Royal, 1903, where he was sold for 500 gs., whilst the heifer Lady Buscot Grace this year has won first prize at the Bath and West Show at Nottingham, first and reserve for champion at the Essex Show, second at the R.A.S.E. Show, Park Royal, and other prizes.

The animals for sale on the 27th inst. comprise a large number of fine cows and heifers, descended from the late Mr. E. Bowly's stock at Siddington, celebrated in the seventies for the high prices then realised; many of them are of the Maids and Roses of Oxford as well as of the Chorus and Musical families. The Lady Bates tribe obtained at Holker is numerously represented: also Mr. J. Thorley's Ringdale Favourites, from which several prize winners have been bred. There are specimens too of the Cruickshank Clippers and Lancasters, the Trethewy's Ruths and Garne Magics from Aldsworth, at which sale in 1901 the bull Now or Never 67544 was purchased, and has since been used in the herd, as well as his sons Buscot Marquis 85485 from Dalmeny Lady 2nd of the favourite Lancaster tribe, and Buscot Revenue 85488 from Moss Rose of the old Garne Pye tribe. To continue the same strain of fashionable blood the young bulls Missie's Crown and Royal Pennant were purchasd at the Uppermill Sale last October; the former is by Mr. Willis's Bapton Sapphire from Missie 168th, the latter by Mr. Marr's Royal Diamond from Princess of Morn of the Miss Ramsden family. These are now in service with the heifers, which will be found a singularly good lot of two-year-olds and yearlings, several of which are most promising for exhibition next season.

At a public meeting, held on the show

ground at the close of the Waveney Valley Agricultural Association's show at Harleston, on Tuesday, it was unanimously agreed "That the Norfolk Agricultural Association be invited to hold its sumer show in 1906 at Harleston," and it was also resolved that in the event of the Association accepting the invitation, the Waveney Valley Agricultural Association be requested to drop its show for the year, and to give its utmost support to the County Show.

A consignment of 24 Wensleydale Longwool rams from the noted registered flock of B. J. Hodgson, Hallwith, Spennithorne, were sold to Messrs. R. Vissen and J. Zuwrbien, Beemsten, Noord-Holland, and were shipped from Hull on 2nd inst. to Antwerp.

A nicely got-up private catalogue has recently been issued of the Dowsby Hall flocks of Lincoln Longwool sheep and the Durham Shorthorn herd, belonging to Messrs. S. E. Dean and Sons, Dowsby Hall, Folkingham, Lincs. The flock is the largest registered flock of pure-bred Lincolns in Great Britain, consisting of 1,550 breeding ewes, which have been bred for many years from choice prize-winning sires, and almost every animal in the flock traces back to a Royal champion. The success of the flock in England has been most marked, having won two £50 challenge plates against all breeds of Longwools, two £15 breed cups, four champion, six reserve champions, forty first, forty second, and eighteen third prizes at the Royal and other English county shows during the last three years, whilst rams and ewes from the flock have been sold to go to all parts of the world to start new flocks and for show purposes.

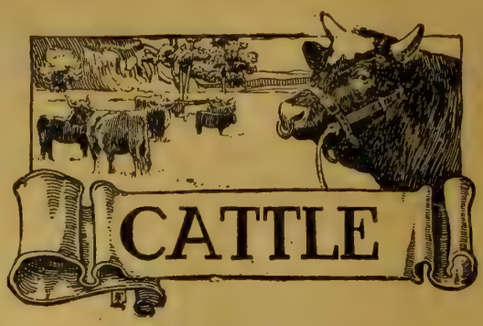
Messrs. Dean and Sons' herd of Shorthorns was founded in the year 1878, and has been most carefully bred, purchases having from time to time been made from the oldest strains of pure Bates' cattle. Scotch sires of the very best strains have been carefully selected for the last few years, and the herd now consists of eighty breeding cows and heifers, besides other young stock. The noted bull Imperial Favourite (86233), which cost 700 gs. when six months old at Mr, Marr's sale in 1903, and was this year champion bull at the Peterborough Show against all ages, is still in serivce, whilst Lord Wild Eyes 18th (vol. 51), a home-bred bull sired by Baron (82777), grandsire Royal Star (71502). Lord Lovat's noted bull, has done most valuable service, and has left some excellent calves. He was shipped per s.s. "Raeburn" on July 22, for Buenos Ayres.

The Newport (Mon.) Corporation have decided, on the proposition of the Mayor (Councillor Robert Wilkinson), to invite the Bath and West and Southern Counties Show to hold their show at Newport in 1907.

Messrs. Alfred Mansell and Co., the well-known live-stock exporters, of Shrewsbury, recently shipped twenty-five beautiful Shropshire ewes, bred by Mr. Tom Davies, to the account of Mr. Robert Miller, of Ontario. Mr. Miller has had a large number of Shropshires sent him this season, and the ones above mentioned are well worthy of their predecessors.

Messrs. Alfred Mansell and Co., live stock exporters, of Shrewsbury, recently sold to Mr. G. Hall, of South Africa, twenty well-grown, strong ram lambs from the flock of Mr. J. H. N. Walford. All the lambs were specially selected for dense wool and nice character.

Crawley Fair.—The annual September cattle, horse, and sheep fair at Crawley, took place on the 9th inst. For quantity of stock the fair was the best that has been held for many years; yet trade was very bad, in spite of the fact that a good company was present. Very few beasts changed hands throughout the fair, and these at low prices, compared with those that have been ruling lately. Trade was dragging all round. Messrs. Wood, Son, and Gardner had a splendid entry—about 125 head of horned stock, 150 sheep and 30 horses—but they only experienced middling trade. The beasts went at from £12 10s for two year olds, down to £6 a head for yearlings. Lambs went fairly well, reaching as high as 33s. 6d.



Notes and Jottings.

The Metropolitan Cattle Market on Monday last appears to have been rather more cheerful, the top quotation for choice Devons and Herefords being 4s. 8d. per 8 lb. The supplies appear to have been drawn, as is usually the case at this time of year, mainly from the Midland counties of England. Scotch cattle were conspicuous by their entire absence, and Ireland contributing but 57 head. It is not often that these arteries of supply are so very limited as this represents, and perhaps the reasons may be attributed on the part of the Irish cattle to the fact that the season has not been as good as usual for finishing them in the Emerald Isle, and as regards the Scotch supply a great many cattle are now sent direct to the more Southerly markets in Hampshire, Sussex, and Kent from Scotland, instead of passing through the London market. A commendable proceeding.

The question of butterfat in milk appears to continue a very vexed one. The case published in your last issue is a very interesting one, and the result very satisfactory to the producer. In such cases it would, however, be of great advantage to dairy farmers and all interested in such cases if the food used was made known. There is no doubt that many of the most milk-producing foods as regards quantity are simply worse than worthless as regards quality, and then there is the marvellous variation in the quality of milk from different breeds, and even more difference, or at any rate quite as great, in the milk of different animals of the same breed. A little more information as to these things would be immensely instructive when disputes of that nature arise.

The season appears to have been a very hard one for breeders of Red Polled cattle as far as public auction prices are concerned. Both the highest individual as well as the average prices have scarcely reached a profitable point, whether this is due to an over supply of that breed or to other causes is difficult to ascertain. At our leading shows of the breed this year the displays have been very satisfactory, and the breed can fairly claim to be a dual-purpose one, and with the great agitation that is taking place with regard to the breeding of milking cattle it is not encouraging to find that a breed of such proven value for the pail has to be disposed of at such low down prices as obtained at the clearing out of the famous Whittingham herd.

Whilst making notes of a milky nature a line of reference to the meeting and doings of the Staffordshire farmers may not be out of place. Like many other dairy farmers, those of Staffordshire are evidently not satisfied with the present means and ways of disposing of their produce, and appear to rather favour the formation of a Farmers' Dairy Company in their midst. Many dairy companies have been formed in various parts of the country during the past decade, and previously, but one hears of but little if any advantage accruing to the farmers who are producers from this course, and the writer, at any rate, has no hesitation in commending the remarks of the members present at the meeting mentioned, who were of opinion "the farmers could deal with the milk more satisfactorily themselves than any factory could."

The question of officialism and a great amount of red tape, which perhaps in these cases may often be called "a pale red," appears to be one which absorbs a great deal of time, and with that a great deal of money that would be of great benefit to the farmers. The writer can speak somewhat feelingly upon this point, having joined one or two such institutions in the past with anything but satisfactory results, whilst after returning to the old-fashioned custom of dealing with it at home matters improved incredibly. The expenses of wiring to and from the station or the factory are avoided, the better feeding (if adopted) than your neighbour gives is all placed to your own credit, and all offals are at home for the benefit of something or other, often applied with the best results by being given to the "gintleman that pays the rint."

Looking over the Board of Agriculture returns for Ireland is not altogether a pleasant proceeding, the decline in the census of cattle for so comparatively small a country being almost alarming. It is very difficult to locate the cause of this. The very high prices in keen demand prevailing for store cattle in recent years, one would have thought, would have resulted in a vast increase rather than a decline. Has the very fashionable course of cross-breeding anything to do with this? It too often happens that cross-bred females

Forthcoming Live Stock Sales.

are precocious developers for the butcher, and worth a good price to sell, and thus tempt their owners to dispose of them instead of retaining them as breeders, whereas in a pure bred herd the females are usually of the greatest value for breeding purposes, and so are retained with that object in view. This is worth thinking about

---

What a pretty picture the three yearling Aberdeen Angus heifers made on the cover of last week's issue. The Langshott herd may be proud of breeding such, but what a famous sire Equerry of Ballindalloch proved. His male progeny fattened readily, and his females, like the group referred to, present wonderful uniformity. What satisfaction it is to any enthusiastic breeder when his stock sires produce young stock of uniform character. There is no other feature in breeding that is so thoroughly satisfactory as this, and when it does take place it is almost certain to follow on to third or fourth generations. Stock as remote as this will often be so like their ancestors in such instances, that a close observer and keen judge will recognise them at once if he had been acquainted with their frontal head.

Picking up a daily paper a terrible scare was observed. It ran thus: "Meat Famine in Germany." What a marvellous change time has wrought on the Continent of Europe in respect to its meat supply. Looking back over the hills of time it seems but the other day that we stood in the Islington Cattle Market with long lines of four-years-old Dutch and other bullocks from the Eastern side, as well as those handsome and docile Spanish and Portuguese oxen, with their sober-looking coats and picturesque horns. By degrees the altered circumstances have obtained in the following way. First, the four-years-old oxen were gradually displaced by early matured two-year-olds; gradually, the number of two-year-olds and all other imported ones became smaller, until it finally ceased altogether.

Then for a period, and even at times to-day, English bullocks have been shipped to the Continent, and finally the Continent becomes so absolutely dependent upon American meat that the scare of a "meat famine" appears in the leading papers. The demand for meat has increased enormously in the British Islands during the past twenty years, and much more so on the Continent, this increased consumption being due to the dual causes of an ever-increasing population and ever-increasing wages and a higher scale of living. From an English breeder's point of view, the ceasing of imported stock from Europe has been nothing short of a godsend. It was thence the devastating cattle-plague came, and thence the almost equally to be dreaded foot-and-mouth complaint was brought. Truly, we have great cause for being thankful that foreign cattle are no longer admitted.

Sale of Shorthorns at Manoravon.

Manoravon has for some years been known for its Welsh ponies and Shorthorn cattle, and a large number of farmers and breeders (several coming over from the Penyfai sale on Tuesday) attended the sale of a large portion of Mr. Evan Jones's Shorthorns on Wednesday, in the Towy Valley, despite the fact that the weather was most inclement, heavy rain falling the greater part of the day. The beautiful bunch of two-year-old heifers and the grand lot of bull calves were greatly admired. The pick of the sale was undoubtedly the white heifer Crocus 5th, first-prize winner at the United Counties Show this season, and after quick competition she went to Sir Arthur Stepney at the Dell for 67 gs. Among the best purchasers were Mr. H. Sessions, of Ilton, who secured several of the best of the cows and heifers, Mr. J. S. Hobbs, of Maiseyhampton, and Mr. F. Stratton, of the Duffryn. Altogether the sale was considered most satisfactory, the cows with their calves averaging nearly £24 each. Messrs. J. Thornton and Co. were the auctioneers.

We give below a list of the chief lots: -

COWS, HEIFERS, AND CALVES.

	Gs.
Czarina 28th, red and white, c. April 18, 1896; s., Lincoln Forester 70770 ..... Mr. F. Lloyd	19
Duchess 9th, roan, c. April 16, 1898; s., Dainty Baron 70223 ..... Mr. J. Allen Thomas	18
Crocus 4th, roan, c. Feb. 11, 1899; s., Magnanimous 70909 ..... Mr. H. Sessions	35
Jessie White, white, c. Feb. 17, 1899; s., Magnanimous 70909 ..... Mr. R. Rees	21
Charming Bess, roan, c. March 11, 1900; s., Rampart 75355 ..... Mr. H. Sessions	36
Diadem 2nd, red, c. Nov. 20, 1899; s., Westerfield 73865 ..... Mr. Richardson	27
Virtue, red and white, c. Jan. 14, 1901; s., Rampart 75355 ..... Mr. J. R. Thomas	20
Charming Bess, roan, c. Jan. 14, 1901; s., Rampart 75355 ..... Mr. H. Sessions	31
Lady Rampart, roan, c. March 11, 1901; s., Rampart 75355 ..... Mr. F. Stratton	25
Tulip 19th, red and white, c. June 25, 1901; s., Monarch 81728 ..... Mr. H. Sessions	19½
Her red cow calf, c. March 24, 1905, by Roan Hanley 82072 ..... Mr. H. Sessions	13½
Golden Dawn, red and white, c. July 25, 1901; s., Monarch 81728 ..... Mr. J. T. Hobbs	26
Lady Ethelred, red, c. Feb. 15, 1902; s., Monarch 81728 ..... Mr. J. T. Hobbs	25
Her red and little white bull calf, c. March 24, 1905, by Roan Hanley 82072 ..... Mr. J. Swell	6
Diadem 3rd, roan, c. April 9, 1902; s., Monarch 81728 ..... Mr. F. Lloyd	31
Golden Gleam, roan, c. June 25, 1902; s., Monarch 81728 ..... Mr. D. Burnett	31
Victoria Chorus, c. June 13, 1902; s., Earl Cawdor's Monarch 81728 ..... Mr. J. T. Hobbs	25
Miss Mite, white, c. Sept. 20, 1902; s., Monarch 81728 ..... Mr. R. Footman	20
Lady Eliza, roan, c. Jan. 30, 1903; s., Monarch 81728 ..... Mr. D. Howell Thomas	19½
Tulip 20th, roan, c. April 6, 1903; s., Monarch 81728 ..... Mr. H. Sessions	20
Quickly 3rd, roan, c. April 11, 1903; s., Monarch 81728 ..... Mr. H. Sessions	31
Charming Biddy, roan, c. May 6, 1903; s., Roan Hanley 82072 ..... Mr. D. Burnett	24
Victoria Jubil, red, c. July 1, 1903; s., Earl Cawdor's Monarch 81728 ..... Mr. R. Stratton	22

Sale of Shorthorns at Llanelly.

The sale of the late Mr. W. J. Buckley's herd of Shorthorn cattle, as well as some choice cattle from Sir Arthur Stepney's and Mr. H. C. Lewis's herds in Pembrokeshire, took place at Penyfai, Llanelly, on Tuesday, Messrs. Thornton and Co. being the auctioneers. Many of the animals were of the north-country breeding that has been so sought after in recent years, more especially the "Missies," and these made good prices, Mr. E. Potter and Mr. H. C. Lewis taking the best into Westmorland and Pembroke respectively, whilst several of the best lots were purchased by Mr. C. D. Phillips to go to Monmouthshire. There was a large company present, and the stock were brought out in excellent breeding condition. An average of nearly £26 was obtained. The flock of Shropshire sheep was also sold at fair prices.

We give below a sale list of the principal lots, with purchasers' names and prices; the animals, except where otherwise stated, were the late Mr. Buckley's: -

COWS AND HEIFERS.

	Gs.
Princess Missie, red roan, c. February 27, 1896; s. Prince William 69320 ..... Mr. E. Potter	54
Bellona 2nd (Sir A. Stepney, Bart.), red roan, c. March 9, 1896; s. Livy 61118 ..... Mr. H. Sessions	17½
Blooming Rose, rich roan, c. May 10, 1897; s. Red Prince 67707 ..... Mr. Mansel Lewis	17½
Golden Flower, red, c. November 14, 1898; s. Dream of Millions 72378 ..... Mr. T. A. Buttar	41
Ury Lass 2nd, red, c. January 15, 1899; s. Easter Gift 72549 ..... Mr. C. Edmonds	29
Blossom (Sir A. Stepney, Bart.), red, c. July 20, 1899; s. Deputy Lieutenant 72336 ..... Mr. C. D. Phillips	18
Sweet Dewdrop, rich roan, c. March 25, 1900; s. Cabin Boy 66766 ..... Mr. Mansel Lewis	17
Old Fashion 5th (Mr. H. C. Lewis's), roan, c. April 18, 1900; s. Pedestrian 73185 ..... Mr. C. D. Phillips	25

Aberdeen Angus Sales in Scotland.

Ballindalloch and Auchorachan Herds.

Last week Messrs. Macdonald, Fraser, and Co., Ltd., of Perth, conducted a number of important sales of Aberdeen-Angus cattle in Scotland, commencing on Tuesday with the dispersal at Lagmore Farm, Ballindalloch, of a number of choice animals from Sir G. Macpherson Grant's herd at Ballindalloch, and Colonel Smith Grant's, Auchorachan. The Ballindalloch herd has long been recognised as one of the very foremost of the breed, and as the Auchorachan herd was founded some thirty years ago from the same stock, there was nothing left to be desired as regards the breeding of either consignments. The Ballindalloch collection included thirteen cows, all in profitable condition, served by Eblamere, Everard, Edensor, Eblito, and England, all Erica sires. There were also three two-year-old heifers, five choice yearling heifers, and one bull. The Auchorachan lot was made up of seven cows, four two-year-old heifers, and nine beautiful yearling heifers.

There was a good attendance at the sale, and bidding was at times brisk, but prices did not rule so high as could have been expected. Of the forty-two animals catalogued, one was not forward and two were withdrawn, the offers in each case falling considerably short of the reserve figure. For the thirty-nine animals exposed, a total was realised of £1,569 15s., giving the fairly good average of £40 5s. The highest price of the day was 105 gs., which was realised for the Ballindalloch eight-year-old cow Eliota, by Eltham. She was fancied by Mr. Kerr, of Harvieston, and by the representatives of Mr. J. R. Findlay, Aberlour, and between them they speedily got the price up to 100 gs., and at 5 gs. more she passed into the Aberlour herd. There was also a spirited contest for the Ballindalloch three-year-old Beneficent Maid, a typical Miss Burgess cow, by Bion, and showing the best characteristics of the breed. The final competitors were Mr. Wylie Hill, of Balthayock and Mr. James Kennedy, of Doonholm, the latter securing her at 77 gs. Details of these and other sales are given in the following list, the name of the herd from which the animals came being given in parenthesis: -

COWS

Mr. J. R. Findlay's

On Wednesday Aberlour was the scene of the sale, where, after an interval of nine years, a draft from Mr. J. R. Findlay's herd was disposed of. It has been the aim (and how it has been fulfilled is well known) of Mr. Findlay to keep the herd in good, healthy condition, and by careful selection and purchases from some of the most famous herds in the country to improve the breeding and the general quality of the stock. The cows have all proved good breeders. The present sale was rendered necessary on account of the herd having outgrown the accommodation available at the home farm. The animals catalogued numbered forty, and included many of the best representatives of the herd.

There was another large attendance, and, as a rule, there was no lack of spirit in the bidding. The whole of the forty animals catalogued were put through the ring, and they brought an aggregate of £1,403 17s., or an average of £35 1s. 11d. But for the moderate prices obtained for the four heifer calves and the two bulls exposed the general average would have been considerably higher. As it was, the result was very satisfactory, one of the cows bringing 190 gs. and one of the yearling heifers 100 gs. The former was the four-year-old Pride of Honour, a get of Performer out of the Alick dam Preference Pride. This beautiful and highly bred cow has had a distinguished career, including many championships at the Northern showyards, and her record also includes a second at the Highland Show, and a first at the Royal Northern, and reserve to a Shorthorn bull for the championship of all breeds at Inverness. For this exceptionally fine animal there was a smart competition between Mr. A. T. Gordon, Combscauseway, and Mr. John Grant, Advie Mains. Bidding began at 70 gs., but it was not until double this figure was reached that the keenness of the contest became apparent. Mr. J. M. Fraser, who was selling, tried hard to reach 200 gs., but Mr. Grant could not be induced to name that sum, and at the figure mentioned the animal was taken out by Mr. Gordon. For the yearling heifer there was also a lively bidding. Mr. James Cameron, on behalf of Mr. Wylie Hill, and Colonel Smith Grant and Mr. Kerr, of Harviestoun, all being in the running. In the end she was secured for the Auchorachan herd. The following is a list of the chief sales:

COWS

Pramella of Aberlour 24090, c. July 21, 1895; s. Mainstay of Aberlour 11977 .....Mr. Allan 29

[*Owing to pressure on space the other sales are unavoidably held over until our next issue.*]

Sale of Sussex Cattle at Mayfield.

Mr. Edward Lloyd, of New Pin Farm, Five Ashes, Mayfield, Sussex, is relinquishing farming, and on Friday Messrs. T. Bannister and Co., of Haywards Heath, sold the live and dead stock, the catalogue including a valuable herd of pedigree Sussex Cattle. There was a large attendance and keen competition. The Sussex cattle sold as follows; dairy cattle and several horses were also sold, the best price for the latter being 46 gs.:—

Redleaf Laura, purchased by Mr. E. Rayner, Wadhurst, 21 guineas; bull calf, Mr. E. Rayner, 5 guineas; Mayfield Molly 4th, Count Munster, Maresfield, 21 guineas; bull calf, Count Munster, 17 guineas; Noble Lady 22nd, Mr. Wickens, Mayfield, 22 guineas; Blue Bell 2nd, Mr. H. J. Chapman, Lewes, 25 guineas; heifer calf, Mr. H. J. Chapman, 6 guineas; Blechnum 3rd, Mr. E. Rayner, 25 guineas; bull calf, Mr. H. T. West, Woodmancote, 9 guineas; Helen, Mr. H. J. Chapman, 27 guineas; heifer calf, Mr. H. J. Chapman, 7 guineas; Penshurst Barbara, Mr. H. J. Chapman, 22 guineas; bull calf, Mr. H. J. Chapman, 16 guineas; Skipper's Queenie, Mr. H. Bell, Reigate, 12½ guineas; heifer, Mr. H. Bell, 22 guineas; Skipper's Annie, Mr. E. Symes, Five Ashes, 18 guineas; heifer, Miss Taylor, Five Ashes, 21 guineas. Steers were purchased by Mr. Wickens, a pair at 36 guineas; Mr. Wilson a pair at 26 guineas; Mr. E. Symes one at 18 guineas; Mr. H. S. Greaves, Buxted, two at 10½ guineas each; Mr. A. E. Dudeney, Barcombe, two at 13 guineas each, and one at 28 guineas. Mr. E. Rayner purchased a Sussex cow at 15 guineas, and her steer calf at 9½ guineas.

The Horsted Jerseys.

The entire herd of pure-bred Jersey cattle, bred by the late Mr. Francis Barchard, was sold by auction at Horsted Place, Sussex, on Friday, by Messrs. J. Thornton and Co. The late Mr. Barchard was not only a great admirer but an eminent breeder of both cattle and sheep. For many years he kept on his beautiful estate a herd of Shorthorns and a herd of Black Polled cattle, as well as a famous flock of Southdown sheep, which were eventually dispersed at high prices, and were quite notable events in the county of Sussex. The herd of Jersey cattle had been in existence about thirty years. It consisted of two families: the Empresses, descended from a first-rate cow imported in 1876; and the Rushes, which came from Mr. R. J. Pope. The principle adopted by Mr. Barchard was the selection of the highest bred sires, without being in themselves showyard winners. This principle he found successful with his Shorthorns and Black Polls as well as with his sheep, and the high prices they realised on their dispersion showed that the public appreciated his system. The same was applied to the rearing of the Jersey herd. There was a large attendance at Friday's sale, but the animals sold cheaply, as have other Jerseys of late, top prices being but 34 and 33 gs., whilst a very few realised over 20 gs., and some sold as low as 5 gs. Some in-calf two-year-old and yearling heifers from Mr. Q. J. Streatfeild's (Uckfield) and Mr. G. M. Maryon Wilson's (Searles) herds were included in the catalogue. The chief lots and purchasers were as follows, the animals, except where otherwise stated, being the late Mr. Barchard's:—

Transactions in Store Stock.

Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Blessington, Co. Wicklow, on 13th September, there was a small supply of very moderate cattle; slow demand and a clearance not effected. Calves, 2nd class, £2 17s. 6d. to £3 5s.; yearlings, 2nd class, £6 5s; two-years-old, 2nd class, £8 7s. 6d. to £9 15s. Large supply of Wicklow Mountain (Cheviot) ewes, for which there was brisk demand, a good clearance being effected. Two-years-old and upwards, 2nd class, £1 10s. 6d. to £1 17s.

Contagious Diseases of Animals.

NOTE.—The figures for the current year are approximate only.

The President of the Board of Agriculture paid an official visit, on the 9th inst., to the Blythwood and Walpole Farms at Stansted, left by Sir James Blyth to the Government for the investigations of the Royal Commission on Tuberculosis. He was received by the chairman of that body, Sir Michael Foster, M.P.

FOR exhaustive and helpful information on the growth, cultivation, and uses of fodder crops, read

Horse Notes.

It is essential, now that a Royal Commission on Motor-cars and the Ways of Motor-car Drivers is about to sit, that horse owners and horse breeders should make known their requirements with no uncertain voice, and put themselves in communication with the Commission as soon as possible. Every man, from the breeder of the racehorse and the hunter, to the breeder of the cart horse, and to the small farmer whose horse stock is represented by a couple of low-priced farm drudges, is equally interested, and if concerted action is taken there is, at any rate, a chance that those who pay for the maintenance of the roads may, in the not very distant future, be able to use them with a moderate degree of safety. But if this golden opportunity be missed the roads will be for the motorist alone, and it will be impossible for the pedestrians, equestrians, or coachmen to use the roads at all, whilst farm labourers will do so at the peril of their lives.

There is nothing so certain as that the motorists of all classes will combine to get as much licence as is possible, even for the scorcher. The industry, as it arrogantly calls itself, is not too scrupulous in the means it uses to obtain its ends, and it has money behind it. It is, therefore, necessary for those who wish to retain a partial use of the roads for the maintenance of which they pay, to organise, and that without delay.

I would not be misunderstood. For the motor-car itself I have no dislike; it is the motor-car recklessly driven, without any regard to the safety or convenience of others who use the roads that I have such a rooted objection. And in this particular, the horse I was riding a few days ago is like his owner. I was riding along a straight road, and saw in the distance a motor-car coming along at the speed of an express train. No sooner did it come within the range of vision than it was upon me, and so great was the pace that it was impossible for me to read the number. My signal to slacken speed was unheeded, as I knew it would be, and the car was upon us in a flash, and the next thing was that my horse and I were struggling in the ditch by the side of the road. Fortunately, we did not part company, though it was very nearly a roll right over. That it was not, was entirely due to the exceptionally good shoulders of the horse I was riding. And when I got my horse turned round the motor-car was, to all intents and purposes, out of the range of vision.

Now, if by any chance a bad accident had happened—if I had been badly hurt or killed, especially the latter; and, if by any lucky chance, the fiend in human shape who was driving the car had been pulled up, he would have sworn that the accident was entirely due to my loss of nerve, and to the bad managing of my horse; the papers which support "the industry" would have taken up his cry, and the unanimous verdict would have, probably, been, "Serve him right." But I did not lose my nerve, and if I could have caught the driver I would have demonstrated to him that there was something else I had not entirely lost either. As for the horse being badly broken, that was only one out of five motor-cars that I met, or that passed me, in the course of that ride, and it was the only one my horse took the least notice of.

It is, I admit, somewhat hard that those who drive decently should be inconvenienced by restrictions because of a few Yahoos who have not a thought for the convenience or the safety of others; but I can see no help for it. There are, of course, many ways of limiting the speed. Big racing-cars might be prevented going on the roads altogether, and only cars of a certain low horse-power licensed. Or it might be made obligatory to use solid instead of pneumatic tyres. Personally, I should be sorry to see these means adopted, because there are many men whose driving is careful, and who never cause any danger to other passengers. But I am afraid there is no other way. For instance, it was impossible to recognise and bring to justice the man who put my life in jeopardy for a minute or two the other day. We were the only occupants of the road, and he was gone before I had any chance of identifying him, whilst putting the telegraph in operation was entirely out of the question. I have no doubt of his being punished if he could be caught, both by the magistrates and by the Automobile Club, whose notices on the question of furious driving have, by the way, not had the slightest effect upon "scorchers," who know very well that their chances of being caught are remote, and who, therefore, hold all rules at defiance.

There is one thing that cannot be too strongly impressed upon those who drive motors or who ride on bicycles, and that is that it is impossible to train horses so that they shall take no notice of objects coming suddenly upon them. It is easy enough to train the average horse to meet or pass a motor car coming at a reasonable rate of speed, but no horse is to be depended upon to meet an object which comes upon him suddenly, whence he cannot tell, and which is upon him as soon as it is fairly within the range of his startled vision. Horses have got accustomed to railways, and will stand with their noses on the railway gates whilst a train moves slowly into or out of a station. But the case is very different if an express comes rattling by. And it is the same with the very quietest of horses under such circumstances. I have horses that have been boxed for hunting purposes once a fortnight and oftener for the last five or six seasons. They will walk into a horse-box as unconcernedly as into their own stables. But if an express train comes past them in a hurry they will bolt in an instant. They bolt because they do not realise what it is that comes on them, not because they are terrified of the thing itself.

It is interesting at this distance of time to study the controversy which raged upwards of a hundred years ago concerning the respective merits of oxen and horses for farm labour. Messrs. J. Bailey and G. Bailey, who in 1797 published a well-written and interesting book on the Agriculture of Cumberland, Westmoreland, and Northumberland, make a comparison between the cost of oxen and horses for farm work. They lay it down as an indisputable fact that it takes eight oxen to do the work of two horses, or at any rate for the first year, though after that they say half-a-dozen will do the same work. The cost of an ox is reckoned at £6 5s. per annum, made up as follows:—

	£ s. d.	£ s. d.
Summering, 2 acres of grass at 20s.		2 0 0
Wintering on turnips and straw	2 0 0	
,, ,, hay	4 0 0	
Average		3 0 0
Interest on cost of oxen	0 10 0	
Harness, &c.	0 15 0	
		1 5 0
		6 5 0

The ox is presumed to improve in value £1 per annum, so that the net cost per ox is £5 5s. This works out with a team of oxen consisting of eight the first year and six the two following years to an average cost of £40 per annum.

The cost of a horse's keep in those days is enough to make any horse-owner who has to pay for his provender wish that he had lived then. The prime cost of keeping a horse for a year is estimated, roughly, at £15 15s., made up in the following manner:—

	£ s. d.
Summering, 2 acres of grass	2 0 0
Wintering:—	
Straw, 13 weeks at 9d.	0 10 0
Hay 1½ tons at £2	3 0 0
70 bushels of oats at 2s.	7 0 0
Shoeing and harness	1 0 0
Annuity to pay off £25 in 16 years	2 5 0
	15 15 0

The annuity, of course, is what must be written off for depreciation, and seems fairly calculated. It will be noticed that the straw is totalled at 10s. instead of 9s. 9d., which is the exact amount, probably to make even money in the average. It is, however, a matter of very slight importance. So that even at the date when labour was cheap, the horses came out at a cost of £8 10s. per annum less than the oxen. Such being the case, it is a wonder that oxen were used such a long time as they were.

It is interesting to notice that even in those days the Northumberland farmers went to Clydesdale for the best of their draught horses, and they are described as standing from 15 hands 2 inches to 16 hands, and as "strong, hardy, remarkable good and true pullers; a restive horse being rarely found amongst them." We are also told that "the horses bred in the county are of various sorts, from the full blood racer, to the strong, heavy, rough legged black." The latter, I take it, would be the ancestor of the Vardy horse; about which breed, curiously enough, there is no history to be found in any old book I have come across. There seems to be a certain tradition hanging around them, and I have heard individuals of the breed highly praised. The late Sir Jacob Wilson told me that he remembered seeing them in the days of his youth, but that even then they had become practically extinct. I have never even heard the derivation of the name. In all probability the increasing esteem in which the Northumberland farmers held the Clydesdale caused the cross-bred to be absorbed. Whatever the reason, there can be little doubt but what the active, sharp-stepping Vardy, with his good shoulders, would have been invaluable nowadays as a foundation for breeding heavy troop horses.

THE LOOKER ON.

Sale of Mr. Hargrave's Hackney Ponies.

Messrs. Henry Manley and Sons, Ltd., offered for sale on the 9th inst. some 70 pedigree Hackney ponies, the property of Mr. Ward Hargrave, at The Normans, Rusper, near Horsham. Owing to the extremely inclement weather, which compelled the auctioneers to adjourn a portion of the sale to the vicinity of a large tent, the attendance was not large. Mr. Walter Lloyd, of Haywards Heath, presided at the luncheon, and gave the usual toasts. Mr. Hargrave, in responding, stated that his object in pony breeding had been to endeavour to breed something better than the parents in the produce. Many well-known Hackney and pony breeders attended the sale, and purchases were also made for exportation to Canada. Mr. Walter Lloyd secured the pick of the foals, a nice quality filly descended from Lady Lambert, and sold at 25 gs. Lady Hannah, one of the best of the brood mares, and the recipient of a h.c. ticket in London this year, was withdrawn at a bid of 65 gs. A three-year-old colt out of the foundation stock mare, Parbold Blackbird, made 27 gs. Lady Hannah's yearling colt realised 22 gs., and a three-year-old gelding out of the brood mare Tittums 30 gs. The finished harness ponies sold well, Mr. Jay paying 56 gs. for Fuchsia and Mr. Lewis (Brighton) 50 gs. for the Berkeley Model gelding Jack. In consequence of Mr. Hargrave having decided to retain his three stallions, these were not submitted for competition.

Mr. Garret Taylor's Shires and Hackneys.

On Thursday, Messrs. Sexton, Grimwade, and Beck conducted an unreserved sale of the entire stud of Shire horses, and also a number of Hackneys and ponies belonging to Mr. Garrett Taylor, at Kirby Bedon Stud Farm, Norwich, and the fixture attracted a very large company of buyers. The animals were all of the highest quality, and a large proportion of the Shires were descended from the famous Hitchin Conqueror. Bidding was brisk throughout the sale, and some fairly good prices were obtained, but buyers undoubtedly secured a number of bargains through the sale being an unreserved one. The Shires sold best, and a couple of them realised a three-figure price, namely, 180 gs., given by Mr. C. Tindall for Kirby Bedon Conqueror, a splendid stallion by Blythwood Conqueror; and 150 gs., given by the representative of His Majesty the King for the brood mare Laurel by Maxie out of Blossom. Details of the other principal prices are appended, and the sale resulted in a grand total of £2,408 3s. 6d., the Shires contributing £1,842 15s., and the Hackneys £565 8s. 6d.

Show and Sale of Clydesdales at Stirling.

The seventh annual show and sale of Clydesdale horses, held at Stirling by Messrs. Macdonald, Fraser, and Co., Ltd., took place on Wednesday, when 118 animals were forward, about the same as last year, but there was a slight falling-off in the quality of the different lots shown. The outstanding classes were the sections for geldings and fillies rising three years old, and the animals placed in these classes were of very good merit. Foals were also a good show. The judges were Messrs. Bean, Ballochy, and Greig, Crookstone, and their awards were as follows:—

FILLIES, rising 3 years old.—1, Mr. M'Caull, Barbush, for his brown filly, sired by The Dean, and sold at £33 10s.; 2, Mr. Binnie, of Plean, sold at £33 10s.; 3, Mr. Kinross, Hillend, sold at £26. Others in this section made from £24 to £35.

GELDINGS, rising 3 years old.—1, Mr. Moir, Nethercarse, sold at £42 10s.; 2, Mr. Risk, Culmore, sold at £40; 3, Messrs. Reid, Hillside, theirs in this section made from £27 to £37.

FILLIES, rising 2 years old.—1, Mr. Walls, Muirtown, sold at £25 10s.; 2, Messrs. Reid, Hillside, sold at £19 10s.; 3, Mr. Meikle, Craigrie.

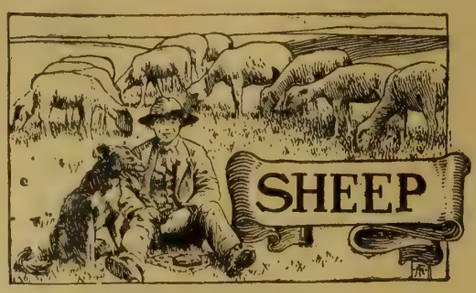
GELDINGS, rising 2 years old.—1, Messrs. Dobbie, Touchmollar, sold at £30; 2, Mr. Murray, of Polmaise; 3, Mrs. Campbell, Gartmore.

FOALS.—1, Mr. Bullions, Roseburnlane, sold at £18; 2, Mr. Thomson, Cauldbarns; 3, Mr. Couper, Kinneddar.

At the sale there was a large and representative attendance of buyers from all quarters, but, unless for the best class of geldings and fillies, a slow demand was experienced. A fairly good clearance was made, the best competition being for geldings rising 3 years old. Work horses sold to £40, colts to £25 10s; ponies to £18.

The Flanshaw Hackneys.

At Flanshaw Stud Farm, near Wakefield, on Monday, when Mr. F. Fox, of Dewsbury, offered for sale a number of pedigree and prize-winning Hackney and harness horses, the property of Messrs. J. and H. Moorhouse, there was a large attendance but a poor trade, a good number of the lots being withdrawn. The principal prices realised were as follow:—Yearling colt, sire Duke Arthur, dam Orphan Belle, price 50 gs.; harness gelding, Derby Duke, 45 gs.; bay gelding, foaled 1901, 40 gs.; Electric Jess, 38½ gs.



Notes and Jottings.

August shipments of stud and other sheep for export numbered 935 head; 59.09 per cent. less than the number exported during the corresponding month in August, 1904. This falling of in the number of head shipped, however, has not been in respect to stud sheep, but to those not generally taken in large numbers, namely, store sheep. This is fully confirmed if the average declared value of the shipments in these two months be taken as indicative of the merit of the exported sheep. Those shipped in August, 1904, were valued at an average of £5 5s. per head, and those shipped in August, 1905, at £12 1s. 1d. per head.

Reference to the records of former years shows that the average declared value of our exported sheep during last month was the highest that has been recorded for that month since August, 1900, when 906 head were exported of the average declared value of £12 9s. 3d.

The sheep imported during the past month numbered 11,214 head of the average declared value of £1 11s. 7d. per head. Compared with twelve months previously, these figures disclose a reduction of 48.81 per cent. in respect to number imported, and a reduction of 8d. per head in declared value.

The number imported last month was the smallest on record for this month during the past eleven years, with one exception, namely, in August, 1902, when 11,209 head were imported at an average of £1 4s. 5d. per head.

The sources from whence we obtain our imported sheep are two—the United States and Canada. The former country sent us during August last 6,505 head, or 55.53 per cent. less than in August, 1904; and the latter 4,709 head, which, compared with August, 1904, shows a decline of 17.25 per cent.

The aggregate declared value of the live sheep and mutton imported during the past month was £758,017, or 21.90 per cent. more than during the same period of 1904.

The quantity of mutton imported last month was 383,076 cwt., 28.95 per cent. more than in August, 1904. The main sources of supply were: Argentina from whence came 157,409 cwt., which, compared with the quantity imported in August, 1904, shows an increase of 28.21 per cent.; and New Zealand, which sent us 189,161 cwt., or 33.26 per cent more than in August, 1904.

A selection of fifteen yearling ewes and one yearling ram has been made from Mr. Arthur Finn's well-known Westbroke flock of Kent or Romney Marsh sheep, at Westbroke Lydd. This selection is an important one, for it is but very seldom, indeed, that any export purchaser takes so large a number of yearling ewes at a time. The quality and character of these sheep is also very superior, for the yearling ewes are the first selection from somewhere about 500; another ram, Westbroke No. 20 of 1904, was specially selected for this shipment out of about 120 yearling rams, which will be disposed of from the Westbroke flock this season.

Flock masters who are engaged in breeding stud rams for export should note that, under the new regulations applicable to the importation of stud animals to the Argentine (amongst which sheep are included), and to which reference was made a fortnight back, provide:—

1. That it is compulsory to present on arrival at the port of debarkation in the Argentine, with every animal imported as a stud animal, a properly legalised export pedigree certificate.

2. No animal that has not with it this certificate of pedigree can be entered in the Governmental Register of Stud Animals.

3. A pedigree certificate to be recognised as such must be issued by the respective breed societies on the usual form, and sealed and signed by the proper official of the society.

The weather of the past week has been wet and colder, a decided change from that we have recently been experiencing. Have all flock-masters noted this and acted accordingly? We fear not; for, in more than one instance which has come to our notice, we find exactly the same treatment being meted out to the lambs and sheep generally.

This is wrong in every sense of the word. The food requisite for dry and warm weather is certainly not so for wet and cold. The writer knows full well many who read this will say, "What in the world does the scribbler know about sheep or their management?" To this one can reply: "Probably as much as any flock-master"; because the writer's experience of sheep, their management in all ways, is life-long; for over thirty years the subject has been one of special study, and during a greater part of this period opportunity has been afforded for practical management of flocks, in which both showyard work, coupled with ram breeding, and the ordinary commercial flock work was under his direct control.

To condemn any system of management it is needful to say why. Therefore, let any who are conversant with flock management just pause and think a bit. At what period of the year are the losses, as a rule, greatest, say, for instance, amongst young sheep or lambs? and the reply will be from now till midwinter. Why is this so? Simply, to briefly put the matter, because, as a rule, the food given is not that which is most suitable to the well-being of the young lambs or sheep.

To allow lambs simply to exist, as many thousands have to do, on the soddened grasses, clover, etc., is simply bad management, and, in effect, the best possible system to produce disease and loss; or, at the best, a lot of weakened and half-grown sheep. If, on the contrary, some good sound food be given them—it need not be much per head, nor of an expensive kind—the lambs, instead of gradually becoming weaker and losing flesh and substance, would, at any rate, maintain their strength and, to some extent, continue to grow. These would, when springtime came, be at once able to start right away and assimilate with the fullest advantage the food then at command; whilst the other section would, if they survive, be weeks at least before they made any material progress at all, and when at last a start was made, the degree of progress would be infinitely slower.

These few brief notes are well worthy of the attention of the observant flock-master. The cost of the better keep would not be much per head, far less than the cost of the extra keep required in the springtime to restart the poor and neglected lambs, besides which those properly wintered would come to market sooner, grow more wool, and thus make a far better return even if sold for slaughter; whilst if they were ewe lambs kept for stock purposes, their value would be 1s. a head more than the other class.

Suffolk Sheep Flock Competition

The annual flock competitions, organised by the Suffolk Sheep Society, which have been held annually since 1886, have been most generously supported by prominent and influential members of the Suffolk Sheep Society—by the gift of challenge cups—but there has, in recent years, been a regrettable lack of competition in some districts, due, it is said, to the feeling that the larger flocks could not compete with smaller flocks with much prospect of success, and there was also, no doubt, a disinclination to enter the lists against those flocks which had already proved their superiority by repeated victories.

In order to encourage a larger number of flock-owners to prove the high standard of their flocks, the council of the Suffolk Sheep Society have, after very careful consideration of the subject, decided that in place of district competitions the flocks shall be shown in two divisions, the first being for previous winners of cups, and the second for flocks which have never won a cup. Each division will be sub-divided in two classes, viz., (a) flocks exceeding 240 ewes; (b) flocks not exceeding 240 ewes and not less than 120 ewes.

The challenge cups offered for competition under this revised scheme are as follows:—

Division I.—Class A: The Baird Cup, presented by Lieutenant-Colonel E. W. Baird. Class B: The Davis Cup, presented by Colonel R. P. Davis.

Division II. Class A: The Wentworth Reeve Cup, presented by Mr. C. S. Wentworth Reeve. Class B: The Adair Cup, presented by Sir Frederick Adair, Bart.

The Pretyman Cup, for the best ewe lambs. Presented by Mr. E. G. Pretyman, M.P.

The Bristol Champion Challenge Cup. A gold cup of the value of 50 guineas, offered for the best

flock of Suffolk breeding ewes, shown in Divisions I. and II.

The last day for entry is Friday, the 15th inst., and the judging of flocks will commence on October 1, or as soon as arrangements permit.

Bristol Wool Fair.

This fair was held on Wednesday, and was well attended, and there was an exceptionally good demand for Downs, both skins and fleeces, with a strong upward tendency. In some cases holders found themselves compelled to decline orders from a scarcity of supply. Best Southdowns made as much as 1s. 3d. per lb., and matchings were certainly one halfpenny higher than the current prices for the last fortnight. There was also a moderate demand for skin wools, the prices for which were fully maintained, and some buyers complained of the prices asked in this department. Shortheads were quoted at 9d. and 9½d., and cardings 11d. to 1s.

Sheep Fairs and Sales.

Border Union Agricultural Society's Ram Sale.

This important annual event took place at Kelso on the 8th inst., and was most successful, the entry being a record one, and the quality generally an improvement, and the prices good. The entries comprised no fewer than 988 Border Leicesters, 325 half-breds, and 1,017 Oxford and Suffolk Downs, or a total of 2,330, as against 2,049 in 1904. Each ram was sold singly, and in disposing of such a large number no fewer than fourteen auctioneering firms were engaged. The Border Leicesters sold best, and for these many handsome prices were realised. The top price was £130, which sum was obtained by Mr. David Hume, Barrelwell, for the Highland and Angus county champion, by Prime Favourite, from a Stanley ewe. He is a sheep of good substance, with well set on head, and nice skin, and he came in for very keen competition; Mr. Dun, Laidlawstiel, stayed longest, and eventually got this choice ram. Others from Mr. Hume's flock also sold well, and this breeder had the satisfaction of making top average for the sale, his 19 animals averaging £35 9s. per head. Messrs. Smith, Galalaw, got £125 for a great sheep, by Gala Quality from a little-known ewe, the buyer, after a keen contest, being Mr. Wallace Auchenbrain. Space does not permit of detailing the other big prices for Leicesters, but we may mention that they included the following figures:—£90, £80, £71, £70, £56, £52, £50, £40, £35, etc. Half-breds realised up to £26, other chief prices being £24, £23, £21, £18, etc. Suffolk Downs made up to £11, and Oxford Downs up to £28.

Castle Douglas.

Mr. Wallet's annual sale of shearling rams—Border Leicester, Yorkshire, and Wensleydale—at Castle Douglas was held on Thursday, when about 340 were presented. There was a large attendance, and a brisk demand was experienced for Border Leicesters, prices being from £1 10s. to £2 dearer than last year. The chief prices were £17, £15, £11, £9, etc., whilst the best average in the section was £11 12s. 6d. for twenty, this being obtained by Mr. Templeton, Sandyknowe, Kelso. In the Yorkshire ring a business very favourable to exposers was done. The top price and average in this ring were obtained by the executors of the late Mr. T. Willis, Carperby, who disposed of 12 at an average per head of £10 5s., the top figure being £21 10s. Other prices ranged from £10 downwards.

Mr. C. Coxon's Shropshires.

Messrs. Winterton and Sons, of Lichfield, acting with Messrs. Lowe, Tamworth, sold, at Elford Park, Tamworth, on the 8th inst., the Shropshire sheep and Shorthorn cattle belonging to Mr. Charles Coxon, whose flock is well known all over the country. Forty-six rams were offered, and made the satisfactory average of £14 each. Captain Townsend hired No. 1 at 25 gs., Major Kenworthy gave 35 gs., Sir P. A. Muntz 16 gs., Mr. H. Sankey 21 gs., Mr. Webb 14 gs. for South America, and he was also the purchaser of ten others for Russia; Mr. Beale gave 20 gs., Mr. Dyott 17 gs. Messrs. G. and J. Brown hired No. 21 for 20 gs., Mr. G. Beale 18 gs. The ewes made up to 5 gs. each, the average for sixty-five being £3 9s. 6d. Shorthorn cows made 27 gs., 22½ gs., 21 gs., 20 gs., 23 gs.; bullocks £36 the pair.

Mr. T. Fenn's Shropshires.

On Tuesday Messrs. Alfred Mansell and Co. offered for sale the whole of the flock of Shropshire sheep so long maintained at Stonebrook House, Downton Castle, near Ludlow, by Mr. Thomas Fenn. The dispersion of a flock having a world-wide reputation was brought about by Mr. Fenn's determination to give up farming owing to advancing age. No history of Shropshire sheep could be complete without reference to Mr. Fenn's famous flock at Stonebrook House. It is one of the oldest flocks extant, contains a good deal of the Mansell strain, and is well and favourably known in every country where Shropshire sheep are bred. Every sire Mr. Fenn has introduced is registered in the Shropshire Flock Book from 1868, when the Royal winner, Abbot of Bary (54), a son of the famous Nonpareil (908), was used. Stonebrook representatives have for many years taken high positions at the leading English shows, and the flock has been largely resorted to by contemporary breeders for sires. The flock never looked better than on the day of its last appearance as one collection, and the uniformity of character, purity of type, and perfection of form were remarkable.

Prior to the sale there was a luncheon, at which general regret was expressed at the dispersal of such an excellent flock.

Mr. Fenn, in thanking the company for their kind expressions, said he hoped that whatever they bought that day would prove useful, and bring to them as much profit and pleasure as it had been to him to breed Shropshire sheep during the last forty-four years. It was a severe wrench to him to give up breeding Shropshires, but after forty years he had decided to leave it to younger hands, and he hoped they would be successful.

Bidding was brisk at the sale, and good prices were realised, as the following list will show:—

RAMS.—Two-shear ram, Countersign, 100 guineas, Mr. F. Bibby, Hardwick Grange, Shrewsbury; four-shear ram, Downton (11417), 30gs, Mr. T. A. Buttar, Coupar Angus; two-shear ram, 20gs, Mr. Powell, Hereford; three shear ram, Gladiator, 33gs, Mr. T. A. Buttar; three-shear ram, Downton Branch, 25gs, Mr. J. J. Brewin. Shearling rams: 27gs, Mr. Cole (the incoming tenant); 16gs, Mr. Phillips; 20gs, Mr. Cole; 7gs, Mr. Edwards; 13gs, Mr. A. Everall; 6gs, Mr. Richmond; 46gs, Mr. T. Simon; 6½gs, Mr. Ridgway.

PASTURE RANGERS.—11gs, Mr. G. Howells, Leinthall; 15gs, Mr. Powell, Lower Hill, Hereford; 15gs, Mr. Sydney Hill; 5½gs, Mr. Rickards; 8gs, Mr. Morgan, Dinmore; 7gs, Mr. J. Capel Phillips; 5½gs, Mr. Powell; 9gs, Mr. Morris, Hereford; 21gs, Mr. J. S. Harding; 13gs, Mr. Farmer, Tugford; 8gs, Mr. Webb; 7gs, 6½gs, Mr. Webb; 7gs, Mr. Boughton Knight; 9½gs, Lord Llangattock; 6½gs, Mr. Boughton Knight; 7½gs, Mr. Mellings, Walton; 5½gs, Mr. Humphreys.

EWES.—Shearling ewes, pens of five: 10gs each, Mr. F. Bibby, Hardwick Grange; 8gs, Mr. Wilson, Australia; 5gs, Mr. Bebb; 6½gs, Hon. Victor Cavendish, M.P.; 3½gs, Mr. Brewin, Birkenhead; 4½gs, Mr. Pritchard; 3½gs (twice), Mr. Boughton Knight; 3gs, 2¾gs, 3gs, 2½gs, Mr. Howley; 48s, 49s, Mr. Parr. Two-shear ewes: 82s 6d, Mr. F. Bibby Hardwick Grange; 55s, Mr. Cole; 67s 6d, 60s, Mr. Cole. Young stock ewes: 115s each, 67s 6d, 90s, 80s, 67s 6d, 60s, Mr. Cole; 130s, Hon. Victor Cavendish, M.P.; 80s, Mr. D. A. Thomas, M.P., South Wales; 52s, 57s 6d, 57s 6d, Mr. Parker, Aston Eyres; 62s 6d, Mr. Bell; 55s, 62s, Mr. Potter; 57s 6d, Mr. Groom, Wellington; 60s, Messrs. Marston Brothers. Ewe lambs: 7½gs each, Mr. Brewin; 3gs, 2½gs, 40s, 44s, 40s, 41s, 42s, 38s, Mr. Cole; 2½gs, Mr. Bell; 35s, 38s, Mr. Brown; 40s, 37s, Mr. Coxon; 34s, Mr. Farmer, Tugford; 28s, Mr. Parr.

RAM LAMBS.—17gs, Mr. Napper; 4½gs, Lord Boyne; 8gs, Mr. P. G. Hughes, South America; 50gs, Mr. Brewin; 5½gs, 5½gs, 12gs, 12gs, 7½gs, 6gs, Mr. P. G. Hughes; 20gs, Mr. Woods, Valletts; 4gs, Mr. Marston; 15gs and 8gs, Mr. Cole; 12gs, Mr. D. A. Thomas, M.P.; 8gs, Mr. Bell; 3½gs, Mr. Jones, Crow Leasow; 3gs, Mr. Brown; 3½gs, Mr. G. Hamar; 23gs, Mr. White; 26gs, Mr. Berry; 4½gs, Mr. Nott; 8½gs, 3½gs, Hon. Victor Cavendish, M.P.; 4½gs, 4gs, Mr. Woodgate, Leinthall; 8gs, Lord Boyne; 3½gs, Mr. Moore; 2½gs, Mr. Bellyse; 3gs, Mr. Hamar.

PAIRS OF LAMBS.—Sold from 8½gs the pair to 3gs.

Findon.

Findon great sheep fair, the origin of which dates back over a hundred years, was held in most fair weather, on Thursday, at Nepcote Green, Findon, a picturesque spot in the valley below the Southdowns, and was largely attended, many well-known Sussex flock-masters and farmers being present. The number of sheep and lambs penned was between 6,500 and 7,000, slightly fewer than last year. Business commenced soon after nine o'clock, and was all over by one o'clock. There was a good demand for Southdown ewes and lambs, and the quality was well up to the average. Over 3,000 Southdown ewes and lambs were entered for the auction by Mr. Harry Jas. Burt, of Steyning, which was the most important part of the day's doings and at which some very good prices were realised. The highest was that given by Mr. Holliday for 100 ewes of Mr. A. Short's (Findon) flock, namely, 47s. 6d.; the next best price being 46s. 6d. given by Mr. Dunn (for the Duke of Norfolk) for 100 ewes of Mr. H. R. P. Wyatt's flock; whilst the lowest was 18s. The following prices were realised for rams and ram lambs:—Mr. Dunn (for Duke of Norfolk) at 5½ guineas; Mr. A. Short at 4 guineas, 6 guineas, and 7½ guineas; Mr. Batchelor at 3 guineas; Mr. Gardener (Crawley) at 4½ guineas; Mr. Brockhurst at 35s.; and Mr. Dunn at 3 guineas. There were in addition a few good private sales, and the top price for lambs was realised by Mr. Warren, of East Preston, who made 44s.

Glasgow.

Messrs. Macdonald, Fraser, and Co.'s 21st annual show and sale of rams and ram lambs, at Glasgow, took place on Tuesday within their premises, Cattle Market. The total number catalogued was 504, consisting of 50 Leicesters, 190 black face shearlings, and 264 black face ram lambs. These figures show an increase over last year's entries, and are about equal to those of 1903. In the Leicester section many well-bred sheep were exposed both in the shearling and lamb classes, the whole being brought out specially for crossing purposes. The black face shearlings were a strong class, no fewer than nine pens of five sheep being drawn out for competition. At the conclusion of the judging a start was made with the sale of Leicesters. There was a large crowd of buyers from all parts of Scotland, the Western Islands, and Ireland. The Leicester shearlings met a good demand, making up to £29 (secured by Mr. Buchanan), others selling at £15, £10, £11, etc.

Horncastle.

There was a very large show of sheep at Horncastle September Fair, held on Thursday, nearly 2,000 being penned in excess of last year. Gimmers made up to 70s., and ewes 58s. Mr. Joseph E. Walter sold a large number of rams by auction. Messrs. Crowder's Thornton rams made up to 11 gs.; Mr. R. Robert's Thimbleby rams made up to 10½ gs.; Mr. W. Taylor Sharpe's Baumber rams, 10½ gs.; Mr. J. Redmore's, Hemingby, 8½ gs.; and Mr. George Langdale's Market Stainton rams, 10 gs. per head.

Lichfield.

Between 3,000 and 4,000 sheep were offered by Messrs. Winterton and Sons at Lichfield on Thursday, and they met a brisk trade at good prices, several lots being bought for exportation. Mr. J. Brown's 30 rams made 20, 13, 12, 13, 11, and 8 guineas, and averaged £9 each; Mr. George Brown's 10½, 11, and 10 guineas; Mr. A. S. Berry (15) 20, 15, 17, and 9 guineas, and averaged £10 each; Mr. J. L. Coxon up to 9½ gs.; Mr. J. Myatt, 7½ gs.; Mr. J. Fowlers, 10½ gs.; Mr. Hunter, 8 gs.; Mr. P. W. Boston's ram lambs, 11½ gs.; Mr. Corbishley's lambs, 7½ gs. Ewes were sold at good prices, the chief being:—Mr. J. Brown's, 78s., 60s., 58s.; Mr. A. S. Berry, 62s., 60s., 62s.; Mr. J. L. Coxon, 55s.; Mr. W. Roberts, 51s.; Mr. Ashmall, 53s.; Mr. J. H. Parkes, 56s.; Mr. Myatt, 56s.; Mr. Hulme, 56s.; Messrs. Ashill (200), up to 50s.; Mr. Hunter, 52s.; Mr. Wylie, 52s.

Sleaford.

The sixteenth annual show and sale of registered Lincoln sheep at Sleaford took place on Thursday, when Messrs. Hincks and Lawrence offered by auction 3,827 Longwool theaves and ewes, 420 Longwool and half-bred lambs, 172 registered Lincoln Longwool rams, and 69 pedigree Hampshire Down rams. Lincoln rams made 14 gs. to 45 gs. each, Hampshire rams 3 gs. to 6 gs. each, theaves 54s. to 60s., but the prize pens realised 66s. to 69s., and one pen from Mr. J. Blankley, of Denton, reached 74s. per head; lambs made 36s. to 40s. each, and ewes fully late rates. Awards were made as follows:—Lincoln rams.—1, Mr. F. Money, Silk Willoughby; 2, Mr. C. Clarke, Scopwick. Pen of twenty theaves—1, Mr. T. Houghton, Billingborough; 2, Ms. E. Knight, jun., of Walcot. Pen of thirty lambs—1, Mr. J. Todd, of Kirkby Green; 2, Mr. B. Leedale, of Digby. There was a large attendance of buyers.

Stamford.

Some choice consignments of rams were forward at the sale, held at Stamford, on Monday, by Messrs. J. Martyn Collins and Co., and Messrs. Royce, of Oakham, Stamfor and Melton Mowbray. The following were the top prices and averages of the different exhibitors:—Mr. Fred Ward, Quarrington—Top price, 20 gs.; aggregate for 12, £120 15s.; average, £10 1s. 3d. Mr. Jas. Hornsby, Laxton Park, Stamford—Top price, 7¼ gs.; aggregate for 16, £59 6s. 6d.; average, £3 14s. 2d. Mr. Jas. Flower, Chilmark, Salisbury—Top price, 8 gs.; aggregate for 15, £91 9s. 3d.; average £6 3s. 3d. Major Pinder, Newstead, Stamford—Top price, 13 gs.; aggregate for 20, £165 2s. 3d.; average, £8 5s. 1d. Mr. Brown, Clanfield, Horndean, Hampshire.—Top price, 6 gs.; aggregate for 6, £29 8s.; average, £4 18s.

Wigton.

Hope's Auction Company had over 3,000 lambs of all classes forward at their special sale at Wigton on Wednesday. The buck were second and third draws. With a large attendance there was a spirited sale at the highest prices of the season here by several shillings a head. Half-bred lambs made 19s. 6d. to 27s., cross lambs up to 28s., and Cheviots up to 19s. 6d. each.

[*The remainder of Sheep Sales will be found at page 338.*]

SHOWS IN BRIEF.

Bury St. Edmunds.

The colt and foal show held at Bury St. Edmunds on Wednesday was the most successful yet seen in that town. The entries were larger than on any previous occasion—there were about twenty entries more than last year, and the quality was better; whilst the attendance of visitors was most satisfactory. The great object of establishing a sale had evidently been attained, for associated with the show there had been catalogued entries of about 200 horses, viz., 85 cart mares and geldings, 65 two-year-old and yearling cart colts, 30 Suffolk and Shire-bred foals, and 20 Hackneys. Messrs. Simpson and Sons conducted the sale, which was a brisk one, and some good prices were obtained. The best were 57 gs. for a three-year-old Suffolk filly sent by Mr. H. Turner, 55 gs. for a four-year-old Shire gelding sent by Mr. P. Brown, and 52 gs. obtained by Mr. Newdick for a three-year-old gelding. Others sold from 37 gs.

Chiltern Hills.

The fifty-third annual show of the Chiltern Hills (Wendover) Agricultural Association was held in the beautiful park of the president, Mr. Alfred de Rothschild, C.V.O., at Halton. It was the sixth of the new series, and if the elements had but proved propitious it would undoubtedly have been the most successful. Some additional attractions had been provided, the arrangements for the convenience and enjoyment of the visitors still further extended and improved, and the entries showed a gratifying increase in nearly every department. It was most unfortunate, therefore, that the sun should have refused to shine upon the undertaking, except in a few fitful gleams late in the afternoon, and that leaden skies and drenching showers should instead have sadly marred what otherwise would have been a most animated and attractive scene. The attendance, however, was larger than could have been hoped for under such discouraging conditions, the "gate" exceeding that of last year. The agricultural show proper, although not extensive, was a very comprehensive one, and in every way creditable to the district. It included agricultural horses, hunters, horned stock, sheep, pigs, corn, roots, butter, dead poultry, eggs, vegetables, etc. The total number of entries was about 760, roots representing 60, corn 45, growing crops 12, agricultural horses 38, ploughing 17, building and thatching 5, rewards to labourers 25, hunters, nags, and jumpers 36, horned stock 70, sheep 18, pigs 11, butter 25, poultry and eggs 59, cottagers' vegetables 278. As regards the quality it may be said that, on the whole, it was most creditable.

Chiltern Hills and Southern Bucks.

The Chiltern Hills and Southern Bucks Agricultural Asociations held their annual show on Wednesday, in Daws Hill Park, High Wycombe, by permission of Earl Carrington. The broken character of the weather of late caused considerable apprehension as to the kind of meteorological conditions that would prevail, but the fixture was happily favoured by a pleasant, bright autumn day, and was attended with a gratifying measure of success.

The show of stock, though not very extensive, was creditable to the district and to the exhibitors. The total number of entries in all the sections was 500, or two more than last year, there were, however, decreases in the classes for agricultural horses (63 against 72), horned stock (46 against 49), sheep (10 against 12), and hunters and nags (145 against 190); but increases in all the other sections, which included roots and corn, pigs, butter, dead poultry and eggs, and honey. The roots were scarcely up to the standard which was expected from the representative entries received, but some fair mangel was shown. The corn was disappointing as a whole, although there were some fair samples of white and red wheat. The agricultural horses included some grand animals, and a good many other of a very serviceable stamp. Every entry turned up, and, as a whole, it was pronounced decidedly the best show of heavy horses ever seen at this gathering. There was an excellent collection of hunters and hacks, and, as usual, considerable interest was excited in the tradesmen's turn-outs and the jumping competitions. There was a keen and interesting competition in the cattle classes, which were open to the United Kingdom, and these made a good show; the local cattle classes were, however, but poorly filled. The sheep were considered by the judge very satisfactory, considering that the exhibitors were tenant farmers only, the quality leaving nothing to be desired; but pigs were represented by a solitary boar.

Coleshill Horse.

Favoured with fine weather, a good attendance, and a good entry, the thirteenth annual show of the Coleshill Horse Show Society, held on Monday, was, perhaps, the most successful of the series. The entries showed a gratifying increase over last year, numbering 150 compared with 136 on the occasion of the previous show. The increase related chiefly to the driving and jumping classes, which contained excellent horses and competitors in first-class shows. Sixteen horses appeared in the jumping contests, which were witnessed by a large crowd in the afternoon. In the Shire classes there was an entry of 72, and there were several capital contests. The quality of the exhibits was very creditable, and the all-round success of the show must have been gratifying to the promoters, who are to be congratulated on providing an improved show each year.

Montgomeryshire.

The annual show of the Montgomeryshire Agricultural Association was held on Thursday at Maes Gwastad, Welshpool, a most suitable site kindly placed at the disposal of the promoters by the Earl of Powis. Delightful weather in the morning attracted a splendid attendance of spectators, whose comfort, however, was somewhat affected during the afternoon by several heavy showers of rain. There were no fewer than 310 entries in the different classes, a great improvement on the number at the previous show. The most gratifying increase was in the Shire horse classes, the number being 120 against 92, and they made a very fine show. In the class of mares with foal at foot, Messrs. Edward Jones and Sons were easy winners with their Welsh National Show winner, Queen Bertha. This mare also took the silver bowl, together with the Shire Horse Society's gold medal, as well as the special prize offered by Mr. Humphreys Owen, M.P., for the best Shire mare bred and owned by a tenant farmer in the county, Messrs. Jones being the breeders of the mare. They also won the Shire Horse Society's prize to the breeder of the winner of the gold medal. Twenty hunters were shown, an exactly similar number to those last year, and they were a commendable lot; while ponies decreased from 78 to 60. A new feature of the show was the introduction of classes for cattle, and these drew together 50 entries. The competition in this section was confined to tenant farmers and cottagers, and the entry was therefore considered gratifying. It is hoped the Society will see their way next year to still further extend the scope of their work by introducing classes for sheep, which are a source of considerable profit to farmers in the district, and which it would well pay the agricultural industry to develop.

South Tyne.

The annual show of the South Tyne Agricultural Society, held in the pretty grounds adjoining Bellister Castle, Haltwhistle, on the 9th inst., was completely spoiled by a storm. After a beautiful morning, rain commenced between 11 and 12 o'clock, and later came down in torrents, accompanied with a gale. There was naturally, a general stampede to any place of shelter, and the outlook became alarming, there being every appearance that the marquees would be wrecked. For about three hours the sight was pitiful. There was a general clearance off the ground with the stock, while large numbers who came unprepared for such a storm were drenched. There was no possibility of going on with the judging, in fact several of the competitors removed their stock before the judging took place. A hurried meeting of the council was summoned, and it was decided to make an attempt to finish the awards, and the judges went on with their work amid the rain. Fortunately the storm somewhat abated, but the financial result of the show was disastrous, only £40 being taken as gate money and catalogues sold, as compared with £112 last year. Hundreds of people who came by the noonday trains could not leave the railway station. The programme of the show was completely altered, and was concluded at a much later hour than usual. The entries for the show were a record, being 1,250 as against 1,197 the previous year. On the whole, the result of the day was most disappointing and disheartening to the society, as there was every indication that the show would have been a record one, both as regards attendance and quality of exhibits.

Thame.

Each year the show of the Thame Agricultural Society grows in importance, and the improvements made meet with the appreciation they deserve. The show held on Thursday was in every way a success, there being good entries and attendance, and most favourable weather. Prizes were offered for hunters, cart horses, colts, cow-stock, jumping and driving, ploughing, shepherds, hedging and thatching, roots, honey, and long servitude, the total value of the awards being about £300. The entries were much more numerous than last year, when there was an increase on the previous year, an indication that the show is gaining in favour amongst the agriculturists of the district, whilst the quality of the exhibits was of a high order all round. In the cart-horse section the entries were also fairly numerous, and the work of the judges was by no means easy. The foals were a useful lot of animals, especially those competing in the class for those eligible for the Shire Horse Stud Book, showing the good the Shire Horse Society has done in recent years by getting the best animals in their books. In the cattle class some good dairy cows and heifers, and also sturk heifers, were shown, but the steers were not quite so good. There was a large show of roots. The swedes were fairly good, considering the season, but the mangolds were of such exceptional merit that the judges highly commended the whole of the entries in the champion class.

Wardle.

The show of the Wardle Agricultural Society has the reputation of being the oldest in Lancashire. Its beginnings were in a small way; at one time it was held in a house in the village, and later in Wardle Mill Yard. Now it attracts exhibits from a large area, as was proved at the sixty-eighth show held on Wednesday at Wardle, which is about three miles from Rochdale. There were 1,162 entries—a decrease of 16 on the previous show. The cattle, which numbered 66, were a fine lot of animals, whilst there were 115 horses, and concerning these it may be said that the heavy classes were superior to last year's, but the light horses were, on the whole, not so good. In the morning there were slight showers, but later the sun shone brilliantly, and the attendance numbered over 2,000.

Woodstock.

The forty-eighth annual show of the Woodstock Agricultural and Horticultural Association was held yesterday in Blenheim Park, by permission of the Duke of Marlborough, who was unfortunately unable to be present. The Duchess of Marlborough, who takes a very keen interest in the work of the association, and supports the show with entries, was also prevented from paying her usual visit. There are few more comprehensive village shows than that of Woodstock, for, in addition to sections for agricultural produce and stock, there is always a good dog show; and, up to a few years ago, the fixture was one at which specimens of the genuine Blenheim or the Marlborough spaniel could be seen. There were two classes for this variety at last week's show, and there were benched four long spaniels of the old-fashioned variety, which are taller than the type which is now accepted as the Blenheim. In the agricultural section the Shire horses were the most interesting group, the silver medal of the Shire Horse Society being awarded to Mr. F. C. Taylor's two-year-old, by Glyn Diamond Duke; the Duke of Marlborough's three-year-old, the leader in his class, being reserve. A filly from the Blenheim stud also headed her class.

Yeovil.

"A most successful show" was the verdict of the large number of persons who visited the Yeovil Agricultural Society's Exhibition at Yeovil on Thursday, and the Society is to be congratulated on its continuous progress. The improvement which attended the efforts of the Society in earlier years has been well maintained of late, all the principal classes being well up to modern standards. Totals of entries are occasionally misleading, and especially would this be so if bare numbers appeared in connection with this exhibition, for there was a falling off compared with the last exhibition. Analysis, however, revealed that the decrease was practically limited to the butter section, and that all others presented a satisfactory increase, the quality especially being excellent. The reason of the decrease in the butter is due to the increasing number of farmers disposing of their milk to the factories, or entraining it to the cities. The other section of the dairy department—cheese—showed gratifying indications of being on the up grade, the competition being close, and the support accorded by exhibitors being so generous as to make the display quite a feature of the exhibition. The cattle classes were an interesting lot, including, as they did, representative displays of Devons and Shorthorns. Agricultural horses turned out in fair numbers, and the majority of them were healthy, strong-looking animals, quite of the best type for heavy farm work, whilst the hunting classes were well supported, as were also the sheep, which were chiefly Somersets, Dorset Horns, and Downs.

Wills.—Mr. Geo. Ernest Moberly, A.M.I.C.E., Cottesmore, Tuddenham Road, Ipswich, a member of the firm of Messrs. Ransomes, Sims, and Jefferies, agricultural machinery makers, and a native of Whilby, left estate of the gross value of £22,606, of which the net personality has been sworn at £20,350.

By Lupulin.

Home Notes.

Our Actual Crop.

will soon be ascertained, but at present it is almost impossible for the most learned amongst us to make any other than an approximate pronouncement. There is no doubt that a large quantity of hops have already been gathered, the frequency of the loads passing through our streets on their way to the warehouses, providing sufficient evidence thereof. But factors are receiving constant communication from growers, who say that, owing to the damage done to the hanging hops, by the gales, the extreme alternations of temperature and other causes, they are deciding to leave considerable areas unpicked. They are naturally induced to such conclusions by the very low prices realizable for off-colour samples, in which there is not sufficient return to cover the out-of-pocket outlay for picking, drying, and packing. Again, the wet weather has hindered the supplies to the oasts, and in some cases the kilns have not been able to keep pace with the pickers. Without any desire to exaggerate the possible effects of these circumstances, it appears as if they must necessarily affect our final results, and that probably our crop returns will not come up to the big figures that were once so confidently predicted.

The Borough Trade.

is in the meantime in a very unsatisfactory condition. Planters wanting money for immediate use are begging for bids, and buyers appear to be only spasmodically inclined to operate. During two or three days of this week, there have been signs of comparative activity of demand, such moderate business as was then done, being alternated with actual dulness. The result is naturally want of tone, and although a little firmness for coloury samples has been talked about, I am afraid it has but slight foundation in real experience. At present the hops offering are principally from the smaller growers, therefore we can hardly estimate the market properly or safely. I am prepared for a recovery from the present debased position when the panic, that seems to be influencing many sellers, shall have subsided. The course of business at Worcester Fair being held to-day, will probably influence the London market for the next week or so. From what I hear from the Midland growers, I am of opinion that they are not generally inclined to give their hops away, and I trust they will help their brethren in the South by such firmness as they may consider to be reasonable.

The Hop Syndicate.

has unfortunately decided to dissolve. This decision was come to at a general meeting of members held on Wednesday last. They have "fought a good fight," but circumstances have hindered the realisation of their hopes, and they have "finished their course" with general disappointment. But the value of combined action has been abundantly demonstrated, and it is more than probable that past experience will be used as the foundation for future operations.

Hop Report.

Messrs. G. Gascoyne and Co.'s report for 1905 is as follows:—The English hop crop of 1905, which before the commencement of picking was universally regarded as promising to be a vintage year, has every appearance now of being a disappointing crop. Throughout its growth there had been an almost entire absence of aphis blight, and the wealth of sunshine which the plant absorbed during the critical period of the fruit's development promised a harvest rich alike in quality and quantity. Sunny days and warm nights are essential conditions to a plenteous yield, and where the plant was untainted by mould, the quality was further improved by the occasional rains of the month of August.

Unfortunately, towards the close of the month, there was a considerable acreage which developed this insidious disease, and its ravages will make a difference to the quantity of usable hops. The early varieties appear to have been most badly attacked, and the first parcels on offer being of a disappointing character, met with little response from consumers. This diminution of the yield will have to be taken into consideration in computing the quantity likely to be available for consumption, as the official returns are somewhat misleading in taking no account as to how much of the growth is fit for brewing purposes.

There is another factor which will also affect the returns, and that is the quality of the later pickings. In a year like the present, the grower is hampered by want of sufficient kiln accommodation, with the result that before he can get anything like the whole of his growth picked and cured, the later sorts have become over-ripe, and depreciated to such an extent in colour that they will not pay for picking, and the only course open to him is to leave them on the poles and let the wind disperse them. Unless there is a big advance on opening prices, this course will certainly be taken by hundreds of growers this season. When these allowances are made for the early rubbih and the unpickable later hops, it will be seen that the quantity available for brewing purposes is likely to fall far short of what appeared to be in sight before picking commenced. It is the hops which come between the very early and the later sorts which promise to be the best quality, and at the extremely low prices now ruling, they are the finest value obtainable for many years. Never, probably, within the memory of any member of the trade has such an unprecedented state of affairs existed. Absolutely all stocks of old hops are exhausted; brewers reserves are admittedly at almost vanishing point; we have in view only a fair crop of usable material and yet prices have opened at a level which could only be justified if we had in hand the big reserves which existed in 1901.

All official reports and notices of the National Association of English Hop Growers, are printed in the Mark Lane Express, *and current information from all parts of the world, likely to be of interest and benefit to the members of the society, and Hop Growers generally.*

Foreign Notes.

America.

Some day I suppose I shall be able to refer to the ascertained facts of the United States crop. At present, in spite of the picking being well under weigh, and in some districts practically finished, the figures quoted appear to be only conjectural, and opinions as to the final results differ as widely as ever. My friends in Washington, writing under date September 1, say that "crops remain in excellent condition, and are likely to overrun all former estimates," and, referring to some other current reports issued by holders of 1904 hops, say "these parties are still trying to fool the growers, but events have discredited them in all quarters." Under same date, I have a letter from a Californian correspondent, who, speaking of his own district, says "we are in the midst of our picking, and will finish our crop in about two weeks more. We expect about such a crop as last season, but shall not be surprised if it comes down shorter than expected all through this Coast." The writer sends me also the results of his observations during a week's journey, then just completed, through the best parts of Oregon. He speaks of the most promising yards as not likely to yield more than moderately, and that many yards are badly blighted, some ruined, some damaged to the extent of half the crop, and he concludes that "if Oregon harvests as many hops as last year, it will be all she can do, under the most favourable conditions." It is evident that we must wait a little longer before we can arrive at certainty.

Nuremberg.

Concerning the yield, as ascertained from the ingathering thus far, the reports are generally up to previous expectations. But unfavourable weather, including much rain and cold nights, with occasional storms, gives rise to fear that the later sorts will be deteriorated in colour and quality, and that possibly the quantity harvested will be lessened. The hops already received from Hallertan, Spalt, and Baden are very satisfactory; some samples in the air-dried condition that I have seen leave nothing to be desired as regards their richness in lupulin. The tone of the market remains fairly healthy for medium and best qualities, the demand keeping about on a level with the supply. The lower sorts are at present somewhat neglected, and values thereof have receded. Recent quotations are approximately from 30s. to 40s. for common market hops, Hallertans running from 50s. to 75s., Sealed Hallertans from 75s. to 80s., best Spalts from 85s. to 95s., Wurtembergs from 60s. to 90s., and Badens from 65s. to 85s. These figures represent the money paid to growers for green or partially dried produce.

Belgium.

The Poperinghe white bines are now picked, and the harvesting of the later growths will soon be completed. The position is much the same in the Alost districts. Both as regards quantity and quality, the results are satisfactory, almost beyond expectation. It appears to be certain that last year's yield will be exceeded. Some samples of 1905 Pops were shown to me this week. The colour is excellent, and the condition proves the progress made by Belgian planters. They are somewhat deficient in brewing quality, but the low prices at which they are offered will doubtless commend them to the notice of English buyers.

Judges for the Smithfield Show.

Cattle.

Devons, South Devons, and Sussex.—Alfred C. Skinner, Pound Farm, Bishops Lydeard; Alfred Stanford, Eatons, Steyning, Sussex.

Herefords and Red Polled.—Rees Keene, Llanvihangel Court, Rogiet, Newport, Mon.; A. D. Bruce, Estate Office, Elvetham Park, Winchfield.

Shorthorns and Cross-breds. James Peter, Berkeley Castle Estate Office, Berkeley, Glos.; C. H. Eady, The Manor, Lockinge, Wantage.

Aberdeen Angus and Galloways. — William Whyte, Hatton of Fassie, Glamis, N.B.; James Biggar, Grange Farm, Dalbeattie, N.B.

Welsh and Highland.—J. W. Harris, Pilrhoth, Llanstephan Road, Carmarthen; Robert Mac diarmid, Castles, Lochawe, Argyll.

Kerry, Dexter, and Small Cross-bred Cattle. F. A. Hordern, Buxted, Sussex; G. F. Roumieu, Bethune House, Farnham, Surrey.

£25 Cup, £50 Cups, Champion Plate, and King's Challenge Cup.—Richard Stratton, The Duffryn, Newport, Mon.; W. S. Ferguson, Pictstonhill, Perth.

Sheep.

Leicestershires, Border Leicesters, Cotswolds, and Lincolns.—William Marshall, Cottam House, Driffield; Henry Smith, The Grove, Cropwell Butler, Nottingham.

Kentish or Romney Marsh, Devons, etc.—Alfred Amos, Wye, Ashford, Kent; William Tuckett, Stockleigh Pomeroy, near Crediton.

Cheviots and Mountains.—William Davidson, Cornhill Farm, Cornhill-on-Tweed; Simon Linton, Oakwood, Selkirk.

Southdowns and Shropshires.—Hugh Penfold, Moat Farm, Marston, Ampthill; A. S. Berry, Church Farm, Whittington, Lichfield.

Hampshire Downs and Suffolks.—E. J. Bennett, Chilmark, Salisbury; J. T. Smith, Dodnash Priory, Bentley, Ipswich.

Oxford Downs and Cross-breds. — John M. Eady, Lancefield, Thorpe Malsor, Kettering; T. Blake Eagle, Manor Farm, Thrupp, Oxford.

Ryeland and Dorset, etc.—David Price, Bulwark House, Brecon; John Kidner, Dodhill House, Taunton.

Champion Plates for Long- and Short-Woolled Sheep and Prince of Wales's Challenge Cup.—William Thomas, The Hayes, Sully, Barry, Glamorganshire; Charles Coxon, Elford Park, Tamworth.

Pigs.

Small White or Small Black, Middle and Large White Breeds.—Edwin Buss, Springhill, Fordcombe, Kent; D. R. Daybell, Bottesford, Nottingham.

Large Blacks and Berkshires.—W. Townsend, The Manse, Stroud, Glos.; J. W. Kimber, Fyfield Wick, Abingdon.

Tamworth and Cross-breds.—J. B. Hill, Smethwick Hall, Congleton; Anthony F. Nichol, Bradford, Belford.

Champion Plates and Prince Christian's Challenge Cup.—Walter Crosland, Estate Office, Buscot Park, Faringdon; D. W. Philip, The Ashes, Whitacre, Birmingham.

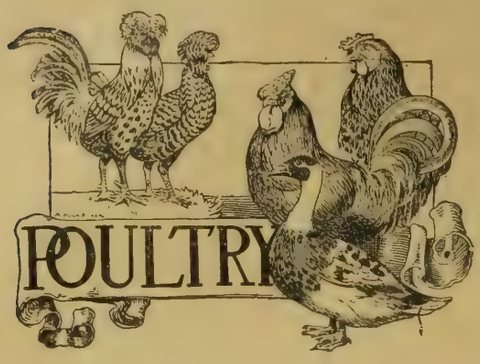
Carcase Competition.

Cattle and Sheep.—R. Bright, Ivingtonbury, Leominster; C. Clark, Aberdeen House, Upper Clapton, N.E.

Pigs.—J. E. Cottrell, Abingdon, Berks; R. P. Venner, 97, Southampton Street, Reading.

Table Poultry.—C. E. Brooke, 11, Aberdeen Park, Highbury, N.; E. Phillips, 9, Sloane Street, S.W.

Louth September Fair. The chief feature of this fair, held on Friday, was the large show of drape ewes which made 42s. to 48s. Best fat beasts were in small supply, but there was a large show of rougher sorts. Breeding sheep and lambs were described as tending upwards in price, but as the former were in good fat condition they were said to be not so dear as they seemed. A few Hampshire rams were on offer, and ram lambs made 4¼ guineas. Other chief prices were:—Bullocks up to £24 10s.; heifers, £21 12s. 6d.; cows, £22 10s.; in-calvers, £11; steers, £12; drapes, £9 15s.; Lincoln wethers to 63s.; young ewes and half-bred gimmers to 60s.; half-bred wethers to 58s.; ewes to 57s. 6d.; and lambs to 42s. 6d.



Paying Breeds.

The question as to which are the most profitable breeds is one which must necessarily receive the attention of those who are taking up poultry-keeping, whether as a hobby or a means of livelihood. Then there are quite a number of people who add a fresh breed to their present stock, and they naturally look out for one which is really profitable.

As the years go on we notice some of the breeds which were formerly very popular sinking into obscurity, and others becoming more popular. It is noticeable that those breeds which are the most popular at the present day have good utilitarian qualities to recommend them.

As we have frequently said, it is absolutely impossible for a breed to gain popularity and retain it, unless it has some good, useful qualities, as the large majority of poultry-keeprs are utilitarians, and the birds they keep must yield something beyond the cost of maintenance, or they have to be given up very quickly. All the "culls" from exhibitors' and good-class breeders' yards are sold to utility poultry-keepers, and breeds which have not good laying or table qualities to recommend them will not be taken up.

For the production of eggs alone, the non-sitting breeds are most profitable. Those who have small runs, and keep a few fowls for laying only, cannot do better than go in for non-sitters, as these fowls waste no time in sitting, and when bred from good laying strains they lay nearly the whole year through, for a great many of them lay even while they are moulting. The breed which once held the premier position as egg-producers has now become obsolete, and has been superseded by more profitable breeds. We are referring to the Black Spanish.

The Leghorns are undoubtedly the most popular breed, and it is difficult to state which of the three varieties—Whites, Blacks, and Browns—are in the greatest request. For many years the White Leghorns were kept very largely, but recently the Blacks and Browns have been making rapid strides, as they are not only grand layers and very hardy, but, as their plumage does not show the dirt, they look as well on a town run as in the country; and even although fowls may lay as well when their plumage is dirty, their owners do not care to see a lot of dirty-looking fowls about, and the trim appearance of the Black and Brown Leghorns under adverse conditions has had a great deal to do with their becoming so popular. They are grand layers, and cannot be put in the wrong place.

Black Minorcas and Blue Andalusians share the honour of producing the largest-sized eggs amongst the non-sitting breeds. Black Minorcas are undoubtedly the next in popularity to the Leghorns, and although they are not quite so hardy, it is our opinion that they will always retain their place, because of the size of their eggs, the number they lay, and their beautiful appearance.

The Andalusians are equally profitable, but every one knows that in breeding these it is impossible to avoid some of the birds coming mismarked in plumage, as the best Blue birds throw black spots, and white birds often appear, and a few come white with blue or black feathers in them. Notwithstanding this, they are popular and profitable.

Houdans are non-sitters, and excellent laying strains are to be found amongst them. In addition to their good laying qualities, they are very good table birds, and are the only non-sitters which can be classed as good table birds. There are more Houdan cockerels used for mating with pure breeds to produce first crosses, and with cross-bred hens to get good layers and table birds combined, than of any other non-sitting breed.

Some people consider that Houdans are delicate; but this is not so if their crests are just trimmed a little over their eyes, as then the air can get to the birds' faces, and should there be any colds amongst the birds, they can be detected at once, which is not possible when the crests are allowed to completely cover the birds' eyes.

Wyandottes and Plymouth Rocks, in all their varieties, continue to hold their own. The Partridge and White Wyandottes are becoming as popular as the Silvers and Goldens, and we believe they will be more popular in time, as they produce much larger eggs than the older varieties.

Langshans are not making any headway—in fact, we must say we consider they are losing ground each year; and Brahmas and Cochins are also going out entirely, being superseded by the newer varieties of English and American production for utility purposes.

Dark and Silver Grey Dorkings are still largely kept for breeding table birds, and in the improved laying strains of these breeds are to be found some very profitable fowls. Indian Game are bred largely for producing good table birds.

Then we come to the Orpingtons, which are acknowledged by all who have kept them to be the most popular and profitable breed of the day, as they combine excellent laying and table qualities with hardiness, and they are in great demand, whether for exhibition or utility purposes. The Blacks are in very much greater demand this year than they have ever been before, whereas the number of Buffs bred every year is increasing very rapidly.

The White Orpingtons bid fair to become as popular as the Buffs for country poultry-keepers. They are so handsome, and such grand layers and table birds, that it is not to be wondered at that they are taking so well.

AUCTION SALES.

(continued from front page).

TO HAY CONTRACTORS, MERCHANTS, STOCK OWNERS AND OTHERS.

IDLEIGH COURT FARM, ASH, NEAR WROTHAM, KENT.

About 2½ miles from both Fawkham and Meopham Stations, S. E. & C. Rly.

MESSRS. DANN & LUCAS have received instructions from F. R. Stoneham Esq., to SELL by AUCTION on WEDNESDAY 4th OCTOBER 1905, at 3 o'clock precisely, on the premises, in Lots, about 240 tons of EXCELLENT UPLAND HAY in ten stacks, containing some good samples of Meadow, Lucerne, Rye Grass, and Trifolium Hay of this and previous years' growth.

The Stacks are all situate close to good hard roads within Two Miles of Longfield Railway Siding, S. E. & C. Rly., whence the Hay can be conveyed to the London Markets and elsewhere. The Hay has been grown in a high upland district and should recommend itself to Hay Merchants and Stock Owners who require Hay of sound quality.

May be viewed at any time previous to the sale. Mr. Lukehurst, at the Farm will show the Lots if desired.

Catalogues may be obtained at the principal Inns in the neighbourhood, at the Farm, and of the Auctioneers, Dartford, Kent, and 23, Budge Row, Cannon Street, E.C.

SALE OF THE FAMOUS EARTHAM SOUTHDOWN FLOCK.

EARTHAM ESTATE, CHICHESTER, SUSSEX,
Four miles from Barnham Junction Station, and six miles from Chichester Station (L. B. & S. C. Railway).

DISPERSAL SALE OF THE WHOLE OF SIR JOHN MILBANKE'S PURE-BRED OLD-ESTABLISHED SOUTHDOWN HILL FLOCK
(Registered No. 236 in Flock Book), consisting of about

1,000

HEAD OF EWES AND EWE LAMBS, in flock ages, which

MESSRS. STRIDE AND SON are favoured with instructions from Major Sir John Milbanke, Bart., V.C. (who has sold the estate), to SELL by AUCTION, at the HOME FARM, Eartham,
On THURSDAY, OCTOBER 5th Next.

The Eartham Flock is one of the old standard Hill Flocks of the Southdown Breed, having for more than half a century past continuously received the greatest care and judgment in its breeding, selection, and drafting.

With true Southdown type and character, and the finest quality of both mutton and wool, these ewes possess exceptional size, strength, and constitution, and the lengthy growing mutton-making lambs from this flock have for many years been one of the features of the Southdown Lamb Sales in Chichester Market.

None of the sheep will be in any way made up for sale, but will be sold in their natural breeding condition, the ewes running the downs until the day of sale.

Luncheon by ticket only at One o'clock.

Sale to commence punctually at Two o'clock.

The flock is open to inspection at any time by appointment with Mr. William Smart, Home Farm, Eartham.

Catalogues of the Auctioneers, Auction and Estate Agency Offices, 63, East Street, Chichester, Sussex.

SEEDS, PLANTS, &c.

SEED POTATOES.—Prospective purchasers are invited to inspect trials and crops on my farms, during the season, by appointment.—W. J. ATKINSON, Weston St. Mary, Spalding.

EXCELSIOR WHEAT, 1st PRIZE, BIRMINGHAM, 1901. Grown and selected expressly for seed for the last 25 years. Has produced 61 BUSHELS GRAIN, 3 TONS STRAW per acre. Strongest storm resister grown. 40s. per quarter, 36 stones nett, sacks included, on rail; cash with order.—THOMAS CHETTLE, Manor Farm, Reading.

200,000 FIDLER'S ECLIPSE Cabbage Plants, 3s. 1,000. W. HORNE & SONS, Cliffe, nr. Rochester, Kent.

SAINSBURY'S NEW WINTER KING BARLEY. Two rowed. The earliest Barley in cultivation. Re-selected every year. Favourite with brewers for its high quality. Strongest straw. Not liable to be laid. Stand any winter. Commenced cutting July 12th (very ripe); all housed by 22nd. A customer writes: "Your winter barley gave me every satisfaction; we cut in June and housed first week in July." Another, farming 600 acres, writes me: "The winter barley you supplied me with was the heaviest-looking crop I ever saw—was a sight for gods and men. I have ricked five big stacks, with over 20 waggon loads in each, off 28 acres." Price free on rail Ross, 80s. per qr. Sacks 1s. Cash. —J. B. SAINSBURY, White ross, Ross, Herefordshire.

SEED WHEAT.—I again offer my superior stock of wheat, "Squarehead's Master," specially grown for seed, with which I have supplied noblemen and large farmers throughout the kingdom for years past, many renewing their orders yearly.—Sample and price from F. O. TAYLOR, Thuxton, Norfolk.

SITUATION, AGENCIES, WANTED AND VACANT.

WANTED, AGENTS for the SALE of NATURAL Ammoniacal and Phosphatic GUANOS and high-class Chemical Manures. All analyses and dry condition guaranteed.—Apply to DANIEL DE PASS & CO., 1, Fenchurch Buildings, Fenchurch Street, London, E.C.

ACCOUNTANCY.—To Parents and Guardians. City Chartered Accountant, old established, has vacancy for pupil. Premium moderate, part returned as salary.—Address, "F.C.A.," MARK LANE EXPRESS office, 1, Essex Street, W.C.

AGRICULTURAL PUPIL A vacancy exists at a prosperous Leicestershire Dairy and Grazing Farm for a working pupil, who would live in and be treated as one of the family. Every opportunity exists for thoroughly mastering the details and principles of successful farming; within easy rail distance of large centres of population.—Address in first instance, "D1285," W. H. SMITH & SON, Union Street, Birmingham.

WANTED—Working Foreman on a fruit and vegetable Farm. Must have had good experience in management of labour. State age and salary required to "B." "MARK LANE EXPRESS" Office, 150, Strand, London, W.C.

TO CHEMICAL MANURE MANUFACTURERS.—A Commission Agent with highest references, who has a large connection with growers, would be willing to represent a firm in the Channel Islands, for the sale of a "Potato Manure." Average sales about 400 tons per annum.—Apply A. Z., c/o Beresford Library, Jersey.

WEATHER FORECASTS AND FORECASTING.

With this issue we bring to a conclusion the series of Special Harvest Weather Forecasts which have been appearing during the past three months. The science—and we presume it will be admitted it is a science—of weather forecasting is still in its infancy, and the trouble to the lay mind is that there are so many different methods in vogue by which it is attempted to form an opinion upon the meteorological probabilities. Astrology, tidal influences, and cycles of years all have their followers, and it is difficult to say which system one prefers when there are so many enthusiasts ready to convince the doubter.

Suffice it to say, however, that the principle upon which the forecasts of the MARK LANE EXPRESS have been made are not based upon any of the systems mentioned above, but rather upon an intelligent and careful study of the cyclonic and anticyclonic systems and their relative positions over Europe. We have not attempted to forecast beyond the limited period of three days, but we do claim that our efforts have been in the main trustworthy, and our readers who have followed the predictions will have found that their main features, with but few exceptions, have turned out to be accurate.

"Never prophesy unless you know" is an aphorism of Artemus Ward, and in general the advice is such that it cannot be disregarded with impunity, but meteorology is of universal interest and of such vital importance to the human race, more especially to the tiller of the soil, that it has always figured largely in the mind of man in all ages. Our attempts during the summer to afford our subscribers an idea, based upon reliable facts, of the forthcoming weather have, we trust, been appreciated. We have not claimed infallibility for the predictions appearing in our columns, but if weather forecasting is to be placed on a plane anywhere near approaching the exact sciences, it can only be done by repeated trials and observations extending over a series of years, and we hope to this end our efforts have not been "as a voice crying in the wilderness."

ROADSIDE TREES AND HEDGES

The complaints made from time to time of overhanging trees and high hedges keeping the sun and wind from the roads, and so retarding their drying, have recently become more acute—principally owing to the exacting demands of the motor traffic. As the time for dealing with such complaints is at hand, it may be useful to recall the provisions of the Highway Act, 1835, under which the nuisance may be abated.

Abatement, rather than prevention, is the question to be considered. It is not necessary, therefore, to do more than mention Section 64, which provides that no tree, bush, or shrub shall be planted on any carriageway or cartway or within 15 ft. from the centre thereof. This section, however, has a certain historic interest, inasmuch as it necessitated a section in the Public Health Act, 1890, to enable highway authorities in urban districts to plant trees in their streets.

Section 65 of the Act of 1835 provides that if the Surveyor of Highways thinks that any carriageway or pathway is prejudiced by the shade of any hedges, or by any trees (except those planted for ornament, or for shelter to any hop-ground, house, building, or courtyard) growing in or near such hedges or fences, and that the sun and wind are thereby excluded from the highway, or if any obstruction is caused in any road by any hedge or tree, the Surveyor may cause the owner of the offending hedges or trees to show cause why his hedges are not cut, pruned, or plashed, or his trees not pruned or lopped so as to admit the sun and wind to the road, or why the obstruction should not be removed. The justices are to hear and determine the complaint, and may order the hedges or trees to be cut or lopped, or the obstruction removed, within ten days, on pain of a penalty of forty shillings. If the order is not complied with, the Surveyor is authorised and required to do the work for the benefit and improvement of the highway, to the best of his skill and judgment, and may recover the cost of so doing from the defaulting owner. The next section, however, limits the compulsory cutting of hedges to the period between September 30 and March 31, whilst the felling of oak trees can only be compelled in the months of April, May, or June, and of ash, elm, or other trees in December, January, February, or March—unless they are causing an actual obstruction of the highway.

It will be noticed that the Act contains an exception in favour of "ornamental" timber—in the legal sense of the word. But even ornamental timber could be cut if it constituted a positive obstruction, as it is a nuisance at common law to allow trees to hang over a highway so as to obstruct the passage, and any person may lop them so far as necessary to remove the obstruction.

The Act is somewhat aggressive in its tone, as it authorises proceedings without any previous warning or notice requiring the nuisance to be abated. In practice, however, such notices are almost invariably given, and are usually complied with where

there is reasonable cause of complaint, and thus the extremity of proceeding under the Act is seldom resorted to. A case, however, was recently brought before the Justices of the Isle of Wight, in which a property owner was summoned to show cause why he should not remove an overhanging bough of a tree, which obstructed the motor-omnibus traffic. For the defence it was contended that the tree, which was very ornamental, was not an obstruction to ordinary traffic; that a motor-omnibus was not a carriage within the meaning of the Highway Act; and that the tree, having been in the road before the dedication of the highway to the public, could not be interfered with. The Bench, however, held that a motor omnibus was a carriage within the meaning of the Act, and that the bough of the tree was an obstruction which could be removed under the Act. Accordingly they ordered its removal within twenty-one days, but consented to state a case for appeal.

To go to the other end of England, we notice that a good deal of misunderstanding is asserted to exist in Teesdale as to the obligations of landowners to lop trees overhanging highways. It is alleged that on one estate the trees are positively dangerous to motorists, cyclists, and vehicular traffic generally, whilst on another chairs have been knocked off the top of trollies laden with furniture, and the chimney of a caravan has been completely demolished by overhanging trees. Evidently the branches are too low—or the loads were too high.

Seasonable Topics.

Abandoned Hops.

A few weeks ago the outlook for hops was bright and cheerful. From all hop-growing districts came reports of heavy crops, and all that seemed wanting was good weather for picking. Unfortunately, however, climatic conditions for this important operation have not been all that could be desired, and from Kent we are getting rather dismal news of the progress of the hop-picking. In the first place, low prices are prevailing, which in itself is not encouraging, and, secondly, crops have gone off badly. The outset of the picking was marked by violent gales and heavy rains, which knocked the fruit about badly in many places, and since then fogs by night and hot sunshine by day have caused the hops to turn brown and go off quickly. It is not uncommon to see patches abandoned in order that brighter hops in other gardens may be secured, but pickers and dryers are hard put to in their attempts to keep pace with the decay that is going on. As it always does in such circumstances, good cultivation has made its mark, and in the best-worked gardens the hops have withstood the ravages of disease and weather far better than in cases where the treatment is of a second-rate character. In spite of this, however, the fact remains that the weight of hops picked will not be so heavy as was at one time anticipated.

* * *

Something Wrong.

Speaking generally, the corn harvest may be said to be over, and the hum of the threshing machine, which is a familiar sound just now, tells its own story of the golden grain parting company from the ear. Still the corn is not all in yet, and during a long drive in the West of England the other day we observed several fields that had not made the acquaintanceship of the reaper and binder. Oats were the crop uncut, and they did not look particularly valuable, but surely they ought to be cut if not in stack by now. We tried to make an excuse on the grounds of late sowing and unfavourable weather, for oats are always a difficult crop to harvest when the clerk of the weather is unkind, and, in the case of one field, we discussed the matter with a local farmer. After describing the position of the field, the man, who evidently knew the party who farmed it, only laughed and observed: "Oh, there's no accounting for him, he never seems to bother himself about anything, and how he carries on is a mystery to me." So there was something wrong after all in the case of the uncut oats, as there generally is when you see matters neglected or all behind. There always were dilatory farmers, and we suppose there always will be, and these cases form real conundrums to their more energetic neighbours as to how they continue to carry on. Sometimes they go under, but frequently they manage to rub along in a slip-shod sort of fashion, while men of greater energy and more inclined to speculate make ventures which end disastrously. By their ways shall we know them. This is quite true of the dilatory farmer, who generally begins to think about his ploughing, his haymaking, and his corn cutting when his neighbours are half-way through, and he is still muddling on when everybody around him has finished. If such a man makes ends meet that is all, but he is not much good to his landlord and the tenant who follows him invariably has to suffer through his dilatoriness.

Ram Sales.

Nothing has been more encouraging this season than the reports of ram sales, for never have breeders been furnished with a better lot of sires, and, judging from the brisk character of the sales, there never was a better demand for them. In regard to quantity, there may or may not have been more pedigree rams bred than are wanted for home use, but foreign sheep farmers have been eager to buy, and apparently when they find what they want, price is no object to them. In view of facts and figures, ram breeding must be a profitable branch of agriculture just now. Quite so; but let us qualify the expression by adding to those who are established in it. We hear nothing of the failures, and do not advise amateurs to rush into it with the idea of getting rich quickly, for a reputation as a successful ram breeder is not built up in a year or two. Indeed, some of the most famous flocks are in possession of men who are carrying on work that was begun years and years ago by their fathers or grandfathers, and in some cases, we may add, they are improving the reputations made by their sires. One can picture the surprise of a ram breeder of the old and departed school if he could drop in at a present-day ram sale and see a group of foreign buyers, gentlemanly men with hardly a farmer look about them, but in possession of bulky cheque books and substantial banking accounts. These are the men whom the present-day ram breeder has to cater for, and the wider the market the higher the prices. Foreign competition may affect us in some ways, but so long as breeders keep up the present standard of pedigree sheep, the old country will be a market for them.

* * *

Scabby Potatoes.

Though scab on potatoes is only a skin affection and does not materially affect the eating quality of the tubers, it spoils their appearance and consequently reduces their market value. Just exactly what scab is, and what causes it are questions very much open to discussion, and, while some experts hold the view that it is a fungus disease which is transmitted from the parent tube to the offspring, and the living germs remain in the soil, others are of the opinion that the trouble is brought about by the mechanical condition of the soil. Be this as it may, the fact remains that potatoes on some lands always come scabby, while on others they come out perfectly clean; and in support of the latter theory it may be observed that on newly turned-up land potatoes frequently come scabby, as they also do in sharp, gritty soil, and we have frequently noticed that the liberal application of coal ashes to the ground is conducive to scab. Whether potatoes can be dressed in any way to prevent or check the increase of scab is a matter of interest to growers, and last Spring we obtained 14 lbs. of badly scabbed Up to Dates for the purpose of experiment. Half the quantity were soaked for two hours in a solution of commercial formalin, at the rate of half a pint to 14 gallons of water, and the remainder were planted without any dressing. The whole were planted on land where potatoes do not scab much in the ordinary way, and results show that the percentage of scabbed tubers was slightly higher in the roots from the undressed seed, though in neither case was the proportion large. In both cases, however, the young tubers that had come into direct contact with the seed potato were badly scabbed, and this supports the contention that scab is transmitted from parent to offspring; at any rate, when they come in contact during the period of growth.

* * *

The Unemployed Question.

Things have changed since the banners and drums of the Salvation Army appeared in our streets, and the followers of General Booth were held up to derision and ridicule on every side. A man less earnest would have thrown up the sponge in those days of persecution, but General Booth was made of different stuff, and he stands to-day, with the exception, perhaps, of King Edward VII., the best-loved man of the century. It is not only as a religious leader that General Booth shines, but even more so as a social reformer, and we find him, at an age when most men who live to be so old are contented with armchair and slippers, promoting a gigantic scheme of emigration, which has for its object the removal of workless and landless men from this country to menless land on the other side of the world. Australia favours the movement, and offers thousands of acres of fertile land that is only waiting for the hand of the cultivator. The scheme is not one of charity, but it offers help to those who are willing to work, but have no chance in the old country. Some may argue that we want men on the land at home. Just so, but unfortunately the land does not offer much prospect for them, and that is the true secret of the deplorable rush to towns; and, besides, there are thousands of country-bred men in towns who would not live if they came back to the land at home, but who may under the scheme proposed make something for themselves in a new and undeveloped country. We shall always have the drones, the thriftless, idle individuals who will work nowhere, but are contented to prey on their fellow creatures. How to deal with this section is a problem, but the genuine unemployed is another matter, and if General Booth's scheme is a means of helping the genuine worker who is kept down through sheer force of circumstances, then it is worthy of support.

* * *

Leaving a Farm.

With Michaelmas at hand we have the season when changes are made, notices are sent in, and the preliminary steps are taken for making a try in another quarter. Few men leave farms on which they have been for years without some feelings of regret. They grow attached to the place, scenes, and people about, get familiar, and even those who are in the fortunate position of being able to give up and retire on the results of their labours, feel a wrench when it comes to leaving the old homestead. Some men make it a general custom every few years to give notice, though they have not the slightest intention of leaving. They want a reduction of rent, a new building, or some other concession, and if the landlord does not see eye to eye with them they give notice. Perhaps the landlord is averse to changes, so some arrangement is made to appease the discontented tenant, and he stops on, but landlords are not all alike, and it is not always wise of a tenant to give notice unless he really intends to leave, for the simple reason that the landlord may take him at his word, and he may find himself in the undignified position of begging to be allowed to stop on. Many men are forced to give notice against both will and inclination, but through sheer force of circumstances. We were talking to such a one the other day, who wanted to give up an unprofitable portion of his farm and retain the homestead and the adjoining land. The landlord could not see his way to divide the farm, and the man has no alternative to giving up. It is easy enough to talk about sinking sentiment, but in some natures the task is difficult, and this man is grieving at the idea of leaving the place where he has lived nearly all his life, and making a fresh start somewhere else. It is not unnatural, and this Michaelmas no doubt notices will be given and taken, and next March homesteads will be left by farmers who, for a time at any rate, will leave their hearts behind them.

Successful Lincolnshire Allotments.—The allotment holders of North Somercotes, Lincolnshire, recently threshed their corn, and 71 quarters of good grain, the produce of 13 acres held by 14 men, was weighed off from the machine. This yield is double that of last year. Some of the plots averaged over seven quarters to the acre.

There was but a small show and few buyers at the fair held at Partney on Tuesday. Drapes realised £11 to £15 apiece; two and a-half-year-old beast, £16 to £18; two year olds, £13 to £15; and young beast, £10 to £12. A very good lot of foals on offer, and business was fairly good at prices ranging from £14 to £20 for cart foals, but there was no trade for Hackneys.

Agricultural Politics.

By a LOBBYIST.

I am glad that my protest against the autocracy of the amateur in matters affecting agriculture has been strengthened by the authority of Mr. W. E. Bear. "It is only," says Mr. Bear, in the course of a striking article in the *Economic Journal*, "in business affairs connected with the land that outsiders consider themselves capable of instructing insiders." Not only is this true, but the worst is that authoritative minds in our statecraft seem inclined to accept this vanity on the part of the uninstructed and the uninformed. Take the pretensions of certain of our great urban organisations in connection with the unemployed problem. At Whitehall their projects for shifting the army of wastreldom on to the land—projects inspired by the unwholesome belief that any shiftless ne'er-do-well is good enough for the countryside, that any human derelict can successfully fight his own moral and physical infirmities in the atmosphere of the farmyard—are received with a complacent acquiescence that encourages the municipal pundits in their irritating Quixotries. One day, of course, these proposals will be crystallised in definite extravagant experiments; and then Whitehall will perceive that in patronising the crudities of ambitious ignorance it has inflicted a sore harm upon the community. But it is not only "in business affairs connected with the land" that outsiders are considered to be more capable of instructing than insiders. It is also the case in connection with politics concerning the land. Only in this instance the uninformed Parliamentarians who are without practical knowledge of the land and its economic necessities masquerade, vide Mr. A. H. Lee, M.P., as "independents," and as men likely to wield more influence than Parliamentarians having this experience and dowered with a representative and delegated authority.

• • •

General Booth is likely to find the Labour leaders among the enemies of his over-sea colonial scheme. Their position may be said to be a reflection of the criticism I ventured to offer to Mr. Rider Haggard's original proposals. "We want our own manhood in our own villages," says, in effect, Mr. William Crooks, M.P. I asked, in commenting upon Mr. Rider Haggard's suggestion, whether his baits would not be attractive, not so much to the human flotsam and jetsam of our towns, but to the lusty muscle and sinew of the countryside? The very nature of his suggestions would induce to a romantic interpretation. They would be represented, if accepted by the authorities, in vivid colouring very different to prosaic fact. Hence it is that as a sequel we should in all probability see a further denudation of our villages. Of course, neither Mr. Rider Haggard nor General Booth would desire this. Their anxiety is to make practical citizens of men who either finally become a burden on the community, or else develop into street-corner loafers. Once, however, the process of settlement was resorted to, how could the line be drawn? It would be difficult—nay, it would be a cynical impropriety—to reject an applicant simply because he was not sufficient of a loafer. That the unemployed problem must be dealt with is certain. At present it is a festering sore in the edifice of our civilisation. We must, however, be careful that the process of human rehabilitation of the unfortunates of our life does not prove a lure to the hardy manhood of our villages. We want labour on our countryside. If it be possible by an educative system to secure it, then let that system be at least experimentally tried here at home.

• • •

I do not know whether Mr. E. A. Pratt is an inspired defender of the railway companies. If he be—and his letter in the *Times* of a few days ago is a reflection of what I may describe as the railway-directorial mind—then I am afraid his inspiration is not always wise. If there be any logical deduction possible from his letter, it is that excessive railway charges to agriculturists are justified by the Rating Act. In other words, the Rating Act places so great an affliction on the railway companies, that they are obliged to compensate themselves in some other way, and railway rates for rural produce are apparently esteemed the most desirable method. I would that this contention had been presented to Parliament either when the Rates Bill was being debated or some railway question was being considered. It would have been a sufficient reply to the very astute manœuvring on behalf of the companies of which the lobby is the frequent scene. Its blunt avowal—of course, Mr. Pratt does not make it in the fashion I have; my assertion is a free deduction from his letter—would have been an admirable checkmate. The Rates Bill was designed for the relief of the agricultural interest. The House of Commons would assuredly have been impressed, and that not pleasantly, with the frank assurance from a railway director that if the railways were compelled to benefit the farmers in this one direction, they would take care to penalise them in another.

• • •

What if the towns which declare themselves to have been bitterly prejudiced in the financial sense by the Act were to recoup themselves by doubling the fees in their markets? Mr. Pratt, too, forgets the fact that one of the chief contentions before the railway inquiry is that the railway charges to agriculturists are not excessive? Does he contend that before the Rating Act the railway charges were too moderate? The defence of the railway companies' attitude has hitherto been very astutely and ably conducted by Mr. Pratt, but in this case I rather think that he has, in his eagerness, over-reached himself. However, it would be well if we could be officially assured that there is a deliberate movement on foot to recoup rated bodies the additional sums they may have to pay under the Rating Act. If there be such a movement, then the benefit assumed to be derived under the measure is simply a delusion.

• • •

I see that the programme for the autumn campaign of the Tariff Reform League will include lectures at such distinctive rural resorts and centres as Tonbridge, Lewes, Aylesbury, and Hereford. Now, may I again plead that the oratorical emissaries should not be permitted to follow the example of their leaders and evade the points of direct interest to the farmers. Those points can be all epitomised in the question: If there is to be an encouraged Colonial preference with the Colonies under the projected economic system, how can the British farmer possibly benefit? Let it not be forgotten that this system of preference, which is simply, so far as the English producer is concerned, a system of encouraged competition, could only apply to agricultural products. Neither Canada nor Australia would seriously compete with any of the products of the great industrial centres. The British farmer would thus have to pay the bribe for inducing the colonists to trade with British manufacturers under favourable conditions to the latter. How serious is this bribe is sufficiently illustrated by the assurance of both the Canadian Premier and the Canadian Minister of Agriculture, that in a few years Canada—where the farmer pays no rent, has not the intolerable burden of rating which the British farmer has, Atlas-like, to bear, and where the Government looks upon the farmer as a person to be aided even out of the State coffers—will be able to supply all the food-necessities of the United Kingdom. What is the farmer to receive by way of compensation for thus penalising himself in order that the trades of the great towns may benefit?

• • •

To the constant repetition of these points—which, of course, any sane man can see are not conceived in a spirit of antagonism to the principle of Protection—there has been opposed a sedulous silence. This silence is, of course, the diplomatic policy in the interest of the urban manufacturers. Farmers now, however, have it within their power to demand that this attitude shall be abandoned—that silence shall give way to clear speech. To be a cat's-paw in benefiting urbanism is—well, is really not a very dignified rôle. So far as I can see, the new economy may mean the encouragement of a rival to the farmer who will be able to invariably undersell him. If, instead of a Canadian competition a German competition were suggested, there would be a furious explosion of national wrath. Frankly, what does it matter to the British farmer—apart, of course, from the very excellent sentiment of patriotism, but which after all, would not in this case pay the rent—whether the tragedy of his economic undoing be inspired in Germany or in Canada? He would be undone all the same.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Sept. 16, 1905, together with the quantities imported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905.
	No.	No.		Cwt.	Cwt.
Cattle ...	12,977	13,190	Wheat ...	2,854,900	2,354,000
Sheep.....	6,946	2,606	Flour.....	171,100	337,500

Lard	36,941	33,852			

The President of the Board of Agriculture (the Hon. Ailwyn Fellowes) has promised to attend the dinner in connection with the Alford Bull fair on November 7. The Duke of Portland will be in the chair.

The show of the Frome District Agricultural Society is fixed for Wednesday next. There is an entry of no less than 779, being over 50 more than last year. The cheese entries are above the usual average. The large cheese tent, 240 feet long and 42 feet wide, will contain nearly 400 entries of the finest Cheddar that can be produced in the world. The butter classes are patronised by the best makers. In the working dairy the actual making of butter by 35 exhibitors may be witnessed, many of the competitors being crack hands. Miss Stubbs, of the County Education Butter School, will give demonstrations in butter-making. Table poultry and eggs are a larger entry than last year. Mr. Walkley, the Somerset county poultry expert, will give demonstrations in trussing poultry. In the jumping and driving competitions most of the best horses are competing. There is a good entry of cart horses and colts. Shorthorn and Jersey cattle include some from the best herds. Sheep and pigs are also a good entry. There will be a grand display of fireworks in the evening. The band of the Volunteer 3rd Battalion P.A.S.L.I. (Frome Detachment) will be in attendance throughout the day. The usual excursion trains will run from all parts. The Frome Fanciers' Associatic will hold a great show of dogs, poultry, pigeons cage-birds, and rabbits on the ground on the same day. The annual dinner will be held on the 26th inst., when the president, Mr. A. R. Baily, will take the chair.

NORTHERN NOTES.

It will seem a little strange to the dwellers in the southern counties to learn that the remnants of the northern harvest are only just being gathered in, and yet such is the fact. Some corn is still out in Scotland, even near the Borders, and along the east coast on this side of the Tweed and the Tyne, even along the North Yorkshire sea-board, the work of the harvest was only finished last week. The past two weeks were splendid—perhaps the finest of the season—and some of the last secured crops have been carted in splendid condition.

The Michaelmas summer—the Indian summer—when we get one, is probably the pleasantest time of the year. The power of the sun is curtailed, the heat is not oppressive, the air is often beautifully clear, and the evenings are warm and pleasant. The morning dew passes quickly away, and walking, cycling, and motoring, and, indeed, all outdoor exercises, can be experienced and enjoyed by even the weakest and most delicate. People rush to the seaside for their holidays earlier in the season, but a holiday by the sea during one of our Indian summers is long remembered. Are we to have such a one this autumn? The weather indications at this moment are all in that direction.

Country life is now at its best, the heat is not troublesome, just great enough to be appreciated; the shooting season, the fateful time for the young partridge, is in full swing; cub-hunting is on everywhere, and soon the real hunting season will open. The fisherman finds the exercise of his craft to be most enjoyable, and the resotr to the golf links is a source of unfeigned pleasure to both those who play the game and those who stand and watch it.

Rough on the farmer that this beautiful weather comes now instead of during those anxious weeks of harvest when the crops—the result of the year's toil and preparation—seemed in such imminent danger, but, after all, better late than never. The grain is drying and hardening in the stack, thatching work is executed under favourable auspices, the autumn cleaning of land is facilitated, and the root crops are making good progress. It is, however, only too true that in those districts where turnips suffered so severely from the drought, the root crops can never recover half the ground then lost, but the progress made is greater than could have been anticipated, and the weather is all in their favour.

Thus far the test of the threshing machine confirms the forecasts given before the harvest. Wheat yields well, and although by no means a record crop, it is well above the average. And some samples are very good, although others are not so dry as might be desired. At first millers fought very shy of the northern wheats, and a strenuous attempt was made to bring down prices well below 9d. per stone, but the attempt has failed, and rates have an upward trend. Barley, too, yields well, perhaps not so well as wheat, but this crop, too, is above an average one in quantity. Many samples have been weathered and discoloured, the best are being allowed to mellow in the stack, and it is not yet possible to pass a final verdict on the quality of the barley crop of this year's growth. Oats are turning out quite as badly as was anticipated on many farms in the districts where the drought prevailed so long, the record will be touched—that is, the record of the minimum growth. And some samples are wretchedly thin and light, but there are a few good ones, and it may be said the quality of the crop is superior to its quantity.

Grass grows well. This is not a matter for surprise, but it is worthy of note that cattle are doing well on the new growth, a somewhat uncommon experience at this season.

Sheep continue very dear. Some put it down to the favourable demand for mutton, but the fact is that sheep are scarce, and flocks have been depleted. Very large numbers of lambs have been sold to the butchers, and we may confidently predict that the price of mutton will not decline, while the values of breeding sheep are rising.

The new swine disease stated to be a form of erysipelas, not uncommon on the Continent has caused a good deal of uneasiness but fortunately its presence has been confined within an area of some twenty miles, and the stringent measures adopted by the local authorities and the Board of Agriculture will, it may be believed, prevent the disease from spreading further. For animals once attacked there seems little hope of cure. How did the disease originate? Is the official version, that the germs of the disease were brought into this country in some meals or food stuffs imported from the Continent, likely to be correct? It is hard to say, but some authorities draw very different conclusions as to the cause of the outbreak and as to the origin of the disease. Is there any analogy between this, and those mysterious outbreaks of anthrax which at intervals puzzle the inquirer, and lead to the belief "That there are (many) more things in heaven and earth than are dreamt of" by our scientists. Some people imagine that an analogy, and a very close one, may well be drawn here.

Unusual diseases in animals and unusual diseases amongst mankind seem to often appear together, and just lately medical men and the Public Health Department of the Local Government Board have been much concerned with the presence of cerebro-spinal fever (spotted sickness) amongst us. Fortunately this disease has been localised, and its spreading prevented, and it is earnestly to be hoped that this fatal complaint will soon be eradicated from the country.

September 22, 1905. M. Y.

Agricultural Education in Devonshire.

There was an interesting and important discussion affecting agricultural education at last week's meeting of the Devon County Council. Sir T. Acland states that a special sub-committee of the Education Committee had considered the whole question of the finance of education other than elementary, and they recommended that the following items be eliminated from the scheme:—Under the head of agriculture—grant for bee-keeping, £150; grant to the County Agricultural Association, £150; grant in connection with the County Nursing Association, £150; ambulance, £200. It was also recommended that the amounts for practical horticulture should be reduced from £200 to £150, and for classes in agricultural processes from £300 to £150. The committee did not believe they could allocate money as they previously had to competitions in hedging, sheep-shearing, dairy competitions, bee-keeping, etc., being of opinion that it did not come under the term "higher education than elementary." The money entrusted to them was for instruction, and not prizes.

Mr. Spear regretted the proposal to withdraw the grant to the Devon County Agricultural Association of £150, and to reduce the £300 for agricultural processes to £150. By the committee's proposals £1,770 would be devoted towards agriculture, and the large sum of £9,220 for evening continuation schools, technical education, and science classes. The agricultural industry was the largest in the county, and it was equally important to get young people efficient in agricultural pursuits, as in other branches of industry. The committee's proposal treated agriculture very unfairly. He had an experience of how the money allocated to agriculture was spent, and could testify that it did a vast amount of good. The competitions had a most beneficial effect in the country districts. When it was known that prizes would be given annually for competitions the young people in the country districts did their best by securing instruction to make themselves efficient. The disparity in the amounts to be voted for agriculture and other purposes was so great that he felt compelled to move an amendment. He moved that the £150 be voted to the association, and £300 for agricultural processes.

Mr. Franklin seconded, believing that if the small amount now given in prizes at agricultural competitions was stopped, much of the good work done would be destroyed. Rather than the competitions should be abandoned, he believed farmers would wilingly submit to a small rate for the purpose of providing the prizes.

Lord Clifford reminded the Council that the proposed reductions were necessary to bring the expenditure down to the income. It was useless for the Council to recommend that the full grants be given unless they stated where the money should come from. There was no surplus for the purpose.

General Sir Redvers Buller believed it would be a great mistake to take away any money devoted to agriculture, but the committee felt they could not make the grants under the head of elementary education. If the Council desired to make the full grants there should be a special resolution on the matter.

The Chairman: That cannot be done, because the auditor will surcharge us.

After further discussion, it was decided that £150 be voted to the Devon County Agricultural Association for demonstrations in connection with the association, and that £300 be granted for the purposes of agricultural processes instead of the committee's recommendation of £150.

Mr. Sillifant and Rev. J. D. Pitman wished to include £150 for the promotion of bee culture, but the proposition was rejected.

EAST ANGLIAN NOTES.

The work of preparation for the coming season is quickly going forward in East Anglia, and newly-ploughed fields have added quite a distinct feature to our landscape, and although the future is of necessity obscure, farmers this year feel more confident inasmuch as it appears that more prosperous times are at hand. Prices have somewhat fallen during the past month, but with better thrashing weather, and the improvement of the cereals by keeping, a better tone now prevails, and should farmers in the Eastern Counties keep their heads and not rush their produce on the markets, prices will materially improve, as the quality is there.

Farmers who have had more than thirty years' practical experience in farming have told the writer that they never have harvested such a bulky crop of corn, and the yield, both of wheat and barley, will be much above the average on the medium soils. On the other hand, oats are the lightest of the cereals, and beans are said to be only fair, although they were cut early and promised to be very good. In this connection it is interesting to compare the *Times* special reports on the condition of the late harvest in East Anglia, and here we find that while wheat stands at 99 per cent. of a perfectly healthy crop of average growth, the highest figure recorded since 1898, Norfolk lost a little in the past months, the figures for this county standing at 93 as against 96 a month ago. But as regards the barley crop we notice that whereas England stands at 91½ per cent. of a healthy average crop, Norfolk has a figure of 94, exactly the same as five weeks ago. The root crop of England, by the way, is put at 86, and here we may note an improvement of two points for Norfolk during the past six weeks.

Bishop Stortford market was visited by the writer on Thursday last, and although the visit was somewhat a disappointing one, as the barleys on view were neither numerous nor of special quality, "overside attractions" did not lack interest. In the first place, the roadway in Potters Street, at the narrowest part, suddenly gave way, revealing a large cavity that had apparently been caused by a steam roller that in the early morning had passed along and broken the sewer, much to the inconvenience of those that wanted to be busy at market. While business was slack, however, the writer heard that the oldest inhabitant, who, by the way, was a native of Farnham, Essex, named David Warwick, formerly a shepherd on the Hassobury estate, had passed away, at the age of ninety-three, in the Bishop Stortford Infirmary.

In past years the Witham ploughing matches have been claimed to be the largest of their kind in England, as many as eighty ploughs being at work at one time. To preserve such a prosperous institution was worthy of an effort, and the competitions on Monday last showed no falling off either in interest or excellent workmanship. Hitherto the representatives of all ten parishes have ploughed together upon Blunts Hall Farm, Witham, where land has been provided by the Hon. C. H. Strutt, M.P., but this year representation was made from "the men on the hills" that the conditions of low-lying country were not quite the same as those to which they were accustomed. To meet this, ploughmen belonging to the two Braxteds and Wickham Bishops were allowed to do their work upon Sexton's Farm, Great Braxted, while those from the other seven parishes met at Blunts Hall. Each man had to plough thirteen furrows to a stitch and take up the brow, the depth of the work being between 3½ and 4 inches.

After the day's work the ploughmen, together with the members of the committee and local farmers, were entertained by the President, the Hon. C. H. Strutt, M.P., who distributed the prizes to the successful competitors.

September 22, 1905.

Those who follow the guidance offered in Sutton's Bulb Catalogue will experience no difficulty in securing a most welcome supply of flowers from November to May, when they are of the highest value. The descriptive lists are models of order, carefully compiled to assist the amateur and to remind the gardener on those points which aid selection either for a few beds or a grand terrace garden. Those who have had comparatively little experience with bulbs will probably find one or more of the admirably selected collections suit the requirements of home and garden. Nearly every page of Sutton's Bulb Annual is illustrated with reproductions from photographs, many of them suggesting modes of treatment that will be valuable to lovers of horticulture. The work can be obtained from the publishers, Messrs. Sutton and Sons, Reading, and those who secure a copy will find it full of interesting information.

Midland Notes.

The harvest moon is passing. Even during the past few nights it has been remaining fourteen hours above the horizon, but the season is gone for another year when our evening luminary makes its appearance, night after night, almost simultaneously with the setting of the sun. Good use was made of that brief time in many districts where there was grain still lying in the fields, and it has been no uncommon sight in the North and North-east Midlands to see the carts making their slow way to the stackyards by moonlight. We shall now see the evenings drawing in perceptibly faster, and one or two touches of frost in the early morning are a further reminder of the changing of the season.

One of the lessons which this summer has enforced upon us is the power of kale to resist drought, and to start growing again immediately upon the fall of rain. Kale might be grown more than it is in the Midlands, for it is not so easily discouraged by a bad season as swedes or turnips, and is not exacting in the matter of soils.

Very pleasant to see was the good stamp of the tenant farmers' horses at Kineton a few days back, and since then we have had a capital show at Brackley. There were some at the latter exhibition who failed to share the Earl of Effingham's hopeful views as to the future of agriculture. But on the subject of farm lettings his lordship was undeniably right. There is less difficulty in finding farm tenants, and what is more there are many fewer farms to let; even advertisements of farms wanted seem to be showing a tendency to increase in number. In one Midland paper which is much used for these purposes the three weeks of this present September have seen twenty-four "wanted" and sixty-six "to let" announcements, while in the same three weeks of 1904 the numbers were nine and eighty-nine—a change in the proportions which is surely not without significance.

Those with long memories may well cry "Ichabod!" over the country fair, whose glories are indeed departed, Worcester furnishing one of the very few exceptions which go to prove the rule. Even there the pleasure fair is gradually dying out, but it was good to see the pockets of hops—something like 5,000 in number—which overflowed the capacity of the market last Tuesday, and had to be stacked in the entrance to the Shire Hall. The vitality of the fair is the more remarkable when it is remembered that most of the hops sold in at Worcester come from Hereford, where an attempt to start a market some few years ago turned out disappointingly.

If this had not been a good year for garden and orchard fruits, the season seems to have suited the wild fruits of the hedgerows. The prices of the wholesale market do not allow of much profit being made from blackberries, especially where the picking of them has to be paid for, and the occasional farmer who tries to make the most of the fruit on his own land is apt to find himself regarded as "near" and unneighbourly. But some of the higglers whose carts bring country produce into Birmingham suburban streets, and who do not despise small things, must be doing well out of the blackberries, which are uncommonly abundant.

What is a tenant farmer? That sometimes ticklish question has been asked again at more than one Midland show this season, and lately the case was specially cited to the present writer of an exhibitor—and winner—in local tenant farmer classes who neither lives on the land he farms nor relies upon it for his income. Virtually he rents a pleasure farm, on which it pleases him to spend some of the profits of a thriving city business. There are, no doubt, many such, and they are often enough keen cultivators of the soil, and liberal buyers of live stock. But it is hardly fair to the bona-fide tenant farmer, whose holding is his means of support, to set him to compete in such company, and if some of our agricultural societies would overhaul their rules a little they might not be doing a bad thing.

September 22, 1905.

The annual sheep and cattle fair at Gisburne, known as "The Old Fair," was held on Wednesday, when there was a large attendance and a very good show of stock. The show of sheep and lambs was especially good, and a brisk trade was done in them at improved prices. Young geld cattle made £8 to £11, young heifers £5 to £9 10s., bullocks £5 to £8, half-bred store lambs 20s. to 30s., horned lambs 9s. 6d. to 13s. 6d., half-bred shearlings 33s. to 42s., half-bred ewes 33s. to 45s., Irish ewes 21s. to 27s. each, and Scotch ewes 21s. to 28s. each.

Developing Forest Lands.

SIR,—I have not forgotten the kindness you showed in your issue of November 14 last in giving hospitality in your columns to the views I ventured to express on the above subject; and, having quite recently visited the Forest of Dean, I should like to draw public attention to the School of Forestry which has been established there under the direction of Mr. C. O. Hanson, late of the Indian Forest Service. I am glad to be able thoroughly to endorse the statement in the Blue Book issued last year testifying to the keen interest which is taken by Mr. Philip Baylis (Deputy Surveyor of the "Dean" and High Meadow Woods) in the efforts that are being made to increase and improve the knowledge and experience of the forest staff in the practical science of Sylviculture, and, I may add, in the promotion and development of British Forestry generally. Mr. Hanson's students at present mostly consist of young woodmen employed in the "Dean." Those in the service of the Crown are paid on school-days according to the customary rate of remuneration, and arrangements are also made for receiving others not in the employ of the Crown. But it is evident that the work might be greatly extended to the public advantage and become a centre for training students similar to the well-known establishment at Nancy, where under the careful supervision of Colonel Pearson, of Kington (who devoted so many years of his active life to that service), the young aspirants for Indian forest appointments have heretofore been sent at the State's expense, owing, alas! to the absence of home facilities.

There can be no doubt that the subject of forestry in England has now become a matter of primary importance. It is universally admitted that in the past mistakes have been made in the "management" of this and other forests, and at present the Crown has only enclosed—so the officials contend—8,000 of the 11,000 acres which it is entitled to reserve under certain special Acts of Parliament. The great importance of the subject to Great Britain was forcibly pointed out in a report made to the India Office by M. Boppe, of Nancy, Inspecteur des Eaux et Forêts in France. He considers the "Dean" pre-eminently *une forêt de l'avenir*, and thinks it would form an excellent field for the study of the treatment of standard oaks, saying that in such a forest, where the soil is so exceptionally fertile, it might be possible to find a solution of the oft-discussed problem of obtaining the maximum production in quality and quantity from a forest of oak. M. Boppe also points out that "were it only for the purpose of replanting the five or six millions of moor and waste land which cover one-third of the Highlands there is a sufficient reason for the formation of such a school." He continues:—"Considering the present depressed state of agriculture all over Europe, it becomes more and more necessary to endeavour to draw the greatest possible advantage from the land, and by properly adapting a different vegetation to different soils to seek to obtain, through the medium of the enormous capital which the present generation can command, the maximum production from a minimum area. It is thus that the forests are called upon to play an important part in the immediate future, and the farmer will henceforth find a powerful auxiliary in the forester."

It is evident that, under Mr. Baylis and Mr. Hanson, everything possible is now being done for the development of these forest lands, and it is to be hoped that in the future arrangements will be made by which a larger number of students of various classes will be able to take advantage of the unique opportunities afforded of practical and scientific instruction in forestry. At present the work of this school would seem to be almost exclusively confined to men of the mechanical and labouring classes. It is, as M. Boppe shows, a matter of importance to every civilised nation, and especially to England—which, with her colonial possessions, is perhaps of all countries in the world the one most richly endowed with valuable timber forests—that this vast accumulation of forest riches should not fall into the hands of ignorant persons or be squandered away without thought of the future. Here there is a splendid training ground (*Pflegestaette*, as the German foresters say) for those interested in the science of forestry—a science in which the mistakes of to-day, if we are not careful, will perhaps be perpetuated in future years, if not generations.

It is generally admitted that in the coming winter the difficult problem of the unemployed will be with us in even greater intensity than it has ever been before. The Act passed this session must result in various public works being proposed more or less of a problematical character. But it is certain that afforestation schemes need not be unremunerative. In a recent letter which I have received from the well-known Continental expert, Dr. A. Schwappach, of Eberswalde, he says:—"Your proposal to employ the unemployed in forestry operative work is by no means a bad idea. I welcome it. The workless hands for which employment is wisely sought, in a big cosmopolitan city like yours, would not, of course, be immediately available for productive forest work, but they could be trained to the task."

In further correspondence I have had with foreign specialists I find the following interesting statement:—"At Luetzel, in the district of Luneberg, and at Northeim on the Weper, the Hanoverian State Forests extend to 11,725 acres; and a recent purchase of peaty land near Gross Fullen was made with the express object (a) of pursuing forestry investigations and (b) with a view to the establishment of a colony for the unemployed. This embraces 1,092 acres. The amount of land placed under forest by the help of a loan fund is at present 16,644 acres, so that it will be seen that the action of the Provincial Legislature has resulted in the afforestation of 29,461 acres." In the proposals for public work for the unemployed this matter should not be lost sight of, and I am convinced that if the work be undertaken after due consultation with the best expert knowledge now available on the subject a great national benefit will accrue.—Yours faithfully,

CHARLES HANCOCK, B.L.,
Member of Scottish Arboricultural Society.
London, September 20, 1905.

Agricultural Co-operation.

SIR,—I notice that the word "co-operation" is being freely used in reference to various proposals which have been put forward of late for combination amongst farmers and agriculturists. While I am glad to see that the idea of combination is making so much headway amongst farmers, and that it is receiving so much encouragement from the Press, I am compelled to protest against the misuse of the word "co-operation" and its application to undertakings which are not truly co-operative.

The term "agricultural co-operation" only applies strictly to those forms of combination advocated by the Agricultural Organisation Society, and it is important to us that agricultural co-operation should not be brought into disrepute and our movement compromised by the failure or indiscretions of undertakings to which the term "co-operation" is wrongly applied. Many of the undertakings now proposed are, indeed, on utterly unsound lines, and for the very reason that they are not co-operative, will either fail altogether, or will not succeed in accomplishing the beneficial results which are expected from them.

The best way to form an agricultural co-operative society is to register under the Industrial and Provident Societies' Act, and so to frame the rules that the amount of the nominal capital is not fixed; that shares can be allotted at any time to any farmer applying for them; that the interest payable upon the capital is limited to a small percentage, and that the bulk of the profits is divided amongst the members as a bonus upon the amount of their sales through, and purchases from, the society.

A limited liability company in which farmers take shares may be a form of combination, but it is not co-operation, and as a farmers' combination pany, when they would become mere shareholders hold shares in approximate proportion to the amount of their dealings with the company, the interest on their shares is roughly equivalent to a bonus on their transactions; but this is a condition which could hardly exist even at first, and if it did exist would very probably soon cease to do so. Some of the members might leave the district and cease to have dealings with the company, when they would become mere shareholders drawing profits from the business done through the company by the other farmers. Moreover, if the profits were at all large, the shares in the company would rise in value, and some shareholders would dispose of their shares to persons other than farmers, who would then likewise draw profits which should go into the farmers' pockets. Again, if after the company were formed a farmer wished to obtain shares, he might have to purchase them at a premium and pay so highly for them, that the dividend would merely represent interest at ordinary investment rates on the money which he had paid for them. So in a very few years such a company would become an ordinary trading concern, the objects of which would not be to benefit the farmers, but to make

the biggest possible profit for the shareholders, and it would then be no better than any other middleman.

A true co-operative society is very different from this. By the limitation of the interest on the share capital (usually to five per cent.) it is prevented from becoming a mere investment for capitalists. Whatever profit is made, over and above the five per cent. charged for interest on capital, is divided among the farmers in proportion to the trade they have done through the society in the shape of a bonus at the end of the year. The fact, again, that the amount of the share capital is not fixed, and that fresh shares may be allotted any time on application, prevents the shares rising in value, and enables any farmer in the district to become a member without paying heavily for the privilege.

I might enumerate many other advantages which co-operative societies, such as I have described, enjoy over the ordinary limited liability companies, but my purpose is to show what is true co-operation as applied to agriculture. It is all the more necessary that this should be clearly understood, since it is becoming generally admitted that co-operation is the form of combination which is likely to do most for the regeneration of agriculture. One deputation of farmers after another has visited Denmark and has returned convinced of the necessity of adopting Danish methods in this county, but this can only be done in the manner which I have indicated.—

Yours truly, J. NUGENT HARRIS,
Secretary of the Agricultural Organisation Society,
September 18, 1905.

Harvest in North Lincolnshire.

SIR,—All our harvest is new home, some of the later fields in not too good condition, with a few sprouts. Prices of corn are very low, a rush to the market causing a corresponding reduction in the dealers' bids. I and my neighbours also have just got our lambs penned on the early turnips. They, of course, look somewhat thin, as usual, but they are taking the roots well, and will soon improve. They are, as a rule, very healthy, although I have heard of a few losses in another district. Prices of mutton are good for those who have any to sell, the only bright spot in our penning, for wool, although dearer, for which we are thankful, is at 30s. per 28 lb., only three-fourths of it average value yet.

Our potato crop here is much diseased, especially Dates, and pig food will be very plentiful. The price of good ones even is lower almost than I ever remember, and no buyers. Often and often am I asked if I can say what sort should be planted. I cannot answer.

September 22, 1905. NORTH LINDSEY.

Dorsetshire Prospects.

SIR,—We are close on Michaelmas, which practically closes the agricultural year. In many respects it has been a favourable season. Although the Dorset farmer believes in the old adage of a dry March and wet May—which this year was exactly reversed, as we had a wet March and dry May, the result being, in my opinion, the worst crop of oats grown for years. Also in my case, a failure in the mangel crop. Swedes and roots drilled the last few days of May and early part of June are particularly good, making, on the whole, the root crop a little below average. Sainfoin hay is very good. The dry pasture hay was light. All was taken in good condition, and with a considerable amount of hay left from last year, I see no fear of scarcity for the coming winter.

Wheat I consider the crop of the season, and expect a good yield both in quantity and quality. As to barley, very little is grown in this neighbourhood. I have a heavy crop of straw, but being grown after roots the quality will probably be coarse.

Sheep, of which we are very proud, and consider of the first importance, matured remarkably well. We had a good lambing, a fair crop of lambs, and they have continued very healthy. Prices have been on the whole fair; wool much better.

Dairy cows and cattle generally have done very well, and are in a very healthy condition. Therefore, I consider the season of 1905 a favourable one. A great drawback to agriculture is the burden on the land, which I hope the Government will shortly be able in a measure to relieve.

September 20, 1905. J. B.

Fine Weather in Wiltshire.

SIR,—Since harvest finished splendid weather has enabled many a farmer to clean land fouled by the rainy seasons of two and three years ago. Trifolium is sown, rye and winter barley go in well, and roots, although patchy in districts, are looking healthy and making rapid growth, sheep and stock generally thriving.

The later sheep fairs have been satisfactory to the seller, and were it not for the price of corn prospects would look brighter than usual. In many parts the yield will not be as heavy as expected.

Labour is plentiful. At Wilton Fair the number of carters and shepherds looking for a job was greater than usual, but this is partly accounted for by the spirit of change in the youth of the present age.

September 21, 1905. D. W.

OBITUARY.

Col. Sir Robert Gunter.

Yorkshire has lost one of her most prominent and popular men by the death of Colonel Sir Robert Gunter, M.P., which took place at his Yorkshire residence, Wetherby Grange, on Monday, aged seventy-three. For some weeks past Sir Robert Gunter had been seriously ill, and latterly little or no hope had been entertained of his recovery, and little surprise was therefore felt by his friends at the news of his decease. The immediate cause of death was exhaustion, consequent upon a prolonged attack of neuritis. Sir Robert's interests and his sympathies touched many aspects of the life of his adopted county—military, agricultural, political, and administrative—not to name those personal relationships which made him a leading, and always welcome, figure in social circles. It was chiefly as an agriculturist, however, that Yorkshiremen best knew Colonel Gunter, to give him the familiar style and title that still clung to him after he received his baronetcy. On most matters connected with agriculture he could speak from practical knowledge, for he farmed about a thousand acres of land, and was a successful breeder of cattle and horses.

In the sixties and early seventies the Wetherby herd of Shorthorns was one of the most celebrated in the country. Colonel Gunter established the herd soon after taking up his residence at Wetherby Grange, and with the assistance of his steward, Mr. Knowles, himself an authority on Shorthorn breeding, quickly secured for it the high reputation which it was destined to achieve. At one time the Wetherby Shorthorns carried off most of the principal prizes at the Royal, the Yorkshire, and other big shows. But after a while Colonel Gunter came to the conclusion that the showing of cattle, involving the necessity of keeping them in a highly-fed state for exhibition purposes, was not conducive to successful breeding; consequently he ceased showing, and for a great many years no Wetherby Grange beast has been seen in the ring.

The old Duchess breed is now almost extinct, but all along there has been maintained at Wetherby Grange a large and useful herd of Shorthorns. Of late years Sir Robert devoted considerable attention to the rearing of heavy horses, and many of the fine muscular animals employed in the brewery trade of the district have been bred at Wetherby Grange. In the Wetherby Agricultural Society Sir Robert took a great interest, having been its President for a long period, and he lent his park for the annual show. He was largely instrumental in securing the holding of the great Yorkshire meeting at Wetherby—in his own park—in 1868; and eleven years later, when the Yorkshire Show took place in Leeds, he was president of the County Society.

Mr. George Bagnall.

We regret to record the death of Mr. George Bagnall, which occurred at his residence, Greatworth, Northamptonshire, on September 12, at the age of seventy-one years.

In the agricultural world, and amongst all his friends, he was widely known and highly respected.

Coming into the Westwell Farm after the death of his father in 1856, he farmed a large area of land with considerable success. His noted flock of Cotswold sheep was held in high reputation, both here and abroad, as well as having gained premier honours at the Royal, Bath and West of England, and all the leading shows in England, France, and America.

His services were often sought in the showyard as a judge of stock, and he was also an ardent sportsman, game preserver, and supporter of foxhunting. He was also for many years a member of the Whitney Board of Guardians and Assessment Committee.

He was one of the old type of yeomen, very firm, candid, and straightforward in all pertaining both to his private and business transactions.

Mr. Bagnall was left a widower in 1881, and leaves five sons and two daughters to mourn the loss of a kind and considerate parent. The funeral took place at Westwell, the interment being in the same grave as his wife, amid every manifestation of sorrow and respect.

The burial service was impressively read by the Rev. T. B. Rainey, of Holwell, and amongst those who attended were Thomas, William, George, Douglas, and Alex, sons of the deceased, Mr. and Mrs. Bazeley, and Miss Bagnall, son-in-law and daughters, Dr. Cheatle, Messrs. R. Jacobs, Clement Pinnell and Charles Pinnell, J. Cave, Puckering, etc.

Mr. B. Fletcher, farmer, of Carlton, near Yeadon, a well-known and successful exhibitor of dairy cattle at Otley and other agricultural shows, died early on Tuesday morning, aged sixty-two years. The deceased gentleman was a member of the Wharfedale Board of Guardians, and had sat continuously as the representative for Carlton for fully a quarter of a century.

A well-known Tyneside farmer passed away last week in the person of Mr. W. Rowell, of Staley Townfoot Farm, which was farmed by deceased's father and grandfather. The deceased, who was in his sixty-eighth year, was a familiar figure at the local auction marts, and took prizes at the Christmas fat stock shows. Though he had been in failing health for some months, he was able to transact business, and attended the lamb sales in Hexham the day before his death, so that his demise on the following day was most unexpected.

Potato Blight in the Fens.

In the course of a special article, the *Peterborough Advertiser* states that disaster has overtaken potato crops in the Great Fen district of Huntingdonshire, and that never since the memorable failure of the "Old Regents" in 1876 has such destructive blight visited the potato lands as that which has fallen upon it during the last fortnight. Hundreds of acres of potatoes of many varieties are now partially, and in isolated cases wholly, ruined by the ravages of the blight. The greatest consternation prevails amongst the farmers, who, anticipating a heavy harvest, have been suddenly overcome by this most lamentable visitation.

"Up-to-Dates" and "British Queens" are the greatest sufferers, perhaps because they are the largest crop of the Ramsey district. The greater part of the acreage under potatoes is monopolised by these soft varieties, and excepting in but a few isolated instances, all have come under the influence of the dire visitation. It is the more remarkable because in the great bulk of cases the crops have been grown from first Scottish seed, bought at advanced prices by the enterprising growers. Many of the crops are so destroyed that they will not realise sufficient to recoup the grower for the cost of his seed. Consignments to the markets have rotted in the railway trucks whilst on the journey, and many orders have been cancelled. The "Royal Kidneys," "Northern Stars," "King Edwards," "John Llewellyns" have generally escaped, but they are not grown in the same quantities as the "Up-to-Dates" and "Queens." Blight is showing in the "Evergoods," although in places they have resisted the disease. In fact, the worst fears have been realised.

In Lotting Fen very serious loss has been sustained by the small growers, amongst whom there is much alarm. Three or four weeks ago slight blight appeared in a few varieties in the Ramsey Fen, but no misgivings were entertained of the great bulk of the main crop. But the damp weather of the last fortnight, followed by periods of hot blistering sunshine, rapidly brought on the blight.

Interviewed at Peterborough Market on the 13th inst., Mr. John Rowell said that the blight was the most disastrous ever known in the Ramsey district. Many acres there will not be dug at all, as they would not pay for the labour. Royal Kidneys and certain kinds of Scottish seed have resisted the disease. Fogs heralded the first signs of the blight some time ago, the haulm becoming blackened and the heavy rains in August completed the ruin of the main crop. Large growers will sustain heavy losses, and the cottagers will similarly suffer. The crops on the light Fen land have escaped, and the fields are simply full of potatoes, and a huge crop is anticipated.

Cheesemaking in Lancashire.

A scheme is on foot for developing the cheesemaking industry of Lancashire, which is growing to large proportions. A meeting has been held at Preston with the object of founding a county dairy show at which cheese should be exhibited, as well as other dairy products. The conference was attended by representatives of the Royal Lancashire Agricultural Society and the Lancashire Farmers' Association, and by the committee of the Preston Cheese Fairs' Association. It is suggested that the first exhibition shall be held at Preston, the centre of the agricultural districts of Lancashire, and that subsequent exhibitions shall be held in other parts of the country.

Harvest Weather.

1, Essex Street, Strand, Monday, September 25th, 1905.

SPECIAL THREE-DAY FORECAST. GENERAL PREDICTION.

The general distribution of pressure, with a belt of high pressure to the North and over Scandinavia, continues to favour Easterly winds of moderate strength and generally fair and dry weather over the North and, at first, West. In the Centre, South, and East there will be cloudy skies and some rain until the small cyclonic system central over Dover passes into Germany. The subsequent changes are less certain, but no very sudden change may be expected for the next two or three days, and until the general distribution of pressure alters from high to low in the North and low to high in the South. The general sequence will be:—(1) North-Easterly to Northerly moderate winds; fair in the North and West; showery to fairer in the South-East. (2) Fairer more generally, with variable moderate winds. (3) Finally some showers, chiefly in the N.W. and S.W.; fair to cloudy elsewhere.

LOCAL PREDICTIONS.

No 1.—Scotland.—At first, fine or fair with moderate N.E. winds; later, E. winds, fair to cloudy; finally, E. to S.E. winds, some showers in the West. Temperature about normal.

,, 2.—England (N.E.) and part of Scotland:—Peebles, Selkirk, Durham, Lincoln, Northumberland, Roxburgh, Yorkshire, (N. & E. Ridings).—At first, fine to fair in Northern section, dull to showery in Southern; later, fairer generally; wind chiefly North-Easterly to Northerly and variable. Temperature normal to cool.

,, 3—England (East):—Bedford, Cambridge, Essex, Hertfordshire, Huntingdonshire, Norfolk.—At first, some drizzling rain; later, fairer; finally fair to cloudy; wind moderate, Easterly to Northerly, and variable to South-Easterly. Temperature about normal to cool.

,, 4—Midland Counties:—Buckingham, Derby, Gloucester (part), Hereford, Leicester, Northampton, Nottinghamshire, Oxford, Rutland, Shropshire, Stafford, Warwick, Worcestershire, Yorkshire (West Riding).—At first, cloudy or dull with some rain in the S.E. section; later, fairer more generally; finally, fair to cloudy, and some showers in the S.W. section; wind North-Easterly to Northerly and variable to South-Easterly. Temperature about normal.

,, 5.—England (South):—Middlesex, Berkshire, Kent, Surrey, Sussex, Wiltshire, Channel Islands, Hampshire.—At first, some drizzling rain, and moderate North-Easterly winds. Later, fair to fine, with Northerly to North-Westerly winds. Finally, Easterly to South-Easterly winds, fair to cloudy, and some showers. Temperature about normal on the whole.

No. 6.—Ireland.—At first fine, with North-Easterly to Northerly winds. Later, Easterly to South-Easterly winds, fair to cloudy, and some showers in the S.W. Finally, South-Easterly to North-Easterly winds, fair in the North and East, some rain in the West and South, to fairer. Temperature about normal.

,, 7.—England (North-West) and North Wales:—Cheshire, Lancashire, Westmorland, Anglesey, Carnarvon, Denbigh, Flint, Merioneth, Montgomery.—Continuing at first and later mostly fair, with North-Easterly to Northerly moderate winds. Finally, South-Easterly to Easterly winds, fair to cloudy, and some showers.

,, 8.—England (South-West) and South Wales:—Brecon, Cardigan, Carmarthen, Glamorgan, Pembroke, Radnor, Cornwall, Devon, Gloucester (part), Monmouth, Somerset.—At first, fine to fair, with North-Easterly winds. Later, fair to cloudy, with Easterly winds. Finally, South-Easterly winds, some rain. Temperature normal to cool.

Age of Moon—Twenty-seven days.

One-Day Forecast prepared by the Meteorological Office at 11 a.m. on Monday, Sept. 25th.

GENERAL INFERENCE.—The depression over our south-eastern counties and the adjacent portion of the Continent appears to be moving towards Germany, and decreasing somewhat in depth.

SCOTLAND, N.; SCOTLAND, E.—North-Easterly and Easterly winds, light or moderate; fair; cold.

ENGLAND, N.E.—North-Easterly to Northerly winds, moderate or fresh; fair generally, but some showers; very cool.

ENGLAND, E.—Same as England, S.

MIDLAND COUNTIES.—Northerly winds, light or moderate; fair as a whole; very cool.

ENGLAND, S. (London and Channel).—Northerly or North-Westerly winds, moderate or light; dull, with some rain, then improving gradually; temperature continuing low.

SCOTLAND, W.—Same as Scotland, N. and E.

ENGLAND, N.W. (and N. Wales).; ENGLAND, S.W. (and S. Wales).—Same as Midland Counties.

IRELAND, N. & S.—Moderate winds, mainly Northerly; fair; cool.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—There was a very poor attendance, and the general tone of the market was quiet at nominally unchanged prices. English wheats were sparingly offered at 29s to 31s for white and 28s to 30s 6d for red. Foreign grades quiet and tending easier; choice white Karachi quoted at 32s, La Plata at 31s to 33s, No. 2 Northern Manitoba at 35s, and No. 3 at 33s 6d. Maize steady; mixed American ex quay offered at 24s 6d, ex ship at 23s 9d, and La Plata landed at 23s 9d to 24s. Flour quiet at 21s for Iron Duke and 30s to 30s 6d for Hungarian. Barley dull; Odessa-Nicolaieff is obtainable at 19s to 19s 3d and Persian at 18s 3d. Oats firm but slow; 39lb Russian held for 15s to 15s 6d.

Mark Lane, Friday. — Nothing was particularly altered at the London Corn Exchange, the general tone remaining distinctly in holders' favour, business being kept within narrow limits, and the attendance of an average character. English wheat gradually comes up in better supply, but meets with a good reception, both in London and the country, and anything fit for milling use sells wihout difficulty. American flour unaltered. Patents continue in small supply, but the deficiency is not felt, while operators await the new spring wheat result in prospective. Grinding barley dull, and about unchanged. Maize maintained. Mixed American scarce, at 23s 3d, ex ship; 24s ex quay.

COUNTRY.

Ashford, Tuesday.—Market quiet. Trade for wheat at late rates, 27s to 30s. English oats dearer, 16s to 20s. Foreign barley easier, at 21s to 22s. Good number of samples of English malting barley offered, but condition not very satisfactory, most being discoloured, and prices offered ranged from 26s to 30s; more would be paid if samples met maltsters' requirements. New Mazagan beans 28s to 29s; new ticks, 31s to 33s per quarter. Tares, 6s to 6s 6d per bushel.

Banbury, Thursday.—Wheat, red (new), 27s to 28s; barley, 24s to 30s; beans (new), 30s to 31s; ditto (old), 32s to 33s; oats, 17s to 20s; peas 27s to 30s per quarter.

Berwick, Saturday.—Average attendance, with large supplies of barley. Fine quality maintained last week's prices, medium and lower sorts unchanged. New oats shown. Barley, 23s to 29s; oats, 18s 6d to 21s.

Birmingham, Thursday.—There was a good attendance at the market, and the trade had a firmer tone about it, prices generally having a stronger tendency. Foreign wheats met with a fair inquiry, and were 6d per quarter dearer on the week. English wheats maintained late rates. Grinding barley was 3d dearer at 19s per quarter (400lb) at Sharpness. Both Plate and flat maize were unchanged. English oats were 6d dearer at 18s per quarter (312lb), and beans made 3d per bag more money.

Brighton, Thursday.—Small attendance and quiet trade. New white wheat, 29s to 30s; new red ditto, 29s to 30s; barley, 28s to 33s; grinding ditto, 21s to 22s; oats, English, 15s 6d to 18s 6d; peas, 30s to 31s; beans, 30s to 31s. Oats 9d dearer; barley firm.

Bristol, Thursday.—There was an average attendance on market to-day; fair trade doing. English wheat in moderate supply at fully last week's prices. Foreign very firm. Maize 3d dearer. Barley unchanged. Oats 3d dearer. Flour in better demand at late rates.—GRACE BROTHERS.

Bury St. Edmund's, Wednesday.—Wheat in rather moderate supply, but no improvement in the trade. Reds, 27s 6d to 28s; whites, 27s 6d to 28s 6d per quarter. Barley in average supply; ordinary to medium samples were firm on the week at the turn more money. 26s to 31s per quarter. The demand was chiefly for the finer malting descriptions, which sold readily at 32s to 36s per quarter. New oats and beans very firm. Other feeding corns firm, with round maize 3d. dearer, at 25s, and flat steady at 26s per quarter.

Cambridge, Saturday.—We have had another week of fine weather, favourable for threshing, and supplies have, consequently, been rather more abundant. At this market on Saturday, a moderate supply of wheat sold readily, at last week's full prices. Beans and oats were 6d dearer. Barley in fair supply, and met a better demand, at last Saturday's rates. Wheat, red, 27s to 29s, and white up to 30s per 504lbs.

Canterbury Saturday.—Rather firmer trade in wheat, with best samples for seed making 32s per 65lb.; milling up to 31s. Malting barley 26s to 30s, and occasionally 32s for very choice. Oats rather dearer, ranging up to 18s for spring corn, and to 20s 6d for black winters scaling 45lb.

Carlisle, Saturday.—Fair supply of oats in our market to-day. Good demand at last week's prices. New, 18s to 18s 6d per 336lb.; old, 22s 9d to 23s per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—English grain offering a little more freely, and prices were maintained. Mixed corn same as last week, but some improvement in the demand for feeding stuffs generally. Quotations: Wheat, white, 4s 3d to 4s 5d; red, 4s 2d to 4s 6d per 75lb.; barley, grinding, 3s to3s 2d per 64lb.; beans, 5s 9d to 6s per 20lb.; oats, new, 2s 2d to 2s 4d; ditto, old, 3s 2d to 3s 4d per 46lb.; Indiancorn, 12s 9d to 13s 3d per 240lb.

Chichester, Wednesday.—A fair attendance, but small quantities on offer and not much trade. New white wheat, 28s to 29s 6d; new red ditto, 28s 6d to 29s 6d, barley, 26s to 32s; grinding ditto, 19s 6d to 26s; oats, English, 16s to 24s; rye, 21s to 23s; peas, 28s to 30s; beans, 31s to 33s; tares, 6s to 7s 6d; maize, 23s to 25s; flour, 27s.

Colchester, Saturday.—With a moderate supply the market for wheat was very steady and late rates firmly maintained. For the better class of barley the demand was good, and 1s per quarter advance was established. Beans and oats 6d per quarter dearer.—JOSEPH WILES AND SON, LTD.

Coventry, Friday.—A moderate attendance. Not a large supply of wheat. Barley in fair demand, and but few samples of oats and beans showing. Prices ruled: Wheat, old, 11s 6d to 12s per 496lb.; new, 10s 6d to 11s 3d per 496lb.; barley, 29s to 32s per 448lb.; oats, old, 23s to 25s per 312lb.; new, 18s 6d to 20s per 312lb.; beans, 12s 6d to 13s per 496lb.; peas, 11s 6d to 14s per 496lb.

Derby, Friday.—Wheat firm but quiet at last week's rates. Spring corn unchanged. Quotations:—Wheat, white, 2s 8d to 2s 9d; red, 2s 6d to 2s 8d; malting barley, 24s to 26s; beans, old, 24s to 24s; new, 20s to 21s; old, 23s to 24s; new 17s to 18s.

Devizes, Thursday.—There was a larger quantity of corn on the market to-day, and the prices show no alteration in value. The following were the quotations:—Best old wheat, 16s to 17s 6d; secondary ditto, 13s to 14s; new wheat, 14s 6d to 15s 6d, best barley, 26s to 32s, secondary, 20s to 24s; rye, 22s to 24s; old black oats, 21s to 23s; white ditto, 20s to 23s; malting barley, 26s to 32s; beans, 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday.—Only a moderate supply of English wheat, and about an average attendance. Prices firm, at 10s to 11s per load. Strong demand for foreign wheat, at an advance of 6d per qr. Maize was a shade cheaper. Beans very firm. A fair supply of oats, but trade only moderate. Barley at late rates.

Dorchester, Saturday. — Not quite so much wheat offering as of late, farmers evidently being alive to the fact that in the present state of the trade it is unwise to force their stocks unnecessarily on the market, and thus assist in keeping prices at the present low level. Business was consequently firmer to-day, but at unaltered rates for home grown; foreign, on the other hand, being held for advanced rates. In malting barley holders showed great firmness, and no distinct rise can be quoted. Grinding, however, is 3d dearer. Feeding stuffs firm, but there is a total absence of any great demand.

Dublin, Friday.—Wheat, 17s to 17s d; malting barley, 15s to 15s 6d; grinding ditto, 13s 6d to 14s 6d; malt, 18s 6d to 20s; oats, 10s to 13s 3d; oatmeal, extra pinhead, 12s 6d to 14s 6d; flour, 9s to 11s; pollard and bran, 6s to 6s 6d.

Exeter, Friday.—Trade rather dull. English wheat firm, and occasionally made rather more money. English barley unchanged. Grinding barley and maize 3d dearer. Oats firm; some sorts rather dearer. Flour firm. English wheat 3s 6d to 3s 7d; English barley, 3s 3d to 4s; superfine flour, 25s to 27s 6d; fines 23s to 25s.

Glasgow, Wednesday.—There was the usual attendance at our Corn Exchange to-day. Wheat and flour—Quiet trade passing at unchanged prices. Maize a shade easier and in buyers' favour. Beans firmer, but a quiet trade. Foreign barley and oats 3d to 6d per boll dearer on the week, but Scotch oats a little easier. Peas unchanged. Oatmeal 6d to 1s. per sack cheaper since last Wednesday's market.—GIBSON AND CLYRK.

Glasgow, Friday.—Market firm for wheat, sellers asking 1½d to 3d advance for springs in forward positions, but buyers show no anxiety; hard winters equally firm. Flour slow and the turn against buyers. Mixed American and round maize unchanged. Foreign barley, foreign oats, and grinding beans maintain late full prices. Bran quiet at 82s 6d per ton for medium. Other articles unaltered.

Gloucester, Saturday.—English wheat in moderate supply, and values are unchanged on the week. Reds making 3s 6d to 3s 7d per bushel. There is a better tone all round in the foreign trade, wheat meeting with more demand at 3d to 6d advance. Feeders strong, with oats and barley 6d and maize 3d dearer.—WAIT, JAMES AND CO.

Grantham, Saturday.—A fair supply of wheat, the best quality of which made an advance of 6d per qr., the quotations being 28s to 29s per qr. Samples of wheat out of condition met a dragging trade, and realised 26s to 27s per qr. An average supply of barley, the best qualities making up to 32s, and common sorts 24s to 28s per qr. Trade in beans was quiet at 30s to 32s per qr.; blue peas, 40s to 45s; oats, 6d per qr. dearer on the week, and sold at 16s to 19s per qr.

Hereford, Wednesday.—A smaller attendance. English wheats very slow at last week's figures. Nothing doing in barleys. Oats dull. Beans very firm. Wholesale quotations:—Wheat, 3s 3d to 3s 6d per 62lb; barley, 2s 9d to 3s 9d per 56lb; old oats, 2s 6d to 3s per 40lb; new oats, 2s to 2s 6d; old beans, 4s to 4s 6d per 65½ lb; new beans, 3s 6d to 3s 9d; vetches, 5s 6d to 6s 6d per 65½ lb.

Ipswich, Tuesday.—Wheat was in no great supply, but millers are now rather full of stock, and the trade therefore shows no improvement, at 28s to 29s 6d per qr., delivered at Ipswich. Barley: A fair supply, mostly of only medium quality. There was a better inquiry for these than last week's, and rather higher prices were realised, at 26s to 31s per qr. A rather limited supply of better-class samples met with a brisk demand from several quarters, and a healthy business was done, at 32s to 35s and in one or two cases up to 38s per qr. Oats were in small supply, and fully as dear on the week, at 16s 6d to 18s per qr.; foreign scarce and firm. Beans: New, firm, at 29s per 35 stones. Maize: Round 3d dearer, at 24s; flat steady and unchanged, at 25s per qr. Other feeding corns, including Indian lentils, etc., all firm on the week.

Leeds, Tuesday.—The wheat trade is slowly but surely gathering strength. The heavy Black Sea shipments, chiefly for the Continent, are offset by the small exports from other countries. There is no pressure to sell American wheats, and Indians will soon be a scarce article; prices rule rather higher on the week. Maltsters still buy sparingly, and prices are irregular. Fine foreign barley scarce and dear. Feeding stuffs unchanged.—DUNNS AND CO.

Leeds, Friday.—English wheat firmly held at Tuesday's full prices, and all kinds of foreign were 3d dearer, choice lots reaching 35s. English and foreign malting barley was without change, feeding barley being a shade lower. There was no change in beans, peas, oats, maize, and flour.

Leicester, Saturday.—Good attendance of buyers and dealers, with larger supplies of home-grown wheats. Wheat 29s to 31s per 35 stones. Barley was in rather Trade steady at firm rates. Red wheats 28s to 30s; white faulty condition, and trade slow at 25s to 30s per 32 stones. New oats, in very irregular condition, made 18s to 20s per 26 stones.

Lincoln, Friday.—Fair show of English wheat, which readily at the full prices of last week, viz., 28s 6d per qr. delievered, 1s less on rail. Moderate show of barley, and quiet trade at irregular prices. Small supply of oats, and prices 6d per qr. higher. Beans also a small show and unchanged.

Liverpool, Friday.—Wheat: The market has a fair attendance, and wheat is firmly held for ½d to 1d advance, with a fair trade passing in Russian and Manitobas. Graded wheat, owing to the sharp advance in futures, is practically withdrawn from the market, and nominally 5d to 6d higher than last Tuesday. Flour: A rather better inquiry for foreign at late rates. English a quiet trade, without actual change in prices. Maize: Mixed is quiet, but steady at unchanged prices. Plate steady, but quiet at former quotations. European sorts are quiet, unchanged. Barley: Malting is steady, unchanged. Feeding the turn in sellers' favour. Beans firm at full prices. Peas steady, unchanged for white sorts, but green Indian quiet, and generally easier. Oats in rather better demand for both British and American qualities; late rates are maintained. Oatmeal, though inactive, is firmly held at fully late prices, with small offerings. Oilcake in better demand for both American and English cakes. No change is made in values. SEGAR AND TRANSFLEET.

Maidstone, Thursday.—A moderate attendance, and fair show of wheat, which moved off at no change in the cost from last week. Barley also was unaltered in value or demand. Oats are slightly firmer, as no foreign black except American. Other grain as heretofore.

Manchester, Thursday.—Rather a small attendance compared with last week. English wheat firm, and in moderate demand at about last week's prices. In foreign, Plate is 1d to 1½d per cental higher; other qualities firm at last week's prices. Flour unchanged, but exceedingly steady. Spot stocks of Indian corn are rather small, but to arrive mixed American 5s 1½d; Plate on the spot 5s. English oats very scarce at late rates, and occasionally ½d per bushel dearer; little offering in offering in foreign. Foreign barley about ½d dearer Peas and beans unchanged but firm. Bran, thirds, and other feeding stuffs have an upward tendency, but not quotably dearer.

Newark, Wednesday.—Wheat in fair supply, which repeated last week's prices. Barley rather more showing, values still rather irregular. Oats and beans unchanged in value. Wheat, 26s to 28s per quarter; barley, 23s to 28s per quarter; oats, 15s to 18s per quarter; beans, 29s to 33s per quarter.

Newcastle-on-Tyne, Saturday.—A steady demand for foreign wheats, at an advance of 3d per 504lb. English changed hands at last week's prices. Maize steady at last week's prices. Old oats of sweet quality was firmly held at an advance of 3d per quarter; unsweet quality difficult to dispose of, and lower prices had to be taken to make sales. Beans firm and dearer. Pease unchanged. Local barleys were steadily held, and last week's prices were made, prices varying from 22s to 27s, according to quality.

Northampton, Saturday. — Good show of wheat, which sold readily at prices practically unchanged. More demand for barley. Quotations:—New wheat, 27s to 28s. Malting barley, 26s to 32s; barley, 26s to 30s. New white oats, 17s to 18s; new black oats, 16s to 18s. New beans, 28s to 30s. Peas, 27s. Flour, 24s 6d to 28s 6d.

Norwich, Saturday.—There is no alteration in the wheat trade since last Saturday, prices being about the same. Fair supply of barley on offer, which met a slow trade. Fine but cold weather has prevailed during the past week, with N.E. winds. Wheat, red, 28s to 29s per quarter, weight 63lbs. per bushel imperial. Corn inspector's return for the week ending September 18, 1905:—Wheat, 2,499—27s. Barley, 3,680—22s 8d.—J. ARTHUR MILLS.

Nottingham, Saturday. — Less wheat offering, and values well supported. Barley small supply, prices still irregular. Maltsters in no hurry to buy. Oats and beans both a limited show, and values well maintained.—ROBERT HUBBLE.

Oxford, Saturday.—There was a fair attenrance at the market, and trade showed some improvement at steady rates. Wheat was firmly held, and barley was rather dearer.

Peterborough, Saturday. — A fair supply of wheat, which met a steady demand at last week's rates. More barley offering. Good samples sold readily at full prices. Ordinary terms rather slow. Oats firm and in sellers' favour.—THOMAS HILL AND SON.

Plymouth, Thursday.—There was a good attendance on our market to-day. Wheat firmer. Barley, maize, and oats 3d to 6d dearer.—ORLANDO DAVIS AND CO.

Preston, Saturday.—During the week the market for wheat, especially white, has been strong. Beans, peas, and barley all firm. There was not much business at to-day's market, and the attendance was meagre, with values unchanged in all articles. Quotations:—Wheat, white, new, per windle of 220lb., 12s 6d to 13s; ditto red, 12s to 12s 6d; oats, old, 3s to 3s 2d per bushel; ditto new white, 2s 6d to 2s 8d; ditto yellow, 2s 3d to 2s 4d; beans, per windle of 220lb., 16s 6d to 17s.

Reading, Saturday.—Fair attendance, but not much trade. Wheat sold at 30s to 32s. Good barley, 28s to 34s; second-rate went cheaply at 22s. Oats made from 16s to 21s. Old beans were very dear, and fetched as much as 39s, and bran showed a rise of 5s per ton for the week. Flour sold from 21s 6d to 26s, and good quality hay made 65s to 80s per ton, and straw 30s to 38s. Mangels were quoted at 18s per ton free delivery.

Retford, Saturday. — Practically no change in the value of grain. Wheat was a dull trade at 27s to 28s 6d per qr.; one or two choice lots for seed were offered at 29s to 29s 6d; but the season for these is yet early. There was no malting barley worth more than 29s, the general run being 25s to 28s, and grinding 23s to 24s per qr.; maize, 26s; black oats, 16s to 17s; white ditto, 17s to 18s; and English beans, 30s per qr.

Ripon Thursday.—A good supply of samples of new wheat, which have a firm tone, and a fair trade is being done. A good attendance. Prices:—New wheat, 27s to 29s; foreign wheat, 32s to 36s; grinding barley, 23s to 24s; malting barley, 26s to 28s; new oats, 17s to 17s 6d; round maize, 25s to 26s; flat maize, 25s to 26s 6d; bran, £4 15s to £5 10s per ton.

Shrewsbury, Saturday.—Wheat, 14s to 14s 6d per 225lb; new wheat, 12s to 12s 9d; old white oats, 16s to 17s; new oats, 11s 6d to 12s 6d; peas, 11s 6d to 12s 6d per 240lb.; beans, 13s 6d to 14s per 240lb.

Stamford, Friday.—Much larger attendance, holders reluctantly accepting a substantial reduction in many branches. Wheats were quite 6d to 1s lower on the week, the ruling quotations being 26s to 26s 6d, and 27s in the most exceptional cases; new oats, 17s to 17s 6d and 18s 28s; beans, old, 33s to 34s; new, 30s to 31s; oats, old, 23s to 29s per qr.; beans, 30s to 32s, and 32s to 34s for old samples.

Sunderland, Saturday.—Rather more grain offering. Wheat steady at late rates. Spring corn unchanged in value. Arrivals coastwise: Wheat, 956 quarters; foreign, nil.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 28s to 29s; new red ditto, 27s 6d to 28s; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 16s to 19s; rye, 23s to 24s; peas, 31s to 36s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 28s.

Warwick, Saturday.—Very little quantity of wheat on offer; what there is makes slightly reduced prices compared with last week's. Small supply of barley; fairly good quality. Feeding stuffs about the same.

Winchester, Saturday. English wheat a better inquiry and a shade dearer. Foreign firm, unchanged. Barley, 3d to 6d advance. Maize and oats unaltered. Flour, a good steady trade at late rates.—FEAR, COLEBROOK AND CO., LTD.

Wisbech, Saturday. Less grain offering. Wheat in demand at 28s. to 28s 6d. Oats firm, 16s 6d to 18s. Barley, 24s to 27s. JAMES FLETCHER.

Yeovil, Friday.—Free offer of new season's grain, and in some instances wheat made from 3d to 6d more money. Barley and oats firmly held, without quotable change. Best quality English wheat sold at from 30s 6d to 32s per quarter; secondary, 28s to 29s; foreign wheat, 32s 3d to 35s 3d; malting barley, 30s to 34s; feeding barley, 20s 6d to 23s 6d; fine ditto, 19s to 19s 9d; beans, 33s 6d to 37s 6d; oats, white, 15s to 19s 9d; ditto black, 18s to 19s 6d; Irish black, 16s 3d to 17s 3d; maize, 23s to 25s; rye, 20s 6d to 23s 9d; vetches, 6s to 7s per bushel. Flour the turn dearer; business passing on the

basis of 24s 6d to 26s for fines. Milling offals selling well at firm rates.

Wolverhampton. Wednesday.—There was only a poor attendance, and the business passing was of a quiet character. Quotations::—White wheat, 27s 6d to 28s 6d; 216lb; flat corn, 25s 6d to 26s 6d per 480lb; English beans, 12s 9d to 18s per 196lb; oats, new, 9s 6d to 11s per 196lb; old, 14s to 15s per 196lb.

Worksop. Wednesday.—Fair attendance, but not a large show of grain. Wheat was a very small show, and sold at last week's full prices. As the malting season is not yet in full swing the demand for barley was not great. Prices:—White wheat, 27s 6d to 28s 6d; red ditto, 27s to 28s; malting barley, 27s to 30s; grinding barley, 24s to 26s; white oats, 16s 6d to 18s 6d; black ditto, 15s. to 16s 6d; maize, 26s to 28s per quarter; fine sharps, £6 to £6 10s; barley meal, £6 to £6 10s; bran, £4 10s to £5 10s per ton.

York. Saturday.—The attendance was good, but wheat varied a great deal in condition, fine,dry samples being in demand. Fine white made up to 28s 6d and 29s 6d, whilst red and mixed were sold at 27s to 28s 6d per qr. of 36 stones. Malting barley wasin more general demand, fine making 27s to 29s; good, 25s to 27s; and ordinary sorts, 23s to 25s per qr. of 32 stones. Oats were very firm, but scarce, white Tartary selling at 16s to 17s; black, 17s to 18s; and white Garton 18s to 19s per qr of 24 stone. Rye fetched from 20s to21s per qr. of 36 stone; beans, 10d to 11d per stone.

FOREIGN.

Hamburg. Saturday.—Weather dry and cool. We have a firm market for all articles, with a brisk trade doing in feeding barley, maize, and oats. The latter turned out a bad crop in Germany, owing to which considerable quantities are being imported from Russia and America. Fine dry red Holstein and Mecklenburg wheat is selling at 30s 3d to 31s per 504lb. f.o.b. Prices in the Midland districts are too high and quality too poor for exportation. 80-81 Ko River Plate is offering at 29s 9d to 30s 6d; American hard winter No. 2 at 30s 9d per 480lb. c.i.f. Hamburg. There is a better demand for rye, 25s 6d per 480lb. c.i.f. is asked for 9 15-20 South Russian afloat. New Holstein and Mecklenburg barley is selling at 24s 6d to 28s 6d; Prussian at 28s 9d to 32s; Bohemian and Slovakian at 34s to 39s 6d; Danish at 28s to 30s 6d per 448lb. f.o.b. Considerable quantities of the latter are imported. Fine Bohemian and Slovakian is readily taken by German brewers, and prices are looking up. South Russian feeding barley in brisk demand, and 60-61 Ko spot parcels sold at 17s 6d per 400lb. c.i.f. Hamburg. Our market closes quieter, but as direct offers are wanting, holders remain firm. Maize continues in demand; mixed American afloat is selling at 24s to 24s 3d, January shipment 21s 3d, River Plate September-October 22s 9d to 23s per 480lb. c.i.f. Hamburg.—JOHN TATLOCK.

Paris. Wednesday.—Offers of good wheat are still becoming rarer in the provincial markets, although there is plenty of inferior wheat about; in view of this, prices are very firm, and have again advanced 25c. Business is very difficult, due to the unequal quality of the parcels available. At the Bourse de Commerce firmness is the predominating note, but as offers are keeping pace with inquiries, prices remain unchanged, and as regards wheat, are rather in favour of buyers. Business opened fairly regular, but was quieter at the close, in spite of the firm tone which prevailed in the spot market. Rye.—Nothing doing and prices nominal. Oats in fair demand, with a rise in price of from 10c. to 15c. At the weekly spot market a very firm tone has prevailed in home-grown wheat. Millers have raised the price of their superior marks 1f. per quintal, and in the centres of production farmers are making steadily decreasing offers of good wheat. Business in consumption marks of flour continues difficult, and millers are keeping up their prices. Offers of rye, though not large, are still sufficient to meet all requirements. Oats continued to advance in price during the past eight days, as offers are becoming less frequent, though demands are still large.—DORNBUSCH.

THE BALTIC.

The cargo exchange seldom troubles itself with flour, but is just now interested in offers to ship new American flour in October at 25s. 6d. c.f.i. for patent North-Western, and at 23s. 6d. for patent winter from Kansas and other Central States. Another branch of business which is now active is in American oats, cargoes of which are offered for prompt shipment at prices according to sample, 15s. to 15s. 6d. per 320 lb., as a rule. Buyers are fairly numerous.

Wheat cargo sales of the week have not been very important, and prices remain very much as they were. Recorded transactions include 33s. per 480 lb. for fine Australian arrived, 29s. per 480 lb. for October shipment from Buenos Ayres, 30s. 9d. per 504 lb. for fine Danubian prompt shipment, and 31s. for Walla Walla per 500 lb. November shipment.

Maize has realised 23s. per 480 lb. for three cargoes of Argentine to hand, and 23s. 3d. is asked for November shipment by fast steamer. American for February shipment is as low as 20s. per 480 lb., so that the time of holders' profits is limited.

Barley has made 20s. per 416 lb. for October shipment of Roumanian, and 25s. per 448 lb. for November shipment of Californian. A couple of cargoes of ricemeal for November shipment from Rangoon have been placed at 95s. per ton.

A brief comparison of prices for cargoes on passage now and a year ago shows that values, if low for some sorts of wheat, are not so for all. Moreover, spring corn is firmer for cargoes generally than it was a year back.

MANURES.

Liverpool. Friday.—Nitrate of soda is firm, and the spot price of 95 per cent. is £10 5s, whilst refined commands more money. For kainit and basic slag there are inquiries for autumn deliveries at prices which are subscribed. Feeding stuffs are a steady market, and there is more inquiry from consumers. Fattening cake, Liverpool make, in bags, £6 10s; feeding or dairy cake, Liverpool make, in bags, £6 2s 6d; nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £10 5s to £10 7s 6d; East Indian bone meal, in bags, £5 5s to £5 7s 6d; kainit, prime 23 per cent., sulphate of potash, in bags, £2 to £2 2s 6d; palm nut cake, prime, in bags, £5 15s to £6; linseed cake, American thin oblong, prime, in bags, £7 7s 6d to £7 12s 6d; ditto English, in bulk, £8 7s 6d to £8 12s 6d; linseed meal (pure crushed linseed), in bags, £13 10s to £14 10s; cottonseed cake, N.A. decorticated, good to prime, in bags, £6 17s 6d to £7 3s 9d; ditto English decorticated, prime, soft, in bags, £7 5s to £7 7s 6d; ditto English, undecorticated, prime, in bulk, £4 10s to £4 15s; ditto (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags, £6 17s 6d to £7; maize germ meal, prime, in bags, £5 15s to £5 17s 6d; corn oil cake, prime, in bags, £5 18s 9d to £6 2s 6d—per ton. Indian meal, coarse to fine grinding, prime, in bulk, 12s 6d to 12s 9d per 240lb; linseed, fine bold feeding, in bags, £2 6s to £2 7s 6d per quarter (416lb); cod liver oil, cattle feeding, prime, in casks, 4s 6d per gallon; treacle, feeding prime, in barrels, 4s 4½d per cwt.; D.N.S. brand superphosphate of lime, guaranteed, 25 to 27 sol., in bags; ditto, guaranteed, 30 to 31 sol., in bags; superphosphate of lime, guaranteed 35 to 36s sol., in bags—nominal. Basic slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, £1 11s 6d to £1 13s 6d; ditto, prime quality,guaranteed 38 to 45 per cent. phos., in bags, £1 19s to £2 0s 6d; finest quality, guaranteed 42 to 50 per cent. phos., inbags, £2 2s to £2 3s—per ton, at depots inland.

WOOL.

Canterbury. Saturday.—Staplers are buying freely at 12½d the fleece, and 8d for lamb wool, and it is reported that 13d has been made.

Halifax. Saturday. — The London sales, except to stiffen holders in maintaining quotations, have had little effect on wool sales here, the improvement having been discounted. Home-grown wools exhibit little change on the week. Shropshire hoggs are, exceptionally, advanced a little, but the extreme quotation is not conceded. Pick Irish wools are also somewhat improved in value. Spinners appear to be generally better employed, at slightly improving prices.

London. Tuesday.—There was a large attendance of both home and foreign buyers and spirited competition. The catalogues consisted chiefly of cross-breds, which met with a strong demand at an average advance of 5 per cent.—barely as much for the finer qualities, but fully 5 per cent. for coarse wools. Of merino sorts there was but a very small selection, which scarcely afforded a criterion; but, so far as could be judged, prices ruled par to 5 per cent. above July. Cape wools were unchanged but firm, especially for greasy parcels. — HELMUTH SCHWARTZE AND CO.

London. Saturday.—English—per pkge. of 240lb.—Fleeces, South Down hoggs, £14 to £14 10s; half-bred hoggs, £13 to £14; half-bred wethers, £12 10s to £13; Kent fleeces, £13 to £13 5s; South Down ewes and wethers, £13s 10s to £14 10s; Leicester ditto; £12 10s to £13 10s. Colonial — per pound — Victoria: Fleece super. 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d; New South Wales, second average, 1s 8½d to 1s 9½d; greasy average, 11½d to 1s; South Australia, greasy average, 9d to 9½d; New Zealand, scoured average, 1s 9d to 1s 10d; greasy average, 10½d to 11½d; Cape, scoured super., 1s 9d to 1s 10d; fleece average, 9½d to 10d; greasy average, 7½d to 8½d; Natal, scoured, 1s 5d to 1s 6d; greasy average, 8½d to 9½d; crossbreds—grs.—Victoria good to super., 1s 2d to 1s 3d; New Zealand, fine, 1s 2d to 1s 3d; medium, 1s 0½d to 1s 1½d; coarse, 10½d to 11½d.

HOPS.

Canterbury. Saturday. — A good inquiry for sound hops, and those of exceptional colour and quality have fetched 70s per cwt. The bulk of the trade is in Faggles, at from 40s to 50s, and extra choice up to 60s per cwt. Yearlings are in steady request, and some Mid-Kents have changed hands at 70s.

Worcester. Saturday.—Owing to the proximity of the fair, there were not many growers at market to-day. Business was not brisk, but many lots changed hands, especially bright, fine-coloured samples, which are scarce, and made good prices. Other parcels sold at about last week's rates. 4,021 pockets have passed the public scales this week, this is in addition to the large numbers which are now weighed over by the hop merchants.—CHARLES FARAM AND CO.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

Farmers continue to deliver more new wheat than is quite expedient, but there is, on the whole, more moderation in this respect as compared with the rush at the beginning of the month. There is also more firmness in holding, and factors have no longer instructions to effect a certain proportion of sales at no matter what sacrifice. Importers of wheat, so far from undermining the market, are helping to sustain it, and thus far into the new cereal year purchases for autumn shipment have been by no means large.

Since threshings began to add their story to that of the actual ingathering of wheat, it has become clear that certain regions have been much more fortunate than others. Kent, Surrey, and Sussex threshings are up to August expectations, while, in the S.W. of England, Cornwall, Devonshire, Dorset, Wiltshire, and Somerset have one of the best wheat yields for many years. On the other hand, the southern Midlands appear to have been a little deceived by the fine August aspect of the crops, threshings in Middlesex, Berkshire, Bedford, and Hertford proving a little below expectation pretty generally. The West has very fair crops, but nothing extraordinary. Northern England has been favoured; Yorkshire, Lancashire, and Durham especially so. Scotland has decidedly over an average wheat yield in Berwick, Haddington, Forfar, Fife, Aberdeen, and Perth, and a little wheat was grown, and grown profitably, even in the Highlands.

Barley threshings are a great deal less advanced than those of wheat, but enough is known to enable us to say that the best yields are in S.E. Scotland, North Norfolk, the counties of Suffolk and Cambridge, and in parts of Lincolnshire. In the second class, that which has attained a good average may probably be placed Essex, Kent, Sussex, and, in the South-west, Cornwall. Between Sussex and Cornwall, the seaboard counties of Hampshire, Dorset, and Devon speak none too well of their barley threshings. Late August rains were exceptionally heavy in this part of England. Some splendid crops of barley are reported from isolated parishes of the Fens. The only regions where barley seems to be really a poor crop are parts of Buckingham, of Surrey, of the Wye Valley, and of Wales.

Oats, it must be admitted, are deficient over large areas. The great district of York and Durham has a most disappointing yield, and very poor results are reported from Hampshire, from Derbyshire, from the Upper Thames Valley, and from the western Midlands, including Warwick and Stafford. On the other hand, parts of Cambridgeshire and the Fens have grand oat crops, Norfolk and Suffolk are by no means wholly grumbling, and Scotland—to which country oats are, comparatively speaking, more important than to England, has a yield probably 5 per cent. superior to that of South Britain.

The sales of English produce at the statute markets since September 1 have been:—

	Qrs. — This Season.	Last Season.
Wheat	255,000	131,000
Barley	70,000	81,000
Oats	69,000	101,000

It is wheat that is being rushed so unduly on offer. Other cereals are being postponed in market delivery to make way for wheat. But the price averaged is a significant warning of what results from over-supply.

	Prices — This Season. Per Qr.	Last Season. Per Qr.
Wheat	27s. 0d.	29s. 11d.
Barley	25s. 6d.	24s. 11d.
Oats	16s. 11d.	16s. 1d.

The prices making for new rye are very low, but a good quotation is current for new tares or vetches.

The country markets in England are now lowest in the Eastern Midlands, 28s. 2d. being accepted at Peterborough and 29s. 4d. at Lincoln. In East Anglia proper value is rather less depressed, Norwich quoting 30s. 2d. per qr. In the North 30s. 8d. is averaged at Doncaster, and in the South-West 30s. 3d. is the price at Salisbury.

Barley averages range from 22s. 6d. at Peterborough to 25s. 5d. at Salisbury, but are disappointing generally. Norwich quotes 25s. only, and Lincoln 22s. 11d. per qr. Better prices should become current as soon as the supply of malting quality becomes at all dominant.

Oats are very cheap, and, indeed, depressed in East Anglia, and the Norwich average of 15s. 7d. can only be described as a miserable one. Averages are rather better in the North.

The mean price of wheat in France is now 39s. 5d. per qr., being 1s. 5d. fall on the month. This may be taken as evidence of the new crop being more or less of a good one, for when we deduct 12s. 3d., the duty, from 39s. 5d. the decidedly low average of 27s. 2d. is disclosed as the native price. Paris, which is usually rather dearer than the country markets, is at present quoting a 41s. average, or 1s. 7d. above the average of the country.

In Germany prices are not so high as in France, and it must be remembered that the duty is less. Berlin quotes an average of 38s. 2d. for wheat, and Breslau, on passage, 35s. 3d. The latter is the great agricultural centre for East Prussia, Posen, Silesia, etc. It is usually 2s. to 3s. cheaper than Berlin.

The American visible supply of wheat is very small indeed for the season. The new wheat crop has been in stack for a month, even in the N.W.; and in the earlier States, for two months. Yet the total which has been sold to merchants and is in theor depots is only 300,000 qr. more than at this period last year. The visible supply of wheat in America for the past ten years on September 23 (or nearest Saturday thereto) has been as follows:

	Qrs.
1905	3,150,000
1904	2,850,000
1903	3,175,000
1902	4,525,000
1901	5,530,000
1900	9,400,000
1899	6,500,000
1898	2,000,000
1897	3,300,000
1896	7,800,000

The maximum holdings of merchants in the U.S.A. in September were 11,500,000 qr. on September 25, 1894; the minimum was 1,900,000 qr. early in September, 1898.

The meaning of a small visible supply a year ago was a small crop, but no such explanation will now serve. The American farmer clearly believes that his wheat will be worth, later on, more than the merchant is now prepared to give for it. This is a fact worth considering by British farmers. The price of foreign wheat in England cannot be gravely lowered during the next few months except by large American shipments.

American home wants of maize are extraordinarily difficult to estimate, but the figures for the year which will end October 31 next are likely to be about as follows:—

Crop, November 1, 1904	288,000,000 qrs.
Exports to October 31, 1905..	12,000,000 qrs.
Presumed home wants	276,000,000 qrs.

The exports are estimated on ten months' returns pro rata. If these figures prove accurate, and the new crop exceeds 300,000,000 qr., as appears likely, the export surplus for the new maize year, November 1, 1905, to October 31, 1906, should be not far short of 25,000,000 qr. Low prices for flat maize seem likely for a year from January next.

The recent recovery in maize on spot has been helped by the good Continental inquiry, there being 1,095,000 qr. on passage to Continental ports, against 898,000 qr. a year ago. The reserves of old maize in America in merchants' hands on the 23rd inst. were as follows:—

1905	530,000 qrs.
1904	460,000 qrs.
1903	760,000 qrs.

The price at New York is 20s. per qr., against 19s. in 1904 and 19s. 3d. in 1903.

Our present expectations of linseed are thus divided:—

	Qrs.
Argentine	120,000
Indian	50,000
Russian	10,000
American	5,000
Various	5,000
Total	190,000

A year ago 100,000 qr. were coming from Argentina, 120,000 qr. from India, and 10,000 qr. from all other countries—230,000 qr. in all.

OIL SEEDS.

TO-DAY'S MARKETS.

MARK LANE, MONDAY, September 25.

[FIRST REPORT.]

Plenty of new English wheat was to-day on offer at 28s. to 30s per qr., so that there is not much practical recovery. None the less, the tone is better. Foreign was a bit dull, but holders were uniformly firm. New English malting barley was still scarce and quality was a good deal below the average. A few fine lots up from Yorkshire made 32s to 33s. but most Norfolk samples came at 29s. to 30s. per qr. The trade in feeding barley was firm, and crushed barley tends to rise in price. Oats were rather dearer on the week; 17s. was paid for heavy Vologda, 16s. 6d. for good American, and 15s. 6d. for Odessa. Maize was firm. Some fine cleaned linseed from Russia fetched 41s. cash, while pure crushed linseed had buyers at about £13 per ton. Tares were in request, 56s. per qr. was freely paid for any good sample. Other sales to-day included Saffi canaryseed at 80s. per qr.; large hand-picked haricots at 67s. per qr.; and Tunisian dari at 24s. per qr.

CLOSE OF THE MARKET.

CLOSE OF THE MARKET

THE MARKET CLOSED QUIETLY, BUT NOT WORSE FROM THE OPENING.

THE FLOUR TRADE.

MARK LANE, Monday, September 25.

Top-price flour to-day was a quiet trade at 30s., town whites at 27s., and town households at 24s. per sack.

Country millers were in evidence, and they are accepting such moderate prices for their millings from the new home crop that London makes feel the competition severely, and secondary foreign sorts, like French, are completely outpaced. Australian also feels the competition. Stone-made country flour sold more freely than usual. There was also a good sale of wholemeal, and, without the market having been in any way captured by those who are called "brown bread faddists," there is undoubtedly a certain reaction in favour of the rougher grindings. American flour on spot was unchanged; 28s. is the price for best Minnesota October delivery. Sales to-day included fancy Belgium at 27s. 6d., Six Anchors (fine Hungarian) at 29s. 9d., and Manitoba finest patents at 29s. 6d., cash terms. Aberdeen oatmeal at 11s. per cwt. cash sold fairly well.

LONDON TERM MARKET.

This market is open to elected members only, and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were:—

WHEAT (per cental).

No. 2 American Red	6s. 8d.	Oct. delivery.
,, ,,	6s. 7d.	Dec. ,,
,, ,,	6s. 7d.	Feb. ,,

MAIZE (per cental).

American	4s. 9d.	Oct. delivery.
,,	4s. 4d.	Jan. ,,

The tone of the Term Market to-day is a little firmer from the close of last week. Wheat for December delivery makes 6s. 9d. per cental; maize for January, 4s. 4d. per cental.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—Higher prices are asked for shipment, but there is no change on spot. Grain.—Indian corn dull at 13s. 7d. per 280 lb. There has been a brisk demand for foreign oats at advancing prices. Scotch oats are offered freely and cheaply. Barley very scarce on spot. Pease quiet. Beans unchanged. Oilcake rather firmer. Mill Stuffs.—Bran and common thirds rather quieter. Fine thirds still in demand. — McKINNON AND McDONALD (Glasgow).

Offals.—The demand for bran continues steady; prices firm and tending upward. Flour.—Demand moderate; quotations unchanged; the tendency, however, for home-made flours in favour of buyers.—GREENHILL BROTHERS (Belfast).

Milling Offals.—A poor trade at last week's prices.—JOHN BAWCOMB AND CO.

We have liberal arrivals of wheat, which meet a steady demand at full prices. Flour a slow sale at late prices. Maize, barley, and oats unchanged in value.—COVENTRY AND CO.

FEEDING STUFFS.

London, Monday.—Linseed cake: Demand is much improved, and, as oil has again experienced a considerable drop, prices are well maintained; American-made is the turn dearer, but remains at a comparative low figure. Undecorticated cotton cake: The inquiry is small and sellers are accepting lower prices in order to induce sales. Decorticated cotton cake and meal: Trade for meal is extremely good, and the market is 2s 6d dearer; cake is also in fair demand. Linseed: There is considerably more business doing, both for feeding and crushing purposes.

ROBERT AND JOHN HEWETSON.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are held for threepence advance, but this checks trade. Cargoes of oats are in fair request at that amount of admitted improvement. Barley and maize cargoes are not quotably dearer, but they are helped by the strength of trade for wheat and oats.

BUSINESS DONE.

WHEAT.—Walla Walla, 31s 9d per 500lb., November shipment; Australian, 33s 3d per 480lb., due; Argentine, 31s 3d per 504lb., on passage; Argentine, 30s per 480lb., on passage; New Zealand Longberry, 31s per 480lb., on passage; New Zealand Shortberry, 29s per 480lb., on passage; North Russian, 33s per 492lb., on passage; White Calcutta, 31s 3d per 492lb., on passage.

MAIZE.—American, 23s 6d per 480lb., arrived.

BEANS.—New Zealand, 32s per 480lb., on passage.

BARLEY.—Californian, 28s per 448lb., on passage; Californian, 25s per 448lb., prompt shipment; Ouchak, 24s per 448lb., prompt shipment; Syrian, 23s per 448lb., prompt shipment; Smyrna, 21s per 400lb., prompt shipment.

OATS.—Archangel, 14s 9d per 304lb., arrived; Odessa, 15s per 304lb., prompt shipment; Vologda, 16s 6d per 320lb., October shipment; American, 14s per 280lb., October shipment.

LINSEED.—Turkish, 42s per 416lb., October shipment; American, 40s per 416lb., October shipment; Persian, 38s per 416lb., October shipment.

CANARYSEED.—Turkish, 69s per 464lb., October shipment; Sicilian, 78s per 464lb., October shipment.

HEMPSEED.—Russian, 33s per 336lb., October shipment.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: The demand for Canadian butter has been slow except for choicest lots of both salt and saltless, which have made full figures—viz., 110s to 114s per cwt. There are many lots of secondary quality of both kinds, some showing signs of storage, which are selling at 104s to 108s, but trade for such is somewhat slow at the present moment. The Copenhagen official quotation was yesterday raised to 103 kroner, and the last time it was as high as this figure was in 1901. Cheese: There is a firmer feeling on the cheese market, and prices have an improving tendency. Choicest Canadian goods are bringing 55s to 56s per cwt., with occasional sales at 57s. The c.i.f. price in Canada is also 57s per cwt. W. WEDDEL AND CO.

SEEDS

London, Monday.—The demand for trifolium practically over; winter tares more off freely at the current reasonable prices; seed wheat in fair demand; prices firm. New clover seeds now offering, qualities various; prices momentarily normal.—JOHN PICKARD AND CO.

CATTLE.

Metropolitan Market, Islington.

	Monday, Sept. 25, 1905. British.	Total.	Monday, Sept. 26, 1904.
Beasts	1,420	1,420	1,420
Sheep and Lambs	6,799	6,799	6,799
Calves	26	26	10
Milch Cows	99	99	90

Quotations per 8 lb. (sinking the offal):—

ENGLISH.

	Inferior.	Second.	Prime.
Beasts	2s 10d	3s 6d	4s 8d
Sheep	4s 10d	5s 4d	6s 0d
Calves	3s 8d	4s 10d	5s 4d

Milch cows, per head, £16 to £21.

British arrivals included as follows: Scotland, nil; Eastern Counties, 40; Midland, Home, and Western Counties, 1,216; Devon, 20; Ireland, 84.

We note to-day an increase of 150 head in the number of beasts offered for sale compared with Monday last. The majority, as usual at this season of the year, arrived from the Midland Counties and Ireland. These latter comprised 38 Dublins (10 of which were choice black polled cattle), 26 Waterfords, and 10 stone cattle (2½ to 3 years old). Irish descriptions met with a slow sale; but notwithstanding this, sellers were able to maintain late rates. For both prime and second quality English beasts the trade was dull, prices being difficult to maintain, even for the best. Fat butchering cows and bulls met with a limited demand, consequently a decline of 1d. to 2d. in value had to be noted.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Sept. 26, 1904.
Devons	4s 6d ex 4s 8d	4s 6d ex 4s 8d
Herefords	4s 6d ex 4s 8d	4s 6d ex 4s 8d
Runts	4s 0d ex 4s 4d	4s 2d to 4s 4d ex 4/6
Lincolns	3s 10d ex 4s 0d	4s 0d ex 4s 0d
Irish	4s 0d ex 4s 5d	3s 10d to 4s 0d
Fat Cows	3s 4d ex 3s 6d	3s 4d to 3s 6d

There was an increase of 30 in the number of sheep and lambs penned compared with Monday last. Trade for both wethers and ewes was of a slow but steady nature, late currencies governing all transactions, the latter selling best. Scotch were in average numbers, and Irish were in smaller supply. Trade, however, for both descriptions was slow at a decline of 2d. per 8 lbs. in value. Lambs were difficult to vend. The supply consisted of 400 Scotch, 1,670 Irish, and 357 from the Eastern Counties. A clearance, notwithstanding the inclement weather, is expected to be made.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Sept. 26, 1904.
7½ to 8 st Downs	5s 10d to 6s 0d	5s 8d to 5s 10d
9 st Downs	5s 8d to 5s 10d	5s 6d to 5s 8d
10 st Half-breds	5s 4d to 5s 6d	5s 4d to 5s 6d
8 st Scotch	5s 8d to 5s 10d	5s 8d to 6s 0d
10 st Irish	5s 2d to 5s 4d	5s 2d to 5s 4d
10 st Down Ewes	4s 2d to 4s 4d	4s 2d to 4s 4d
11 st Half-bred ditto	4s 0d to 4s 2d	4s 0d to 4s 2d

Calf trade was slow but firm, the best on offer to dress from 144 to 166 were quoted at 5s 4d. per 8 lbs. (sinking the offal).

No pigs on the market.

London (Central), Monday.—Liberal supplies, quiet demand. Beef: Scotch, 3s 10d to 4s 4d; English, 3s 6d to 3s 7d; American, 3s 4d to 3s 8d. Mutton: Scotch wethers, 4s 8d to 5s; ewes, 3s 4d to 3s 6d; English wethers, 4s 6d to 4s 10d; ewes, 3s 2d to 3s 6d. Lamb: Scotch: 4s 8d to 5s 2d; New Zealand, 3s 2d to 3s 6d; Dutch, 4s 4d to 4s 6d. Veal, 2s 6d to 4s 8d. Pork, 4s to 4s 6d per 8lb.

St. Ives (Hunts), Monday.—Beasts 376, sheep 1,599, pigs 297. Beef, 7s to 7s 9d; mutton, 8s 2d to 10s 8d; pork, 6s 6d to 7s 6d. Fat and store cattle and sheep fair demand. Fat and store pigs good demand. Milch cows fair show, and trade prices £16 to £22.

FOREIGN

Deptford, Monday.—Beasts 1,463. To-day's supply of beasts compared with Monday last showed an increase of 327 head, the supply consisting of 540 States and 923 Canadians. Trade was of a slow nature, rates ruling 1d per 8 lb. in favour of the buyer. The best States on offer were quoted at from 3s 10d to 4s. Canadians, 3s 8d to 3s 10d; seconds, 3s 4d to 3s 6d. 568 Canadian ewes were offered for sale at from 4s 2d to 4s 4d per 8lb (offal given in). On Saturday 970 States and 576 Canadian beasts were offered for sale. Trade ruled firm and steady at a slight advance on last Wednesday's quotations. Prime States beasts made from 3s 10d to 4s 1d; ditto Canadian, 3s 7d to 3s 11d. Besides the above 500 States beasts were withheld. Included in to-day's arrivals were 433 Canadian sheep, trade for which, though slow, was firm in regard to value, top prices paid per 8lb as follows: Ewes, 4s 4d (offal given in).

Liverpool, Monday.—Larger supply of cattle, demand slow; best qualities barely maintained last week's quotations, and middling and inferior sorts were lower. Sheep again shown in reduced numbers; trade in consequence was of firmer tone, all classes being cleared at slight advance on late rates. Beef, 6½d to 4½d per lb; mutton, 8½d to 6d. At market: 1,395 cattle and 6,806 sheep.

Irish Live Weight Quotations.

(Department of Agriculture and Technical Instruction for Ireland.)

The following returns are those of actual sales made in Robson's Cattle Mart, Belfast, the stock being weighed ither before or after sale, for week ending Sept. 12, 1905.

HOPS.

London, Monday.—W. H. and H. Le May, 67, Borough, London, report:—The market is well supplied with English hops, consumers are taking them freely at prices ruling.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

The number of beasts on the chief market day of the week was slightly larger, the supply being chiefly drawn from the Midland counties and Ireland, Scotland not being represented. Trade in the early part of the morning was of a steady nature, but became slower as the day advanced; nevertheless, no alteration in regard to value can be noted. The Irish consignment consisted of 61 Dublins and 43 Waterfords; this class of cattle met with a dull and dragging trade, notwithstanding sellers being willing to accept a decline of 2d. per 8 lb. Fat butchering cows and bulls met with little country demand, consequently 2d. less money had to be accepted to effect sales. On Thursday sales were confined as usual to fat cows, bulls, and rough cattle, these being governed by Monday's currencies.

At the Foreign Cattle Market, Deptford, trade became slower as the week advanced, consequently a decline in value ensued. The total number of beasts on offer at both markets was 4,528, as against 5,196 during the previous week, consisting of 1,260 British (increase 170) and 3,268 foreign (decrease 838), comprising 2,072 from the United States and 1,196 from Canada. The following were the top rates obtained per 8 lb. (offal given in):—80 to 90 stone Devons, 4s. 6d. to 4s. 8d.; 90 to 95 stone Herefords, 4s. 6d. to 4s. 8d.; 95 stone Runts, 4s. 4d., ex. 4s. 6d.; 100 stone Lincolns, 3s. 10d. to 4s.; 90 stone Irish, 3s. 10d. to 4s.; 90 stone States, 3s. 11d. to 4s. 1d.; 95 stone Canadians, 3s. 9d. to 3s. 11d.; 90 stone fat cows, 3s. 4d. to 3s. 6d.

The sheep trade at Islington on Monday was of a steady nature for both wethers and ewes, the tendency in regard to value being an upward one. Scotch met with a good demand at late rates, whilst Irish made an advance of 2d. per 8 lb. more money. On Thursday all sales were governed by Monday's quotations. Lambs were in small supply, consequently neither trade nor prices are worth quoting. No sheep were offered for sale at Deptford. The total number penned at both markets was 8,693, as against 8,117 during the previous week, consisting of 8,260 British and 433 Canadians; these latter were quoted at from 4s. 2d. to 4s. 4d. Best pens made per 8 lb. as follows:—7½ to 8 stone Downs, 5s. 10d. to 6s.; 9 stone Downs, 5s. 8d. to 5s. 10d.; 10 stone Half-breds, 5s. 4d. to 5s. 6d.; 10 stone Irish, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 4s. to 4s. 2d.

Calves numbered 25; these were quoted at from 5s. 2d. to 5s. 4d.

The few pigs on offer were quoted at from 4s. 4d. to 4s. 6d. per 8 lb. (offal given in).

Trade in the West.

The trade for all classes of stores—barreners, heifers and calves, and store heifers—continues unaccountably dull and depressed, the low values prevailing failing to attract buyers, and this seems all the more inexplicable seeing the abundance of grass keep there is almost everywhere just now. Barreners are selling almost even worse, scarce anything, excepting very high-condition animals, making over £12 or £13 apiece; but there are two assignable causes for this—one the earliness of the season for buying barreners, the other the indifferent character of the beef trade. The store sheep trade is giving evidence of some slight improvement, and this is attributed principally to the greatly improved condition of the root crops, due to the recent splendid rains, under the influence of which vast areas of what was given up as worthless have come on wonderfully, and now promise in many instances to prove a record crop.

Though by no means meeting a fast trade, both fat beasts and sheep, in the absence of anything like excessive deliveries, are bringing fairly good prices for anything that can be classed as choice, of which there is no great superabundance, the major part of both the beef and mutton now coming out, excepting here and there a few really good, ripe steers and heifers, being of a secondary character. Most of the beef is now selling at from 10s. to 11s. per score, though occasionally a very ripe Devon heifer or steer may bring an additional sixpence, but this is very rare. Wether mutton still commands plenty of attention at 8d. to 8½d. per lb. for the ripest, and 7½d. for seconds, and there is likewise an improvement in the ewe trade, best young sheep making 7½d. per lb., and older sheep of coarser weights, 6½d. to 7d. Pigs, though scarcely as dear as they were, are still bringing a very good return, but only baconers or porkers of exceptional quality and very small weights now bring 10s. per score, the major portion of the best classes of either baconers or porkers ranging between 8s. 6d. and 9s. 6d., and for much heavier pigs from 7s. to 8s. is an average quotation.

Trade in Scotland.

The number of fat cattle on offer this week has been rather under an average. A good trade has been experienced, and prices have advanced about 15s. a head over the previous week. Good sheep were scarce and rear. Ewes also shown in shorter numbers, while lambs were under an average. An active trade has been got, and prices have advanced 1s. a head all over. There was a small supply of fat calves, and they made more money. Pigs in moderate numbers, and they made the highest prices this season. Store sheep continue to meet a good trade at highly satisfactory prices for exposers. Rather more store cattle on offer. These met a quiet demand, and, although a considerable number of sales were effected, there were a few left unsold at the finish. Milch cows met rather a quieter market. Quotations:—Top price of best cattle per live cwt., 39s.; current from 35s. to 37s.; mutton to fully 9d. per lb.—JOHN SWAN AND SONS, LIMITED.

Trade in Ireland.

The attendance of both home and English buyers at Thursday's Dublin market was good, and the number of cattle and sheep offered for sale was up to a fair average. The best, well-finished beef held its own, prime ox and heifer beef making from 52s. to 55s., and for extra choice up to 57s. per cwt.; good second-class beef from 46s. to 50s., and inferior from 44s. to 45s. per cwt. Cow beef sold fairly well, being most bought up by local men. A slow trade was done. Wether mutton of prime quality made from 6¾d. to 7½d. per lb.; ewe, 6d. to 6¾d.; and inferior sheep from 5d. per lb. upwards. Large heavy hoggets, 44s. to 56s. each; small to medium ditto, 32s. to 44s. Lambs averaged from 24s. for small up to 40s. for large fat. Prices were firm for veal calves of best quality, with a good demand from 7½d. to 8½d. per lb.; inferior calves from 5d. per lb. upwards. In view of the prospect of dear winterage, trade for store cattle and sheep is very slow, and thin animals are practically unsaleable. The late fair at Banagher—which, with Ballinasloe, is the leading market of autumn in Ireland—proved a disappointing one, the supply being far in excess of the demand. There was a good attendance of buyers in the pig market, and trade was fairly active, better prices being obtained for the nicer classes of pigs, but rough pigs were hard to clear. Choice light-weight made from 53s. to 55s. per cwt.; inferior from 36s. per cwt. upwards.

LONDON.

Islington, Thursday.—Beast supply consisted of butchering cows and bulls, with few rough cattle, for which there was a fair demand at Monday's quotations. Top prices: Fat cows, 3s 4d to 3s 6d; fat bulls, 2s 10d to 3s 2d per 8lb. Sheep supply showed increase of forty, compared with Thursday last. Trade ruled fairly steady for both wethers and ewes, late rates being maintained. No Scotch sheep offered. Best pens made per 8lb as follows:—7½st to 8st Downs, 5s 10d to 6s; 9st ditto, 5s 8d to 5s 10d; 10st half-breds, 5s 4d to 5s 6d; 10st Irish 5s 4d to 5s 6d; 10st Down ewes, 4s to 4s 2d; 11st half-bred ditto, 3s 10d to 4s. Calves in small supply. Quotations per 8lb, sinking the offal: Beasts, 2s 10d to 3s 6d; sheep, 3s 10d to 6s; calves, 3s 6d to 5s 4d; pigs, 4s 4d to 4s 6d. Total supply: Beasts, 50; sheep, 1,370; calves, 20; pigs, 10; milch cows, 5.

Central, Friday.—Supplies were on a heavy scale, for which a slow inquiry again prevailed, and values in some instances ruled lower. Beef arrivals included 80 tons Scotch, 400 Liverpool sides, 2,900 hindquarters, 1,500 forequarters, and 2,000 Argentine chilled hindquarters and forequarters. Quotations: — Beef: Scotch short sides, 4s 2d to 4s 4d; long sides, 3s 10d to 4s; English, 3s 6d to 3s 7d; American Deptford-killed, 3s 6d to 3s 8d; Liverpool sides, 3s 4d to 3s 6d; American refrigerated hindquarters, best, 3s 10d to 4s; forequarters, 2s 4d to 2s 6d; Ranchers from 1s 10d to 3s 2d; New Zealand hindquarters, 2s 3d to 2s 4d; forequarters, 1s 8d to 1s 9d; Argentine chilled hindquarters, 2s 4d to 2s 8d; forequarters, 1s 9d to 1s 11d. Mutton: Scotch wethers, 4s 6d to 5s; ewes, 3s 4d to 3s 6d; English wethers, 4s 6d to 4s 10d; ewes, 3s 2d to 3s 6d; New Zealand, 2s 6d to 3s; River Plate, 2s 2d to 2s 4d; Dutch wethers, 4s 2d to 4s 4d; ewes, 3s 2d. Lamb: Scotch, 4s 8d to 5s 2d; New Zealand, 2s 2d to 3s 6d. Veal: English and Dutch, 3s to 4s 8d. Pork: English, 4s to 4s 8d; Dutch, 4s to 4s 6d per 8lb.

COUNTRY.

Ashford, Tuesday.—Beef trade slow at last week's prices. Mutton rather better. Small half-bred wethers made up to 6s, and neat kents up to 5s 4d per stone. Lamb sold readily at 6s 4d to 6s 8d. Pork a good trade, up to 4s 2d.

Basingstoke, Wednesday.—At Raynbird and Sons' Sale yard there was a good attendance of buyers to meet a supply of 58 fat beasts, 69 calves, 342 fat sheep and lambs, 40 store lambs, 210 pigs, and 201 head of dairy and store cattle, for which the following prices were realised:—Fat shorthorn steers made up to £17 10s, heifers £15 5s, cows £14 10s, Devon steers £19, polled Angus cows £19, West Highland cows £10, ditto with calf £12 15s, ditto two-year-old heifers £8 10s, fat calves 7½s to £5 5s, small 20s to 50s, fat hogs 6ls 6d to 8ls, porkers 42s to 50s, small 25s to 40s, store pigs 10s to 28s, dairy cows £5 to £30 15s, fat Downs wethers 58s 6d and ewes 54s 6d, eight months' old Down lambs 40s to 52s 6d, small 38s to 44s, old ewes 32s to 40s, rams up to 51s, three months' old sucking lambs, Downs 34s to 38s 6d, Southdowns 36s, cross-breds up to 29s. The best fat beasts were cleared at last weeks figures; second class, half fed, and inferior were a slow trade, and prices lower. A good trade, and a clearance made, of the short supply of fat sheep and fat lambs. Welsh cows of good class realised high prices, secondary descriptions lower prices. Store cattle trade continues a slow business, with little inquiry. Fat calves cleared with a slight reduction upon late prices. The pig trade, both for fat and stores, was very brisk, and the short supply was unequal to the demand. Ruling values:—Best fat beasts, 6½d to 7d; secondary ditto, 6d to 6½d; bulls, cows, and inferior, 5d to 5½d per lb; best fat sheep, 8½d to 9d; secondary ditto, 7½d to 8d; old ewes, rams, and inferior, 6d to 6½d; choice fat sucking lambs, 9d to 10d per lb; fat calves, 6d to 8d per lb; fat porkers, 9s 6d to 11s per score.

Berwick, Saturday.—106 beasts, 73 more than the previous week, were penned. Attendance of farmers and buyers fair; quality of stock good; trade showed an improvement. Calves, £6 10s to £7 10s; heifers, £10 10s to £14 10s; stirks, £8 10s to £11 10s; two-year-olds, £11 10s to £15; three-year-olds, £12 10s to £16; shorthorn bulls, £9 10s to £13; cows, £15 10s to £23.

Birmingham, Thursday.—Small supply of beasts, sheep, and pigs; trade good for pigs and slow for beasts and sheep. Beef, 5½d to 6½d per lb.; mutton 6½d to 8½d per lb.; lamb, 8d to 8½d per lb.; bacon pigs, 10s. per score; cutting pigs, 9s 10d to 10s per score; sows, 8s per score.

Bristol, Thursday.—Fair supply of beef, and trade slow at 58s per cwt. for best qualities, and 55s for secondary. Good number of sheep and lambs, and trade quiet. Light wethers, 8½d per lb.; prime wethers, 7¾d; heavy, 7d; ewes, 6d. Lambs quoted as light wethers, season being nearly over. Short supply of pigs, baconers selling at 9s per score, and porkers at 10s 3d. About 600 store cattle and trade slow, late rates not being maintained, and several remaining unsold.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s.	d.
6sc. 10 lb. to 9 sc. 10 lb.	2½ in. and under	9	3
Under 10 sc.	Not exceeding 2½ in.	9	3
Under 11 sc. 10 lb.	2¾ in.	8	9
Under 12 sc.	3 in.	8	3

C. AND T. HARRIS AND CO., LTD.

Canterbury, Saturday.—Best ewes meet a good demand at from 42s to 44s; useful ewes, 36s to 40s; good working lambs, 22s to 26s; and better class up to 30s; wether tegs, 38s to 43s.

Carlisle, Saturday.—There were about 300 head of Irish cattle exposed on the Sands, including a number of wintering bullocks. Buyers were scarce, and trade quiet. Quotations: Wintering heifers, £8 10s to £12 10s; heifers for feeding, £14 to £15 10s; wintering bullocks, £7 10s to £9 10s.

Chester, Thursday.—Supplies were again large, and buyers numerous. The demand, however, did not equal the supply, and although a large business was transacted, many lots remained unsold. There was a full show of sheep and lambs, and a good demand. The high prices asked rather checked business, but a large proportion changed hands in spite of the advance, and quotations closed firm. Milch cows made £17 to £22, calvers £16 to £20, barrens £10 to £13, heifers £9 to £15, stirks £6 to £10, and lambs 16s to 45s each.

Colchester, Saturday.—Beef: Stall-fed made from 4s 8d to 5s per stone, whilst grass beef made from 4s 4d to 4s 6d; mutton sold at from 5s 8d to 6s per stone; and pork 9s per score. There was a fair supply, and trade was good.

Doncaster, Saturday.—Moderate supply of cattle and trade dull, more attention being paid to the sheep trade. £1 per head less was taken in some cases. Milch beasts made £15 to £22, bullocks £12 to £16, heifers and drapes £11 to £15, stirks £7 to £9, and young stores £4 to £6 each. Better supply of sheep. Gimmers sold at 48s to 58s, ewes 44s to 60s, and lambs, which were scarce, 30s to 40s each.

Dorchester, Saturday.—Messrs. Ensor and Son had extensive offers of stock at their to-day's repository sale, with a distinctly improved trade for milch beasts, which good sale at the advance, the best making £17 to £21 each, and others £14 to £16 10s; two-year-old barren heifers £22 to £25 per pair; barreners quiet sale at £22 to £26 per pair. Fat beef keeps fairly steady, heifers making £16 10s to £19 each, and steers £16 15s or £17 15s each (or 11s to 11s 6d per score); fat cows, £16 5s to £18 15s (or 10s to 10s 6d). Mutton trade quiet; fat ewes, 42s to 44s each (or 7d to 7½d per lb.); cross-bred lambs, 28s to 33s (or 9d to 9½d). Ready clearance all through.

Dublin, Thursday.—Numbers in market: Beasts, 3,899, increase 66; sheep, 9,150, decrease 12; calves, 40, decrease 6. Caution was the prevailing tone in the cattle trade, fancy finish only making late rates; secondary and inferior qualities favouring buyers, and more difficult to place. In the sheep department the early morning bids were equal to last week's figures, but later on a quieter trade prevailed, and a clearance could not be effected. Lambs out of season. Cattle, live weight (best), 29s to 32s per cwt. Exceptional for Angus crosses, up to 34s per cwt. Secondary and inferior qualities, 26s to 28s 6d per cwt. Mutton, dead weight, 5¾d to 7½d per lb.—GANLY, SONS AND CO.

Edinburgh, Wednesday.—With larger supplies trade for cattle was quieter. Polled bullocks, £16; horned, 16 guineas; bulls, £9 10s. Sheep were in larger supply, and met a fair trade; half-bred lambs, 22s to 31s; Cheviot Dinmonts, 32s to 41s; smaller sorts, 23s to 31s. Cows met a slow trade; best shorthorns 26 guineas; Ayrshires, £14 to £19; crosses, £18 to £20.

Exeter, Friday.—Average supply of cattle; trade slow at late prices. Some remained unsold. Large supply of sheep, quality not generally good; only the best were saleable at 8d; ewes, 6½d per lb; breeding ewes, for which there were less demand, 36s to 40s, but many failed to find purchasers. Choice lambs, 9d to 10d per lb.; plain were unsaleable. A good many sheep of the Bridgwater class changed hands at less money than of late; calves, 7½d per lb. Barreners, £7 5s to £11; steers, £7 5s to £10; heifers, £9 to £10 7s 6d; yearlings, £6 to £7 2s 6d.

Glasgow, Wednesday.—There was a fair demand for live stock at about late figures. Top Scotch cattle, 64s, current 60s; top Irish, 58s, secondary 54s to 56s per cwt.; top hoggs, 9d to 9¼d; secondary 8¾d to 8¾d; top wedders, 8d to 8½d; lambs 7d to 9d per lb. Dead meat slow and prices tending lower; best Scotch beef, 6d to 6½d; best States, 5½d to 5¾d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles, and Co. report their sales as follows:—Upwards of 100 cows and calves and in-calvers which met a very good trade, the best prices being £23, £22 15s, and £22 10s. A large supply of store cattle with a better demand.

Hereford, Wednesday.—With fewer buyers the trade was not quite so good as of late. Beef did not do so well;

bullocks and heifers 6½d to 6¾d per lb., a farthing extra being made for exceptionally prime animals; cow beef sold at 4½d to 5½d per lb. The store cattle trade remained dull, and there were not many in the market. There was a fair supply of veal at about 7d per lb. Fat sheep being short, sold fairly well; wethers made from 7¾d to 8¼d per lb. Store lambs reached satisfactory prices, ranging from 29s to 34s each. Anything young and useful in store ewes went well. Shropshires at 40s to 48s, and Radnors 36s to 43s. Pigs were a smaller supply, but the trade was good; porkers of good quality made 5½d, and bacons 5d to 5½d per lb. Fat sows realised 8s per score.

Leicester. Saturday.—Full average supplies of home-bred stock. Buyers and dealers were well represented. Trade ruled steady at firm prices. Choice milch cows were scarce and in demand at £20 to £22, good lots £18 to £19, secondary £15 to £17, bullocks £11 to £14, Irish cattle £12 to £15. Welsh stock £9 to £12, and calves 15s to 35s each.

Lincoln. Friday.—Small show of horned stock, and a slow trade at last week's prices. Fair supply of sheep and a good demand, drape ewes realising 30s to 35s; young ewes, 45s to 50s; gimmers, 50s to 63s; and lambs, 28s to 38s per head.

Lynn. Tuesday.—A few store cattle, making £6 to £15. A larger show of fat beasts, prices unchanged, at 7s to 8s per stone for the very best. Few store sheep; trade firm at 38s to 45s each. Fat sheep an average supply, at 9s to 9s 6d per stone. Breeding ewes, 45s to 55s. Rams, £5 to £7. Store lambs, 30s to 40s each.

Manchester, Friday.—Beef: First-class, 5½d; second-class, 4½d to 4¾d; third-class, 3½d to 3¾d. Mutton: First-class, 7½d; second-class, 6½d to 7d; third-class, 5½d to 6d. Veal: First-class, 6½d; second-class, 5½d to 6d; third-class, 4½d to 5d. Bacon pigs: First-class, 5½d; second-class, 4½d to 5d; third-class, 3½d to 4d. Porket pigs: First-class, 7d; second-class, 6½d to 6¾d; third-class, 6d to 6½d.

Norwich. Saturday.—Supply of fat beasts more than equal to demand, and trade slow at 8s per stone; poor trade for store animals, and clearance not effected, and prices ranged from £6 to £18 per head. Quiet trade for sheep, lambs making 25s to 38s, and breeding ewes 45s to 62s per head. Limit number of fat sheep, and trade firmer than last week, prices quoted being at 10s to 11s 6d per stone, with extra 6d for best qualities. Big show of fat pigs, and trade brisk at 6s 6d to 6s 9d per stone, 7s being paid for best animals. Good demand for store pigs.

Nottingham. Saturday.—Rather larger supply of cattle, and a slight improvement manifest in the trade. For best milch cows £18 18s to £21, newly-calved heifers £16 to £18, barren cows £11 to £14, and strong steers from £9 upwards. No sheep or pigs on offer.

Retford. Saturday.—Scarcely sufficient stock on offer to test prices. Milch beasts found customers with difficulty at £14 to £18 per head. The quotations for steers, heifers, and calves unchanged.

Preston, Wednesday.—Only a moderate attendance, but a capital show of cattle and sheep. Brisk demand for nice fat calves, but sheep slow, and trade all round was dragging, with weaker prices. Cows and bulls made 4d. to 5½d., heifers and bullocks 5½d to 6¼d, hoggs 8½d to 8¾d, lambs 8¾d to 8¾d, ewes 6d to 6½d, tups 5½d to 6d, calves 6½d to 8d per lb. At market—Cattle 225, sheep 1,976, calves 150.

Romford, Wednesday.—Average supply of fat beasts, trade fair: Best animals, 4s 4d to 4s 6d; middlings, 3s 10d to 4s 2d per stone. Sheep in fair supply; trade about the same: Best sheep, 5s 4d to 5s 8d; middlings 5s 2d to 5s 6d; ewes, 4s to 4s 4d per stone. Slow trade for store beasts. Average supply of pigs; trade rather better.

Shrewsbury, Tuesday.—Usual supplies. Slower trade in store cattle and sheep. Good business in fat stock. Quotations:—Beef, 5½d to 6¼d per lb; mutton, 7½d to 8¾d per lb; lamb, 8d to 8½d per lb; veal, 6½d to 7d per lb.; lamb, 8d to 8½d per lb.; bacon pigs, 9¾d to 10d per score. Numbers offered as follows: 722 cattle, sheep and lambs 3,533, calves 100, pigs 476.

Thame, Tuesday.—There was not such a large entry of stock as has been usual lately. Full attendance of buyers made beef trade decidedly better, a practical clearance being effected. Sheep were in great demand, and sold well throughout. Veal continues to meet a good demand. Bacon and pork scarce and dear. Messrs. Bond and Burrows' sale comprised 96 fat beasts, 239 fat sheep, 114 fat and weaning calves, and 38 fat pigs. Fat oxen made from £16 10s to £20 5s, fat heifers £15 10s to £20 5s, fat wethers 45s to 57s 6d; fat ewes 40s to 53s 6d, fat lambs 30s to 39s 6d, fat calves £3 to £4 13s, weaning cow calves 30s to 58s, bull calves 10s to 52s, bacon hogs £3 to £5 5s, porkers 26s to 48s.

Truro, Wednesday.—Business fairly brisk. Attendance very good. Fat bullocks, 54s to 58s per cwt.; barreners and store bullocks, 40s to 45s; cows and calves, £11 to £16 each; rearing calves, 20s to 35s; ewes, 38s to 52s; wethers, 7d to 7¼d per lb.; ewes, 5½d to 6d; lambs, 7d to 7¼d; pigs, 8s 6d to 40s each; beef 6d to 8d per lb; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured 6d to 7½d, cured, 7d to 9d; pork carcases, 4½d to 5½d. Number in cattle market: Bullocks, 310; calves, 90; sheep, 1,161; pigs, 247; horses and ponies, 45.

Wolverhampton, Wednesday.—Moderate trade all round; average supply. Prices: Beef, 5½d to 6¾d per lb.; mutton, 6d to 8¾ per lb.; veal, 6d to 7d per lb.; lamb, 8d to 8¼ per lb.

Worksop, Wednesday.—Moderate supply of all kinds of stock, with trade fairly brisk. Best quality beef made 7s to 7s 6d, and secondary 6s 9d to 7s 3d per stone. Best Southdown and cross bred mutton 8d to 9d, ewes and other sorts 6d to 7d, and lamb 9d per lb.

York. Thursday.—This was the second of the extra markets held during September and October principally for the sale of breeding sheep, and every bit of accommodation was taken up, there being fully 15,000 sheep of all classes penned. There was, however, only a comparatively small attendance of buyers, and the supply, for an off market, proved quite twice equal to the demand. The trade for North-country ewes was worse than has been experienced for some years, and a very large number were turned out unsold. What sales were effected were at from 40s to 50s per head. Shearling sheep and the best classes of lambs met with some inquiry, the former making 46s to 60s, and the latter 28s to 35s each; and Masham lambs 22s to 26s each. The few calving and milch cows on offer contained nothing of very good quality, and the sales effected were at about late rates.

FOREIGN.

Yorkhill. Monday.—Large supplies of Canadian and American cattle were on offer at the usual weekly sales held to day, 888 head being penned in the lairages. All were delivered in fair shape and condition, and made a good appearance in the stances. There was a large attendance of buyers, though business was somewhat quite. A fair trade done at rates similar to those ruling last week, and clearances were effected at all the stances. Bullocks of useful weights and sizes made up to 56s per cwt. deadweight, while inferior qualities were easily down to 52s per cwt. Bulls made from 46s to 48s per cwt.

FEEDING STUFFS.

Hull, Tuesday. Linseed: The arrivals are 1,979 quarters Buenos Ayres, 16,270 Calcutta, 220 Odessa, 7 Hartlingen, 10,295 Rosario, 5,005 St. Petersburg, total, 34,966 quarters. The shipments for the week ending September 15 are: Plate, 24,000 Hull, 21,000 orders, 11,000 Continent; Bombay, 34,000 Continent; total, 95,000 quarters. Linseed has been practically neglected through the week, and prices have dropped a further 9d to 1s per quarter. River Plate: Spot 35s taken; afloat and September-October 35s 3d sellers. October-November, 35s 6d. Duluth: October-November, 36s. Cottonseed: The market has shown little activity, with a few sales made at £5 6s 3d and £5 7s 6d spot. £5 7s 6d paid passage and September, at which rather buyers to-day. One or two sales November-January made at £5 12s 6d, sellers now asking £5 13s 9d. Bombay done at £4 14s September-October and January-February, and this remains the value. Oilseed cakes. Linseed cakes are steady at a decline of 2s 6d per ton. Demand moderate. Cotton cakes: Firm, unchanged. Bombay rather inclining firmer. Orders slow. KEIGHLEY, MAXSTED AND CO.

London, Thursday.—Linseed flat, with considerable pressure to sell both old and new crop; fair business passing in the latter. Calcutta London, spot 37s, and August-September 36s 9d, September-October 36s 6d, April-June 35s. Hull: Flat, with scarcely any demand. La Plata spot 34s 9d, passage 34s 9d, September-October 35s 3d, December-January sellers 34s 6d, and January-February 34s. Rapeseed finds few sellers, but the enquiry has rather improved. Brown Cawnpore, September-October 36s, brown Calcutta, September-October 36s. Cottonseed: There is scarcely any change to note in this article; Egypt has continued steady, and business here has been restricted, assisted to some extent by the advance in freights. London: September £5 12s 6d, Fayoumi £5 16s 3d sellers, November-January £5 15s. Hull: Spot, passage, and August £5 7s 6d, September £5 8s 9d, Fayoumi £5 13s 9d, October to January £5 12s 6d business reported. Linseed oil, after a slight improvement at the end of last week, has again declined, and closes quiet at lower rates. We quote spot and month in pipes £15 7s 6d, barrels £15 15s, October-December £15 17s 6d, January-April £16 5s. Hull naked spot £14 7s 6d, September-December £14 10s, January-April £14 15s. The stock in public warehouses in London on the 16th instant is given at 5,905 tons.—THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday.—Linseed cakes: The trade rules dull, with only a small consumptive demand, while present high values continue to check business and there is almost a total absence of any speculative inquiry. Russian offer sparingly, and needy buyers are compelled to pay last week's full prices. American are unchanged for steamer parcels shortly due. East India seed pures have been sold without alteration in value. London made being in small production maintain their value. Cotton cakes: Egyptian are fairly plentiful on spot, but with a firmer attitude on the part of shippers prices remain steady. English meet a slow sale and are practically unchanged. Decorticated London-made cake and meal is in improved request at £7 2s 6d to £7 5s, and special digestive meal at £5 5s, with American "Open Hand" brand selling at £7, and meal at £6 12s 6d. Rape cakes: Dull and neglected; East India and Ravison unchanged. Maize germ meal: White American for winter despatch is held for rather more money. English move off quietly at about late rates. Maize gluten meal is nominally quoted at £5 15s per ton. Rice meal: This article is becoming particularly scarce and with shippers retiring from the market values are irregular at £4 15s to £5. Broken Rangoon rice is cheaply offered at £4 15s per ton. Locust beans remain scarce and firmly held at £5 5s per ton for whole, and £5 10s per ton for kibbled. Nitrate of soda is scarce and firmly held at £10 15s per ton ex quay.

Thursday.—Birmingham: 8 to 10. Brigg: 12 and 13. Driffield: 13 and 14. Evesham: 10½d to 11½d per dozen. Kidderminster: 10. Penzance: 1s to 1s 3d per dozen. Northtawton: 14. Penistone: 11. Plymouth: 10. Ripon: 11. Scarborough: 10. Wellington (Salop): 11 and 12. Wetherby: 11 and 12.

Friday.—Altrincham: 8 and 9. Ashburton: 1s to 1s 1d per dozen. Barnstaple: 12 to 14. Camelford: 11. Chester: 9 and 10. Crewe: 9 and 10. Congleton: 9. Dartmouth: 1s 2d per dozen. Derby: 9 and 10. Exeter: 10. Helmsley: 13. Knutsford: 10. Leyburn: 11 and 12. Lincoln: 13 and 14. Lostwithiel: 14. Macclesfield: 9 and 10. Nantwich: 10. Northwich: 9. Otley: 9 and 10. Redruth: 1s 1d per dozen. Runcorn: 8 and 9. St. Austell: 12. Stamford: 8 to 10. Stockport: 8 and 9. Tavistock: 10. Totnes: 1s 2d to 1s 3d per dozen.

Saturday.—Appleby: 10 and 11. Berwick: 1s 1d to 1s 2d per dozen. Bridgnorth: 10. Carlisle: 9 and 10. Doncaster: 10 and 11. Grantham: 14. Howden: 12 and 13. Ipswich: 10 to 14. Lancaster: 9 and 10. Malton: 12. Pontefract: 11 and 12. Retford: 1s 8d to 1s 10d per score. Richmond (Yorks): 10. Shrewsbury: 10 to 12. Skipton: 9 and 10. Stokesley: 10 and 11. Whitby: 10. Worcester: 10. York: 10 to 12.

CHEESE.

Newport, Wednesday.—A good supply, and business was fair. Quotations:—Caerphillies, 45s to 53s per cwt.; fancy dairies, 53s to 54s; truckles, 52s to 58s; cheddars, 56s to 58s.

Glasgow. Wednesday.—The arrivals of cheese this week were light, but more than sufficient for the demand. The prices now sought check sales. Though the trade are well supplied, holders are not disposed to yield. Cheddars quoted from 56s to 60s per cwt., but several parcels of specially choice commanded 1s above top figure. Dunlops, 54s to 58s.

POTATOES.

Borough. Saturday.—Good arrivals this morning experienced a very slow demand. Best Silts, 55s to 65s; Blacklands, 45s to 50s per ton.

Goole. Wednesday.—Moderate attendance, and plenty of potatoes on offer, which met with a better demand at 4s to 4s 3d per load of 255lb. In the retail market prices were about 4d to 6d per stone.

Southwark (Waterside). Saturday.—During the past week supplies have been quite equal to the demand, and prices, except for best samples, very weak. The following are this day's quotations: — Essex, Kent, and Surrey Up-to-Dates, 50s to 60s; ditto Puritans, 50s to 55s; ditto British Queens, 50s to 55s; Lincoln Evergoods, 50s to 55s; ditto Up-to-Dates, 55s to 60s; Blackland Up-to-Dates, 40s to 45s; ditto British Queens, 35s to 45s—per ton.

Spitalfields. Saturday. — Supplies were on a rather small scale, and samples are arriving in a slightly condition. Trade made generally quiet progress. Dunbar Yorks, 50s to 60s; Puritans, 50s to 60s; Royal Kidneys, 55s to 65s; Beauty of Hebrons, 55s to 60s; British Queens, 50s to 55s; Blacklands, 45s to 50s; Up-to-Dates, 50s to 60s per ton.

HAY AND STRAW.

Birmingham. Friday.—Fair supply, trade quiet. Quotations:—Old hay, £2 5s to £3 17s 6d per ton; new hay, £2 5s to £3 7s 6d per ton; straw, 25 6d per cwt.

Derby. Friday.—Quotations:—Hay, new, 75s to 90s; best, 95s to 100s; other, 75s to 85s; best old, 95s to 100s; straw, wheat, 25s to 30s; oat, 25s to 30s; oat, 50s to 60s; peat moss litter, 35s to 40s.

Manchester. Friday. Hay, 2½d to 3d; clover, 3½d to 4d; straw, wheat, 30s per 36 per stone.

Whitechapel Saturday. Supplies were moderate, and the demand proved poor at recent quotations. Best clover, 72s to 80s; inferior ditto, 55s to 70s; specially picked hay, 75s; good ditto, 65s to 75s; inferior ditto, 45s to 60s; mixture and sainfoin, 57s to 72s 6d; straw, 27s to 38s per load.

Sheep Fairs and Sales.

Ayr Ram Society's Show and Sale.

This annual fixture took place within the Cattle Market, Ayr, on the 14th and 15th inst., and proved satisfactory, a good entry of first-class animals being received. The sale, which started at half-past nine, was not concluded till nearly six o'clock. The highest price of the day was £40 for an Overshiels black-faced shearling, the purchaser being Mr. Hamilton, Woolfords. Mr. Robert Lees' (Lagg) first-prize ram went at £13 10s. to Mr. Hewatson, Carsheoch, and the second-prize ram, shown by Mr. M. Hamilton, Woolfords, to Mr. Murdoch, Drumhorn, at £14 10s. Mr. Robert Lees' first-prize group sold well, as follows:—One at £22 to Mr. Kerr, Islay; one at £20 10s. to Mr. M'Sproul, Mearns; and others at £15, £14 10s., and £9 10s. One of the Messrs. Cadzow Brothers' second-prize group sold at £20 to Mr. Sandilands, Corsebank, and others at £16, £11, £10 10s., and £9 10s. Mr. M. Hamilton's first-prize black-face tup lamb was sold at £10 10s. to Mr. M'Arthur, Snar, and Mr. R. Cadzow's second-prize lamb to Mr. Moffat, Gateside, at £15, Mr. R. Cadzow also won first prize with fine black-faced tup lambs. Two were sold to Mr. Hamilton, Nether Wellwood, at £15 10s. and £14 10s., and others at £9, £8 5s., and £5 5s.

Beaminster.

At this well-known Dorset fair, held on Tuesday, there was hardly such a good supply of sheep as in previous years, whilst trade was by no means brisk, in fact, was dragging all through. The general run of sheep prices was as follows:—Dorset horn ewes, 45s. to 57s.; Down ewes, 44s. to 50s.; horn wether lambs, 30s. to 36s.; cross-bred lambs, 31s. to 40s.; Down wether lambs, 33s. 6d. to 36s.; couples, 59s. to 65s.; horn chilver lambs, 38s. to 42s.; fat horn wethers, 45s. to 50s.; fat Down wethers, 46s. to 52s.; Down rams, 50s. to 59s.; horn ditto, 50s. to 60s.

Mr. H. Bridger's Southdowns.

Mr. H. Bridger, J.P., of Old Shoreham, having let Beeding Court Farm, Upper Beeding, the whole of the pure-bred Southdown Hill flock of 828 ewes in ages, stock ewe lambs, and rams was disposed of by auction on Monday, Mr. H. J. Burt, of Steyning, being the auctioneer. The Beeding Court flock was established by Mr. Bridger in 1894 on the late Mr. A. S. Elliott giving up the farm. Ewes were secured principally from such well-known owners of the period as Mr. George Homewood, Mr. Richard Brown, and the late Mrs. Penfold, Cokeham; as well as Mr. Isaac Baker, Wilmington. The sheep have been carefully bred, and the stock still further improved by draft ewes and lambs from good breeders. There was a good attendance at the sale and a brisk trade was experienced. 135 full-mouthed ewes realised £302 10s.; 162 six-tooths, £411; 157 four-tooths, £440 7s.; 190 two-tooths, £533 5s.! and 180 stock ewe lambs, £336 15s., the grand total for 824 animals being £2,023 17s.

Hawick.

Hawick annual ram sale was held on Wednesday, and was conducted by Messrs. Andrew Oliver and Son, in Hawick Auction Mart. There was a great display of Cheviots and Leicesters, this being the principal market in Scotland for the sale of the former. There was a brisk trade, and prices generally were firmer than last year. The numbers were 581 Cheviot and 288 Leicesters, Oxfords, and Blackfaces—total 869, compared with 834 last year. The highest price of the sale was given by Mr. Murray, Parkhall, who got one of the Hindhope lot for £50. From the same stock Mr. Miller, South Slipperfield, got one at £49; and Mr. Elliot, Meigle, one at £43. Mr. Moffat, Craick, gave £47 for a sheep from Newton Bellingham; and Mr. Thornton, Hyndlee, £39 for another ram from the same lot; whilst £44 was given by Mr. Veitch, of Wauchope, for a sheep out of Attonburn.

Little Driffield.

The annual chartered September fair at Little Driffield took place on Tuesday. The fair has for a great number of years been looked upon as a time for offering rams from the most prominent breeders in the neighbourhood, as well as from a wider area, and the lots offered last week established a record, there being 328. These were all shearlings of the Lincoln, Leicester, and Oxford Down type of sheep. There was a large attendance, and trade was good.

Messrs. Hornby and Wilberfoss had the largest number to offer (160) in their ring. Mr. R. Dixon, Dunnington, disposed of six of his Lincolns at an average of £7 17s. 6d. each, the highest price being £10 10s. Mr. Thomas Crompton, of Westfield, Nafferton, sent 22 Lincolns, all of which were readily sold, the average being £12 9s. 7d. each, the highest price being £21, Mr. W. D. Megginson, Towthorpe, disposed of 30 Leicesters at an average of £10 7s. 3d. per head, one making £25 4s., whilst ten shearling rams from Mr. J. J. Stamper, Highfield, Nunnington, made an average of £10 10s., the top price being £16 5s. Fifteen Oxford Down ram lambs from Mr. W. Wilson, Speeton, made an average of £4. 11s. 9d., the highest price being £7. Messrs. Sugden and Pearce Brown had 13 Lincoln rams from Mr. Robert Fisher, Leconfield, the average realised being £17 8s., one making £22 11s. 6d. Other lots sold at little less prices than those given above. Messrs. G. W. Clark and Sons had several consignments of Lincolns, and the best prices were obtained for those from Mr. J. Jackson, Buckton Hall. Ten of these made an average of £7 2s. per head, the highest price being £12 10s. Mr. E. F. Jordan, of Eastburn, sent 17 from his Leicester flock, which made an average of close upon £7 10s. each, up to £10 being paid, whilst a consignment of Oxford Down ram lambs from Mr. Ernest White, Clanfield, Oxford, made up to £2 17s. 6d. each. Messrs. Cranswick and Cranswick sold eight rams from the flock of Messrs. J. E. and C. H. Simpson, Pilmoor House, Hunmanby, at an average of over £8 17s. each, £13 10s. being paid for one, and for ten Leicesters sent by Mr. John Cranswick, Field House, Hunmanby, close upon £8 each was obtained, one making £11, whilst eleven long-wool rams from Mr. Joseph Cranswick, Rudston, averaged about £5 17s. each. In the general fair about 3,000 lambs were penned, and met a fair sale at 34s. to 40s. per head.

Louth.

The old-established sheep and ram fair at Louth was held on Friday, and there was a large show and a fair trade. The top price recorded was 27 gs., given for one of Mr. Taylor Sharpe's (Baumber) Lincoln Longwools, who had the highest average in the fair, viz., £10 17s. 4d. per head for twenty. The average for other Lincolns ranged up to £8 18s. 6d., whilst for twenty-six Hampshire Down ram lambs Mr. L. W. Stephenson, of South Thoresby, got an average of £9 2s. 1½d., others averaging up to £8 10s. 1d.

Northampton.

The annual Northampton Ram Fair, which was held on Tuesday, in the Cattle Market, turned out one of the most successful held for several years back. The number of rams penned, it is true, fell somewhat as compared with previous years, but not for a long time has there been such an attendance of buyers, nor have the prices given been so good. Messrs. Pierce and Thorpe had the honour of obtaining the highest price given for a ram, getting 20 gs. for an Oxford Down shearling sent by Mr. R. W. Hobbs, Kelmscote, Lechlade, and bought by Mr. Walter Passmore, Ashby St. Legers. Mr. Hobbs sent altogether ten splendid shearling rams, and for these he got the satisfactory average of £12 3s. 6d., the prices in addition to the 20 gs. including 13½ gs. (twice), 13 gs., 11½ gs., and 11 gs. (twice). Last year's highest price for a ram was also 20 gs. Mr. Hobbs also sent 48 ram lambs, sold at prices varying between 12 gs. (given by Mr. G. James, Irchester, for an animal which won a first prize at the Royal show) to 3 gs., the average being £6 17s. Messrs. Paxton and Holiday, Bicester, obtained the highest price for a ram lamb, Mr. Hunt, of Wheatley, paying them 17 gs. for an Oxford Down belonging to Mr. Henry Akers, Faringdon, Berks. A vast number of other consignments were disposed of at prices ranging up to those given.

Shrewsbury.

The Shrewsbury Great Autumnal Sale of Shropshire and cross-bred sheep took place on the 14th and 15th inst., and was conducted by Messrs. Alfred Mansell and Co., secretaries to the Shropshire Flock Book Society, Shrewsbury. On the first day 220 Shropshire rams were offered, and a large company of well-known breeders and flockmasters attended, including representatives from Scotland, Ireland, South America, South Wales, and most of the Midland counties. The trade was brisk and many rams changed hands. Mr. R. H. White, of Ireland, secured a grand specimen bred by Mr. T. G. Juckes at 28 gs. Mr. A. P. Turner paid 31 gs. for a ram bred by Mrs. Inge; eight other sheep from this flock made 27 gs. (Mr. R. C. Pryce), the lot averaging £15 5s. 10d. Mr. P. Everall's selection made 30 gs. to Australia, ranging down to 7 gs. Mr. T. Jones had a consignment of 25, which were all sold at an average of £7 15s. Mr. Joseph Everall had a consignment of 15, and these were sold at prices ranging from 16 gs., 14 gs., 13 gs., 11 gs., 10 gs., down to 7 gs. Mr. T. G. Juckes's lot sold well, viz., 28 gs., 14 gs., 13 gs., 11 gs., and 7 gs. Other consignments were received from Sir W. O. Corbet, Bart., Messrs. S. F. M. Nevett, E. J. Frank, E. Nock, S. Bromley, V. Bromley, Mrs. Everall, Messrs. J. Harding, R. C. Pryce, R. H. Gwynne, Lady Rothschild, etc.

On the second day 1,500 Shropshire ewes and 800 cross-bred ewes and wethers were passed under the hammer, and a grand clearance was effected. The company again was large, and many of the lots were eagerly sought after. Sir W. O. Corbet headed the list with 20 beautiful shearling ewes, which realised 100s., 75s., 67s. 6d., 67s. 6d. Mr. F. Bibby's pens sold at 55s., 53s., 51s., 50s. Mr. S. F. M. Nevett's 71s., 71s., 64s., to 53s. Mr. T. Jones's 61s., 59s., 58s., 57s., to 51s. Mrs. Everall's 52s., 51s. Mr. J. H. N. Walford's 59s., 57s., 54s. Mr. P. Everall's 51s., 50s. Mr. J. Everall's 71s., 57s., 55s., 53s., 52s. Mr. W. Oakley's 47s., 46s., 45s. Mr. J. Whitaker's 49s., 45s. Mr. E. J. Frank's 57s., 55s., 54s., 53s. Mr. R. C. Pryce's 75s., 70s., 60s., 59s. Mr. J. Munslow's 54s., 52s., 51s., 50s., 48s. The cross-bred ewes and wethers were a capital display, and sold from 42s. down to 31s.

Mr. J. Thompson's Leicesters.

Forty pure-bred Leicester shearling rams and upwards of 200 breeding ewes and gimmer shearlings, the property of Mr. Joseph Thompson, were sold by auction at Wauldby, Brough, East Yorks, on Friday. A large number of farmers and flockowners assembled, and there was keen competition for the first score of rams. The highest price was 21 gs. Other leading prices were 14½ gs. and 15 gs. The rams realised a total of £335 10s. 6d., or an average of just under 8 gs. each. The gimmer shearlings, sold in lots of ten, realised up to 60s. per head, and the ewes to 67s. each. The averages are about the same as last year's.

Ulverston.

On Tuesday the Ulverston and North Lonsdale Auction Mart Company held their annual show and sale of rams and keeping sheep at Lightburne Park, Ulverston. There was a good average entry for the show, and the quality was of a very high order, and included in the sale were 60 Shropshires belonging to Mr. Victor C. W. Cavendish, M.P., which were disposed of at an average price of about £3 10s., the winner in the Down ram or lamb class realising £3 12s. 6d. Altogether about 1,500 sheep passed through the ring.

(*Other Sheep Fairs and Sales, on page 373.*)

ADVERTISEMENTS RECEIVED TOO LATE FOR CLASSIFICATION.

CROWN LANDS, SHIMPLING THORNE, SUFFOLK. To be Let, a good Corn and Barley Farm, lying in a ring fence, known as Shimpling Park Farm, comprising about 572 acres, of which 482 acres are arable and 87 acres grass. There is a Bailiff's House and 5 Cottages and 2 sets of modern Farm Buildings. The Farm is situated about midway between the market towns of Sudbury and Bury St. Edmunds, being about 7 miles from either town, and is distant about 3 miles from the Cockfield Station on the Great Eastern Railway. For further particulars, apply to Messrs. CLUTTON, 9, Whitehall Place, London, S.W., Crown Receivers.

CROWN LANDS, ISLE OF SHEPPEY, KENT.—To be Let, the valuable, compact Grazing and Corn Farm, known as "Neats Court Farm," containing about 790 acres, of which about 500 acres are pasture and marsh grazing land and 270 acres arable. The Farm is situated near to Queenborough Station on the South Eastern and London, Chatham and Dover Railway, and within easy reach of Sheerness and the market town of Sittingbourne. There is a good farmhouse with modern farm buildings and nine labourers' cottages. About 368 acres of marsh grazing land adjoining the Farm can be let with it if desired. The sporting will be included in the letting. For further particulars, apply to Messrs CLUTTON, Crown Receivers, 9, Whitehall Place, London S.W.

SUSSEX, EAST HANTS, AND CHICHESTER FAT STOCK, At CHICHESTER. NOVEMBER 22nd and 23rd. Entries close November 9th. F. N. HOBGEN, Secretary, East Street, Chichester.

LIVERPOOL DISTRICT FARMERS' CLUB GRAIN & ROOT SHOW. At NORTH HAY MARKET, LIVERPOOL, OCTOBER 21st, 1905. Entries close October 7th. J. LUNT, Secretary, 61, Hackins Hey, Dale Street, Liverpool.

PENISTONE, THURLSTONE AND DISTRICT PLOUGHING ASSOCIATION. At PENISTONE, NOVEMBER 16th, 1905. Entries close November 11th. W. OGDEN, Secretary, Lyndene, Penistone.

WHITCHURCH DAIRY FARMERS' ASSOCIATION. At WHITCHURCH, NOVEMBER 14th and 15th, 1905. Entries close November 9th. T. NUNNERLEY, Secretary, Whitchurch, Salop.

Live Stock Record.

LIVE STOCK GAINS AND LOSSES.

By the issue of the second instalment of the Agricultural Returns for 1905, the respective numbers for England, Wales, and Scotland, and for all the counties, are unfolded to view. Critical inspection discloses facts not altogether of a satisfactory character, for some of them show considerable decreases of sheep to such an extent that taking England in its entirety there is a deficiency of 50,944 compared with the return of 1904, although the respective increases of 45,282 in Wales and 55,680 in Scotland, give an increase of 50,018 for Great Britain. The state of things in respect to cattle is altogether different. England exhibits an increase of 103,704, Wales 10,354, Scotland 14,610, which gives the aggregate of 128,668, as was stated in the preliminary returns. The total increase of 12,197 horses is made up by 8,182 in England, 1,661 in Wales, and 2,354 in Scotland.

Most of the English counties more or less display increases in cattle, the only exceptions being Leicester, Warwick, and Stafford, but as the numbering of the latter is only eleven less than in 1904, this is scarcely worthy of notice; nor is the deficiency of Warwick large, being 297. But that of Leicester amounts to 2,428, and, strange to state, so far from that county having compensatory gains in other stock, the returns disclose a deficiency in sheep amounting to 6,582, while horses are 194 less. Taking the English counties, the largest increases of cattle are indicated by the Yorkshire returns, the herds of that county having an augmentation of 15,084 — this notwithstanding an increase of 37,961 sheep and 647 horses. The county showing the next largest gain in cattle is Wilts, 7,074; and the sheep of Wilts appear more than they were in 1904 by 18,054; horses having also an increase of 73. Third in the list stands Sussex, with a cattle increase of 6,735, but against this that county had a sheep loss of 5,463, its equine number being 287 more. Cornwall had a satisfactory output, in a gain of 5,118 cattle, 3,319 sheep, and 507 horses. Somerset had a cattle gain of 4,730, a sheep loss of 4,351, a horse gain of 1,283. Next come the four counties of Northumberland, Lincoln, Oxon, and Gloucester, all with sheep losses to set against their cattle gains, the latter ranging from Lincoln's 4,639 to Gloucester's 4,032. The herd increases of Hants, Berks, Kent, Bucks, and Lancs all range between 3,000 and 3,600, and all of them, except Hants, have sheep gains also.

Strange to state, the English county which exhibits the greatest decline in sheep is Lincoln, it being 28,234. There are gains of 507 horses and 439 cattle, however, and the heavy export of pedigree sheep may partly account for the deficiency. But how is the loss of 14,329 sheep in the Northampton return to be accounted for? There is an increase of 126 horses and 855 cattle, it is true, but those who know the county would scarcely expect it to show this heavy loss of the ovian race after the satisfactory lamb crop of last spring. There are other losses, however, equally unaccountable, such as 9,400 in Notts, 14,015 in Suffolk, 7,378 in Cambs, 16,794 in Warwick, 9,316 in Gloucester, 8,951 in Essex, and seven other counties with over five thousand losses each. On the other side there are, of course, considerable gains, some of which have been mentioned, but in addition that of Dorset was 13,955, Westmorland 12,040, Kent 9,913.

STOCK AND SHOW NOTES.

By Herdsman.

Speaking at the luncheon held in connection with the Easingwold Agricultural Society's show at Easingwold, on Wednesday, Lord Londonderry remarked that in the past he had been a firm believer in local shows, and they were now even more necessary in order to support the chief provincial show —if he might use the expression—the "Yorkshire," the Royal Society having now fixed upon London as its permanent home. Personally, he had always regretted that action, for he had always looked upon that show as a kind of movable feast, which first gave the South a chance and then the North. No doubt the desirability of the change was well considered by those responsible, but shows such as that at Easingwold should go a long way towards making the Yorkshire the great show for the whole of the North of England.

At a meeting of the Council of the Scottish National Fat Stock Club held last week, it was stated that the prize list for the forthcoming show would amount to about £1,400, the donations received to date being £120, or about the average.

The Wensleydale Bluefaced Sheep Society's Show and Sale of Wensleydale rams will be held at Helifield on October 3, when something like 250 rams and ram lambs will be forward. Catalogues can be had of the secretary of the society, Mr. J. H. Willis, Carperby, Aysgarth, R.S.O.

An unreserved sale of pedigreed Clydesdale horses, hackney and hackney pony foals, store cattle and sheep, the property of the Seaham Stud Co. (late Londonderry Stud), at Seaham Harbour, Co. Durham, will be held on Thursday, October 5. The catalogue comprises:—9 Clydesdale brood mares, 6 Clydesdale fillies (one to three years old), 5 Clydesdale entire colts (one and two years old), 25 Clydesdale colt and filly foals, 1 gelding, 5 hackney foals, 14 hackney pony foals, 1 driving cob, 70 store cattle, Shorthorns, and crosses, and 48 cross Wensleydale gimmers. The sales at Seaham Harbour have long held a wide popularity, the high-class quality of the stock being well known, and I am sure that the animals mentioned above will fully maintain the reputation of the stud. The auctioneers will be Messrs. A. T. and E. A. Crow, Sunderland.

I would remind intending exhibitors at the Smithfield Club Fat Stock Show that the time for closing of entries is drawing very near, and those who have not yet filled in the entry forms should do so at once. The entries close as follows:—Implement department, October 2 (post entries October 5); cattle, sheep, pigs carcase competition, and dead poultry, November 1 (post entries November 6). Prize lists, entry forms, and other information, can be obtained on application to Mr. E. J. Powell, the sec., 12, Hanover Square, London, W.

On Tuesday of next week Mr. W. Bainbridge will sell by auction, at the Ewell Hackney Stud, Ewell, Surrey, 29 class prize winning hackneys, the property of Mr. W. Oppenheimer, who, owing to press of business, is unable to devote the necessary personal attention to such an important stud, and thus has decided to sell without reserve, with one or two exceptions. The animals catalogued include:—13 brood mares and foals, 3 three-year-old fillies, 1 two-year-old filly, 5 harness horses and 5 yearlings and 2 two-year-olds. There will also be included 8 hackneys from the stud of Mr. R. P. Evans, Woodhatch, Reigate. These will be on view September 27 and 28. Luncheon at 12.30, and the sale will commence at 1.30. Catalogues can be had of Mr. W. Bainbridge, Walton House, Warrington.

Mr. Alfred Hughes, of Packwood Grange, shipped to Russia on the 9th inst., per s.s. Dago, from Hull, two pedigree Large White boars and one young sow, to the order of Messrs. Wm. Cooper and Nephews, of Berkhampstead. These were choice typical specimens of the breed, and were selected by Mr. Frank Webb at the Warwickshire Show at Coventry, having there been reserve number and highly commended in strong classes.

At a meeting of Cleveland Agricultural Society at Redcar, last week, it was reported that a profit of £10 had been made on this year's show, notwithstanding the heavy rainfall on the date of the exhibition. An invitation to hold another show at Redcar was received, and this was left over for discussion at the annual meeting, which was fixed for the last Wednesday in January.

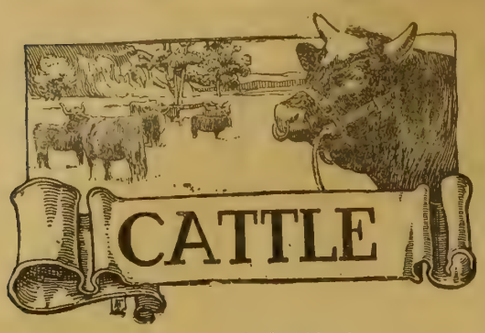
The prize schedule for the Royal Dublin Society's Winter Show at Ball's Bridge, on December 5, 6, and 7 has already made its appearance, and it shows that the prizes are on the usual liberal scale. Classes are provided for cattle with prizes of £6 and £5, firsts; seconds, £4 and £3; and thirds, £2 and £1; for sheep there are nine classes with prizes of £5 and £3; and pigs have one class in which the prizes are £3, £2, and £1. Other sections include dairy produce, honey, farm produce, poultry, etc. Entries close (except for poultry) on November 1 at single fees, and November 4 at double fees, poultry closing on November 6. Applications for entry forms should be made to the agricultural Superintendent, Leinster House, Dublin, stating the number of forms required, and in which class the exhibitor desires to enter.

I would remind breeders of hunters that the entries for Vol. II. of the Hunter Stud Book and Supplement close on Monday next, October 2, with the Secretary, Mr. A. B. Charlton, 12, Hanover Square, London, W.

Messrs. John Thornton and Co. announce the sale of a number of Sir W. H. Wills's pure-bred Shorthorns, to take place on Tuesday, October 17, at Coombe Lodge, Blagdon, Somerset, and on the following day, at Woodhouse, Almondsbury, Bristol, they will bring under the hammer fifty of Mr. E. Harwood's pedigree Shorthorns. Both sales will commence after a twelve-o'clock luncheon, and full details can be had of the auctioneers.

The 1906 Bath Horse Show has been fixed for Wednesday and Thursday, September 5 and 6, the entries closing on Saturday, August 18.

IMPORTANT TO FARMERS.—The best Farm Account Books are "WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK," with Preface by Clare Sewell Read; 72nd edition; 6s.; larger size, 7s. 6d. JARROLD'S IMPERIAL FARM ACCOUNT BOOKS, 3s. 6d.; JARROLD'S FARM LABOUR BOOKS, 2s., 2s. 6d., and 4s. 6d., post free. Lists of Game and Dairy Account Books, post free, of Jarrold and Sons, 10 and 11, Warwick Lane, E.C.—[ADVT.]



Notes and Jottings.

Brilliant days and frosty nights have characterised the weather generally during the past few days over a very large area of the United Kingdom. For general stock purposes it has been very favourable, but the cold snap at night seems rather to favour a probable early and severe winter. Seasons like the present should teach at least all farmers of mixed farms a valuable lesson with regard to the provision of extra food in the shape of catch crops or extra green crops on a few acres of tillage land. This, if not needed, can be converted into ensilage or dry fodder for use at some future time, and if needed will prevent the untimely sale of feeding cattle or young stock, and will increase their weight and value to an enormous extent.

A note of this kind has been given previously in these columns, and it is a note that will bear repeating many times. I am led to refer to the subject once more by having, during the past week, heard of some highly bred and good Shorthorn steers of a year and a half or more old being sold at about £8 each, and blue-grey crosses of the same age at 10s. a head less. These were being sold solely on account of shortness of feed owing to the dry weather having shortened the hay and straw crops upon these particular farms. Even in a dry time, vetches, lucerne, and several other forage plants will make a great bulk of food per acre, and thus help to tide over such times. Maize is a plant that might be much more commonly grown for such a purpose, and is both valuable and bulky. I saw a very heavy crop being cut on the 20th inst.

Writing notes about such low prices as those quoted brings to mind the petition of the Canadians to the English Government for a rescinding of the prohibitory regulation upon Canadian stores. What cheaper beast could anyone wish to have than such as those referred to at the prices named? Whilst travelling this week I also saw a large bill announcing the Government's reply to the Canadian petition referred to, and one paragraph in that reply, or rather in the petition, struck me as being worthy of notice. The paragraph I refer to runs thus: "That the statute prohibiting the importation of Canadian cattle into the United Kingdom should be repealed on the ground that Canadian herds are and have been free for many years past from those particular diseases against which the embargo was imposed."

It will be noticed it does not say "have been and are free from 'all infectious diseases,'" and it has been reported that some Canadian cattle suffer from other diseases not known in England up to the present, and that though not fatal diseases, would give a great deal of trouble and cause heavy expense if imported, which would be a certainty once our ports are again opened to all sorts and conditions of cattle from the Dominion. It is well that our new Minister is so practically acquainted with the troubles to which breeders of live stock would be liable with open doors to these stores, and that he maintains a firm stand against any relaxing of the present laws. Mr. Fellowes' plan of identifying himself so thoroughly with farmers and breeders in all parts of the country and ascertaining their views is just what is required in an ideal Minister.

Then the Government's reply to the petition also explains in a manner that should be satisfactory to both sides that the present system of prohibiting the importation of foreign—including Canadian—cattle is no detriment to any trade or business, and does not affect the consumer or producer adversely to any perceptible extent, and that an extensive business is being done in these cattle under the present restrictions in a manner that is proving most beneficial to all concerned. English farmers and breeders, we repeat once more, will do well to rear as many healthy and well bred calves as their farms and means will enable them to do, and to, as intimated in a note above, look well to the growing of a good volume of green fodder to assist in maintaining a heavy stock through a period of drought.

Several sales of pedigree cattle have taken place recently that prove to a great extent our most popular breeds of cattle. The Shorthorn always has stood first, the Hereford and Aberdeen-Angus breeds coming next in regard to averages and high prices, each of these three breeds in turn being very much above the prices of Red Polls, Sussex, or Devons, likewise any of the remaining lesser known breeds, and lesser tried ones. Though milking cattle of any note and on the market ready for taking into the milk-sellers' herds are getting dearer every day, and are now making high prices, yet the sales of pedigree stock of any of the milking breeds, when sold for breeding purposes, are, and have been for some time, very slow and disappointing.

At a recent show a class was scheduled in the cattle section under the title, "Fancy Cattle," and the exhibits in this class included Channel Island animals, and also some examples of what are known as Welsh Sheeted cattle, a breed that are scarcely known and are very few in number, and are in shape and general points very similar to the ordinary black Welsh, but in colour, instead of all being black, or with, perhaps, a little white underneath, or a slight white line along the back, have a milk-white band extending completely round the body from a little behind the shoulders up to the front of the hips, varying perhaps a little in some cases. The effect upon a group of them is very pleasing to the eye. They are quite an addition to the landscape in a nobleman's park, and are also extremely practically valuable.

Jersey cattle have been very much in demand recently as regards the female sex, owing to the scarcity of milk, many private households having run short in the supply of milk and butter, though the shortness of keep in July and August, and in such places where the family has been accustomed to Jersey produce, it cannot tolerate that of other breeds, hence purchases have to be made to keep the household going. For this purpose any satisfactory prices have been prevailing for animals of the breed that show a good flow of milk, whilst dry cattle and young stock, and also bulls of the same breed, have been and still are selling at prices too low down to be remunerative to the breeder or vendor.

The age to which some breeders keep old favourites is not commonly known, and not taken account of to the extent it might profitably be taken. A cow or a bull that remains faithful and productive to well on in the teens, and some even until after a score of summers have been passed, is perhaps the greatest recommendation that any herd can wish to have. It means that these animals have been profitable (for no one would keep them thus long if it were not so) it means that they have also been sound and most probably entirely free from tuberculosis, and it means, in a very great measure, that these same valuable properties have been bequeathed to and improved upon generations of cattle to come in almost countless numbers. There are cows in the country to-day that have bred as many as twenty calves each, and are still healthy and fruitful.

The Christmas shows are now fast looming upon us, and as farmer meets farmer each interested in the feeding line, and show stock in particular, almost the first question asked is, "Have you seen what so and so has got?" or "How has such a bullock or heifer gone on?" referring, perhaps, to some prominent animal in the junior classes at last Christmas shows, and purchased then for carrying on for further exhibition at the coming shows. Many of these cattle, it is known, have done remarkably well, and some excellent cattle have already been shown at some of the district shows, where classes are provided for fat cattle. Altogether, the probability is that the coming Christmas will witness quite as good animals as have been seen for several years past. There is not likely to be any falling off.

Aberdeen-Angus Sales in Scotland.

Tochineal.

To resume the thread of these sales where we were compelled to abandon it last week owing to exigencies of space, we will deal with the sale at Tochineal, Cullen, which took place on the Thursday, the animals offered being the property of the Countess-Dowager of Seafield, who sent from Cullen House nine cows, three two-year-old heifers, a yearling heifer, and two bulls; Mr. George Bruce, Tochineal, twelve cows, five two-year-old heifers, two yearling heifers, four heifer calves, and two bulls; Mr. William Wilson, Coynachie, six cows with their calves, four two-year-old heifers, and six yearling heifers; and Mr. Robert Forbes, Woodhead of Kinloss, who sent three cows, a two-year-old heifer, three yearling heifers, and a bull. All the four breeders have been for long ardent supporters of the Black Polls, and the stock offered was generally of a useful character, several of the animals being prizewinners at shows in the north-eastern counties. There was a good attendance of buyers, but trade was disappointing, and prices on the whole poor, considering the quality of the stock offered. The highest price of the sale was but 62 gs., which was paid for one of the Coynachie cows, and only twelve of the sixty-two animals sold during the day reached 30 gs. The following were the chief sales, the sellers being indicated by the name in parentheses after that of the animal:—

cows.

Portlethen and Morlich Herds.

On the following day the scene of the sale was Portlethen, near Aberdeen, where were brought under the hammer drafts from the herds of Mr. George J. Walker, Portlethen, and Mr. George Cran, Morlich. Mr. Walker's selection consisted of 11 cows, 5 two-year-old heifers, 8 yearling heifers, 9 heifer calves, and a four-year-old Erica bull; while Mr. Cran's consignment comprised 6 cows, 9 two-year-old heifers, 4 yearling heifers, and 3 heifers calves. Most of the stock was of fashionable breeding and all the animals were shown in the pink of condition. There was a large attendance of breeders and others interested, most of the representative men who had been at the three previous sales of the week being again present. Trade, however, showed no improvement, and once again buyers secured a lot of bargains. The Portlethen lot brought a total of £769 13s., or an average of £23 6s. 5d., while the average for Morlich was £28 12s. 2d., and the total was £629 9d. 6d. The top price for the cows was brought b the Morlich three-year-old Jemima LI., a daughter of Palgrave, which, with her heifer calf, went at 50 guineas to Sir George Couper, Hursley Park, Hampshire. She has been a noted prize-taker at North-Country shows, and was one of the prettiest representatives of the famous old Jemima family. She did not, however, secure the highest price of the sale, this being given for the two-year-old heifer, Jemima 56th, also from Morlich, and for her Sir George Cooper paid 56 guineas. A list of the chief lots is appended:

Millet 26752 (Portlethen), c. Jan. 28, 1898; s., Mailbag Mr. Smith 6s.

Aldbar.

The week's sales were brought to a conclusion on the Saturday with a joint sale at Aldbar, Brechin. In all, 61 head were forward, comprising 30 cows, 12 two-year-old heifers, and 19 yearling heifers. The Earl of Airlie's draft from Cortachy Castle embraced half-a-dozen cows, 5 two-year-old heifers, and 3 yearling heifers. Mr. George Willsher, Pitpointie, sent 10 cows, 2 two-year-old heifers, and 3 yearling heifers. Colonel M'Inroy, of The Burn, had 4 cows, 3 calves, a two-year-old heifer, and 4 yearling heifers. Mr. Chalmers, of Aldbar, had an entry of 3 cows, 2 two-year-old heifers, and 5 yearling heifers. Mr. James Kennedy, of Doonholm, has the only prominent herd of Aberdeen-Angus cattle in Ayrshire, and his lot, which included 7 cows, 2 two-year-old heifers, and 4 yearling heifers, made a very creditable appearance for a herd so much isolated from the recognised home of the breed. All the drafts contained well-bred animals, of high individual merit, and descended from some of the best-known families, including Ericas, Prides, Jemimas (of Morlich, Kinnochtry Princesses, Witches of Endor, Matildas, and other noted strains. The sale was another disappointing one, the prices obtained being on the whole the lowest of the week. Customers seemed to have got their wants pretty well supplied at the earlier sales, and the demand was very slack. The Aldbar herd came out best, bringing not only the highest individual price, but also the largest average. Details of the chief sales are appended

Mr. C. E. Huuter's Aberdeen Angus.

On Wednesday Messrs. Macdonald, Fraser, and Co. disposed of yet another Aberdeen-Angus herd, this time that of Mr. C. E. Hunter's, of Selaby, Gainsford, who, being the prospective Unionist candidate for Scarborough, is moving there, hence the dispersal of his well-known herd. Mr. Hunter took up the breeding of this class of cattle about ten years ago, using as a foundation a few well-bred animals purchased from the Ballindalloch herd, of which Evidence, among those put into the ring, was one. Opportunities for acquiring at once a number of highly bred Trojan-Ericas as were here offered but seldom occur, and the result was a large and representative attendance. Scottish breeders were well represented, and there were also observed many others from different parts of England. The condition of the animals gave general satisfaction, and several lots realised very high prices, the fifty-five head realising £1,926 4s. 6d., or an

average of £35 odd. A yearling heifer, Eyelid, of the Trojan-Erica family—the sire being Examiner of Selaby, and the dam Eyelash of Selaby—made the top price, 115 gs., the purchaser being Mr. Kerr, of Harviestoun. Eyelid was bred by Mr. C. E. Hunter, and was calved on April 4, 1904. She was third at the Royal Show at London in June last and first at Northumberland, Durham, and Yorkshire shows, in addition to being very highly commended at the Highland. The cow Estimation, another Trojan-Erica, was sold to Mr. Fenwick of Birtley for 112 gs. Estimation, calved April, 1902, is a son of Estimate of Selaby, by Hyperion of Selaby, and was bred by Mr. Hunter. She was second at the Royal this year, and at the same show in 1903 secured third place as a yearling, whilst at Northumberland County and other shows she beat all comers. Numerous other good prices were obtained, as will be seen from the following sale list:—

Mr. Clement Stephenson's Aberdeen Angus.

On Tuesday, Messrs. Macdonald, Fraser & Co., Ltd., sold by auction, at Balliol Farm, Long Benton near Newcastle, forty pure-bred Aberdeen-Angus, belonging to Mr. Clement Stephenson, the sale being necessitated by the herd having outgrown the accommodation. Mr. Stephenson, about twenty-five years ago, gained the distinction of being the first to introduce the breed into the north of England, and in the meantime he has produced many animals of national fame, and has been prominent among the prize-winners at our most important shows. It should be explained, however, that three years ago Mr. Stephenson discontinued the preparation of cattle for exhibition purposes, and that they have since been kept in as natural a breeding condition. Mr. Stephenson made use of Sir George Macpherson Grant's Erica bull "Englishman" in laying the foundation of his herd, and many descendants of that wonderful animal appeared in the ring. Other notable families, including the Jilts, the Brides, the Abbesses, and the Prides, were also represented. There was a large and representative attendance of breeders, but, as at the Scotch sale, prices were by no means so good as have been wished for, and some of the buyers undoubtedly got great bargains. Seventy-one guineas was the top price of the sale, and this sum was realised by Jovial, of Benton, which was undoubtedly the pick of the yearlings, and should distinguish herself in the showyards of next year. One of the Jilt breed, she looked the picture of perfection, and bidding for her was brisk. She ultimately was bought by Mr. J. J. Cridlan. Details of the other chief sales will be found in the following list:—

Sale of Lord Rothschild's Shorthorns.

Tring Park, the Hertfordshire seat of Lord Rothschild, has long been known for its pure-bred stock, many of our Colonial friends making Tring one of their first visits in this country, to see the various breeds maintained on this celebrated estate. At the sale of a portion of the herd of Shorthorn cattle on Tuesday, by Messrs. Thornton and Co., there was a representative company, and the cattle were well brought out in healthy breeding condition, many of them being fit for the dairy.

H.M. the King was the purchaser of one of the best cows and her calf in Orange Blossom 34th, bred by Mr. James Hobbs, at 60 guineas. Among other purchasers might be mentioned Mr. C. Adeane, Mr. James Hobbs, Mr. Robert Hobbs, Mr. R. W. Hudson, and Mr. Vernon. The last-named gave 50 guineas for Remembrance, a red and white two-year-old, for exportation, and Mr. A. E. Unna purchased several good lots to go to Chili. The highest price for bulls was 115 guineas, at which sum Mr. W. E. Horne secured the roan yearling Friar, by Lavender Lord. The fifty-head catalogue realised £1,536 13s. 6d., or an average of £30 14s. 8d. A sale list is appended:—

Sale of Mr. R. Wood's Shorthorns at Clapton.

A portion of the herd of Shorthorns bred by Mr. Rowland Wood at Clapton, Thrapston, Northamptonshire, was sold by auction on Wednesday by Messrs. Thornton and Co., in the presence of a large and representative company. The herd is of long standing, and has a good reputation in the Midland counties, not only for its good dairy properties, but for its young bulls. Sixteen bulls sold from it this year have averaged £82 18s. 6d., and prizes have frequently been won at Birmingham both at the spring and autumn sales. Lady Barrington Butterfly 24th, the first cow offered, was the dam of the first prize bull at Bingley Hall last March, where he was bought by Mr. D. Maclennan for

550 gs. She is a very fine cow, but, being ten years old, she only made 34 gs. to Mr. J. C. Stockburn. Mr. Casares, buying for the Argentine, paid the top price of the sale for Village Rose, bred by Messrs. P. A. and G. T. Evans; she quickly ran up to 85 gs., and goes out of the country at that figure. Mr. J. Miller paid 80gs. for May Flower 25th, a very fine two-year-old red heifer, while Mr. W. Scott and Captain Reeve both gave 50 gs. for superior animals. The best price among the bulls was given by Mr. J. A. Preece for Lilford Connaught, sent by Lord Lilford for sale. He is by Mr. Woods' Prince Paul from Connaught Rose, a cow that has already bred two prize winners.

Some of the best prices were as follows:—

COWS AND HEIFERS.

	Gs.

Sale of Lord Southesk's Highland Cattle.

The most important sale of Highland cattle held for some time past took place on Wednesday, when the herd belonging to the Earl of Southesk was brought under the hammer at Kinnaird Castle, near Brechin. The catalogue included almost the whole of the animals in the fold, only a few of the older cows being retained. The collection offered for sale was one of quite exceptional merit—the quality of the young cows and heifers surpassing, in the opinion of a high authority, any sale lots that have been put into the market since the Taymouth dispersion upwards of forty years ago. The majority of the cows and three-year-olds had also the advantage of being early calvers. Prior to the sale, which was conducted by Mr. Paton, of Messrs. Macdonald, Fraser, and Co., Perth, there was a luncheon, at which Lord Camperdown presided. In replying to the toast of his health, Lord Southesk said they knew how much he regretted that he should have to put so many of these fine cattle on the market, but, as no doubt they were aware, he was retaining a small number in order to continue the fold in the future.

The sale was characterised by great activity. It was early evident that many of the visitors had come to buy, and the best stock was in brisk demand. Apart from a lot of bullocks which were disposed of at the close of the proceedings, the breeding cattle sold numbered seventy-eight, and they realised £3,791 11s., making the very satisfactory general average of £48 12s. 2d. The three-year-old heifers brought the best average, namely, £83 12s. 4d.; in the sections for cows and for two-year-olds the highest figure of the day was obtained, £210 being reached in each of these lots. The cows were an extremely interesting collection, and they were eagerly sought after, especially the early calving ones, and in quite a number of cases even the late calvers were well run up. The highest price was obtained for the red brindled four-year-old Princess Morella, which was second at the Dumfries Highland as a two-year-old and first as a three-year-old at Perth. She is as pretty a specimen of the breed as one could desire, and for her there was a keen competition between Mr. Carnegie of Stronvar and Sir George Bulloch's representative; she ultimately went to Sir George's fold at 200 gs. This sum was also given by Sir W. O. Dalgleish for the two-year-old heifer Princess Almira, the winner at the Glasgow Highland in July. She is full sister to King Alaric, and is built in the fashion that the old Taymouth fanciers liked, being very wide and deep in body and close to the ground. Several other three-figure prices were realised, and for details of these we must refer our readers to the following list of chief lots:—

Cows.—Lady Erna, 8 years—Mr. Graham of Airthrie, 28gs.; Desdemona, 11 years—Mr. J. D. Fletcher of Rosehaugh, 28 gs.; Lady Sheila, 9 years—The Duke of Atholl, 51gs.; her bull calf—The Duke of Atholl, 34 gs.; Lady Marian, 7 years—Bulloch's Trustees, Megarnie, 33gs.; Lady Clara, 7 years—Mr. Carnegie of Stronvar, 105gs.; Lady Dois, 8 years—Sir George Bulloch of Rum, 38gs.; Lady Mary Malvinia, 6 years—Bulloch's Trustees, 130gs.; her heifer calf—Mr. Robertson, Scorrybreck, 35gs.; Lady Dorian, 6 years, and bull calf—Sir George Bulloch, 75gs.; Lady Maud, 9 years—Sir George Bulloch, 75gs.; her heifer calf—Mr. Douall of Logan, Wigton, 20gs; Lady Vera, 8 years—Mr. Sopper, Dunmaglass, 25gs.; Cassandra, 9 years—Mr Douall, Logan, 34gs.; Valeria, 8 years and bull calf—Mr. Sopper, Dunmaglass, 33gs; Princess Morella, 4 years—Sir George Bulloch, 20gs; her heifer calf—The Duke of Sutherland, 31gs.; Princess Selina, 4 years—Mr. Thomson, Strathaird, 42gs.; her bull calf—Mr. Sopper, Dunmaglass, 24gs; Princess Alma, 4 years—Mr. Carnegie, Stronvar, 66gs.; Princess Lilian, 4 years, and heifer calf—Bulloch's Trustees, 100gs.; Princess Helen, 4 years, and bull calf—Sir Donald Currie, Glenlyon, 46gs.; Madam Rhona, 4 years—Bulloch's Trustees, 65gs.; Pomona, 4 years—Mr. Sopper, 70gs.; Fauktine, 10 years— Sir Alexander Baird of Urie, 38gs.; Drusilla, 9 years—Lord Midleton, Strathcarron, 60gs.

THREE-YEAR-OLD HEIFERS.—Princess Millicent—Mr. Carnegie of Stronvar, 135gs.; Princess Corona—Mr. Thomson, Straithaird, 75gs.; Princess Caledon—Mr. Macdonald of Dunach, 65gs.; Princess Monica—Sir George Bulloch, 190gs.; Princess Dorothea—Mr. Carnegie of Stronvar, 38gs.; Princess Valdina—Mr. Thomson, Strathaird, 190gs.; Princess Guenora—Mr. Carnegie of Stronvar, 42gs.; Princess Delia—Lord Middleton, 57gs.; Thora Malvina—The Duke of Sutherland, 41gs.; Princess Violet—Mr. Douall of Logan, 32gs.

TWO-YEAR-OLD HEIFERS.—Catalina—Mr. Sopper, 31gs.; Princess Dilecta—Mr. Douall, 24gs.; Princess Flora—Lord Middleton, 42gs.; Princess Almira—Sir W. O. Dalgleish, of Errol Park, 200gs.; Princess Rachel—Mr. Macdonald, Dunach, 36gs.; Princess Valona—Lord Middleton, 50gs.; Princess Varna—Mr. Carnegie, of Stronvar, 44gs.; Princess Dinora—Mr. Macdonald, Dunach, 26gs.; Princess Mariana—Mr Carnegie, of Stronvar, 36gs.; Princess Matilda—Sir Donald Currie, 33gs.; Donnach Buidhe of Dunlossit—Mr. Sopper, 46gs.; Proiseag 6th of Dunlossit—Mr. Sopper, 37gs.

YEARLING HEIFERS.—Lydia Lucy—Sir W. O. Dagleish, of Errol Park, 100gs.; Princess Gallia—Mr. Thomson, Strathaird, 72gs.; Princess Valetta—Sir Donald Currie, 30gs.

BULLS.—Calum Ban of Atholl, 10 years—Mr. Stephen, of Cholderton, 40gs.; Prince Colin, 3 years—Mr. Robertson, Scorrybreck, 30gs.; King Alfred, yearling—Mr. Sopper, 35gs.; Gillemichel, yearling—Mr. Graham, of Airthrie, 22gs.

Sale of a Famous Herd of Sussex Cattle.

The celebrated herd of Sussex cattle bred at Ashurst for the past 130 years without a break, was brought under the hammer at Eatons Farm, Ashurst, on Friday, by Mr. Harry Jas. Burt, of Steyning, in conjunction with Messrs. King and Chasemore, of Horsham. There was a large attendance of buyers, for, in addition to the cattle, the horses, etc., were sold. As there was no reserve some great bargains were obtained. The highest price for a cow was but 19 gs., while for heifers the best figures were 31 gs., 22 gs., and 21 gs., the two stock bulls only realised 18 gs. and 15 gs., whilst the yearling bulls went at prices ranging from 7½ gs. to 19½ gs.

THE TENS OF THOUSANDS of users of MOLASSINE MEAL should see that their stock have a portion in every feed all the year round, not simply as a condiment when an animal is out of condition, or occasionally as a fillip. MOLASSINE MEAL is the most valuable and economical food, displacing all condiments, and should be given in place of the same weight of oats, beans, grain, cake, or other feeding stuffs. Sold by all corn merchants and the MOLASSINE CO., Ltd., 36, Mark Lane, London, E.C. —[ADVT.]

Horse Notes.

The accounts of the cavalry manœuvres which appear in the morning papers are not very satisfactory to the heavily burdened taxpayer. The *Yorkshire Post*, commenting on the state of things, says: "The youth of a very large proportion of the horses upon which the regiments are mounted is stated to be the cause of many of the defects noticed. It is the old story of Treasury parsimony which compels the Army Remount people to put immature horses into the ranks, and the blame for the disappointing performances of the cavalry when tested as a division must not be laid altogether to the debit side of the regimental officer's ledger. The number of sick and sorry horses in the camp lines is far greater than it is pleasant to see."

It is no part of my duty here to criticise a Government Department or the policy of a Government, or else I might point out where there is more wastefulness than parsimony, and that the Remount Department, instead of coming first, as it ought to do, has to put up with the leavings, as it were. Ours is the most expensive and probably the worst equipped army in the world. What is the use of these autumn manœuvres when the cavalry, even in the carefully guarded language of men of optimistic tendency, is admitted to be a failure. For "disappointing performances" is only another way of spelling that ugly word. What would be the result of these "disappointing performances" if the war were real instead of mimic is too awful to contemplate. As it is we are wasting thousands in autumn manœuvres which cannot be carried on thoroughly with such an important arm as the cavalry in an inefficient state from want of being properly mounted.

I have frequently pointed out in these columns the absurdity of expecting farmers to breed more or less good-looking, serviceable, and sound horses and sell them at from £40 to £45. But it is quite possible for the Government to get remounts which in the long run would be much cheaper than those they now waste the public money over in such airy, light-hearted fashion. It does not require a genius to know that no four-year-old, or even no five-year-old, is fit to carry a trooper with all his impedimenta—and a trooper without his impedimenta might as well be at home in war time. It would be interesting to know how many four-year-olds are now in the ranks struggling under a burden they are quite unfitted to carry.

No one for a moment contradicts the statement that working immature horses means early and permanent breakdown. The hunting man whose riding weight is from 14 to 15 st. knows better than ride a four or five year old horse to hounds, and he seldom, if ever, rides a horse hard that is under seven years old. If he does he is pretty sure to regret it. Yet, notwithstanding the fact that theory and practice agree to the letter on the subject, immature horses are still drafted into the ranks by thousands. And it must not be forgotten that the trooper in marching order, and with all his accoutrements, rides considerably more than 15 st. So with using immature horses an early breakdown of a large proportion is assured, and this means an incalculable loss to the nation. And what is worse, our cavalry is not of the value it should be when it is wanted.

This is another factor, also, which is against us getting full value of work even out of such horses as we do get. They are generally bought out of condition, and they are drafted into the ranks before it is possible to get them properly conditioned. Here, again, is a frequent cause of breakdown.

Now, it stands to reason that a mature, sound horse will cost much more than the Government can afford to pay for remounts. A hunter six or seven years old, even if he will not pass a veterinary examination, will generally bring considerably over the regulation price paid for

remounts. But there is another way of going to work—one which is so obvious, and one, moreover, which is so economical if worked with proper care and by efficient officers that it is a wonder that it has never been adopted.

Horses under this plan would have to be purchased at from two to three years old, and it is sufficiently obvious that if the maximum price were £40, a much better class of horse could be purchased at that age than at the present age for £10 more money. These young horses would first have to be sent to properly arranged depots where they would be more generously fed than young horses are usually on farms. They would also be broken-in there; and it stands to reason that if they are drafted into the regiments at five years old—and they might be sent to regimental work in the October after they were five years old—they would be much better fitted for their work than the average six-year-old horse is under present conditions. The two years' generous keep with light work, would bring them to the ranks in such condition as few troopers are in two years after they have been drafted to a regiment.

Of course, there would be the cost of keep to add to the prime cost; but anyone knows that horses are cheaply kept if there are a great number of them together. Care would naturally have to be taken about the contracts, or we might have a repetition of South African mismanagement, but, with ordinary care, the quantities of forage that would be required should ensure individual horses being kept at the minimum cost. But this would be more than made up for by the increased efficiency of the horses, and it is quite certain that if this plan were adopted, we should not hear so much about "sick and sorry horses in the camp lines," when the troops are engaged in the pleasant task of a mimic campaign, in which the conditions are infinitely less trying to horses than in serious warfare.

It is interesting to learn that Sir James Boucant, who has written a book on the Arab horse, to which I shall hope to refer at a later date, has been trying an experiment, or rather is trying an experiment in horse breeding. Holding an opinion which—whether there is sufficient reason for it or not—prevails in many quarters, that the thoroughbred of the present day is of no use except for racing, he is crossing Australian mares with the Arab. This, at any rate, seems a much more likely plan to succeed than the attempt to manufacture the half-bred hunter sire. It is impossible—indeed, no one wishes to say that the Arab is not possessed of many virtues which the modern thoroughbred scarcely possesses, though, perhaps, the Arab is scarcely the superlative animal that his ardent admirers claim, and there are some points in which the thoroughbred is superior to the Arab, even as a sire of ordinary stock.

One curious thing about the Arab is, that those who have had to do with him a great deal hold extreme opinions about him. There are some who hold him the gamest, the most docile, and the most comfortable conveyance of all horses. Once get them on the subject of Arabs, and they quickly use up all the laudatory adjectives in the language. Their staying power is inexhaustible—they can travel on for ever; their manners are of the best, etc., etc. To others, again, the mention of an Arab is like a red rag to a bull. There is nothing too bad to lay to his charge. They are upright shouldered, they shake you to death in their canter, and though they will go on for a long time at a pace, it is such a slow pace that it is really no trial of a horse's staying power; they have no mouths and no manners. Both sides, evidently, are prejudiced; but I think there is a great deal too much said of the superior staying qualities of the Arab. That he can stay longer in the desert is probable, because the English thoroughbred is not acclimatised to the climate and the sand. But in this connection it must not be forgotten that, when the late Khedive of Egypt matched his best Arabs with English horses for a race over the desert, in which conditions as to distance and climate, etc., were supposed to be all in favour of the Arabs, they were beaten by miles, and that by a very moderate English plater.

I have never ridden an Arab myself, so I cannot speak from personal experience. It is probable that there are many Arabs that are pleasant to ride and many that are the reverse. There are certainly a large number that have not good shoulders as an English horseman understands good shoulders. But about the excellence of their legs and feet there is no mistake, and it is here that they may well improve our half bred stock. I once had a mare that was third in direct descent from an Arab, and she seemed to me to possess many of the good properties and some of the bad ones of her Arab progenitor. She was not quite a comfortable ride, she did not carry her head quite in the right place, and she was a bit of a puller. She could gallop, and she could jump, and she could stay from Monday morning till Saturday night. She was a curiously bred mare, her sire being a so-called half-bred full of Knight of St. Patrick blood, her dam was by a thoroughbred, and her granddam by an Arab from a Scottish trotting pony—one, very probably, of the Douglas breed, but of that I cannot be certain. She was the best of the breed, the others being only moderate. Her stock—she bred me three foals—was only moderate, as, indeed, might have been expected from what was, after all, a "chance" mare.

THE LOOKER-ON.

Sale of Hackneys at Elland.

The stud of pedigree Hackneys belonging to Mr. R. G. Ingham, of Hullen Edge, Elland, was offered for sale on Wednesday by Messrs. Ramsden, Scarborough, and Son. There was a large attendance and a good demand. The five first horses made an average of over 55½ gs., and five unbroken youngsters reached an average of over 28½ gs. The following were the best, but prices did not rule very high:—

	Gs.
May, s. Bessemer ..Mr. D. Cullingworth, Dewsbury	31
Terrington Adelaide, s. Goldfinder VI., ex Adeleve Mr. D. Cullingworth	53
Watton Bloom, s. Gentleman John, ex Bloomer Mr. D. Cullingworth	46
Bay Dignity, s. Bessemer, ex Dignity Mr. R. Ford, Driffield	73
Roan Dignity, s. Roan Danegilt, ex Dignity Mr. R. Ford	75
Brown mare, s. Petrous, ex Watton Bloom Mr. James Garnett, Elland	35
Terrington Signature, s. Goldfinder VI., ex Terrington Signa .....Mr. Whitwam, Huddersfield	45

Notes and Jottings.

Amongst the sheep exports noticed last week was a consignment of Wensleydales to Antwerp. It is not often that we have to chronicle the export of stud sheep to this country; therefore it is a matter of gratification to find that there is a demand for sheep of this or any other British breed in Belgium.

The Wensleydales are not much known in the South of England, but in the northern counties and South Scotland the breed is much appreciated. The cross between these rams and the ewes in the districts where they are used results in the production of some high-class mutton-producing sheep. The Wensleydales are an excellent breed of mutton sheep; they have a very large proportion of lean meat, with little or no waste fat. The fleece is also of considerable value, being in the best flocks wonderfully even and uniform. These merits are therefore most valuable in cross-breeding with any class of ewes, and those who are interested in the breed contend, with many good reasons, the support their contention, that all that is required to secure a larger share of the export demand is for the breed to get wider known and tested.

It is satisfactory to note that another consignment of stud sheep—Shropshire ram lambs—have been sent to South Africa. Up to the present time the South African demand for stud sheep has certainly not been up to the expectations entertained at the conclusion of the war. However, from information recently received, there are many indications which give hope for a better demand in the near future.

Another good consignment of the Kent or Romney Marsh sheep have been sold for export. The vendor in this case was Mr. J. D. Maxted, of Lower Garrington, Bettesbourne, near Dover. The selection was made by Mr. W. W. Chapman for Mr. R. Chatterton, who was buying for the Argentine. The number of sheep selected was ten yearling rams of choice breedings, six being by home bred rams and four by rams from the well-known flocks of Messrs. W. Millen and A. Amos.

Once again the Lincoln breed has secured a world-wide advertisement. The London daily papers, or many of them, had an announcement in on Tuesday last that the large sum of 650 gs. had been paid for another ram of this breed. The vendors of this ram were Messrs. Needham, whose grand old flock is one of very high repute indeed.

The prices that have been paid for the leading Lincoln rams this season are certainly in excess of any in former years. Amongst the prices known to have been paid for yearling rams are 1,000 gs., and five at 300 gs. each, from Messrs. R. and W. Wright, one at 450 gs. and another at 500 gs. from Mr. H. Dudding, one of Mr. W. B. Swallow at Lincoln Fair at 200 gs., and now one at 650 gs., besides several between 100 gs. and 200 gs. Surely this is a record no other British breed can equal. The ensuing volume of the Kent or Romney Marsh flock book will be one of great value to the breed, for it contains a record of export trade none of its predecessors can equal. An advance copy enables us to state that during the year ending September 8 last no less than 265 rams and ram lambs and 57 ewes were exported. The corresponding figures for the previous year were 99 rams and ram lambs and 9 ewes.

This record is one that goes far towards proving how much the export demand for these sheep has grown in recent years, but it is also one that might with advantage be added to every other flock book. A reference to the flock book of the Kent Society shows not only the names of all the breeders who have sold sheep for export and his country to which they have been sent, but the individual names and flock book numbers of every sheep, ram, or ewe exported. This information is most valuable to those who are contemplating buying sheep for export, for it enables them to find out in the most ready manner full information as to the pedigree of all the exported sheep, another full information as to where they were bred, etc. More than one export buyer has expressed his strong approval of this useful record, and there is no doubt with the growth of the export demand the value of this unique record will be more and more appreciated.

Amongst the most important sale fixtures for the ensuing week is the Annual Ashford Show and Sale of Registered Kent or Romney Marsh Rams which will take place on Friday next in the Cattle Market at Ashford. The entry comprises 364 yearlings and older rams, representing the picked consignments of nineteen different flocks. The utility of these combination sales cannot be more strikingly shewn than by this fact for any Colonial or export buyer who attends this sale, will be able with one journey and in one day, to see and compare the picked yearling rams of the year from this large number of flocks. The value of this to the Colonial and export buyer is very great, particularly to many who are here for only a short time, and are consequently unable to find time to visit any large number of flocks.

The recent number of the "Journal of the Board of Agriculture" contains much valuable information. We find from one of its many carefully compiled tables that during the twelve months ending August 31st, 1904, 292,565 live sheep were imported. This total, compared with the corresponding figures for the same period in the previous year, shews a decrease of 21.05 per cent. The declared value of these imports shews a decrease of 22.49 per cent, when compared with the corresponding total for 1904.

This reduced importation of live sheep is an important matter to the home flock master, mainly because it is his competition of these sheep that is most severely felt. The reason for this is that such a thing as fresh killed American or Canadian mutton is a commodity one never sees or hears of. Consequently, as all these imported sheep must be slaughtered here on arrival, there is only one conclusion possible, namely, that the whole of the mutton so imported is sold to the public for that which it is not, namely, home grown and fed mutton.

This is a point well deserving the notice of all who are interested in the home-production of mutton. Leaving out of consideration every other phase of the question, no reasonable man can justly object to some means being taken to prevent imported sheep from being sold other than as imported, and thus enable those whose means are limited to take full advantage of the cheaper food these imported sheep should supply, provided their flesh was sold for what it actually is.

Mutton, imported as such, whilst it has undoubtedly a great influence of the market value of mutton, does not so severely compete with the home grown article, because, coming as most of it does in either a frozen or chilled condition, it has, of necessity, to be sold as such. The quantity imported during the twelve months ending August 31st last, was 5,661,813 cwts. or just over 2 per cent. more than in the same period of the pre-

vious year, and the declared value of the same shews an almost similar increase, namely, 2.37 per cent.

Sheep Fairs and Sales.

Alford.

The annual sheep fair at Alford, promoted by the local Bull Fair Committee, took place on the 16th inst., when there was a good show of sheep and plenty of buyers at satisfactory prices. Prizes were offered for the two best Lincoln Longwool shearling rams, and for the best pen of not less than 20 lambs—any breed. The former awards were given to Messrs. J. W. Farrow and Sons, of Strubby, for two splendid animals by Strubby Woolpack III., 8074. In the latter class premier honours were placed with a very promising pen of half-bred lambs, the property of Messrs. J. Dales and Son, of Farlesthorpe. Mr. B. Simons sold Messrs. Farrow and Sons' prize winning rams to Mr. W. W. Wells, of Withern, and Mr. J. Hurdman, of Mareham-le-Fen, for 15½ guineas and 12 guineas respectively, whilst Mr. L. W. Stephenson's reserve ram went at 18 guineas, and another at 17 guineas, to Mr. Kirkham, of Louth (for Mr. Savage, of South America).

Mr. G. F. Barron's Border Leicesters.

The flock of Border Leicester sheep belonging to Mr. G. F. Barron, Thomastown, Auchterless, Aberdeenshire, was dispersed on the 15th inst. at the Kittybrewster Auction Mart, Aberdeen. Fair prices were obtained, and the demand on the whole was regarded as satisfactory. The flock was made up of 150 sheep, which included 23 shearling rams, 23 tup lambs, 24 gimmers, 39 ewes, and 24 ewe lambs. The shearling rams averaged £4 17s. 7d., the chief prices being £6 5s., £6, £5 15s., £5 10s., and £5. Tup lambs sold from 30s. to £5 2s. 6d., gimmers from 52s. 6d. to 62s. 6d., one-crop ewes from 50s. to 72s. 6d., two-crop ewes from 45s. to 57s. 6d., three-crop ewes from 47s. 6d. to 50s., aged ewes 47s. 6d., and ewe lambs from 32s. 6d. to 40s.

Caistor.

The annual September ram fair, at Caistor, was held at The Top House Market on the 16th inst., there being a good show of rams, also a fair show of ewes, lambs, and gimmers. Private sales showed lambs to fetch from 32s. to £2; ewes, 40s. to 55s.; and gimmers, 50s. to 60s. The ram sales were all productive of good prices, Messrs. Dickinson and Riggall (Louth) disposing of the Croxby, Bigby, and Walesby rams, and Messrs. Calthorpe and Briggs of those of Horkstow and North Kelsey. Mr. H. E. Davey's Croxby flock obtained top price, his best ram (by Otby Active A. 7516) realising 32 gs., paid by Mr. G. Marris, of Kirmington. Mr. Davy's average for 25 rams was 11½ gs.; Mr. H. Abraham's 12 Walesby rams averaged 10 gs., top price 14 gs.; Mr. E. Abraham's Otby flock of eight averaged 9½ gs.; and Mr. J. B. Nelson's Bigby rams (10) averaging 12 gs. each. Mr. W. B. Swallow's Horkstow flock of six shearling rams averaged 13⅔ gs., top price 15 gs., paid by Mr. G. Marris (Kirmington). Messrs. Atkinson and Sons' North Kelsey flock of eight rams averaged 8 gs., top price 11½ gs.

Mr. R. Lambe's Southdowns.

One of the finest flocks of Southdown sheep that belongs to Mr. R. Lambe was sold at East Blatchington Farm, near Seaford, on Wednesday, by Messrs. Drawbridge and Ansell, of Haywards Heath. It was a pure-bred hardy flock, comprising ewes, stock ewe lambs, rams, and ram lambs, and the animals were recommended as being a very healthy lot with size, good wool, and hardy constitutions. Lately Mr. Lambe has parted with a good deal of his land for the purpose of golf links, and under these circumstances, found that it would be practically impossible to keep a good flock. In all the lots exceeded 150, and were offered without reserve. There was a representative attendance of breeders, and bidding was brisk, some fairly good prices being realised. Full-mouth ewes fetched from 46s. to 48s. each, six-tooth ewes 48s. to 52s.; four-tooth ewes 54s. to 60s.; two-tooth ewes 54s. to 65s., broken-mouth ewes 26s. to 40s., stock ewe lambs 31s. to 34s., rams 42s. to 52s. 6d., and ram lambs 31s. 6d. to 63s.

Lewes.

Lewes annual sheep fair was held on the Downs on Thursday, when only 3,000 sheep were penned, this being the smallest number within the recollection of those who have known the fair for the last fifty years, and 2,000 below last year's total. A larger number has been seen at what is known as the second fair, which follows a week later. There was, however, no falling off in the quality, which, all round, is very good. The great majority of the sheep were, of course, of the Southdown breed, but there were also a few pens of the Welsh variety. Buyers were present in force, and the prices obtained were regarded as highly satisfactory all round. Prices for rams ranged from four to seven guineas each, ewes fetched from 32s. to 50s., and lambs from 25s. to 34s.

Newingreen.

Messrs. W. and B. Hobbs held a most successful sale of Kent and half-bred sheep and lambs at Newingreen, Kent, they disposing of upwards of 5,300. There was a good attendance and brisk bidding, and the prices were, in the opinion of many, as high as at the first sale. The quality in a good many cases was not quite so good as at the previous sale, but practically everything was cleared. The Kent lambs of medium quality generally made about 25s. 6d., but several better lots were sold at 30s. 6d., 31s., and 32s., and one pen of fifty Kent ewe lambs of Mr. A. Mowbray made 33s. 6d., the top price of the day. Kent wether lambs made up to 31s. 6d., and half-breds up to the same figure. Among the old sheep, Kent ewe tegs made from 45s. to 53s., and half-bred tegs up to 49s. 6d. Kent wether tegs realised up to 44s. 6d., while a capital run of one-lamb ewes made from 52s. to 54s. 6d. Three-lamb ewes made from 40s. to 46s. 6d., the latter figure being reached by a pen of Mr. J. E. Quested's ewes

Sale of Welsh Sheep.

One of the largest sales of Welsh sheep ever held took place at Brynffynon, near Rhyl, on the 15th inst., and was conducted by Messrs. Frank Lloyd and Sons, of Wrexham. The sale was held in connection with the dispersion of the Brynffynon flock, formed by Mr. W. Conwy Bell, and comprised 166 pedigree Welsh sheep, and was on the authority of the auctioneers the largest sale, with record prices, of Welsh sheep yet held in the country. Rams made up to 10½ gs., shearling rams 4¼ gs., ram lambs 8 gs., shearling ewes 3¾ gs., stock ewes 5 gs., and ewe lambs 4½ gs. each. Mr. Frank Lloyd also offered a number of Ryeland sheep, which sold up to £5 2s. 6d. per head, whilst a number of cross-bred Ryeland ram lambs were sold at prices ranging from £2 12s. 6d. each.

Wilton.

At Wilton Sheep Fair about 39,000 sheep were penned, and there was a big attendance of buyers. Prices realised were not up to the high standard of last year, being 1s. or 1s. 6d. below, but the general run was satisfactory to sellers. Owing to the shortage of sheep on the farms a keen demand for working lambs was generally anticipated, and these lambs sold readily at from 25s. to 32s. a head. Meaty lambs made up to 42s., fat wether lambs 44s. to 48s., and butchering lambs of exceptional weight and quality up to 65s. 6d., this price being obtained for fifty of the lambs which, shown by Mr. H. Hitchings, won the Earl of Pembroke's cup. The remainder of the pen of 100 made 64s. 6d., whilst other lots sold from 60s. 6d. downwards.

As usual, Messrs. Waters and Rawlence held a sale of Hampshire Down sheep, the catalogue comprising no less than 18,076 head and 280 ram lambs, and, with a large attendance of buyers from many distant counties, an excellent clearance of the 266 lots of store sheep and fat lambs was effected—three lots only being unsold—at prices generally allowed to be well in advance of Britford and other recent fairs. Regular draft ewes made from 43s. 6d. to 52s.; over-yeared ewes fit for breeding, 36s. 6d. to 44s.; grazing ewes, 27s. to 43s.; two-teeth ewes, 45s. to 51s. 6d.; mixed four-teeth and six-teeth ewes, 42s. to 48s. 6d.; best ewe lambs, 40s. to 45s.; smaller ditto, 34s. to 39s. 6d.; prime fat wether lambs, 46s. to 65s. 6d.; lighter weights and working wether lambs (many nearly fit for the butcher), 35s. 6d. to 45s. 6d.; best mixed lambs, 40s. 6d. to 48s.; smaller ditto and culls, 23s. 6d. to 37s. The trade for ram lambs was slow, and with a glutted market prices ruled low. Those sold for Mr. J. Flower made from 4 gs. to 7 gs.; Mr. A. F. T. Drake, 3 gs. to 8 gs.; Mr. H. J. Hulse, 3 gs. to 3½ gs.; Mr. J. H. Dibben, 4 gs. to 7½ gs.; Mr. C. Coles, 4 gs. to 10 gs.; and Mr. W. C. Young, 4 gs. to 5 gs.

Other Sheep Sales will be found on page 366.

PIGS.

The Outbreak of Swine Erysipelas

The Norwich and District Butchers' Association recently wrote to the President of the Board of Agriculture with respect to the outbreak of swine erysipelas in the Cambridge fens, and asked what steps, if any, had been taken by the Board to prevent the spread of the disease, the members of the association being extremely anxious that it should be confined to the district in which the outbreak occurred. In reply, the following letter was received:—

"Board of Agriculture and Fisheries,
"4, Whitehall Place, London, S.W.
"September 14, 1905.

"SIR, I am directed by the Board of Agriculture and Fisheries to advert to your letter of the 5th inst., with reference to the outbreak of swine erysipelas in the Isle of Ely, and I am to acquaint you that, whilst the Board are causing a full inquiry to be made into the matter, they are satisfied, from the information already before them, that the reports which have appeared in the newspapers, to which you refer, present an exaggerated statement of the case, and that there are no grounds for believing that the disease will spread from that centre throughout the country.

"Swine erysipelas is a disease which has been recognised in England for a number of years. Outbreaks of a serious nature occasionally occur, but those are exceptional. On the other hand, isolated cases frequently appear, and result in the death of one or two swine before the disappearance of the disease.

"The disease has, unfortunately, recently prevailed to a considerable extent in the immediate neighbourhood of Chatteris, and although in the great majority of instances it has been of the nature usually met with in this country, in a few instances the outbreaks have been characterised by exceptional severity. There is every reason to hope, however, that in these cases the disease has been brought under control.—I am, sir, your obedient servant,

"A. W. ANSTRUTHER,
"Assistant Secretary.

"The Secretary, the Norwich and District Butchers' Association, 27, St. Andrew Street, Norwich."

Sale of Pigs at Southampton.

The great success of Mr. Alfred Brown's Berkshires and Large Whites at the Christmas shows undoubtedly attracted a number of breeders to the Hill Farm, Southampton, on Thursday last, when about 100 head of Berkshires, as well as Large and Middle Whites, were sold by auction by Messrs. Thornton and Co. The arrangements made for the visitors' comfort was quite up to date, and the four rows of lock-up pens in which the pigs were shown to great advantage, was well worth seeing.

There was a good company, and the sale (after a bountiful luncheon, at which Mr. Arthur Hiscock presided) was most satisfactory, several of the best pigs being purchased by Dr. Paul de Gruyter to go to Germany. High prices were also paid by Messrs. N. Bengafield, W. J. Chick, L. Cross, Arthur Hiscock, F. H. Jennings, and Mr. L. Wethers for the best lots. The sixty Berkshires averaged £7 8s. 7d., the Large and Middle Whites £5 8s. 1d., and the total for the ninety-four head sold, £629 9s. 6d. We give below a sale list of the highest priced lots with purchasers' names and prices:—

BERKSHIRE PIGS.

		Gs.
Sow, Velmore Princess 9218	Dr. Paul de Gruyter	14
Sow, Velmore Empress 9217	Mr. L. Cross	11

Sale of Middle Whites.

About eighty pigs from the Wharfedale herd of pure-bred Middle Whites, the property of Mr. W. C. Paget, were brought under the hammer at Harewood on Wednesday by Mr. R. Burton. There was a good attendance of buyers, and some most satisfactory prices were realised. The highest was 13½ gs. for a gilt, and prices generally ruled from 2½ gs. to 12 gs.

Cardiff Horse.

During the past few years the great horse show at Cardiff has been held in anything but favourable weather, so that to experience two wholly fine days as those of Wednesday and Thursday was, indeed, a welcome change to the promoters. They had got together a very good show in every respect, and they deserved the fine weather and very large company of spectators; in fact, the attendance was nearly 21,000 in the two days, and the financial result of this show should make good some of the poor rewards of the previous two or three years. Sophia Gardens once more were placed at the disposal of the executive, and, the turf being in excellent condition, the saddle and harness classes had the benefit. The going was especially good in the hunters' competitions and the jumping events. The programme which, as usual, was well spread over both days, was a capital one—full of interest—whilst the high standard of quality which has placed Cardiff in the very first rank of shows of the kind—was more than maintained. The judges were:—Hunters: Colonel Ricardo, Donnington Elms, Newbury; C. P. Hall, Woburn, Bedfordshire; Romer Williams, Newnham Hall, Daventry. Hacks, Hackneys, and harness horses: S. B. Carnley, Alford, Lincs.; D. S. Carr, Carluke, N.B.; Hy. Moore, Burn Butts, Cranswick, Hull. Cart horses: T. Chapman, Orchard, Portman, Taunton; T. Ewart, Dunsmore Home Farm, Rugby; H. R. Hart, Cannock, Staffordshire.

Hunters were the first to come under consideration on the first day, and the division opened with the young stock. Eight yearlings made up a fair class, but scarcely up to the like event at the recent Bath show, as demonstrated by the fact that Mr. J. L. Nickisson, of Swindon, who took first with his chestnut filly Success, only secured the reserve position at the Bath display. Mrs. Brockley, with her chestnut filly, Princess of Wales, was second, and in this entry the lady possesses a capital recruit for her well-known stable. The two-year-olds made up a very nice class indeed, and the Bath rivals again met, namely, Mr. J. A. Mullens, of Longcross, Surrey, with Paleface, a chestnut filly; Mr. Tatem's Penylan Ormerod, and the Moor Grove Stud Company's bay gelding Sportsman. The judges differed from the Bath selection, which, it will be remembered, placed Paleface at the head of the class and Mr. Tatem's entry second; but last week the latter had the pull, the Longcross stable's representative being placed third, Sportsman being second. The three-year-olds attracted a good deal of attention, and once again Mr. Mullens could not get his Bath verdict endorsed, Sheen, which won in the Abbey city, being now placed second, and Mr. J. H. Stokes's Dewische being selected for the leading position. Four-year-olds were a very good lot, both in numbers and quality. Mr. Stokes, of Market Harborough, however, held the field with his black-brown gelding Ebony, standing 16 hands, his old opponent, Mr. J. Drage, of Northampton, being second with Klondyke, a handsome chestnut, which took a like prize at the Bath fixture. Mr. John Drage's Klondyke repeated his Bath success by leading the light-weight four-year-olds and upwards, Mr. J. H. Stokes being second with Goldmint II. The middle-weights were well represented, and all looked equal to carrying anything between 13 and 15 stone. In this class Mr. John Drage was well to the fore with a bay gelding named Cricket Ball, Mr Stokes's Kildare coming a good second. Mr Stokes beat all comers with his 16 hands chestnut gelding Madrid in the class for heavy weights, thus endorsing the Bath judgment.

The hacks or riding horses commenced with Hackneys shown in saddle; most of them were, however, more suitable for harness than for riding purposes. In the class 14.2 and not above 15.2 Mr Arthur Few on provided the winner in Prince Edward, a chestnut with fine action which held the same position at Buxton. His immediate follower was Mr. W. B. Tubbs's Morning Glory, a mare of good action, which afterwards carried off the premier prize in the Hackney breed class. The next class was for Hackneys 13.2 and not above 14.2. Mr H. Frank's Tissington Kit Cat was first there, having better action than Mr. T. Morgan's Majestic. In ponies not above 13.2 Mr. George Griffith's well-known Lady Go Bang defeated Mr. Tatem's Penylan Eva, a very nice goer, showing a lot of style. The Hackneys shown in saddle, the property of residents in South Wales and Monmouthshire, were a good lot. The open class for single harness horses exceeding 15.2 brought out a very good lot, and was probably one of the best classes in the show. Mr. A. E. Evans was first with Princess, a mare of excellent hind and fore action, who went at a great pace. Miss Ella Ross came next with Rowton Blackthorne, a winner of many prizes, now beginning to get a little stale, and not going with the same fire as formerly.

Another grand class was that for single harness mares and geldings, 14.2, and not above 15.2. Nothing came forward to lower the colours of Mr. Hartley Batt's celebrated Heathfield Squire, who made a grand show. Close up was Mr. S. R. Tenant's Authority, a good-looking bay, which was a winner at Richmond. The next class was for cobs. Mr. C. Radcliffe, Cardiff, came to the front with Phœbe Walton, an exceedingly fine goer, who won at Bath. She has a somewhat better hind action than Mr. Frank Tissington's Kit Cat, who divided Phœbe Walton from the same owner's Marie Tempest. Mr. W. B. Tubbs was first in the class for brood mares with Morning Glory, who had previously taken a second prize in the saddle. Mr. James Howell came next with Campanula, who has an exceedingly good action, using her hocks as well as her knees. Mr. Walter Briggs was first in the class for hackney foals with St. Alban a chestnut by St. John, and Mr. Lysaght second with a filly by Garton Duke. In the class for yearling colts by registered hackneys, Mr. David Evans was first with Midland Relish, and Mr. W. Saint second with a black colt by Revolver. Mr. W. J. Tatem's Penylan Amt, sired by Majesty, just managed to score in the class for foals over Mr. James Howell's chestnut by Athil, whilst for two-year-old colts Mr. A. Fewson was to the front with a fine upstanding chestnut gelding by St. Thomas, Mr. James Howell taking second place with an exceedingly smart chestnut by Rosador. The local lightweight hunters, or rather the district embraced by South Wales and Monmouthshire, were fine testimony to the stamp of horse the sportsmen within the confines take unto themselves, whilst the heavyweights brought out a number of horses of stamina, and more than upheld the credit of the district.

The heavy horses were undoubtedly the best ever seen at Cardiff. A specially good class was that for dray or cart horses, in which Mr. John L. Brooks was first with Noble, an immense brown gelding standing 17.2 in height, which defeated Mr. Peter Coats's Clifford Victor, a shire of considerable merit. In the class for three-year-olds and upwards, above 15.2, Sir A. Henderson exhibited Argent, which won with something in hand from Mr. R. W. Hudson's Hendre Jeanette, a five-year-old by Prince Harold. Some good animals were also shown in the tenant farmer classes, Mr. Lewis's Gaer Pearl won in the class not above 15 hands. She is a compact little brown mare with plenty of power In the class for yearling cart colts Mr. Taunton's Red Lynch, a brown, by Lockinge Forest King, had an easy win from Mr. F. E. Muntz's Umberslade Combination. Sir A. Henderson headed the yearling cart fillies with Buscot Fantasy. Mr. F. Muntz being second with Umberslade Bounce, bred by Lord Llangattock. Mr. Peter Stubbs was again to the front in the class for two-year-old colts with Blagdon Banner, while in the fillies Mr. Thomas's Black Bell, sired by Hendre Baronet, defeated Mr. G. H. Williams's Miss Garfield, a fine two-year-old filly, who will probably be heard of again.

The jumping competitions probably are more keenly appreciated at Cardiff than at any show in Great Britain; the entry is always a splendid one, and the performance can always be relied on, and such proved the case last week.

The awards of the championship were watched with keen interest by the large company. The first to be decided upon was for hackneys, shown in saddle, exceeding 14 hands, and not under four years old. Just under a dozen were ridden out, their action being admired, and in a couple of instances something like a turn of speed was shown. There were many noted ring performers, and the first prize in the end went to the part of the country which claims to be the home of the hackneys Yorkshire the distinction falling to Mr. Arthur Fewson, of Hull, with Prince Edward, a dashing-looking chestnut, handsome, doubtless, in harness, but no saddle horse from the important point of view of comfort. Mr. W. Burnell Tubbs was second with Morning Glory, a chestnut mare; and Mr. John Kerr, M.P., reserve with Lady Dandy, a brown mare.

The heavyweight hunters were next dealt with, and it was a class which was a pleasure to look upon. The well known Market Harboro' stable was represented by the chestnut, Madrid, and the brown, Baronet, both geldings; and when matters were sifted the only possible rival was Mr. J. Drage's Carlow. The champion prize and second award went to Mr. Stokes's horses. Baronet especially did well. Second honours went to him, and he faced the fences in a most workman-like manner. Carlow was held in reserve.

The spectators also enjoyed to the full the decisions for the champion hackney harness class. The celebrated Heathfield Squire was not to be denied, and the judges were obliged to award him the coveted distinction, Mr. Arthur Evans, Wrexham, being second with his roan mare, Princess, and Mr. H. Le Marchant, London, in reserve with The Only Way.

The lightweight hunter champion was Mr. Stoke's beautiful bay, Whisky, Mr. John Drage's Klondyke being second, and Mr. J. H. Stokes's Gold Mint II. being held in reserve.

Westmorland.

The annual show of the Westmorland Agricultural Society at Kendal has gained for itself the reputation of being one of the best one-day shows, especially of horses, in the North, and that held on Thursday certainly went a long way in justifying this remark; in fact, with the exception of the centenary show of 1899, that held last week was the best on record, both as regards quality and quantity of exhibits, whilst the "gate" was a big one. How the entries compared with previous years will be seen from the following table:—

	1905.	1904.	1903.	1902.
Cattle	154	142	161	109
Sheep	218	256	231	210
Pigs	6	9	12	16
Agricultural horses	113	92	143	115
Light horses	182	214	191	136

The Shorthorns were the feature of the show, as only natural, seeing the great reputation Westmorland has for the excellence of its Shorthorns. Westmorland upholds its reputation of providing many Royal Show and Yorkshire winners, and some of them or their progeny were at Kendal last week from such herds as those of Mr. Handley, of Greenhead; Mr. Atkinson, of Overthwaite; and Mr. Bateman, of Halton. Bulls have been the specialty of Mr. Handley's herd, and on Thursday he won again, both his well-known white Heather Bloom, which is not yet three years old, and his yearling Royal Favourite possessing all the characteristics of the strain, although in the opinion of some Heather Bloom's colour (white) is a drawback compared with the more popular roan, in other respects he comes up to the highest standard. On the other hand, Mr. Atkinson seeks to maintain the excellence of the female strain with which his father gained so many successes years ago, and the beautiful, straight-lined animal with which he took the first honour in the breeding stock class would be difficult to excel in any ring. Other notable exhibitors here were Mr. John Morton, Mr. T. Park, Mr. R. Parker, and Mr. J. Wood, each of whom gained well-deserved recognition. A gratifying feature of this department of the show was the excellent quality in the tenant farmers' classes.

The standard of horses, both light and heavy, is also high at this show, and the size of the classes and the quality of the stock showed that owners continue to devote serious attention to the subject. Among the hunters both the first and second prize for brood mares with foal at foot went to Mr. Greenwood, of Ingleton, but the Hunter Improvement Society's silver medal was awarded to the three-year-old brown gelding, General, belonging to Mr. William Brown, of Lancaster, while Mr. Dalston, of Ewbank, carried off the Hackney Horse Society's silver medal. It was satisfactory to find that in the heavy horse classes the Shires and Clydesdales were separate, and not grouped together as they sometimes are. As some judges have prejudices in favour of one breed, and some in favour of the other, it is generally felt that the two cannot be judged together satisfactorily. There were good specimens of each type, and their separation from one another was an aid in the discovery of their respective merits. As usual, the Hon. Victor Cavendish was well represented in the section for Shires, and it was to one of his exhibits from Holker that the judges gave the Shire Horse Society's medal. Mr. Hodgson, of Milnthorpe, also added to his honours at every show this season, and Lord Henry Bentinck and Mr. George Rigg, of Cartmel, were other successful exhibitors. It was remarkable that the best group of horses of any breed were Clydesdales, belonging to Mr. Mansell, of Penrith, a group of hunters shown by Mr. Brown, of Lancaster, coming next. A special silver medal offered by the Society for the best hunter or hackney went to a fine four-year old chestnut hackney shown by Mr. McKibbin, of Windermere.

All breeds of sheep were well represented, particularly those suitable for a mountainous district. The best of them were in the classes for rough fell and half breds. There were sheep in the whitefaced classes that produced more wool,

but they were not in any sense more worthy of attention.

The judges were:—Cattle—Mr. H. Dudding, Stallingborough, Lincolnshire; Mr. Jas. Blundell, Kirkham, Lancashire. Light Horses—Hunters—Mr. George Dove, Newtown St. Boswells, N.B.; Hackneys—Mr. Thos. Black, Dumfries. Heavy Horses—Shires—Mr. Peter Blundell, Kirkham; Clydesdales—Mr. W. R. Trotter, Stokefield-on-Trent. Sheep—Mr. Robert Wright, Lincoln; Mr. Alfred Mansell, Shrewsbury; Mr. Wm. Milner, Lancaster; Mr. Hugh Carruthers, Gilsland. Pigs—Mr. J. Hawell, Thirlmere.

Compton.

The twentieth annual show of horses sired by stallions belonging to the Compton Stud Company, was held in most favourable weather at Horsington Park on Tuesday, and attracted the usual large attendance of visitors. The entries showed a very satisfactory increase on those of last year, 218 animals being entered as compared with 187. The increase was largely in the foal class. The numbers were:—Brood mares, 55; foals, yearlings, etc., 86; hacks and hunters, 69; harness horses, 7. The standard of quality displayed in the majority of classes was decidedly in advance of that of last year, although a large number of good horses and well-known prize-winners have been sold out of the district. There was a slight falling off in the number of lightweight hunters, and this has been the general experience at exhibitions of horses this season. The animals shown, however, were nearly all good, and some exceptional quality was in several of the entries displayed, as was also the case in other classes. During the past year the progeny of the Compton sires have met with great success in the prize rings of local and other shows, and it is evident by the young stock the Stud is still doing a most useful work in the district and has remarkably improved the stamp of hunter bred within its area. The prize list is appended.

Prize List.

Brood Mares (Tenant Farmers).—Six free services value £15 for half-bred mares with foals at foot: Mr. D. Shingleton, Milborne Port; Mr. T. H. Miller, Oborne, Sherborne; Mr. C. Ricketts, Morcambe; Mr. T. H. Miller (3).

Brood Mares (open): 1, The Hon. Mrs. McLean, West Hall, Sherborne; 2, Mrs. A. R. Poole, King's Hill, Dursley; r, Mr. T. H. Miller; h.c., Mr. T. H. Miller; Mr. E. J. Legg, Keynsham; Messrs. Harding and Co., Minehead.

The Hunters' Improvement Society's gold medal or £5, with bronze medal for the best registered hunter brood mare in foal or with foal at foot: The Hon. Mrs. McLean; r., Mrs. A. R. Poole.

Foals (open).—Five prizes of 30s. each for the five best foals sired by one of the thoroughbred stallions: Mr. J. Day, Huxham; Shepton Mallet; Mr. T. H. Miller (2), Mr. T. Ayles, Kington Magna; Mrs. McLean; r., Mr. T. H. Miller.

Yearlings (open).—Colts or fillies sired by one of the thoroughbred stallions: 1, Mr. R. Hoddinott, Gillingham; 2, Mr. W. Bown, Yeovil; r., Mr. T. Tucker, Gillingham; h.c., Mr. J. Hinks, Fifehead Magdalen; and Mr. T. Tucker.

Two-year-olds (open): 1, Mr. E. Ranson, Cattistock Farm, Dorchester; 2, Mr. J. Day.

Three-year-olds (open): 1, Mr. E. Munckton, Aller, Langport; 2, Mr. W. Bown, Yeovil; r., Mr. J. Benett-Stanford, Tisbury; h.c., Mr. R. B. Taylor, Langport.

Ponies (open): 1, Mr. H. C. Derrett, Buckhorn Weston; 2, Mr. J. Benett-Stanford; r., Mr. J. Benett-Stanford.

Hunters' Improvement Society's Silver Medal for the best filly: Mr. T. Tucker; r., Mr. E. Munckton.

Medal for the best youngster in Classes 5, 6, and 7: Mr. R. Hoddinott; r., Mr. W. Bown.

Hacks: 1, Mr. G. Ford Tilley, Huntspill, Bridgwater; 2, Messrs. Flower and Mattick, Radstock; r., Mr. G. Ford Tilley; h.c., Mr. J. Parsons, Sherborne, and Mr. J. Eames, Curry Rivel.

Light-weight Hunters: 1, Mr. H. Mead, Drayton, Taunton; 2, Mr. R. M. Collins, Langport; r., Messrs. Flower and Mattick; h.c., Mr. G. Ford Tilley.

Heavy Weights: 1, Mr. W. H. Munckton Mudford, Yeovil; 2, Mr. W. Curtis, Stalbridge; r., Mr. T. H. Miller.

Four-year-old Light Weights: 1, Mr. L. H. Taylor, Chippenham; 2, Mrs. Ware, Sandford Orcas; r. and h.c., Messrs. Flower and Mattick.

Four-year-old Heavy Weights: 1, Mr. R. Hoddinott; 2, Mr. W. W. Osborne, Corsham; r., Mr. C. Clarke, Bruton; h.c., Mr. E. Field, Wincanton.

Hunters' Improvement Society's silver medal for hunters of any age: Mr. R. Hoddinott; r., the Hon. Mrs. McLean.

Harness Cobs: 1, Mr. C. M. Moody, Evercreech; 2, Mr. H. E. Derrett.

Harness Horses: 1, Messrs. Adams Bros., Sherborne; 2, Mr. A. C. Clarke, Shepton Mallet; r., Mr. H. Wardlaw, Sherborne.

The usual sale took place on Wednesday, Messrs. Tattersall being the auctioneers. Trade was fairly good, but prices did not rule particularly high, the following being the best:—Mr. W. W. Osborne's chesnut gelding, Sir Herbert, 80 gs.; Mr. A. C. Clarke's brown gelding Rescue, 70 gs.; Mr. R. Cuff's brown gelding Carbine, 70 gs.; Mr. J. Viles' dark brown gelding Nelson, 60 gs.; Mrs. Hoare's brown gelding Rainbow, 60 gs.; Mr. R. Hoddinott's chesnut gelding Aladdin, 67 gs.; Mr. T. H. Miller's chesnut mare Marga, 50 gs.; Mr. E. Feed's grey gelding Mariner, 45 gs.; Mr. A. E. Abbott's chesnut gelding Silver Tail, 45 gs.; Mr. G. F. Tiller's bay mare Elegance, 45 gs.

SHOWS IN BRIEF.

Easingwold.

The Easingwold Agricultural Society's Show, held on Wednesday, was the best ever known in the 40 years' history of the society; the entries were in excess of any previous years, the weather was all that could be desired, and the attendance far in excess of any previous show. The president for the year is Viscount Helmsley who, with Lady Helmsley and a large house party from Newburgh Priory, the residence of Sir George Wombwell, visited the exhibition during the day. The fixture has the advantage of falling practically at the end of the show season, and this circumstance may be in large measure responsible for the fact that the 224 entries in the horse classes comprised the pick of the animals shown at the county and larger shows. The quality was uniformly high in all sections. Cattle were also a strong lot both in point of quality and numbers, several pedigree herds of repute being represented. The competition in the sheep classes was limited to a few well-known breeders in the locality, the Leicester and Lincoln breeds being represented by some capital pens, whilst there was also a good entry of Wensleydale sheep.

Hay Horse.

Seeing that it clashed with the big event at Cardiff, it was feared that the entries at the Hay Horse Show on Thursday would be somewhat fewer than usual; but this was not the case, there being over 500, which number is above the average; the quality, too, was good, and the attendance of visitors on a larger scale, so that the Society placed yet another all-round success to their credit.

Kington Horse.

The annual exhibition of the Kington Horse Show Society, held at Kington on Tuesday, was a most successful one, the entries being 40 more than last year, the weather fine, and the attendance of visitors on a large scale. The show itself was a good one, agricultural horses being particularly strong. The champion prize in this section went to Messrs. Edwards for a two-year-old cart filly, Little Mary, and the Shire Horse Society's silver medal for the best Shire mare, filly, or filly foal was awarded to Holcombe Starlight, the property of Mr. Peter Stubs. Hunters and Hackneys also made a good display, whilst a popular item—the jumping trials—were very good, an dwere watched with the usual great interest by the visitors. It may be mentioned here that, at a meeting of the committee of thee society, held during the week, Mr. Bernard Philpin, who has acted as chairman of the committee for the last twenty-four years, was presented with a handsome silver salver bearing a suitable inscription and an illuminated album signed by the subscribers, an containing a complimentary address. Mr. Stewart Robinson, who made the presentation, said in reviewing the history of the show from its commencement two names stood out as intimately associated with that history. He referred to the names of Captain Bacon and Mr. Philpin. He believed the show was originated by the former, but the development of the show up to its present high standard had been under the administration of Mr. Philpin. Mr. Philpin made an appropriate acknowledgment of the gifts.

Stokesley.

The show of the Stokesley Agricultural Society, held on Thursday, was a most successful one, no matter from what point it is viewed. To begin with, there were 1,919 entries, or 155 more than in 1904, and only 85 short of the record; then the quality was on the whole the best ever seen there, whilst, finally, the attendance of visitors was the best on record. Thus the show was a success from beginning to end. As usual, most of the classes were open, but there were competitions limited to the Cleveland district, and the townships of Bilsdale-Kirkham, Bilsdale-Midcable, Bilsdale-Westside, Rievaulx, Bransdale, Farnsdale, and Rosedale. Shorthorns particularly excelled, surpassing some of the former displays at Stokesley. Mr. George Harrison, of Gainford, had a singular series of triumphs, carrying off five first prizes and a second premium. Sheep, more especially cross-breds, were very meritorious. In the heavy horse section the judges had some splendid material before them; the breeding stock was excellent, whilst hunters, taking the section throughout, made a very nice collection. The feature of the horse section was, however, the marked improvement in the quality of the Cleveland bays and coach horses.

Warwickshire Hunt.

The most noticeable feature of Warwickshire Hunt Horse Show is the great improvement shown each year in the quality of the exhibits, thus testifying to the good work done by this fixture. At that held on the 15th inst the quality was all round good, and the entries more satisfactory than in some previous years. The young stock was considered remarkably good, especially in the hunter section, and the competition in the agricultural classes was very sharp, the quality being uniformly high. Ten of the 34 classes were reserved for farmers occupying under 100 acres of land, and in these, too, the entries were of a useful type.

By Lupulin.

Home Notes.

Worcester Hop Fair.

After a year spent amidst the noisy bustle of the Borough, it is a real treat for the weary and probably disappointed trader to find an excuse to take a country journey in his recognition of the date (September 19) of this annual assembly of the Midland hop growers. And a pleasant journey it is, through the verdant meadow lands surrounding classical Oxford, past the graceful bell tower of Evesham, with all the lovely wealth of fruit and other products of that famous garden vale, until the view of the Malverns arising in massive bulk and picturesque outline from the fertile plain tells the traveller that he is nearing Worcester. Alighting at Shrub Hill, we are immediately conscious that we are breathing an atmosphere richly charged with recollections of historical interest and hoary antiquity. The narrow streets bordered by quaint half-timbered houses, and trodden by rosy-cheeked rural folk, remind us of the old-time story of the battle between King and Commons and the victory of the Puritans which consolidated English freedom. The noble Edgar Gate leading to the Cathedral Close brings up thoughts of still more ancient days, and we look up from the banks of the shining Severn flowing peacefully below to the glorious and perfect Gothic details of the great church surmounted by its exquisite tower, and muse, if we have time to spare, upon the varied scenes of which it is the silent yet eloquent witness.

But, as the practical aspect of life pursues us even amidst these restful surroundings, we must make our way down the High Street, and passing the Shire Hall, within the walls of which we find pockets of hops invading the space usually occupied only by Cromwellian armour and cannon, with other reminiscences of the great fight, and we are soon at the hop market, crowded to-day with sturdy growers busily engaged in discussing the prospects of the trade in view of the exceptionally bounteous crop they have gathered this year. Even here we have another reminder that we are but successors of a long line of men who have frequented this fair for centuries past. We cannot fix the exact date of its foundation, but the City Charters carry us back to the reign of Queen Mary, and as we have abundant evidence that in the days of Bluff King Henry VIII. the use of hops in brewing beer was recognised and sometimes condemned by various legislative enactments, we may fairly conclude that hops were included in the business of the fair, which the citizens were empowered to hold by their Charter in 1554. By an Act of Parliament passed in the reign of George II. a building previously erected by the City for the housing of the poor was authorised to be used for a hop market, with the proviso that the profits should be devoted to the relief of the poor. Thus the institution continues to our own day, the Hop Market Guardians having enlarged their warehouses and generally improved their property, until they now possess a handsome modern hotel, with a range of offices surrounding the Market Square; and both growers and merchants have the satisfaction of knowing that the funds provided by their transactions are carefully handled and wisely bestowed in the promotion of good charitable work.

Having indulged in this brief retrospection, we are glad to be able to speak of the fact that, judging by last Tuesday's experience, the interest in the hop fair has not abated. All available space in and about the Hop Market Hotel was crowded from early to late. Some anxiety to find purchasers was a feature of the day. The smaller growers were especially pressing in their desire to sell, consequently buyers were more or less indifferent, and took advantage of the circumstances to make very low bids. Some of the poorer samples did not realise over 30s., but the main business for good hops was done round about 40s. to 50s. Any sample that was attractive in colour was readily taken at the latter figure, and here and there a very choice lot secured 56s. It goes without saying that these figures cannot be remunerative to growers, however bountiful may be

NOVA SCOTIA.

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.

the yield of their yards, and I am not sorry to hear that many of them prefer to wait the results of the completion of the harvest, concerning which it is not improbable that important reductions will be effected by many acres being left to blow away.

I understand that samples of growths cured by the most modern processes—i.e., by hot-air instead of open fires—were very favourably considered by expert buyers. Although hops thus treated lose a little of the glossy face generally desired, the rubbing down of the cones proves that the essential constituents of oil, lupulin, etc., are present in greater proportion, and, therefore, that the flavour and the real brewing value are considerably enhanced. Experience appears also to be showing that there is actual economy in this method, not only in its prime cost of working, but in the increased weight secured by the retention of the volatile oils. I trust that these points may be kept in view by Midland growers, whose welfare has interested me for many years past. The fallacious ideas concerning the keeping qualities of Worcesters and Herefords are being removed from the minds of buyers, by recent experiments, and analyses have demonstrated that the richest English hops can be grown in the Midland districts. Growers have, therefore, only to hang on to the old City motto, "Semper fidelis," to secure and retain a leading position in the English hop industry, as long as that industry is permitted to endure.

The Borough.

My observations during many visits paid to factors' show rooms this week have not impressed me favourably concerning the amount of current business. The boards are covered with samples giving evidence of abundance of supply, buyers are here and there present discussing and criticising, but there is absence of real energy, which suggests enquiry as to its cause, eliciting the general response that the country trade is quiet, that brewers are not very ready to entertain offers, and that consequently the hops already taken over remain in merchants' hands. This is far from satisfactory from the growers' point of view, because it necessarily means continued depression of values and difficulty of realisation. There is, moreover, a further explanation. It appears that too large a proportion of the hops now on offer are either diseased or so badly discoloured as to be unattractive. In the true interests of all concerned these should not have been picked. Their sale at 25s. or 30s. can only bring serious loss to the producer, and their existence must tend to debase the general tone of the trade. It is very evident that sound, coloury, well-managed samples are comparatively scarce. Such qualities are no sooner exposed for sale than they are taken up by buyers, and, doubtless, if the market could, by any process, be cleared of all inferior lots, a healthier condition would speedily be established. Already there is a firmer feeling concerning these more select samples, although the prices at which they are selling is by no means commensurate with their real value calculated upon the cost of production. Good yearlings are also in fair demand, but at figures much below the expectations of holders. Therefore we cannot yet accept the present position of the trade as being otherwise than unsettled and uncertain, and we must wait for the actual results of the completion of the harvest before we can attempt to anticipate the future course of events.

From the Country.

I have many and various reports. I am glad to hear that some growers have determined to leave a considerable quantity of hops to be disposed of by nature. Their experience of the market, as far as it has gone, must convince them of the wisdom of such policy. In any case it is clear that more than sufficient hops will be available for the year's requirements, and I trust that planters of all grades will now carefully consider the situation, taking into account the abundant growths of America and the Continent, and decide to limit their output by any legitimate means, unless, in case they can guarantee that the whole of their crops are first class in quality and colour. It is only by such methods that I can see the possibility of any definite improvement in our trade. At present there is practically no foreign competition, as prices abroad are above our own. There is, therefore, room for substantial advancement at home, and wise action on our part will enable us to benefit by it.

Foreign Notes.

America.

Recent news from the U.S.A. does not throw any new light on the hop situation, and it will be far more satisfactory when we can obtain reliable figures, resulting from the completion of the harvest. In the meantime, it would appear, from details to hand concerning the picking experience in New York State, that it is hardly probable that early estimates will be reached. In Onconta, the yield thus far does not go beyond about 75 per cent. of last year. From Waterville I learn that growers do not expect to get more than 60 per cent., and from Cherry Valley district not more than 80 per cent. of last year. Reports from Coblerkill say that planters are everywhere disappointed, their hops not being up to expectation, either in size or weight. Prices paid to growers have ranged from 18 to 20 cents, and it seems to be decided that the latter figure will be accepted for good qualities as the opening currency, this price representing cost in London, about 94s. per cwt., plus merchants' profits.

Belgium.

The rapid progress of the harvest, under favourable weather, points to its speedy completion. The yield thus far surpasses all previous calculations. The first free hop market held at Assche, September 12, was numerously attended by growers, brewers, and merchants. The custom of presenting prizes for the best hops exposed for sale was continued, awards of merit being given to nearly all the lots, these being subsequently sold at 45 to 60 francs. The knowledge of the heavy crops in every district has calmed down the Brussels market, 1905 growths being now quoted as low as 35 to 40 francs (28s. to 32s.) per cwt.

France.

It is now estimated that the crop will exceed 70,000 cwt., which is nearly 50 per cent. more than that of last season. Values at Dijon (Burgundy) for first qualities are quoted at 50 to 60 francs (40s. to 48s.) per cwt.

Nuremberg.

Buyers have become more numerous at the market since the middle of September, and sales increased as the hops arrived and drying improved. These amounted to 2,400 bales, and business was quite brisk. Rain, however, fell during the next few days, and the day's sales fell to 700 sacks. At last Thursday's market buyers were again in full force, and sales amounted to 200 bales, in spite of wet weather. Export trade was brisk, as well as for inland trade. Arrivals from the country amounted to 1,800 bales, by rail 300. With regard to the quality, it is noteworthy that prime quality are in demand, and are going at good prices. First quality market and mountain hops realised 48s. to 55s., several lots 57s. and 60s.; medium qualities are sold at 38s. to 45s., so-called export hops at 30s. to 35s. There is a great demand for Spalt Siegelgut, especially the lighter kinds from the district are well-developed in the cone, and are fine aromatic hops, and are much liked. These fetched 60s. to 70s., and even 75s. The drying is, however, not quite up to mark. Most of the hops that arrive come from Hallertan, Wirtemberg, Baden and Alsace are, however, represented. Daily arrivals from 600 to 800 bales. First quality foreign hops are not easily got rid of at prices quoted hitherto. Sales in other qualities are slow, but prices remain firm. Special qualities realise more than quoted price. Fine Tettnangs fetched the unusual price of 98s. The tone of the market is quiet. Price quotations as follows:—Market hops, 30s. to 50s.; Mountain hops, 48s. to 60s.; Wirtemberg, 50s. to 85s.; Hallertan Siegel, 60s. to 80s.; Hallertan, without Siegel, 45s. to 72s.; Baden, 60s. to 82s.; Spalt district, 90s. to 95s.; Spalt, 70s. to 85s. A few marks extra for specially selected hops.

Mr. T. A. Scarlett, of 22 and 23, Market Street, Edinburgh, the well-known potato-raiser, will hold his annual potato inspection on Saturday next at Chancelot Gardens, where practically every variety of potato is grown. Here the potatoes will be lifted and tested on Saturday, and Mr. Scarlett expects to show new potato-lifters and dressers at work. Messrs. Councillor Wight, Jas. Hope, Harry Hope, M. G. Wallace, Thos. Elder, A. L. Drysdale, McHutcheon Dobbie, R. Paton, Jas. Gray, John Spier, Professors Hunter, Bruce, and Berry, and others, have intimated their intention to be present, and a profitable and pleasant gathering is anticipated.

Utility Poultry Club's Laying Competition.

The Committee of the Utility Poultry Club state that owing to Miss Yates, the manager of this year's four months' competition, having been appointed poultry instructor to the Lady Warwick Agricultural College, the competition will be held at Studley Castle, instead of Royston.

The whole of Miss Yates's poultry plant will be removed to Studley, and in every respect, with the exception of the venue, the competition will be conducted in the same manner as if it had been held at Royston.

A Sale of Poultry.

An unreserved sale of about 600 head of pure-bred Sussex poultry, the property of Messrs. E. and H. Russell, of Broomham Farm, Chiddingly, and comprising the speckled, red, white, and light Sussex varieties, was held in Lewes Cattle Market on the 19th inst. All the birds were of well-known prize strains, and included all Messrs. Russell's prize-winning birds at the Royal, Tunbridge Wells, and Sussex County shows this year, and the International and other leading shows last year. There was a large attendance, but although bidding for the special lots was very brisk, many went at very low prices for pure-bred poultry.

A light Sussex hen which won first prize at the Royal Show this year and similar awards at the Tunbridge Wells and Sussex County shows, fetched 3 gs., while another hen which was first at the international show at Alexandra Palace last year and second at this year's Sussex County show, changed hands for £2 10s. In the speckled Sussex class a sum of 57s. 6d. was paid for the cock which took second prize at this year's Royal Show, and 55s. was paid for the cock which gained the first and champion prizes at this and last year's Sussex County shows.

Apart from these special lots, prices in the speckled Sussex class varied from 11s. for six hens to 3 gs. for five pullets and a cockerel; in the red Sussex class the highest figure was £4 10s. for four hens and a cockerel; prices in the light Sussex class ranged up to 3 gs. for three pullets, and in the white Sussex class the best price was 26s. for four hens and a rooster.

Carlisle Latter Fair was held on Tuesday, when, as usual, there were a number of bullocks and heifers on the Sands, but buyers were scarce, and trade slow at £6 to £11 10s. for heifers, and £6 5s. to £8 10s. for bullocks. Hetherington's Auction Company held a special sale of feeding sheep and lambs and Border Leicesters and Down rams at their Mart on the Sands. There were about 6,000 penned. Buyers attended in good numbers, and a good trade was experienced at a rise of 1s. to 2s. apiece. The following were the prizewinners:—Border Leicester Shearling Rams.

1, Mr. Wood, Bank (sold for £7 10s.). Pair of Border Leicester Shearling Rams.—1, Mr. Bell, New House (£5 10s. to £5 5s.); 2, Mr. Wood, Bank; 2, Mr. Kirkbride, Howgill (£5 10s. and £5). Pair of Lambs.—1, Mr. Wilson, High Head Farm (£4 17s. 6d. and £4 10s.); 2, Messrs. Faulder, Oakbank (£5 5s. and £4 17s. 6d.).

AUCTION SALES.

TO HAY CONTRACTORS, MERCHANTS, STOCK OWNERS AND OTHERS.

IDLEIGH COURT FARM, ASH, NEAR WROTHAM, KENT.

About 2¼ miles from both Fawkham and Meopham Stations, S. E. & C. Rly.

MESSRS. DANN & LUCAS have received instructions from F. R. Stoneham Esq., to SELL by AUCTION on WEDNESDAY 4th OCTOBER 1905, at 3 o'clock precisely, on the premises, in Lots, about 240 tons of EXCELLENT UPLAND HAY in ten stacks, containing some good samples of Meadow, Lucerne, Rye Grass, and Trifolium Hay of this and previous years' growth.

The Stacks are all situate close to good hard roads with a Two Miles of Longfield Railway Siding, S. E. & C. Rly., whence the Hay can be conveyed to the London Markets and elsewhere. The Hay has been grown in a high upland district and should recommend itself to Hay Merchants and Stock Owners who require Hay of sound quality.

May be viewed at any time previous to the sale. Mr. Lakehurst, at the Farm will show the Lots if desired

Catalogues may be obtained at the principal Inns in the neighbourhood, at the Farm, and of the Auctioneers, Dartford, Kent, and 23, Budge Row, Cannon Street, E.C.

DISPERSAL SALE OF THE WHOLE OF SIR JOHN MILBANKE'S PURE-BRED OLD-ESTABLISHED SOUTHDOWN HILL FLOCK (Registered No. 236 in Flock Book), consisting of about

1,000

HEAD OF EWES AND EWE LAMBS, in flock ages as follows:—
218 SHEARLING EWES,
202 FOUR-TEETH EWES,
210 SIX-TEETH EWES,
84 FULL-MOUTHED EWES,
220 EWE LAMBS,
11 RAMS AND RAM LAMBS,
which

MESSRS. STRIDE AND SON are favoured with instructions from Major Sir John Milbanke, Bart., V.C. (who has sold the estate), to SELL by AUCTION, at the HOME FARM, Eartham, On THURSDAY, OCTOBER 5th Next.

The Eartham Flock is one of the old standard Hill Flocks of the Southdown Breed, having for more than half a century past continuously received the greatest care and judgment in its breeding, selection, and drafting.

With true Southdown type and character, and the finest possible quality of both mutton and wool, these ewes possess exceptional size, strength, and constitution, and the lengthy growing mutton-making lambs from this flock have for many years been one of the features of the Southdown Lamb Sales in Chichester Market.

None of the sheep will be in any way made up for sale, neither the ewes or lambs have had cake or corn, and will be sold in their natural breeding condition, working the downs until the day of sale.

Luncheon by ticket only at 12.45 o'clock.
Sale to commence at 1.30.
The flock is open to inspection at any time by appointment with Mr. William Smart, Home Farm, Eartham.
Catalogues of the Auctioneers, Auction and Estate Agency Offices, 63, East Street, Chichester, Sussex.

RAILWAY ANNOUNCEMENTS.

LONDON AND NORTH WESTERN RAILWAY.
KENNEL CLUB'S DOG SHOW,
CRYSTAL PALACE,
OCTOBER 10th to 12th, 1905.
The Railway Company will make arrangements for Through Vans for the conveyance of Dogs to be run to the Crystal Palace on Monday October 9th.
Consignments from the Branch Lines, &c., will be placed in these Vans at the various Junctions.
Conveyance rates can be obtained at the various Stations on the Line.
Arrangements will also be made for the return of the Traffic in Through Vans at the close of the Show, and Exhibitors are requested to order their Consignments "Per London and North Western Railway."
Exhibitors must write their names and addresses distinctly on the backs of the direction labels issued by the Show Committee.
The Company's representatives will be at the Show to answer all enquiries. Information can be obtained of the Superintendent of the Line, Euston Station, London; the Company's District Superintendent, Euston Station, London; or Mr. F. H. Dent, Broad Street Station, London, E.C.
FREDERICK HARRISON,
General Manager.
General Manager's Office,
Euston Station, London, N.W.
September, 1905.

THE KENNEL CLUB'S JUBILEE SHOW,
CRYSTAL PALACE, SYDENHAM,
OCT. 10, 11 & 12, 1905,
THE
GREAT NORTHERN RAILWAY COMPANY will convey exhibits for the above Show from Inverness, Aberdeen, Perth, Dundee, Oban, Glasgow, Edinburgh, and other towns, on and in connection with their system.
Through vans will be run wherever necessary for the conveyance of Exhibits.
Rates for conveyance of traffic may be obtained on application to any Great Northern Station Master or Agent.
Arrangements will be made for the return of exhibits at the close of the Show.
The Company's representative will attend each show prepared to give all information.
Exhibitors should mark their address labels "per Great Northern Railway."
OLIVER BURY,
General Manager.

FARMS, BUSINESSES, &c.

FARMS.—Rents from 10s. Acre; prices £7 Acre. Monthly List 2 stamps. RUTTER, 10, Norfolk Street, Strand, London.

MESSRS. CRONK'S LIST of FARMS, containing particulars of numerous Farms in Kent, Surrey, Sussex, and elsewhere, to be obtained gratis at their office, or will be sent by post on receipt of a stamp Properties inserted free. 12, Pall Mall, London, S.W., and Sevenoaks, Kent.

WANTED TO RENT, Mixed Farm, 100 to 200 acres, 80 miles London, farmhouse and buildings. — DAVISSON, 1, Whitburn Road, Lewisham.

CROWN LANDS, SHIMPLING THORNE, SUFFOLK. To be Let, a good Corn and Barley Farm, lying in a ring fence, known as Shimpling Park Farm, comprising about 572 acres, of which 482 acres are arable and 87 acres grass. There is a Bailiff's House and 5 Cottages, and 2 sets of modern Farm Buildings. The Farm is situated about midway between the market towns of Sudbury and Bury St. Edmunds, being about 7 miles from either town, and is distant about 3 miles from the Cockfield Station on the Great Eastern Railway.—For further particulars, apply to Messrs. CLUTTON, 9, Whitehall Place, London, S.W., Crown Receivers.

CROWN LANDS, ISLE OF SHEPPEY, KENT.—To be Let, the valuable, compact Grazing and Corn Farm, known as "Neats Court Farm," containing about 790 acres, of which about 500 acres are pasture and marsh grazing land and 270 acres arable. The Farm is situated near to Queenborough Station on the South Eastern and London, Chatham and Dover Railway, and within easy reach of Sheerness and the market town of Sittingbourne. There is a good farmhouse with modern farm buildings and nine labourers' cottages. About 368 acres of marsh grazing land adjoining the Farm can be let with it if desired. The sporting will be included in the letting.—For further particulars, apply to Messrs. CLUTTON, Crown Receivers 9, Whitehall Place, London, S.W.

GREAT Railroad and Industrial Enterprises are making the Southern States of America the most desirable and attractive location for farmers, stock-growers, gardeners, and fruit growers. The rapid increase in the number of industrial establishments gives to farmers located on the lines of the Southern Railway System the highest range of prices for farm products commanded in that country; at the same time it offers the best bargains in land values; publications sent free.—Write M. V. RICHARDS, Land Agent, Southern Railway, Washington, D.C., U.S.A.

FARMS to be LET in Sussex and numerous other counties. Dairy, Flock and Poultry Farms. 2 to 900 acres. Send 2d. stamps for list, and state requirements to GLADDING & CO., Farm Specialists and Valuers, Hove, Sussex.

LLOYD'S AVENUE, Fenchurch Street and Trinity Square, Great Tower Street. To be LET, several excellent suites of offices on the ground, first, and second floors, suitable for shipping firms, or tea, wine, and colonial merchants.—Apply to S. WALKER & SON, 22, Moorgate Street, E.C.

WEST SUSSEX, near Haslemere.—To be let, from Michaelmas, excellent residental Farm of 380 acres (240 pasture), with or without sporting over 450 acres (170 woodland); excellent modern house, ample buildings, five cottages.—Apply, The Cowdray Estate Office, Midhurst.

SEEDS, PLANTS, &c.

EXCELSIOR WHEAT, 1st PRIZE, BIRMINGHAM, 1901. Grown and selected expressly for seed for the last 25 years. Has produced 64 BUSHELS GRAIN, 3 TONS STRAW per acre. Strongest storm resister grown. 40s. per quarter, 36 stones nett, sacks included, on rail; cash with order.—THOMAS CHETTLE, Manor Farm, Reading.

200,000 FIDLER'S ECLIPSE Cabbage Plants, 3s. 1,000. W. HORNE & SONS, Cliffe, nr. Rochester, Kent.

SAINSBURY'S NEW WINTER KING BARLEY. Two rowed. The earliest Barley in cultivation. Re-selected every year. Favourite with brewers for its high quality. Strong straw. Not liable to be laid. Stand any winter. Commenced cutting July 12th (very ripe); all housed by 22nd. A customer writes: "Your winter barley gave me every satisfaction; we cut in June and housed first week in July." Another, farming 600 acres, writes me: "The winter barley you supplied me with was the heaviest-looking crop I ever saw—was a sight for gods and men. I have ricked five big stacks, with over 20 waggon loads in each, off 28 acres." Price free on rail Ross. On account of slump in malting barley, will meet my customers by a reduction to 64s. per qr. Sacks 1s. Cash. —J. B. SAINSBURY, Whitecross, Ross, Herefordshire.

SEED WHEAT.—I again offer my superior stock of wheat, "Squarehead's Master," specially grown for seed, with which I have supplied noblemen and large farmers throughout the kingdom for years past, many renewing their orders yearly.—Sample and price from F. O. TAYLOR, Thuxton, Norfolk.

SEEDS, PLANTS, &c.

500,000 FRUITING TREES (under or all heavy), 12, 10s. 6d.; 7, 6s. 6d.; 3, 3s. 6d. Splendid Rose-trees, 1s. 3d. 6d., 6, 2s. Gooseberry and Currants, 2s. 6d. doz. Strawberry plants, 100, 3s.; 50, 2s. Rasp. canes, 25, 1s. 6d.; 50, 2s. 6d. Wallflowers, 100, 2s. 6d. 50, 1s. 6d. Carr. paid. Catalogues free.—EAST KENT FRUIT CO. (M.L.), Sittingbourne, Kent.

SEED POTATOES. Off bright silt, Lincolnshire grown. Also reliable stocks of Scotch grown. For prices apply, W. F. ATKINSON, Weston St. Mary, Spalding.

THE

"BIBBY"

CAKE

V.

LINSEED

CAKE.

From the day we introduced the **"BIBBY" CAKE** to the **FEEDING WORLD** down to the present date, observant feeders have been using more **"BIBBY"** and less of Linseed Cake.

But in out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the **"BIBBY" CAKE** to a competitive test.

Consider the saving! At the relative prices the cost of **"BIBBY"** is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on **"BIBBY" CAKE,** which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous **DAIRY CAKE** in Cakettes, Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in our well-known **DAIRY CAKE, CAKETTES,** and **MEAL.**

Bibby's Quarterly.

CHEESE PRICES AND PROSPECTS.

Although the magnitudinous and rapidly-increasing demands of the towns for milk have undoubtedly lessened the number of cheese-making dairies, there are a sufficient number of them left to cause heavy outcomes to come under the public eye, such as the magnificent exhibition of the Cheddar makers at Frome last week, or the annual Kilmarnock one, or the more varied exhibition of Scotch and English Cheddars, Cheshires, Stiltons, Wensleydale, etc., which will invite inspection to-morrow and during the greater part of the present week in the Royal Agricultural Hall, Islington. At Frome, no fewer than 387 exhibits of cheese appeared, all Cheddars, with the exception of 16 Caerphillies, rather strong proof that the British cheesemaker's occupation has not gone quite yet, however pressing the foreign import traffic may be at times in overwhelming markets and depreciating prices.

We may congratulate British cheesemakers, however, that there is no apparent danger of such a thing happening this autumn. Often in past years, at the present period, there has been quite a glut of Canadians in the market, offered at prices so low that the best of them go to the provision shops and the restaurants in preference to cheese of English make. But just now there is actual scarcity of Canadian cheese in the wholesale trade. Imports have fallen off for the simple reason that prices have of late appreciated on the other side of the Atlantic until they have become quite as high there as here. For instance, while quotations here for the primest Canadian do not exceed from 54s. to 56s. in value, cables have been received of late from the other side declaring enhanced rates up to 56s. 3d., and even to 57s. 6d. These prices are actually higher than a great deal of good home-made cheese command. At Frome last week the quoted rates of medium-class Cheddars were 53s. to 56s. per cwt., and for best only from 58s. to 63s. There were, it is true, some few sales at still higher figures, but they were those of prize-winners, who would not sell the lot which had won unless the entire make of the season were taken therewith. Under such conditions there were sales at 65s. up to 68s. The North British markets have been almost stagnant recently, owing to dealers having stocks to work, offers they trade much in new cheese. Quotations for Scotch Cheddars have been 54s. to 60s., and for Dunlops 52s. to 58s., but Glasgow prices last week gave the highest rate, 2s. above these figures for both. The quotations of Cheshire cheese have been 54s. to 60s. at Nantwich. The rates of Caerphilly at Newport have been 53s. to 57s., for Truckles 56s. to 60s., and for Derbys 62s. to 63s. Gloucester has ranged from 56s. to 58s., and Lancashire from 52s. to 60s.

There is also another thing cheesemakers may be congratulated on. The summer, as a whole, has been favourable for their industry, so that those possessed of the requisite skill have been able to turn out cheese of better quality than in the average of seasons. Those who attended Frome Show on Wednesday, and who were old frequenters, were heard to remark that they had seldom, if ever, seen so few really inferior lots of cheese exhibited. We have no doubt quality extends to a satisfactory, if not to a high, standard in other parts of the kingdom, and good prices may reasonably be expected to follow. Too often, when there has been a fine season for the maker to have a large quantity of really prime cheese to dispose of, the markets have been so depressed by the big imports that prices have drooped ruinously low, so that little or no profit has resulted from the excellent outcrop. Such is not likely to be the case this autumn, and, consequently, we earnestly hope that for once our friends, the cheesemakers, will have a thoroughly prosperous year.

Farm Labourers' Wages in Nelson's Time.

In connection with the Nelson centenary, a most readable series of articles dealing with the great Admiral's association with East Anglia have been appearing in the *East Anglian Daily Times*, and in one of the articles we notice some interesting references to the wages of farm labourers in Nelson's time. It appears that prior to his appointment to the Agamemnon in 1793, he made a somewhat lengthy stay at Burnham; and whilst here took up the cause of the agricultural labourer with his usual enthusiasm. Norfolk, in those times, the writer of the article states, was disturbed and unhappy. Wages were terribly low, and the labouring class were in such a state of poverty and destitution that they were beginning to turn a willing ear to the various agitators who toured the county, and a spirit of restlessness was abroad.

The state of affairs prompted Nelson to write to his friend Prince William (Duke of Clarence), and, in the course of his letter, which was dated December 10, 1792, he said:—

"That the poor labourers should have been seduced by promises and hopes of better times, your Royal Highness will not wonder at, when I assure you that they are really in want of everything to make life comfortable. Part of their wants, perhaps, were unavoidable, from the dearness of every article of life: but much has arose from the neglect of the country gentlemen, in not making their farmers raise their wages, in some small proportion, as the prices of necessaries increased.

"The enclosed paper will give your Royal Highness an idea of their situation. It is most favourable; but I have been careful that no country gentleman should have it in his power to say I had pointed out the wants of the poor greater than they really are. Their wages have been raised within these three weeks, pretty generally, one shilling a week. Had it been done some times past they would not have been discontented, for a want of loyalty is not amongst their faults; and many of their superiors, in many instances, might have imitated their conduct with advantage."

The enclosed paper was to the following effect:—

"An account of the earnings and expenses of a labourer in Norfolk, with a wife and three children, supposing that he is not to be one day kept from labour in the whole year:—

	£	s.	d.
One pair of man's shoes, 7s.; one pair of woman's, 4s. 5d.; one pair for each of the three children, 10s. 6d.; and £1 1s. for mending	2	3	0
Shirts, two		1	[illegible]
Breeches or jacket		[illegible]	
Woman's and children's clothes	1	[illegible]	
Soap, 12lbs		[illegible]	
Candles, 6lbs		[illegible]	
Coals, one chaldron and a half	1	[illegible]	
House rent	2	0	0
	[illegible]		

LABOUR AT THE ADVANCED PRICES

	£	s.	d.
From October 12 to March 31, at 9s. per week	[illegible]		
From March 31 to June 30, at 8s. per week	5	4	
From June 30 to August 25, mowing [illegible]			
Harvest	2	2	0
Woman's gleaning	1	1	0
Total earnings			
Clothes			
For food, five people			

"Not quite twopence a day for [illegible] to drink nothing but water, for beer our poor labourers never taste, unless they [illegible] which is too often the case, to go to the alehouse."

What a contrast to the rate of wages ruling to-day!

Seasonable Topics.

Farewell September! The golden month has been gathered to its fathers, and October, the time of the sere and yellow leaf, is ushered in. With reluctance we parted with September, as it seems to be the last link of summer, and with the advent of October we look for dark nights, chilly mornings, damp days, and falling leaves. But still October can be delightful, particularly when we get an Indian summer, which is the name we give to a balmy autumn, and during the last half of September we have had a taste of it. We get the name of Indian summer from our friends across the Atlantic, who apply this term to the short spell of delightful weather which usually precedes the stinging severity of a Canadian winter. We trust the Indian summer weather experienced of late will continue through October, for, as the country people say, a fine autumn helps the winter on so nicely, and it is good to be abroad on fine October days when the ruddy glow of ripeness steals over orchard and woodland, and by the hundred tints with which she paints the trees, Dame Nature seems to be engaged in a grand effort to make the dying days of autumn the most beautiful. The sun of an Indian summer is warm without being scorching, the air is clear and crisp and balmy, and owing to the mere fact that we are standing on the threshold of winter, we feel that we are enjoying a privilege, and are in duty bound to make the most of every dry sunny day that passes.

Indian Summers

* * *

This is an important season in the agricultural year, for it is a time of changes, and the advertisement columns of country papers are full of notices of farms to let, farms wanted, agricultural labourers in search of places, and masters on the look-out for men. According to the custom of the locality, farmers either enter into new takings at Michaelmas, or else it is the time when notices are given with that end in view next Lady Day. It is no uncommon thing about this time to see farm waggons lumbering along the roads laden with the worldly belongings of labourers and farm hands, who are about to follow their occupation in another quarter. We may observe, in passing, that we have recently noticed what a lot of advertisements there are in local papers for waggoners, mates, cowmen, shepherds, and ordinary farm hands, and this at a time when the unemployed question in towns is growing alarming, and skilled, able-bodied men are walking about idle and hungry. What does it mean? It is the old story of rural depopulation and the growing scarcity of skilled agricultural labour. What lesson does it teach? Simply that the farmer who has got a good waggoner, cowman, or shepherd, and is wise in his generation, will do well to keep him, because really good men are none too plentiful. Sentiment does not keep men on the same farm or in the same village year after year like it used to do, and a bit of encouragement or a shilling or two extra per week is money well spent if it means keeping a good man. Farm labourers are not the uneducated, servile specimens of humanity that they used to be, but they are indispensable to agriculture, and the more scarce good men become the more valuable their services must necessarily be.

Michaelmas.

* * *

Some years ago, when what is popularly known as the whiskey money was put into the hands of County Councils for the purpose of technical education, including instruction in agricultural subjects, the difficulty experienced by the county authorities was to know how to spend it. Of course this end was accomplished, but the work being experimental, a good deal of money was spent to no purpose, if not literally wasted, without agriculture being benefited very much. The experimental stage of the work is now over, systems of one kind or another are in vogue in most counties to provide for what is now known as higher education, and the county authorities, instead of being in difficulty as to how the money should be spent, are at a loss to know how to get the money to spend. As a result, agricultural education is suffering, and there is a danger of the work already done and good work, too, some of it being rendered practically valueless for the want of funds to carry it on. It would have been better never to have introduced technical education at all rather than start it and neglect it. Let us go on or go back through the lack of means. In the last issue of the MARK LANE EXPRESS it was stated that the proposals of the Education Committee of the Devon County Council were to spend £1,770 on agricultural education, and £9,220 on evening continuation schools, technical education, and science schools. This, mind you, is in a county where agriculture is the largest industry, and where the importance of having young people efficient in agricultural pursuits can hardly be over-estimated. Looking at the matter broadly, it would appear as if the higher education of to-day leans in the direction of providing a class of instruction to country youths that is qualified to drive them away from the land rather than keep them on it. This cutting down of funds for agricultural instruction appears to be getting a general thing amongst county education committees, and it is quite time that agriculturists as a body made the demand that a proper proportion of public funds should be devoted to education in the most important of home industries.

Agricultural Education.

* * *

It is about Michaelmas time that the fair season comes round, and efforts are made in market and country towns to keep up these institutions, which were such red letter events in the days of our grandfathers. But the glory of the old-fashioned fair has departed, we think, for ever. Circumstances, associated with the advance of the times, have joined hands to kill the country fair from a business point of view, and in a measure they have succeeded. Keener competition, railways, quick transit, auction sales, and established markets have all helped to make farmers more or less independent of annual fairs, where they used to sell what they had to dispose of and buy what they wanted. As events for pleasure, too, Michaelmas fairs have seen their palmy days. It is not likely that the fair will die an easy death, because, in the first place, country people are loth to see old customs drop out, and secondly, the carrying on of the fair is in the hands of the travelling showman, who never forgets the event, and turns up every year from nobody knows where, with his merry-go-rounds, swing boats, cocoanut shies, shooting galleries, and all the rest of the paraphernalia. Young England, who visits the music-hall, wears high collars, and smokes cheap cigarettes, turns up his nose at this kind of amusement, and prefers to take a cheap ticket to the seaside for the purpose of making his presence felt on the promenade, but the fair still has charms for the lad who drives the plough and the lass who scours the milk pail, and they flock into the town when the annual event is on, and they spend their money just as freely, and often as foolishly, as their grandfathers did before them. One would hardly expect anyone in the twentieth century to give sixpence for a purse with the belief that it contained a half-crown, yet we have seen this done frequently at Michaelmas fairs, and have observed the look of sheer, unassumed disappointment on the faces of the purchasers when they have opened the smart plush receptacle of real Brummagem workmanship and found it empty. The swindled ones get laughed at for making such fools of themselves, and next fairday somebody else does exactly the same thing.

Country Fairs.

* * *

As one travels along a country road at this time of the year that is reasonably free from the choking dust stirred up by the flying motor, one observes that the misty evening air is more or less smoke laden, and the not unpleasant aroma from stick fires fills the nostrils with a sensation that is by no means so stifling as the fumes from petrol. The smoke comes from the smouldering fires in field and garden on every side. There is a man burning up the couch that the harrow has dragged from a piece of foul land that has been fallowed through the summer. Wise man! for if burnt there will be an end to the obnoxious weed, and that is about the only sure way of getting rid of it. There is another man burning his hedge bushings, and the bright glare of light going heavenwards shines bright in the gathering gloom, and over there is a cottager busily engaged in reducing his potato tops to ashes by means of fire. Perhaps he is the wisest of all the burners, for the tops are affected with the potato disease, and though the chances are that he knows nothing about living spores and that sort of thing, the fact remains that it is better to burn diseased potato haulm than to leave it rotting on the ground, as is done in many cases. The policy of burning is good, for it not only gets rubbish and refuse out of the way, but the dead remains of what had life are valuable, and in the heap of ashes that remain when the fire has burnt down we have potash, which is valuable as a fertiliser. Would that we could get more of this commodity, for if you look in a cornfield where rubbish fires have been, the straw is taller and greener on these patches, and if it is potatoes or roots one may observe the same thing. The fertilising properties contained in the ashes make the difference, and in this alone there is sufficient reason for advocating the burning of refuse.

Burnt Refuse.

DAIRY.

The Adulteration of Dairy Produce

The report of the Board of Agriculture and Fisheries of its work under the Sale of Food and Drugs Acts, the Merchandise Marks Acts, and other Acts was issued last week, and it affords some interesting reading. In view of the large amount of dairy produce landed in this country from abroad, vigilance in the detection of articles adulterated before importation is of great importance, and the report begins with a reference to it. In the course of 1904, 2,480 samples of such imported articles of food were taken at the ports of entry—2,111 of butter, 153 of cheese, 40 of fresh and sterilised milk, 92 of condensed milk, 77 of fresh and sterilised cream, six of evaporated cream, and one sample of margarine. None of the samples of butter or cheese was reported against, and in most of the other cases the standard was so slightly below that required that it was not considered desirable to take further action.

According to the reports furnished to the Local Government Board, the total number of samples of articles of food submitted for analysis under the Sale of Food and Drugs Acts by local authorities in England and Wales in 1903 was 78,077, or 5,756 more than in 1902. The chief increase was in milk, of which 33,090 samples were taken, as compared with 29,452 in 1902. The number of milk samples reported against was 3,430, or 10.4 per cent.

The number of samples of butter tested was 13,766, or 379 more than in 1902. Adverse reports were made in 751 cases, or 5.5 per cent. of the number examined, as against 6.5 per cent. in 1902 and 10.3 per cent. in 1901. Analyses were also made of 992 margarine samples, of which 35, or 3.5 per cent. were found to be adulterated, this figure comparing favourably with that for 1902, when 7.7 per cent. of the margarine samples analysed were reported against. The analyses of cheese amounted to 1,805, adulteration being detected in 1.4 per cent. of the samples examined, as compared with 1.9 in 1902.

In a preliminary statement by the Local Government Board of the results of the examination of samples of milk, butter, and cheese submitted for analysis in England and Wales in 1904 under the Sale of Food and Drugs Acts, it is shown that the number of samples of milk examined was 36,413, of which 4,031 were found to be adulterated; of butter 15,124 samples were analysed, and 1,867 found adulterated; and of cheese 2,176 were examined, and 20 were found adulterated.

The report states plainly that during the past two or three years the sale of margarine as butter has been carried on in many of the manufacturing districts of Yorkshire and Lancashire in a manner which suggested the existence of an organised association of fraudulent traders. Certain persons who posed as Irish egg and butter merchants have opened shops in different localities under various aliases, and have sold margarine as butter. When the fraud has been discovered the parties have absconded, either before the summons could be served or before it was returnable. Between twenty-five and thirty of such shops were opened during 1904. Local authorities experienced great difficulty in dealing with these cases, but owing to the exertions of the officials of Lancashire, Manchester, Sheffield, and other districts, this association has now been exposed and broken up. It appears that it was managed by two brothers, who obtained the services of some thirty men to act as managers. These men were all sworn to secrecy by the brothers, who undertook to pay all fines and compensate those who were sent to prison. The principals have so far escaped, but three of the subordinates were convicted and sentenced each to twelve months' imprisonment with hard labour at the last Manchester Quarter Sessions for obtaining money under false pretences.

Chester Cheese Fair.

Mr Challinor reports as follows:—Pitch about 50 tons, large attendance of buyers, tone good. Prices: Best, 58s. to 64s.; medium, 50s. to 55s.; lower grades down to 46s.

Agricultural Politics.

By a LOBBYIST.

It is time, in very truth, that we opposed a disciplined antagonism to the colonisation mania. I hope this last descriptive word will not be objected to; I only use it because I can recall none other that so adequately expresses the fevered anxiety of the many admirable men who are anxious to despatch the muscle and sinews of lusty manhood to the colonies. "The landless man for the manless land" — thus one of these philanthropists expresses the anxiety of the colonisation-mongers; and in order to realise it the denuded villages of England are to be rendered still more manless. Make no mistake about it. Mr. Jesse Collings is absolutely right when he points out that it is not wastreldom and loaferdom the colonies want. Nay, if wastreldom and loaferdom were brought to their shores, they would probably despatch them incontinently home, burdened only with colonial contempt and contumely. 'Tis the very men we want in our villages, and it is in order to bestow these upon the colonies that General Booth is appealing to the breeches-pocket of the nation, that Mr. Carlile, the head of the Church Army, appeals for £100,000 from the benevolent-minded and £20,000 from the State, and seeks to induce Boards of Guardians to become complaisant instruments in his purpose, and that colonial statecraft paints visions of a colonial life romantic and happy beyond any possible realisation. Our villages are to be still further depleted by the professional regenerators of mankind in order that British labourers may perform a work the absence of which from Britain will lay derelict British soil.

• • •

One of the hopes of a sane statecraft is that the men who have been drawn by the magnetic attraction of a bustling life from the villages to the towns may be recalled to the land. This, however, is the very class whom these philanthropists would bestow on the colonies. Mr. Carlile, who is possessed by the anxiety to send five thousand able-bodied men to the colonies in the coming season, openly declares that the class from which selections will be first made will be that "composed of men formerly employed on land and now in destitution in great cities." "When, indeed, they are despatched to Canada," confesses this vigorous gentleman, "every man will be guaranteed to be able to plough, to milk a cow, and to erect a rough shanty." As a fact, even if they do not possess this ability, as a result of an earlier training on the land, they will be specially equipped at the Church Army's farm at Hempsted. General Booth's purpose is the same. Only the physically-best and the well-trained are good enough for the colonies. And do not, I pray, imagine that these emigrants will, if the projected schemes be carried out, be confined only to the men who have been attracted from the villages to the towns, there to find their roseate hopes a bitter Will-o'-the-wisp and a grim phantasy. The land-hunger is still an influence with the rural labourer. The anxiety to cultivate his own must still be an operating force; and it is certain that the generous offer of the Colonies of land for the mere asking and unfettered by any serious conditions—offers, by the way, which experience has taught us, are not always destined to be crystallised and realised in fact—must appeal with irresistible romanticism to hundreds of too-sensitive and cautionless British rural workers. This, indeed, constitutes one of the gravest dangers of this crusade. Not only are the men attracted to the towns to be irrevocably divorced from British soil, but the men already associated with it are to be sorely tempted.

• • •

It may be urged that too much significance is being attached to the matter, and it may be pointed out that already efforts are being made to draft sections of the British unemployed on to British land. The reply to the latter contention is the best revelation of the significance of the business. The drafting of the unemployed into British rural areas has no organising enthusiasm behind it. Even so, however, it is only proposed to draft the human derelicts of town life—the eddying flotsam and jetsam of the street-corners. The colonisation enterprises have not only organised enthusiasm behind them, but their authors and leaders demand only the physically-best and the well-equipped. The broken-down, the dispirited, the laggards, and the untrained are, in the view of the new philanthropy, good enough for Old England.

• • •

You may ask what can be done to delay and frustrate this new movement? Well, certainly you cannot arrest philanthropy in its desire to find a new home for its more favoured and approved protégés. You cannot appeal to the Government to step in and hold the hand of well-meaning benevolence. You cannot demand that a Secretary of State should insist on General Booth and the Rev. Mr. Carlile drafting their thousands of physically-fit labourers on to British land. Where, indeed, could they be drafted? Unlike the Colonies, no Department of State is here willing to offer them—or, for the matter of that, could, under existing conditions, offer them—encouraging prospects of settlements. A great national scheme of afforestation and another great national scheme for the reclamation of waste land, are still only the objects of dithyrambic enthusiasm on the part of visionaries. Well, most assuredly the menace is a serious one, and the Government and the benevolent sentiment of the United Kingdom—from both of whom a great assistance is being sought—may well be asked to reflect as to whether a great harm may not unintentionally be done to the Mother Country. British villages want lusty manhood. The lusty manhood which has gone from the villages is to be given to other countries, and the very incidents of the bestowal will assuredly be followed by the still further deprivation of the villages. Why should we look over-seas for homes for the very manhood we require? I can hear the agitator saying that this is a necessity because there are no satisfactory homes existing in this country. For the moment let us forget the deeper economic and political issues involved in this matter. That a wise and generous statecraft will have to intervene is certain. For the moment, however, the first duty is, if possible, to prevent the carrying out of these schemes—to, at all events, reveal to the mind of politicians and emotional sentimentalists the grave havoc that may be done to the British countryside and ruraldom. The untrained and the laggards and the broken are really not the human instruments British land requires. Our villages should not be made dispensaries for the morally and physically infirm.

• • •

I am sadly afraid that Sir Walter Peace is preaching to an unsympathetic generation. Bounty advocacy is at a discount. It has no active, vigilant friend in politics, and in economics it has only critics. True, Sir Walter has associated an element of romanticism with his proposal of a sovereign for every acre in suggesting that the labourer should have a share of the concession over and above his wages; but this very romanticism would serve to deepen antagonism to it. In the first place, it would inevitably be asserted—the original criticism levelled at the Rating Act is an assurance of this—that the bounty was being utilised to lower the actual wages; and, in the next case, we should have a Bashan-like denunciation from the towns at rural labourers being selected for this special financial privilege by the State. The proposal would thus serve to revive the old antagonism of town and countryside. Besides, Sir Walter's picture of a net gain of five millions sterling to the State would, I fear me, have but little justification in fact. What Sir Walter really means is that by the nation conceding three millions and a half the wheat supply would be doubled, and we should thereby be without the necessity of purchasing seven million quarters from abroad. Would this, however, mean a gain of over five millions sterling by the State? "In order to pay the English farmer an extra eight and three-quarter millions, would," asks the *Westminster Gazette*, "the English consumer tax himself to the extent of three and a half millions? If he did, would he then gain four millions?

• • •

What, too, if in the encouraged competition from the virgin wheatfields of Canada which Mr. Chamberlain would invoke the British wheat was undersold in the markets of the United Kingdom? And, mind you—I know I am eternally iterating this—it is the belief of Canadian statecraft that the Dominion will soon yield enough food-stuffs to supply the whole of the necessities of Great Britain! Where, then, would be the saving? No, Sir Walter, your intention is excellent—there is not a farmer but who would hail with ecstasy a wheat bounty of a pound an acre; but I fear me it is sadly impracticable and delusive. Statecraft, believe me, will not give it a single serious or responsible benison.

• • •

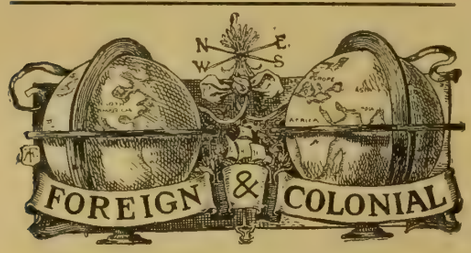
Another object lesson for the Board of Agriculture: The Canadian Dairy Commissioner—where, by the way, is our counterpart of this very useful and practical official?—has been here preparing the way for the capture of other of our markets. What Denmark can do, Canada can do. This is the contention of the wise-eyed men of the Dominion; and so they are prepared to enter into a contest with the Danes, and, for the matter of that, with other foreigners, for the usurpation of the British home trade in fruit, vegetables, butter, and eggs. And, meanwhile, what of the British growers of fruit, vegetables, butter, and eggs? What are the wise-eyed men of British statecraft doing to persuade those British growers to seek that trade for themselves? Over in the Dominion you do not hear the British Minister of Agriculture—I am bound to say Mr. Ailwyn Fellowes has not done this in any assertive manner—deprecating any appeal for the State's financial and practical assistance, and unctuously preaching the beauties of the principle of self-help and personal redemption. He despatches his most trusted emissaries for the purpose of discovering how best the resources of the State can be utilised in seeking a new and profitable outlet for Colonial enterprise. Whilst we here are dulcetly proclaiming at public meetings, under the ægis of a sympathetic peer or an occasional judge, the probable advantages of a system of co-operative distribution in connection with agriculture, there the State practically calls into existence the machinery of co-operation, and itself half provides the methods of distribution. My critics will retort on me with the exclamation, "Why denounce bounties?" I do not denounce bounties; I only question the wisdom of this particular scheme, and of propounding a policy at which statecraft looks with askant eye. Here is, however, a practical evidence of what practical men are actually doing. The moral of the object-lesson can be perceived by the most obtuse.

Another device of the Canadian Government for bringing before the British public the enormous resources of the Dominion of Canada, and for the purpose of attracting emigrants to the colony, is the issue of a series of picture postcards. They are beautifully coloured, giving representations of townships, farmsteads, wheat growing, cattle raising, threshing corn, flour mills, and various incidents connected with farm life, and they depict in a vivid manner the possibilities placed before the emigrant by the Canadian Government. A series will be forwarded to anyone on application to the Canadian Commissioner of Emigration, 11 and 12, Charing Cross, London, S.W.

Farm servants of all kinds from the home counties of Bucks, Berks, and Oxford assembled in large numbers at the Michaelmas Hiring Fair at High Wycombe on Monday. It is one of the few places where the old-time observance seems to lose none of its popularity. The supply of agricultural hands exceeded the demand, but many engagements were effected at rates of remuneration differing little from those prevailing a year ago.

British Possessions
beyond the Seas
AND THEIR
London Representatives.
NOVA SCOTIA.

Offers advantages to British Agriculturists with moder ate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.



Canadian Dairy Produce.

Mr. J. A. Ruddick, a Dairy Commissioner representing the Canadian Government, addressed a meeting of Manchester provision dealers at the Produce Exchange on Wednesday, and in the course of an interesting speech described the progress made in recent years in the export dairy trade of Canada. Canadians recognise, he said, that their great market is this country, and their energies are being directed to increase the trade with Great Britain. They do not rely, however, on patriotism or Imperialism alone to bring about this result, and they are prepared and anxious to give the best possible quality of commodities. He enumerated some of the measures which have been passed by the Dominion Parliament to ensure the purity of dairy produce, and spoke of the efforts of the Government to encourage the trade by affording facilities for transportation and inducing the shipping companies to provide cold storage accommodation in their steamers. With the encouragement which the butter makers had received from the present season's operations he thought there would be a large increase in the output of butter in the near future. He hoped that Manchester would have its share of this increase. At the port of Manchester there were excellent facilities for the handling of Canadian produce, and he would like to see a larger quantity of Canadian butter and cheese brought up the Ship Canal.

In moving a vote of thanks to Mr. Ruddick, Mr. G. W. Little said that this year had seen a marked appreciation of Canadian butter in this country. As yet, only 4 per cent. of the trade here was represented by shipments from Canada, but the proportion would grow, for Canada was now producing a magnificent article.

Mr. R. Graham, in seconding the motion (which was carried), said that although Manchester merchants handle 80 or 100 tons of Canadian butter weekly, the imports to Manchester are practically nil. This season they were only one-eighteenth of the imports to Liverpool. The Canadian branch of the trade is the only one which Manchester merchants have a chance of developing directly, and they are being thwarted and prevented from doing so entirely through the lack of proper shipping facilities. The butter ought to come to Manchester direct. If there were a good service of steamers to the Ship Canal, with good refrigerators, the merchants could make good use of them.

Mr Graham added that the produce which has hitherto been brought to the Manchester docks has been handled most excellently. There are, he said, at the docks all the necessary facilities, and yet they cannot be properly used.

Foreign Crop Prospects.

France.—The Minister of Agriculture estimates the wheat yield at 119,387,159 hectolitres, or 42,556,569 qr., an increase over last year of 6,626,579 qr. The rye crop he estimates at 21,000,000 hectols., or 7,221,375 qr., against 6,189,750 qr. last year. This is an increase on other estimates recently put forward, but the Association of French Millers estimates an even greater yield of 129,561,265 hectols., or 45,750,000 qr.

Germany.—There have been no new developments of importance in connection with the grain crops, but considerable attention is being given to the potato harvest, which has of late benefited materially by favourable weather, unexpectedly high yields being reported over a wide area. The reports concerning quality are less favourable than as regards yield, but as yet are not general enough to admit of fair estimates being made on this point. It is admitted, however, that in low-lying, heavy lands considerable damage has been done by late rains. The threshing out of the grain crops has proceeded steadily, without changing judgments already formed of general results.

Austria-Hungary.—Threshings are, according to official reports, confirming expectations of deficient yield, due to the defective growth of the ears of grain. The potato crop is, as a rule, favourably reported upon. Late potatoes have been doing very well since the August rains, and a good yield is expected, and early potatoes, taken altogether, have given satisfactory results.

Roumania.—The Ministry of Agriculture, in a preliminary announcement, gives the area under wheat this year at about 4,800,000 acres, and the yield as likely to reach 12,500,000 qr. This is larger than any other wheat crop raised in Roumania, and exceeds last year's yield by some 6,000,000 qr., and is 3,500,000 qr. greater than in 1903. The yield of maize on the other hand, has decreased materially suffering much from weather too hot and too dry. No estimate of final yield is given, but it may not be more than 55 per cent. of an average crop. Continued drought still interferes seriously with farm work.

Russia.—The *Official Messenger* reports complete failure of both winter and spring corn crops in provinces of Voronezti, Vladimir, Tver, Samara, Saratoff, Simbirsk, Tamboff, Tula, Riazan, and in parts of the provinces of Orel and Kherson, with unsatisfactory rye harvest over a wide section. Imperial grants are being made to relieve distress in famine-afflicted districts.

Norway.—A report made by the Imperial German Consul at Christiania says that upon the whole the yield of grain in Norway has been above the average and of straw beyond the average, while the state of the potato crop, so far, is excellent.

United States.—Mr. Wilson, Secretary of Agriculture, who has just returned from a tour in the North-West, says that the accounts of enormous crops are not exaggerated.

Canada.—Reports have been of a favourable character this week, threshing results prove good as a rule, and wheat moving freely to market. The Dominion Government Grain Commissioner reports that there has never been in the history of Canada a crop of finer and more uniform quality, and that as much as 80 per cent. of it will grade No. 1 Northern.

India.—Cables report the monsoon, generally speaking, at an end, but full reports of the progress made since the break of the drought in the Punjab and elsewhere have yet to come to hand. It is perhaps significant that there is only a little more disposition on the part of holders to part with their grain than was shown during the dry spell.

Australia.—The general tenor of advices from Australia continue all that could be desired from the farmers' point of view, and should the grain crops not give a bumper yield, they will fall short of general expectations.—*Dornbusch* (September 29).

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Sept. 23, 1905, together with the quantities imported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905.
	No.	No.		Cwt	Cwt.

EAST ANGLIAN NOTES.

In spite of wind and rain, the swallow's cheery twittering song is still heard in East Anglia as it flew along the hedges, keeping always on the side protected by the insect-haunted oak and bramble, knowing full well that there insects will congregate against the cold autumn wind or pass over between the showers in wide sweeps so close as nearly to touch the blue-grey patches of drenched turnips, for, although last Sunday was October, the country side is still thronged with insect life. But glance at the fields and we find throughout the Eastern Counties the plough of all the agricultural implements most busy, and the weather for the past week to the advantage of the farmer, did he but know it, hindering threshing operations. Ploughing for such crops as rye and vetches is very forward, and an immense amount of work in the nature of autumn cultivation during the last half of September has been carried out in East Anglia under favourable conditions either by steam or teams.

As one passes through the Eastern Counties one cannot but remark on the number of barley stacks that want "propping" since harvest, whereas a week or so ago they were perfectly upright, now they have "gone over" one way or the other and at the same time settling down to a quite unusual extent. This must not be thought to be due to heating, as is the case when barley and the sunny days of the barley harvest, or damp condition, but arises more from the brittleness of the straw, brought about by the lack of moisture during the maturation of the barley and the sunny days of the barley harvest. In many cases it is an index to lack of wheat also in the ears, and this will explain why at the moment we hear so many complaints of the quantity of the barley as proved by the threshing machine. However, each market day shows some slight improvement in quality, and a large buyer reports that he saw last Saturday some of the best barley that had ever been offered to him. This particular sample came from near Woodbridge, in Suffolk, and he states, further, that there is some fine barley in Norfolk, especially in the Burnhams and on the sea-coast towards Sandringham.

The apple crop is nearly a failure this year in Norfolk which must be considered a great misfortune, as a good crop of apples—for who has not heard of Norfolk cider?—is of considerable assistance to the winter's housekeeping. But the writer must draw attention to the neglect that he has noticed in recent years of the Norfolk orchards and to the number of worn-out old trees that exist. In other parts of England, as soon as a tree begins to fail, it is cut down, and a new tree is planted in its stead.

By the way, speaking of apples reminds me that at Billingborough, Lincolnshire, there is a Victoria plum tree in the postmaster's garden that has produced two distinct crops of fruit this year. The second lot have attained a size larger than walnuts, and are now almost ripe. Raspberries, in sheltered corners, are also ripening, and a second crop of peas has been gathered. This, however, will not compensate for the loss that is being sustained by diseased potatoes, which unfortunately is rampant in some districts of Lincolnshire.

A meeting of Harleston townspeople and leading agriculturists in South Norfolk was held on Wednesday last under the presidency of Captain John Percy Meade, J.P., of Earsham Hall, Bungay, to discuss the proposal for holding the next Norfolk agricultural show in Harleston. The meeting was the result of a decision come to at a preliminary meeting held a fortnight ago at the Waveney Valley show, and on this occasion there was a remarkably good attendance. After going into the financial side of the question, it was decided to forthwith appoint the secretary and necessary committee. Mr. C. Devereux, of The Rookery, Weybread, Harleston, the hon. secretary to the Waveney Valley Show, was then appointed as secretary to the local committee, amid applause, and Mr. G. Stebbings Barclay's Bank) was selected as treasurer. The General Purposes and Finance Committee were then elected as follows: Messrs. J. B. Dimmock, of Shotford Hall, Harleston; J. Broughton, of Harleston; W. R. Smith and S. Smith, of Harleston; T. Bond, of Pulham St. Mary the Virgin; and John Rutter, of The Beeches, Pulham St. Mary Magdalen. The committee were then instructed to raise the necessary funds to meet the views of the Norfolk Agricultural Society, and view the different sites for the show, and afterwards report to the general committee.

Many visitors to the next Norwich fat cattle show will miss a quaint familiar figure from that

city's streets, for the Norwich bellman is dead. Childerhouse was for thirty years one of the characters of the city by the manner he flourished his bell and preened himself in the public gaze in all the glory of his gaudy uniform while he delivered his calls to the public at the street corners. It was this quality of an artist's pride and joy in his work that made this little old man unique amongst bellmen, and his queer ways and oddities as a crier will be missed by farmers and others who visit Norwich for many a year to come.

NORTHERN NOTES.

The time for wheat-sowing is at hand—here and there some fields have already been planted, but except on the stronger soils it has been too dry. Some are ploughing clover leys, with the intention of drilling early in October, but the work is not done well. Perhaps the rain that is falling heavily and continuously at the time these lines are penned may alter the condition of things, and it is greatly needed for the root crops. The seed pastures that have been turned over require a good deal of consolidation, but there is ample time for heavy rain before Old Michaelmas—October 11—perhaps the best period of any for drilling wheat.

The rain was needed for the root crops, as, in spite of the sun we have had lately, they have made poor progress; they seemed to stop entirely in growth just about ten days ago, and unless a fillip is speedily given by rain, and subsequent warmth, we may look for a large area of mildewed swedes. As a rule, mildew is not very prevalent in the North, except when there has been a stoppage in growth, and there certainly was a prolonged stoppage in June and July. A recurrence is therefore the more prejudicial to the crop.

During the last few years much larger areas of land have been sown with winter oats and winter barley than was previously customary. In the South, these cereals are often sown to furnish sheep feed in the spring, but here these are sown for grain only. Winter barley sometimes gives a very large yield, but the quality is poor, and it is rare that a sample fit for malting purposes is obtained. In the South, some of the best land is sown with winter barley, but here light, poor soils are usually sown with this crop. But, in spite of its more extended cultivation, the crop cannot be said to have "taken on" in the North. The reverse is the case with winter oats, a crop which is now becoming very popular. This is largely due to the introduction of new and improved varieties; the old brown winter oat is now rarely to be met with, and the samples that are grown compare very favourably with spring-sown black oats. Good land is selected for the crop, which is put in at or before Michaelmas, and the straw is generally very bulky. Winter oats have greatly increased in popularity here, and each year sees larger breadths sown. The fact that the crop ripens a week earlier than in the case of spring oats also increases the favour with which it is regarded, as everything that tends to an earlier harvest is considered favourable to the farmer, and it avoids the press of work that ensues when all the cereal crops ripen at the same period.

The position of the owners of pigs attacked with the present form of erysipelas is a hard one, as, although many animals are slaughtered, no compensation is payable. Seventy-five cases have been reported—many of them as swine fever, but which to the chagrin of the owners of the affected animals, were found to be cases of erysipelas. The disease is certainly abating, and for this the prompt action of the Board of Agriculture must have all credit, but nothing seems to be known as to the cause of the outbreak, the official version not being accepted as correct.

The labourers' difficulty—not the labour problem this time—seems likely to become serious. Let the cause be what it may, the supply of agricultural labour is decidedly greater than it was some three years ago; but perhaps the slackness in some of the commercial industries of the North may in part account for the changed circumstances. The Workmen's Compensation Acts are said to have the effect of preventing men of advanced years from obtaining employment in commercial and industrial pursuits. The Acts have had no such effect on the employment of agricultural labour, and are not likely to have such an effect, but the action of the Trades Unions tends to promote such results, and is seems as though these labour organisations hoped to bring about the inauguration of a system of old age pensions through the consequent increase in the number of the unemployed approaching the age of sixty and of those who have passed that age. One thing seems certain, and that is that there will be an increase of pauperism during the winter. What effect the recent Act for the relief of the unemployed may have is not yet apparent. In some industrial centres proceedings are being taken to put the provisions of the Act in force, but in rural districts these provisions are rightly regarded with some jealousy.

One of the signs of the times may be seen in the new regulations concerning Registrars of Births and Deaths which will shortly be in force. Hitherto men not exceeding sixty years of age might be appointed to the office, but now the age limit is reduced to fifty, and men over fifty years of age cannot be appointed Registrars of Births and Deaths. What next? Are the "powers that be" smitten with Trade Union doctrines?

Farmers may well regard these developments with suspicion. The increased county rates, through the operation of the Education Act, 1902, is a very serious matter, and any increase in pauperism, and consequently an increase in the cost of the relief of the poor, will entail a further increase in the Poor Rate, and will press hardly on the occupiers of land, who pay far the greater portion of such rates in rural districts.

FARM.

The Difficulties of East Lothian Potato Growers.

For some years East Lothian farmers have had trouble with potato lifters, and the trouble has increased as expensive varieties of potatoes were introduced. The custom has been, says the *Glasgow Herald*, to allow the lifter to take home a "boiling" as a bonus, but the size of the "boiling" seemed to increase, and it was found that the potato lifters were disposing of their "boilings" to the retail trade, and it was alleged in some instances even to the wholesale trade.

Some farmers reported the matter to the police, with the result that they were boycotted, and could get no one to help during the potato harvest. Farmers then reported to the police privately. Workers were searched and found in possession, but when brought before the Court they said they were not guilty. They had been authorised to take the potatoes by the master or his manager, neither of whom would dare go into the witness-box and dispute the statement.

Matters came to a crisis recently, when some potato stealers were brought before Sheriff MacLeod at Haddington Sheriff Court. His Lordship admonished the women, and suggested that the potatoes which had been stolen, and which had been confiscated by the police, should be returned to them. The result was a meeting in the side-room of Haddington Corn Exchange, when a very large meeting of farmers resolved to bind themselves together to refuse bonuses of potatoes, and to represent the state of matters to the police authorities.

A Remarkable Freehold.

There is in the isolated little valley of Bransdale, Yorkshire, perhaps one of the most remarkable freeholds in England. The history of the manner in which the farm came into the possession of the present family takes the form of a legend told in the dale as being an actual fact, though no doubt the story is more or less fanciful. It is this. The owner of the estate years ago was an expert archer, and hearing that one of his tenants was also skilled at "the butts," he challenged him to a competition. What the farmer was to forfeit if he lost is not known, but the owner offered the farm where he lived if he won. The target was to be a goose tied to a pole, which in turn was fixed into a trough, which is still to be seen. The distance was a mile.

The squire shot first, and missed by a hair's-breadth. Then followed the sturdy dalesman, whose arrow struck and pierced the goose. Every year now at a court at Kirbymoorside a bow and arrow with goose feathers is handed in as proof of title and ownership. At Ormesby, near Middlesbrough, there is a field the freehold of which was secured by a greyhound course, the field being the stake and the owner losing.

At the Mid-Somerset Agricultural Society's Show at Shepton Mallet, on September 5, 1905, £100 was distributed in prizes by the Molassine Co., Ltd., for the best cheddar cheese of various weights made from milk from Molassine mealfed cows. There was healthy competition amongst the local farmers.

Spalding September Cattle Fair.—The September cattle fair, the principal one of the year held at Spalding, took place on Monday, and was well attended, whilst over 400 head of cattle were offered, the bulk being stores, and including some very fine animals. The best stores made £14 to £17, and younger cattle £10 to £12. Cows for milking purposes were in demand at up to £20 a head. There were 200 sheep penned. All were stores, and sold at satisfactory prices.

Midland Notes.

St. Luke's summer is not due yet, or one would be tempted to anticipate it and come and [illegible]. Dull, leaden skies, bleak wind, and [illegible] rain combine to make [illegible] a very outlook at the moment of writing, but we have enjoyed some lovely autumn days lately, with the air almost still, and the country flooded with the mild beams of the September sun, whose rays seem to add richness to the [illegible] and gold tints of the gradually dying leaves. The frequency with which one encounters [illegible] smoke of burning couch grass is [illegible] money to the amount of time which the season has already afforded for weeding. Couch [illegible] to be rather plentiful in many Midland [illegible], and one hears of farmers in Warwick, Northants, and Nottingham who have been glad of the favourable opportunity for hand-forking the roots, which are now tougher than in the spring, and therefore easier to extirpate.

Complaints of potato disease are becoming more numerous, and one is sorry to hear that, in addition to the ordinary blight, the so-called yellow warty disease has made an appearance may find the disorder more widespread than is come to us with seed potatoes from Germany, we may find the disorder more widespread than is yet suspected, for the fungus which destroys the tubers attacks no other part of the plant, and so remains undiscovered, until the crop is lifted. That, however, remains to be seen. What is certain, for the present, is that there are some very excellent crops in the important potato-growing districts of Stafford, Notts, and Warwick, and that if only prices are moderately good some growers will do well out of them. It is worth noting, by the way, that it is not always the newer strains which have best resisted the insidious blight, but the fields which were assisted with the spray at the proper season.

Evesham market gardeners are finishing the season as poorly as they began it. A *Birmingham Post* correspondent who has been investigating, records that lately the market price of beans "has actually been frequently less than the 3d. and 4d. per pot of 40 lb. which is paid for picking, and on some days a pot of beans of fair quality has been knocked down for a penny." There is potato disease, too, which has led to flooding of the markets and to prices averaging 1s. 8d. per pot of 80 lb.—that is, 4 lb. a penny.

Fairs are numerous in the Midlands just now, but there are few of any account. The three day Birmingham onion fair, which was held last week, brought many country visitors to the city, but has long ceased to be the important business fixture it once was, while the pleasure fair is but a shadow of its former self. There is still a good deal of business done at Walsall, and both cattle (mostly young stock) and horses sold pretty well there on Tuesday, albeit the latter were a poor-looking collection. Atherstone statute fair was also uneventful, save for the mad career of a runaway railway horse, whose dray dashed down the street amid much excitement, at something very different from its normal sober pace, and in its course demolished utterly two fancy stalls of crockery and cheap jewellery. Unhappily it injured also two young women standing at the stalls, who had to be surgically attended.

Can it be wondered at that butter is adulterated when adulteration is so profitable? In a case at Kettering on Wednesday taken at the instance of the Northampton County Council, Dr. Voelcker, the county analyst, said the sophisticated article contained 20 per cent. of margarine and cocoanut oil, and it was stated that the defendants—a London firm—did a trade in the stuff amounting to hundreds of tons a week. As twenty tons out of every hundred sold consist of margarine and oil, the gains can readily be reckoned. Fines even of £20 at a time are not enough to stop that sort of business. If only the legislature would take a hint from the excise and customs, and impose a penalty on every pound of the offending article in the possession of the makers, we might see a better state of things.

What is no doubt the last Midland harvest home of the season took place a few days ago at Severn Stoke near Worcester. To the rector, the Rev. Canon Coventry, is due the survival of this ancient and gracious custom, the leading features of which are now a special service in the venerable parish church, lavishly decorated for the occasion, and a luncheon to the principal parishioners, who are generously [illegible] and waited upon by members of the rector's household.

September 28, 1905.

Colonial Competition.

SIR,—The question reiterated ad nauseum by your writer "Lobbyist" gets upon my nerves. If he would spend half the space in showing what is wanted in the way of fiscal reform to help agriculture, he would be doing something to forward the cause with which he is evidently in sympathy. Immediately on reading Mr. Chamberlain's first speech on tariff reform, I wrote to him and pointed out any tariff scheme that would not benefit agriculture was doomed to fail; and further, that if agriculture would be benefited, then the law of distress should be abolished, and in case of bankruptcy, landlords should stand on an equality with all other creditors. There are many ways agriculture might be benefited. There is a proposal to put 2s. per quarter on foreign corn, if 1s. only was put on Colonial, that would give the Colonial a preference of 50 per cent., a very useful margin. Canada allows 33 1-3 on some of our goods, so if we allow them 50 per cent. it would be a generous comparison. Agriculture would be benefited by £1 per cwt. duty on foreign hops, a reduction being made in beer duty to meet any enhanced price of hops. Potatoes, fruits, and many other things would bear a moderate duty. Under the Sugar Convention the Government have power to allow a difference of 2s. 6d. per cwt. on home grown beet sugar, and this ought to be an encouragement to the cultivation of a very profitable crop, and development of a great manufacturing industry. If some part of the revenue thus derived were devoted to relieve farmers of those taxes that are for purposes of a national character, such as roads and education, it would be assisting them doubly.

Will your correspondent try and show what other ways agriculture can be assisted.—Yours truly, CLEMENT DALLEY.

Kidderminster, September 26, 1905.

Crops in Devonshire.

SIR.—Harvest was finished about the middle of September, and was a very protracted one, owing to frequent rains; wheat was a good crop, and well saved; oats were good, except late sown ones, and the latter were exposed to bad weather. Roots are good, both mangold and swedes; common turnips are a failure, owing to drought and attacks of "fly."

Hay was good, and owing to rains in August grass became very plentiful, and will be abundant all through the autumn; young clovers sown last spring are very promising. It is a fine season for cleaning the stubbles for next year's root crops, as the weather has been very dry since harvest.

Ploughing for wheat has commenced, but is again stopped, owing to the land getting hard.

Apples are not very plentiful, and are selling better than they have of late years.

Live stock is healthy on the whole, and is doing well, but there have been serious losses among lambs, owing to "hush"; this disease is very fatal in many cases. L. G.

September 28, 1905.

Crops in Huntingdon.

SIR, Prior to Monday last we were actually suffering from the drought due to the cold winds from the north and east; the roots had ceased to grow and ploughing was becoming difficult on the clover stubbles. A very heavy rain which lasted quite twenty-four hours fell on Monday and early Tuesday, has already altered the appearance of the Kohl-rabi and the mangold, which will not prove to be as weighty as we hoped would be the case.

A considerable amount of cultivating has been possible owing to the early harvest; the general work of the farm is unusually forward. The reports from the threshing machine owners are no better than anticipated; some farmers would appear to have over-estimated the yields of their corn crops. The corn markets do not appear to have recovered from the effects of the heavy supplies early in this month and late August. The difference in the value of feeding stuffs and wheat to fat the miller and barley suitable for the maltster is less than has been the case for many years. Farmers will soon think it to their advantage to grow quantity rather than to study the quality of their corn. S. S.

September 27.

Farmers and Farming in the North Riding.

SIR,—We have had a few frosts that in patches of the district have cut down potato haulms and other tender plants, whilst in other parts they have escaped. The weather, though at times cold, is very dry, and a lot of wheat is being sown, thanks more to the season than to the prospect of better values. Potatoes are being lifted, and are a fair crop, little touched by disease; they are not, however, a big crop, as some reports have stated. Wheat has thrashed out well, barley fairly well, and oats very badly, but prices all round are very bad.

Beef has sold better of late, and mutton very well indeed. It was expected that, owing to the failure of the turnip crop, lambs would be low, but, on the contrary, they are dear. All the autumn sales of sheep have gone off well this season. There is plenty of grass now on the land, and the prospects of autumn fodder have improved. The hay crop was light, but some good second-cut clover has been secured, and this will help matters.

A conference of farmers representing the North-East of England will be held at Darlington on October 20. It is expected to be fully representative and well attended, and that, amongst other things, a short Parliamentary programme to put before candidates at the coming election will be adopted. It is hoped to make the meeting an annual one, with a strong executive to meet between times to take such steps as may be necessary in the interests of agriculturists. Judging from expressions of opinion, the time is ripe in this district for a movement of this kind.

W. P.

September 28, 1905.

Fine Harvest Weather in North-West Lancs.

SIR,—In the north-western division of this county we have been having fine weather for the last two or three weeks, which has enabled the ingathering of the straw crops to prove much more satisfactory that it did in the early stages of the harvest, owing to the wet weather then experienced. In the case of wheat, an average crop is expected; barley is also fairly good. Oats are below average and short in the straw. Potatoes are fairly good, and the disease is not so much in evidence as was predicted, notwithstanding the heavy rains we had a month ago. The prices now obtained for potatoes are the lowest on record, from 25s. to 30s. a ton on rail.

Swedes and mangolds have been growing well, and there was a good promise for young clover and grass seeds, but the late dry weather has put a check upon them, and also the growth of grass.

All kinds of stock are thriving on the pastures, and sheep are selling fairly well. C. J. S.

September 28, 1905.

Farming Topics in Westmorland.

SIR,—Harvest is now fairly completed, and the ingathering has favoured the earliest and latest districts; the heavy-land farmers had rather a prolonged and tedious time, and a portion of their crops suffered some injury from the almost daily showers and occasional wet days, but, taken as a whole, the crops have been secured in more than average condition. But the bulk is seriously disappointing, and will be more than one-third below average. When this is added to the shortage in the hay crop—which is, in many cases, fully below half an average—it makes winter prospects gloomy indeed, and is seriously affecting both the demand for and the price of store cattle for wintering and feeding.

The summer grazing in some cases where cattle have been marketed has been entirely lost, and money in addition. The fine, refreshing showers which have fallen during the passing and past months have, however, effected a marvellous change in vegetation all round. Pastures, aftermaths, and all green crops have improved in a marvellous manner, especially turnips, but are still far short of the weight they usually are at this season, and will not much exceed half a crop in many cases.

The sheep-breeding farmers are fairly going with the cream this year, for with the exception of a shortage in hay (which is less in the valleys than in the open country, owing to frequent refreshing showers during June and July), and when we add the great improvement in the price of wool, and the extraordinary demand and high prices they are obtaining for their surplus stock of sheep, they must be having quite a record year.

The yield of corn, so far as the steam threshers have tested it, is disappointing, both in quantity and quality. What with shortage of crops all round, potatoes excepted, and the continued low price of beef and the high price now being paid for feeding and wintering sheep, the arable farmers do not occupy an enviable position.

But by far the most aggravating question is the great, sudden, and still rapidly increasing local taxation; especially the education rate, over which those in rural districts have lost all control, which the Act of 1902 has transferred from the industrious middle classes to the wealthy upper classes, who, so far, seem to have one and all directed their chief attention to the appointment of officials and increasing salaries. Why not transfer back to the middle classes, who, with much less power to raise funds, produced more satisfactory results with their limited means than our highly educated and wealthy substitutes?

T. B.

September 29, 1905.

South Nottinghamshire.

SIR, The harvest is completed, and is about an average one. Wheat is, in most cases, very good and yielding well. Barley is quite up to the average, but oats are the worst crop of all, no doubt the dry weather in May having stunted the growth. Beans are good; peas not quite up to average. Mangels in some places remarkably good, and in others rather thin, but, on the whole, I should say quite an average crop; the same also applies to swedes.

While turnips sowed late are quite a failure, no doubt owing to the intense heat of the July sun, I know of one field which was ploughed five times and sowed with the very best seed in a perfect seed bed, yet scarcely any turnips came except on the headlands. Harvest intervened, and it became too late to sow others, so that now mustard is coming up on what ought to have been a good bed of turnips. The land is perfectly clean and in good heart. Can anyone give the reason for this absolute failure? Cabbage appears to be a fair crop, as also potatoes.

Fat cattle are being sent to market in a half-finished condition, consequently trade is bad. Sheep are well sold, also pork. Milch cows get dearer as the season gets on, and anything fit to buy runs up to £20; whilst calves are also selling fairly well. Young steers and barren heifers are making all they are worth, no doubt owing to a good amount of straw and roots in the country.

Lambs are very dear, being probably 7s. each dearer than last year. I do not quite know if they are going to pay as well as last year, as I see by the returns there are 161,245 more lambs than last year; surely they will fill a gap somewhere.—Yours, etc. J. A.

September 29, 1905.

Weather and Crops in West Wilts.

SIR,—We are having splendid autumn weather for cleaning the stubbles and sowing early forage crops, such as rye, vetches, and winter oats; a large quantity of the latter are grown for corn in this district, and are yielding well, much better than the spring-sown.

The season so far has been favourable for sheep, and satisfactory prices are being obtained, mutton selling especially well. The swede crop is very much damaged by grub, and badly affected with mildew. Many flockowners will find keep run short before the winter is over.

The cattle trade is bad, excepting the very best quality beef and good milking beast. Milk-sellers have to meet declining prices, which were already low; the prospect is anything but good for this description of farm produce. J. P.

September 29, 1905.

Splendid Weather in Derbyshire.

SIR, We are having some splendid weather now, warm, sunny days and dry nights, which will make the grass last ever so much longer than if it were wet.

Pastures seem to have a fair amount of keep on them, especially on well farmed land. I find it a great help if a meadow can be shut up after harvest until now for the milking stock. I turned my cows into one at the beginning of the week, and they seem to enjoy it very much, and I can perceive a difference in the quantity of milk they give, and am hoping it will save the cabbage. Milk does not seem very plentiful now, and calving cows are selling fairly well.

Potatoes are not a satisfactory crop this year; where the old sorts have been grown there are complaints of disease, and where the new ones, the crop is very unsatisfactory, a large amount of small, and very few of marketable size; one hardly knows which sort to grow.

Mangolds are about the best crop of the year, but turnips are not so good. C. C. M.

September 28, 1905.

By Lupulin.

Home Notes.

The Borough.

The ingathering of the 1905 crop being practically concluded, the hop market appears to be settling down to business, growers and merchants being equally prepared to "face the music" sounded by the recognised circumstances. We are bound to accept the fact of a big yield, and we are also regretfully compelled to acknowledge that low prices are current and will probably prevail, as the consequence of the supplies being in excess of the requirements of consumers. I have hoped that the disadvantages attaching to this excess might have been modified by the process of selection in the gardens and the abandonment, to a substantial extent, of such growths as were manifestly inferior. But from what I can hear and see, this policy has been but partially adopted. Samples have been shown to me which are really valueless, and growths of perished brown hops are displayed whose colour and condition cause inquiry whether they can possibly be examples of this year's crop. The labour and the money expended in picking such stuff are positively wasted, as, if the hops are ever sold, they can only realise such prices as will not nearly cover the cost of picking. But there they are, acting most detrimentally upon the general market, and even hindering, by their mere presence, the improvement in value of better growths, which would naturally be otherwise brought about. I fear it must be admitted that the average quality of our 1905 crop is not so good as was hoped for and expected. Choice hops are thus far comparatively scarce, and growers who possess them may be congratulated, as they may be certain of buyers, who are already showing anxiety to secure such qualities. Consequently an active trade has resulted this week, with evident signs of firmness, and some slight advance in values of the better samples. I hear of many offers for such parcels being declined, and am prepared for further development in this direction, which would soon be more pronounced if the market were not so heavily weighted with inferior qualities. Thus far the low range of English values offers no inducement to importers of foreign produce, but we cannot lose sight of the fact that an important surplus exists, both on the Continent and in America, which only waits a favourable opportunity for shipment to our open ports. This is a season when we should be able to realise the advantage of an import duty. If we could by this means hold in check the threatened invasion of the foreigner our growers might hope for some remuneration, but, as we are at present situated, there seems to be hardly any prospect of profit to our native industry. I would that public opinion could be awakened to the seriousness of the position, as we could then call upon our legislators to take measures for the preservation of this important section of English agriculture, which, if left in this defenceless condition, is apparently approaching annihilation.

Foreign Notes.

Nuremberg.

Previous anticipations of the course of business in the new market have been satisfactorily fulfilled during the past month. No sooner did arrivals of the present crop commence than the needs of consumers were made manifest by their active inquiries, and in proportion to the larger range of selection provided by the increase of supplies, the demand has steadily expanded, and has recently developed into well-established activity. As is generally the case in the earlier period of the season, attention is especially given to the better qualities, and it being evident that, owing to unfavourable weather during the picking and other circumstances, the quantity of hops of choice colour is less than usual, such qualities are keenly sought for, and, consequently, their values have been maintained, with a tendency towards advancement. On the other hand, the lower and medium sorts are at present somewhat neglected, with the result that planters, being anxious to realise, are willing to accept lower prices. It therefore seems probable that the trade this season will be marked by important intervals between the lowest and the highest figures. Already there are seen in the quotations of 90s. for third quality market hops, and 85s. to 90s. for superior Spalts, and it is not unlikely that these differences will become more pronounced as the season progresses.

There seems to be little doubt that the total German crop will fully equal the highest previous estimates. The latest returns give 360,000 cwt. for Bavaria, 75,000 cwt. for Wurtemberg, 40,000 cwt. for Baden, 100,000 cwt. for Alsace-Lorraine, and 55,000 cwt. for other districts, making the total 550,000 cwt., against 445,000 last year. The produce of Austria-Hungary is reckoned at 580,000 cwt., being double that of 1904, so that the aggregate increase of these countries is not less than about 300,000 cwt.

Burgundy.

The recent hop fair held at Dijon was not largely attended, either by planters or buyers. Some lots were sold at 40 to 45 francs for medium, and 50 to 55 francs for best qualities.

Belgium.

The heavy crops and the scarcity of pickers have delayed the completion of the harvest. The quality of this season's crop is generally approved, and it is estimated that the yield will approach 100,000 cwt., being about 10 per cent. in excess of last year. Demand is fairly active, at prices ranging from 52 francs for Pops. to 40 francs for Alosts.

America.

It is now expected that the New York State crop will not realise early expectations, and will not exceed 50,000 bales. But this lowered figure cannot materially affect the estimates of the total U.S. crop, as the increased ocreage on the Pacific coast, and the abundant results reported therefrom, will doubtless more than compensate for any shortage in the Eastern district. Markets are quiet, but steady; recent values still being quoted.

Saie of Mr. W. Bateman's Shorthorns.

The herd of pure-bred prize dairy Shrorthorns, belonging to Mr. William Bateman of Beaumont Grange, Halton, Lancaster, has of late years been been very successful at the North Country shows, particularly in the dairy classes, and the many beautiful animals exhibited at Kendal, Melnthorpe, Lancaster, Carnforth, as well as at the County Show during the last few seasons have brought the herd into great repute in the district. A very large company gathered on Friday to witness the dispersion of about sixty head from it, including breeders from all parts. The animals were brought out in grand form, especially the cows, which were undoubtedly one of the best lots brought before the public for some time. Their beautiful even flesh, excellent udders, and nice character were admitted on all sides, and the good prices realised must have been a satisfactory recompense to Mr. Bateman for the care and judgment that has been exercised upon them. The first cow to reach three figures was the five-year-old Sunbeam, which rapidly ran up to 140 gs. to Lord Grantley, and this proved to be the best price of the day. Red Rose 3rd, a very handsome Red with a splendid udder, realised 105 gs. to Mr. Cawston; and her bull calf, by Duke of Tyne, was taken by Mr. T. Lloyd at 20 gs. Sybil, a roan four-year-old cow, excited good competition, and eventually fell to Mr. Whinnerah's bid of 125 gs., her white heifer calf going to Mr. W. Thompson at 13 gs. As will be seen by the following list, the prices were well maintained throughout. Messrs. Thornton and Co. were the auctioneers.

A Unique Business Offer.

In order to cope with the ever-increasing demand for Molassine Meal, which is already coming on for the current season, the Molassine Co., Ltd., of 36, Mark Lane, E.C., have taken additional offices at 28, Market Buildings, Mark Lane, directly opposite the entrance to the New Corn Exchange, as a sales office. Judging from the cordial invitation extended by the Company, these new offices should prove quite a club for corn merchants, farmers, and stock-breeders, for one and all are asked, when attending the Corn Exchange, to make free use of the office at 28, Market Buildings. To here letters or telegrams may be addressed "c/o The Molassine Co., Ltd."; free use can be made of the telephone or directories there; letters may be written or dictated to one of the typists; whilst all the agricultural journals may be perused there. Further, supposing a farmer or stock-breeder after attending the Exchange has some time to wait for his train and has nothing to do, well, he can call in at the Molassine Co.'s new office and spend the time there reading the agricultural papers, etc. Even if they have no special reason to call, the Molassine Co. will be glad to make the acquaintance of those mentioned. Such a generous offer as that described above is somewhat unique in English business life, and it will be interesting to see to what extent the farmers and stock-breeders will take advantage of it.

The Supply of Pure Milk.

The Wensleydale Pure Milk Society (Limited) formed a short time ago for the object of supplying pure milk to the large towns in the North, commenced operations at their Northallerton depot on Wednesday, when their first bottled milk was despatched to Newcastle. About a hundred gallons of milk are to be bottled per day and sent to Newcastle, where it is retailed by the Co-operative Society at 4d. per quart, while from two to three hundred gallons per day are to be sent direct to Newcastle from the farms under the company's supervision, the farmers entering into a [illegible] contract regulating the health, feeding, and milking of the cows, the sanitary condition and cleanliness of the shippens, etc. The farmers in Wensleydale are taking kindly to the scheme, and an ample market has already been secured for all the milk the company can deal with.

The annual Horse and Foal Fair was held at Spalding on Thursday, when there was a good show and a large attendance of agriculturists. For the best class of animals there was a brisk demand, and the best made £20 to £50 per head, but ordinary foals fetched about £15 each. Agricultural horses of a useful type sold readily and made good prices.

CORN MARKETS.

LONDON.

Mark Lane. Wednesday.—A moderate attendance of buyers was present, and a general tone of firmness prevailed. English wheat was held for fully previous rates, and good dry samples are in request. White quoted 29s 6d to 31s; and red, 29s to 30s per qr. Imported wheat was again well held. No. 3 Northern Manitoba, 33s 3d ex quay; Australian, 35s to 35s 6d; Russian, 31s 3d to 34s 6d; Plate, 32s 9d ex store. Flour trade steady. No. 1 town households, 26s delivered in; Iron Duke, 21s ex store. Malting barley is still firmly held. Fine lots, 34s to 36s per qr. Grinding barley steady. Azoff, 19s ex quay. Imported oats very firmly held. 38lb. Russian, 15s to 15s 3d ex quay. Maize firm. American mixed, 24s, and sound La Plata, 23s 6d landed terms. Beans firm.

Mark Lane, Friday.—Wheat: English steady, quiet, at about late rates. Foreign sellers ask late prices, but demand very slow. South Russian quoted at 31s to 35s; Plata, 31s to 34s; No. 1 Northern Manitoba, at 34s 6d; No. 3 Northern Manitoba, at 32s 6d; No. 2 Club Calcutta and choice white Karachi, at 32 to 32s 3d. Flour steady, quiet. Maize steadily held, unchanged prices, but quiet. Mixed American, landed, quoted at 24s; River Plate, ex ship, at 23s. Barley firm, quiet. Odessa, ex ship, quoted at 18s 6d, landed at 19s 3d. Oats: Small business passing at full rates. Common sorts quoted at 15s 6d.

COUNTRY.

Ashford. Tuesday.—Wheat samples were fewer, and trade was firm at 27s to 30s; with a few shillings extra for sowing lots. Malting barley disappointing in colour and size of berry, and prices ranged between 26s and 30s, though more would have been given for choice samples. Oats firm at 16s to 20s. Feeding barley unchanged. Maize firm and the turn dearer at 25s to 27s. New beans unaltered. Mazagans at 28s to 29s, and ticks 31s to 33s

Banbury, Thursday.—Wheat, red, new, 27s to 28s; barley, 24s to 30s; beans, new, 29s to 30s; beans, old, 32s to 33s; oats, 16s to 20s; peas, 27s to 30s per qr.

Berwick, Saturday.—Large attendance, with average supplies of grain. Fine barleys made fully late rates; secondary oats dull; barley, 23s to 29s; oats, 18s to 20s; wheat, 28s to 29s per qr.

Birmingham, Thursday.—There was a large attendance and business was fairly brisk. Foreign wheats met with a fair demand at 3d per qr. over last week's prices. A good supply of English wheats which made from 28s to 30s 6d per qr. (496lb.). Plate maize was 6d dearer and flat ditto 3d. Grinding barley was 3d dearer at 19s 3d per qr. (400lb.) at Sharpness; English oats, 18s. per 312lb.; beans, 12s 6d per bag (196lb.) delivered in Birmingham.

Bristol, Thursday.—English wheat in good supply at last week's full prices. Foreign 3d to 6d dearer. Maize unchanged. Barley 3d dearer. Oats 3d to 6d dearer. The demand for our continues active, and full prices are obtainable.—GRACE BROTHERS.

Bury St. Edmunds, Wednesday.—Wheat: Supply was again small, but there was practically no change in prices. Reds or whites 27s 6d to 28s 6d, revets 27s to 27s 6d per 504lb on the line. Barley: We had rather a good supply, but not much display of quality. Fair malting samples sold fairly well, but were quiet on the week, at 28s to 31s per qr. Fine sorts were also somewhat quieter, at 32s to 34s per qr; grinding sorts firm. Oats, beans peas, lentils, and most other feeding corns were firm, at last week's prices. Maize (round) was steady, at 25s to 25s 3d per qr. Oilcakes, bran, and other feeding stuffs were firm, with a fair demand.

Canterbury, Saturday.—Oats are dearer, with good inquiry; black spring oats scaling 42lb. are worth 18s, whites of the same weight 19s, and black winters up to 20s 6d. Wheat trade firm and active; best milling samples reach 31s. Malting barley steady from 26s to 30s, and occasionally 32s.

Cambridge, Saturday.—There was a smaller offering of wheat, trade firm. Seed parcels occasionally rather dearer. Wheat, red, 27s to 29s; white up to 30s per 504lb. Beans quiet, unchanged. Oats very firm. Barley in fair supply, but trade not very fierce, except for best.

Carlisle, Saturday. — Smaller supply of oats in our market to-day. Good demand at last week's prices. New, 18s to 18s 6d per 336lb.; old, 22s 6d to 23s per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—The market was very quiet. The supply of English grain is being maintained, full prices being obtained for anything good. There is much variation in the samples, which affects the price. Quotations:—New white wheat, 4s 3d to 4s 5d; ditto red, 4s 2d to 4s 6d per 75lb.; new grinding barley, 3s to 3s 2d per 64lb.; old beans, 5s 9d to 6s per 20lb.; old oats, 3s 2d to 3s 4d; new ditto, 2s 2d to 2s 4d per 46lb.; new Indian corn, 12s 9d to 13s 3d per 496lb.

Colchester, Saturday.—Fair supply of wheat; firm trade at last week's prices. With a moderate show all descriptions of barley sold readily at prices favouring sellers. Beans and peas steady. Oats fully as dear.—JOSEPH WILES AND SONS, LTD.

Coventry, Friday.—The attendance was a moderate one, and business generally ruled quiet. There was only a small supply of wheat, and last week's prices were maintained. Barley a quiet trade. Oats shown sparingly and prices maintained for useful samples. Quotations: Old wheat, 11s 6d to 12s; new wheat, 10s 6d to 11s 3d per 496lb.; barley, 25s to 32s per 448lb.; old oats, 23s to 25s; new oats, 14s 6d to 16s per 304lb.; old beans, 12s 6d to 13s; new beans, 11s 6d to 12s; peas, 11s 6d to 14s per 496lb.

Chichester. Wednesday.—New white wheat, 29s to 30s; new red ditto, 28s to 29s 6d, barley, 29s to 32s; grinding ditto, 24s 6d to 25s; oats, English, 15s 6d to 20s; tic. 23s to 27s; peas, 32s to 36s, beans, 32s to 35s; tares, 6s to 7s 6d; maize, 24s 6d to 25s; flour, 27s.

Derby, Friday.—Wheat firm, and unaltered in value. Spring corn unchanged. New white wheat, 28s to 30s, new red wheat, 27s to 29s, malting barley, 29s to 32s, old beans, 32s to 34s, new beans, 30s to 31s, old oats, 16s to 18s, new oats, 14s to 16s.

Devizes. Thursday.—There was a good supply of corn, trade was slow, and the prices show little alteration to that of last week. A few fair samples of malting barley, but the great bulk of the crop is of low value. Prices ruling were the quotations. Best old wheat, 30s to 32s 6d; secondary ditto, 27s to 29s; new wheat, 24s 6d to 26s 6d; best barley, 26s to 32s; secondary, 20s to 24s; new beans, 30s to 34s; old mixed oats, 21s to 23s; white ditto, 20s to 22s; new malting ditto, 20s to 22s; tares, 10s to 12s, new ditto, 8s to 9s; best extra fine, 10s to 11s.

Doncaster, Saturday.—An excellent supply of English wheat, for which there was a good enquiry. Both English and foreign were firm at full late rates. Plenty of barley on offer, and good grinding in condition, and prices went up to 28s, and for the finest quality 31s per qr. Other things unchanged.

Dorchester. Saturday.—Small attendance, and shorter supply of grain. Wheat not quite so firm, and holders desirous of selling have to make a slight concession, but scarcely to any variable extent, though the trade is certainly tending to lower values. Malting barley, too, was also making a trifle less; feeding barley, on the contrary, ruled very firm. Full prices asked for oats, which buyers were hardly disposed in every case to give. Feeding stuffs generally a firm trade.

Dublin, Friday.—Wheat, 17s to 17s 6d; malting barley, 15s to 15s 6d; grinding ditto, 13s 6d to 15s 6d; malt, 18s 6d to 20s; oats, 10s to 15s 3d; oatmeal, extra per head, 12s 6d to 14s 6d; flour, 11s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter, Friday.—Good attendance; trade much better. English wheat firm; foreign unchanged. English barley about the same as last week. A good deal on offer, and there was a steady demand, but the quality varied considerably; foreign rather easier. Maize 3d t o6d dearer. Oats 6d to 1s dearer. Flour unchanged. English wheat, 3s 4½d to 3s 6d; English barley, 3s 3d to 3s 9d; superfine flour, 25s to 28s; fine, 23s to 25s.

Glasgow, Wednesday.—There was the usual attendance at our Corn Exchange to-day. Wheat and flour quiet and unchanged since last week. Maize unaltered. Barley held for higher prices. Foreign oats firmer on the week, but Scotch oats cheaper. Beans unchanged. Pease unchanged. Oatmeal 1s. per sack down since Wednesday. Bran unchanged, but thirds the turn dearer.—GIBSON AND CLARK.

Glasgow. Friday. — Market practically unchanged in all departments. Trade quiet for wheat and flour. Mixed American maize in retail demand at 13s 6d per 280lb.; Plate quoted at 14s, with little doing. Bran steady at 82s 6d per ton for medium. All feeding stuffs unaltered.

Grantham. Saturday.—Average attendance, and a brisk trade in some departments. Wheat was in small supply, and commanded last week's prices of 27s to 29s per qr. A fair show of barley, and the quality and price varied very much. For the best samples 34s was paid, and inferior sorts 24s per qr; oats, 17s to 19s; beans, 29s to 31s; blue peas, 38s to 48s per qr.

Hereford. Wednesday.—Small attendance. English wheats very firm at last week's prices. Very small trade in English barleys, samples being chiefly of a medium character. Oat occasionally 3d per qr in sellers' favour. Beans in good demand at last week's prices. Wholesale quotations:—Wheat, 3s 3d to 3s 6d per 62lb.; barley, 2s 9d to 3s 9d per 56lb.; oats, old, 2s 6d to 3s per 40lb., new, 2s to 2s 6d; beans, old 4s to 4s 6d per 65½lb., new, 3s 6d to 3s 9d; vetches, 5s 6d to 6s 6d per 65½lb.

Ipswich, Tuesday.—Wheat was in bare average supply, but the trade was no better than last week, at 29s to 29s 6d per 504lbs. for good reds or whites, delivered at Ipswich. The barley trade was steady, although perhaps hardly so sharp as last week. Supply only moderate, with a fair demand for useful malting sorts, at 28s to 32s per quarter. The finer descriptions met buyers at 33s to 35s per quarter. Grinding sorts firm. Oats and beans in good demand, and firm at fully last week's prices. Maize unaltered. Other feeding corns generally firm all round. Oil cakes: Linseed firm, at £8 to £8 10s, and cotton at £5 5s per ton. Bran firm, at £4 15s to £5 per ton.

Leeds, Friday.—English wheat fully maintained Tuesday's prices, choice lots reaching 29s. Foreign wheat rose in value, Americans being 3d dearer. Both malting and feeding barley firm. Peas and flour were the turn against buyers, but there was no change in beans, oats, or maize.

Leicester, Saturday.—Better attendance of buyers and dealers. Average supplies of home-grown wheats in good condition. Trade ruled brisker at firm rates. Red wheats, 29s to 30s; white wheats, 30s to 31s 6d per 36 stones; barley, 25s to 30s per 32 stones; oats, 18s to 20s per 26 stones.

Lincoln, Friday.—Small show of English wheat, which met with a ready sale at last week's full prices. Oats and beans fully as dear as a week ago. Larger show of barley of variable quality, which sold at irregular prices, but as firm as last week.

Liverpool, Friday.—Wheat: There is a moderate attendance of millers at the market, but wheat is quiet at about unchanged prices. Manitobas and Indian sorts, however, are ½d dearer. Flour, a quiet trade, without quotable change in prices. Maize, mixed, in sympathy with the current month, is held at ½d advance, but only a moderate business is passing. Plate quiet, with a small trade at unchanged values. European grades unaltered. Barley, malting, quiet, unchanged. Feeding firm, with a fair trade at full prices. Beans firm at full prices. Peas in moderate demand at recent rates. Oats, English (new crop), in good demand for fine qualities, which are held at some advance. Foreign steady, occasionally held the turn higher. Oatmeal firm at late rates, but inactive. Oilcake quiet, unchanged for American, but English in fair demand at late rates, except linseed cakes, which are too dear.—SEGAR AND TUNNICLIFFE.

Manchester, Thursday.—English wheat unchanged, and in fair demand. Foreign wheat the turn dearer on the week. Flour has a dearer tendency. Foreign barley as before. Indian corn somewhat dearer. English oats very scarce and quoted at 2s 5d to 2s 6½d. Bran and thirds unchanged.

Newcastle-onTyne, Saturday.—Wheat here to-day was firmly held for last week's prices; demand, however, was limited. Maize steady and favouring the seller. Beans and peas firm, and the latter made 6d per quarter over last week's prices. Fine old oats firm and tending dearer. New steady at last week's prices. Inferior qualities the buyers get their own way where business is transacted. Barley unchanged, malting qualities from 23s to 27s, according to quality and condition. — JOSEPH POLLARD AND CO.

Newark. Wednesday.—A small show of wheat at last week's full prices. Barley sold quietly at previous values. Oats and beans unchanged. Quotations: Wheat, 27s to 28s; barley, 25s to 30s; oats, 15s to 17s; beans, 28s to 34s per qr.

Norwich. Saturday.—There was a smaller supply of wheat on offer at our market to-day, at late rates. Barley was in better supply, but some of ordinary quality runs making 4s to 5s less. Fine weather has prevailed during the past week, but showery to-day. J ARTHUR MILLS.

Nottingham. Saturday. - Wheat, in smaller supply, held firmly, and in many cases 6d per quarter more was paid. A better trade in barley, and values well maintained. Oats and beans small show, and prices in sellers' favour. ROBERT HUBBLE.

Northampton. Saturday.—Good attendance. Better supply of wheat and barley, which found readier sale. Wheat 27s to 27 6d, malting barley, 29s to 33s, barley, 24s to 27s, new white oats, 16s to 17s; beans, 28s to 34s; peas, 27s to 32s fl.m., 33s 6d to 38s 6d.

Peterborough Saturday. — A decidedly smaller supply of wheat, and trade firm at last week's prices. Fine barley made fully as much money, secondary qualities the turn easier. Oats 3d to 6d dearer.—THOMAS HILL AND SON.

Oxford, Saturday. — There was a good supply of English wheat on offer, but only a small business was done at about previous quotations. Barley was freely offered, and although buyers operated sparingly, prices showed little change.

Preston, Saturday.—The market for the week closed with a fair demand, spot wheat making about last week's prices to ½d and 1d per cental dearer. American corn more firmly held, and quoted at ½d to ½d per cental dearer. Flour and offa's unchanged. Peas, beans, and oats firm, with a quiet trade.—Quotations:—Wheat, white, new, per windle of 220lb., 12s 6d to 13s; ditto red, 12s to 12s 6d; oats, old, per bushel, 3s to 3s 2d; ditto new white, 2s 6d to 2s 8d; beans, per windle of 220lb.; 16s 6d to 17s; bran, 10s 6d to 11s.

Plymouth, Thursday.—There was a very fair attendance on our market to-day. Wheat firm. Barley, 3d to 6d dearer. Maize and oats 3d dearer. ORLANDO DAVIS AND CO.

Reading, Saturday.—Fair attendance, with slightly improved trade, at following prices:—Wheat, 28s to 34s; barley, 28s to 35s, at latter price very fine quality; oats, 16s 6d to 24s; old beans very scarce, 36s to 40s; new beans, 32s to 34s; peas, 28s to 34s; hay, 60s to 70s per ton; straw, 45s to 50s; dried ale grains, 85s per ton; porter grains, 75s; malt dust, 85s; mangels, 17s per ton, free delivery; bran very firm at last week's prices.

Gloucester, Saturday.—English wheat in moderate supply at unchanged prices, reds making 3s 6d to 3s 7d per bushel. Foreign met a poor demand at 3d advance. Maize and grinding barley unaltered. Oats 3d dearer. WAIT, JAMES, AND CO.

Retford, Saturday.—Only a small attendance and supply of grain limited. Wheat was dull. A few lots changed hands for seed at about 28s, the general run being 27s 6d to 28s 6d per qr. No fine samples of malting barley were offered. The best only reached 23s, inferior lots down to 25s, and grinding 23s 6d to 24s 6d per qr. Maize, oats, and beans as before.

Ripon, Thursday.—A good attendance. Moderate trade. Grinding barley shows a downward tendency. Malting barley firm at full prices. Prices:—New wheat, 27s to 29s; foreign wheat, 32s to 35s; grinding barley, 22s to 23s; malting barley, 26s to 28s 6d; new oats, 17s to 18s; round maize, 25s to 26s; flat maize, 25s 6d to 26s 6d per qr.

Shrewsbury, Saturday.—Wheat, 12s to 12s 9d; old white oats, 15s to 16s; new oats, 11 6d to 12s 6d; peas, 11s 6d to 12s 6d per 240lb.; beans, 13s 6d to 14s; barley, 15s to 19s per 280lb.

Southampton, Saturday.—English wheat in fair supply, at a slight increase in price. Foreign unaltered. Barley and oats unchanged. Maize 3d advance. Flour a steady trade at last week's quotations.—FEAR, COLEBROOK AND CO., LTD.

Stamford. Friday.—Average number of dealers. Wheats, 26s to 27s; new oats, 17s to 18s; barley, 27s to 29s; beans, new, 30s to 32s; old ditto, 32s to 34s per quarter.

Sunderland. Saturday.—Wheat, barley, and oats firm at late rates. Arrivals nil.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 28s 6d to 29s; new red ditto, 27s 6d to 28s; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 16s to 19s; rye, 23s to 24s; peas, 31s to 36s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 28s.

Warwick, Saturday.—Very small supply of wheat, which made full prices of last week. Few samples of barley offered; very variable condition. Feeding stuffs were rather dearer, and in good demand.

Worksop, Wednesday.—Good attendance. Fair supply of wheat and moderate supply of barley. Wheat met a ready sale, but barley dragged. White wheat, 27s 6d to 28s 6d; red ditto, 26s 6d to 27s 6d; best malting barley, 28s to 30s; secondary, 26s to 28s; grinding barley, 23s to 25s; new white oats, 17s to 18s; old ditto, 21s to 23s; old white oats, 19s to 21s; new ditto, 17s to 18s; maize, 25s 6d to 26s 6d per qr.

Yeovil. Friday.—A good offer of new grain and fair amount of business passing, prices generally favouring sellers. English wheat of best quality made from 30s 6d to 32s per qr.; secondary, 28s to 29s; foreign wheat, 32s 6d to 35s 6d; malting barley, 30s to 35s; feeding barley, 20s 6d to 23s; foreign ditto, 19s to 19s 6d; beans, 32s 6d to 37s 6d; oats, white, 15s 6d to 19s 6d; black, 17s 6d to 19s 6d; Irish black, 16s 3d to 17s 3d; maize, 23s to 25s; rye, 20s 6d to 22s 6d; vetches, 6s to 7s per bushel. More doing in flour and meals, fine flour making 24s 6d to 26s per sack; extra fine, 27s to 30s. Good inquiry for milling offals, which were selling at improved prices.

York. Saturday.—There was not so much wheat on offer as last week, and for dry samples 3d per qr. advance was generally obtained. Quotations:—Fine white, 28s to 29s; red and mixed, 27s to 28s 6d pef qr. of 36 stones. Fine samples of malting barley were in good demand at last week's prices; inferior neglected. Fine, 27s to 29s; good, 25s to 27s; feeding, 23s to 25s per qr. of 32 stones. Oats very scarce and rather dearer. White Tartary, 16s 6d to 17s 6d; black, 17s to 18s; white Garton, 18s to 19s per qr. of 24 stones; rye, 20s to 21s per qr. of 36 stones; old beans, 30s to 33s.

FOREIGN.

Hamburg. Saturday.—Our market rules firm, and the demand by our local maltsters and brewers has been more eager, the supplies of Danish Chevalier have been pretty heavy, and also of Bohemian a good deal has been imported; whilst to the South of Germany rather big quantities of Hungarian have been sold, which has caused a rise in Hungary, and offers are falling off a good deal especially of the finer sorts. FRANCIS M. TH. DUHNE.

Hamburg. Saturday.—Weather seasonable; fine sunny and rainy days alternating. We had a brisk trade during the greater part of the week, but towards the end a more quiet feeling gained ground. The imports from September 1 till September 26 amounted to 113,493 tons wheat, 21,565 tons rye, 11,926 tons barley, 61,124 tons maize, 16,780 tons bran. Fine new Holstein and Mecklenburg wheat is selling at 30s 6d to 31s 6d per 504 lb. f.o.b.; 40:1 Ko River Plate is held at 30s 3d to 31s 9 30 35 South Russian Ulka at 30s per 430 lb. c.i.f. Hamburg. Rye quiet, but firm. 9 15 20 South Russian is held at 25s 6d to 25s 9d., 1715 Ko Danubian at 25s 3d., American Western at 25s 9 1 per 480 lb. c.i.f. Hamburg. Malting barley continues in scanty supply, and, owing to the scarcity of fine home grown, German brewers are buying much Austrian and Hungarian, but stocks in these countries are already getting much reduced. Good Bohemian and Slovakian is selling at 32s 6d to 35s, fine at 35s 6d to 36s. East Prussian is offering at 30s to 31s; Saale at 33s to 34s; Danish is selling at 38s to 31s per 448 lb. A considerable amount of business was done in grinding barley, 60/61 Ko South Russian October 18s to 18s 3d, November and December 18s 3d to 18 3d to 18s 6d per 400 lb c.i.f. Hamburg. Maize firm; mixed American: Afloat 24s 3d, January 24s 3d; River Plate September-October 24s per 400 lb. c.i.f. Hamburg. JOHN TATLOCK.

Paris. Wednesday.—Offers at the Bourse de Commerce are still fairly brisk in flour, but buyers are somewhat backward. The tone of the market is weak, and prices have fallen from 35c to 35c. In wheat a fair amount

of business is passing, but prices have fallen from 15c. to 30c. due to realisations. At the weekly spot market business in home grown wheat is fairly steady, but good qualities are getting scarce, due to the rise in price of superior classes of flour. Old wheat has gone up from 25c. to 59c., but the prices of medium and common grades show a tendency to droop. For prime marks of flour 54s. per large sack are now being asked since last Monday. The upward tendency of the market would facilitate the placing of stocks if only holders would consent to make the necessary sacrifices. Inquiry for forward parcels is limited, but it can hardly be expected that the prices of flour will fall in view of the high prices ruling for wheat. Flour will probably remain dear throughout the whole campaign. Offers of rye continue restricted in some districts, but are better, however, where the harvest has been very good. Prices remain steady, but not much business is passing. In oats, the situation remains firm, due to the insufficiency of offers from the chief centres of production.—*Dornbusch.*

THE BALTIC.

There has been little change in cargo prices during the last fortnight of September. At the close of the month Argentine wheat cargoes were making 30s. 6d. per 480 lb. for Rosario, 31s. 3d. per 496 lb. for Bahia Blanca. The finest Russian wheat was held for 34s. 3d. per 492 lb., and Odessa Ghuka was offered at 31s. 6d. per 492 lb. prompt shipment. Transactions between September 26 and 30 included Victorian at 33s. 6d. per 480 lb., Roumanian at 30s. 6d. per 492 lb., White Kurrachee at 31s. 9d. per 492 lb., No. 1 Hard Manitoba at 32s 6d. per 480 lb., and No. 1 Northern Manitoba at 32s. per 480 lb.

Maize has not sold well for futures, but Argentine on passage has realised 23s. per 480 lb., and American 22s. 9d. Barley is 3d. cheaper from a week ago. Kustendje is at 19s. per 400 lb., Eupatorian at 19s. 3d. per 400 lb., and Theodosian at 19s. per 400 lb. Californian is quoted 26s. per 448 lb. for fine.

Other sales of cargoes include Petersburg oats at 15s. per 304 lb., Smyrna beans at 33s. per 480 lb., Calcutta linseed at 36s. 6d. per 410 lb., and Egyptian cottonseed at £5 6s. 3d. per ton.

The London Corn Trade Association c.i.f. quotations for the settlement of rejections and difference in weights on wheat under Rule No. 4 of the Association East Indian Wheat Contract are as follows:—No. 2 Club Calcutta, 32s. 3d.; Soft Red, 30s. 6d.; Bombay Soft White Delhi, 32s. 3d.; Kurrachee Soft White Delhi, 32s. 3d.; Kurrachee Choice White, 32s.; Soft White, 31s. 3d.; Soft Red, 30s. 9d.; all per 492 lb.

The arrivals of grain and seed-laden vessels at Ports-of-Call for the week were 1 wheat (La Plata), 1 maize (La Plata), 2 linseed (1 Rosario, 1 San Nicolas).—Total 4.

The sailings of grain and seed-laden vessels from Ports-of-Call were 1 wheat (Limerick), 1 maize (Rotterdam).—Total 2.

Since January 1, 1905, the total arrivals have been 284 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 6 maize, 1 beans, 4 locust beans, and 48 linseed.—Total 372.

Last year during the same time the arrivals were 232 wheat, 1 wheat and maize, 35 barley and wheat, 17 barley, 5 maize, 5 beans, 4 locust beans, 1 rye, 34 linseed, and 1 canaryseed.—Total 335.

WOOL.

London. Wednesday.—The result of these sales is for Australian wool an all-round advance of about 5 per cent. on the closing rates of the June series. Merino wools showed the advance fully, in greasy descriptions as well as in scoured. Among crossbreds the coarser grades showed the rise most, they were 5 to 7½ per cent dearer; on the medium sorts the improvement was not pronounced and the finest qualities were only slightly higher. —Helmuth Schwartze and Co.

London. Saturday.—English per pkge. of 240 lbs. Fleeces. South Down hoggs, £14 to £14 10s; half-bred hoggs, £13 to £14; ditto wethers, £12 10s to £13; Kent fleeces, £13 to £13 5s; South Down ewes and wethers, £13 10s to £14 10s; Leicester ditto, £12 10s to £13 10s. Colonial per lb.—Vic.: Fleece super., 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d. N.S.W. Second average, 1s 9d to 1s 9½d; greasy average, 11½d to 1s. S. Aus.: Greasy average, 9d to 9½d. N.Z.: Scoured average, 1s 9½d to 1s 10d; greasy average, 10½d to 1s 1d. Cape: Scoured super., 1s 3d to 1s 10½d; fleece ave., 9½d to 10d; greasy average, 7½d to 9d. Natal: Scoured, 1s 5d to 1s 6d; greasy average, 8½d to 9½d. Crossbred-Grs.—Vic.: Good to super., 1s 2d to 1s 3d. New Zealand: Fine, 1s 2d to 1s 3d; medium, 1s 0½d to 1s 1½d; coarse, 11d to 1s.

MANURES.

Liverpool. Friday.—Nitrate of soda is firmer, and holders ask £10 7s 6d for ordinary, while refined commands more money. Basic slag and linseed cake are in increased inquiry, prices are reasonable, and there seems a likelihood of a brisk trade this autumn. For oil cakes there is a slightly improved demand, also for feeding treacle and cod liver oil at the following rates:—Fattening cake, prime, Liverpool make, in bags, £5 7s 6d; feeding or dairy cake, prime, Liverpool make, in bags, £6; nitrate of soda, best quality,, i.e., guaranteed 95 per cent., pure, in bags, £10 7s 6d to £10 15s; East India bone meal, in bags, £5 5s to £5 7s 6d; bone, prime, 23 per cent. sulphate of potash, in bags, £2 5s to £2 2s 6d; palm nut cake, prime, in bags, £6 12s 6d to £6; linseed cake, American thin oblong, prime, in bags, £7 7s 6d to £7 10s; linseed cake, English, prime, in bulk, £8 7s 6d to £8 12s 6d; linseed meal (pure crushed linseed), prime, in bags, £13 10s to £14 10s; cottonseed cake, N.A. decorticated, good to choice, in bags, £6 17s 6d to £7 2s 6d; ditto, ditto, English, decorticated, prime, soft, in bags, £7 5s to £7 7s 6d; ditto, ditto, English, undecorticated, prime, in bulk, £4 10s to £4 17s 6d; do., do. (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags, £6 17s 6d to £7; maize germ meal, prime, in bags, £5 15s to £5 17s 6d; ditto, ditto, in bulk, £5 5s to £5 7s 6d; maize meal, prime, in bags, £5 15s 9d to £6 1s 3d—per ton. Linseed, fine to coarse grinding, prime, in bulk, 1s 5d to 1s 6d per 240lb.; linseed, fine bold feeding, in bags, £2 6s to £2 8s per quarter 416lb.; cod liver oil, cattle feeding, prime, in casks, 4s 6d to 4s 9d per gallon; treacle, feeding prime, in brls., 4s 4½d to 4s 6d per cwt. D.N.S. Brand superphosphate of lime, guaranteed [illegible] per cent. sol., in bags, nominal; ditto, ditto, guaranteed [illegible] per cent. sol., in bags, nominal; ditto, ditto, guaranteed [illegible] per cent. sol., in bags, nominal; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, £4 12s to £4 13s 6d; ditto, ditto, prime quality, guaranteed, 38 to 45 per cent. phos., in bags, £1 19s to £2 6s 6d; ditto, finest quality, guaranteed 42 to 50 per cent. phos., in bags, £2 2s to £2 3s—per ton [illegible]. Jones Langar and Co.

FRUIT AND VEGETABLES.

London. Friday.—Quotations for [illegible]. Potatoes: Duke of York, 60s to 65s; Puritan, Beauty Hebron, and Up-to-dates, 55s to [illegible]; Imperators, 50s to 55s; Royal Kidneys, 50s to 55s; Reds, 45s to 50s per ton; cabbages, sold [illegible] 4s; [illegible] tails; beans, 1s 5d to 1s 9d per bushel; [illegible] 2s per bag; parsley and leeks, 1s to 1s 6d; turnips, 2s to 3s; carrots, 9d to 1s 3d per bag; [illegible] 7s to 10s per dozen bunches; [illegible] dozen lb; apples, 3s 6d to 7s per bushel; plums, 4s to 4s 6d; [illegible] sieve; blackberries, 1s 5d to [illegible]; nuts, 5d to 6d per lb; filberts, 2s to 3s per half sieve.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The peaceful conditions with which October begins in this season are strikingly in contrast with October last with its wars and rumours of wars, its wheat at thirty-one shillings, and a rising market. Throughout Europe, including our islands, an alteration in the outlook such as is shown in this comparison of October, 1905, and October, 1904, can hardly fail to be of importance to wheat growing, and we must be prepared for a falling off in autumn sowings in England, Scotland, France, Germany, Austria-Hungary, and Italy. Nor can we advise English farmers to sow wheat in the face of such disastrous price depression as already has succeeded to the fair but by no means high quotations of last cereal year. The wheat average is already down to 26s. 8d. in the shires, and to 27s. 10d. at Mark Lane.

The threshings of the home wheat crop for September were more than twice as large as last year, and deliveries were a great deal in excess of what we have been accustomed to for several years past. The price has ebbed 3s. 2d. on the year as a result. The imports of wheat last week were liberal, 456,000 qr., and it is certain that when we have the ascertained totals for September before us, those of the past month will exceed those of September in 1904, 1903, and 1902. This is the cardinal fact of importance, actual returns can wait till Saturday next. The large home deliveries have made these importations particularly infelicitous, but, of course, the importers had made their extracts much earlier in the season, and the grain "had to come." There is not a very large quantity due to arrive during October, and, with a moderate supply on passage, the next few weeks only need sharper weather and a touch of early winter to resume firmness. That the weather will rule October's markets is a trade probability.

The supplies of wheat on passage on October 1 are the subject of the following estimate:—

	Qrs.
American	85,000
Russian	345,000
Roumanian	60,000
Indian	255,000
Australasian	235,000
Argentine	330,000
Various	30,000
Total—October 1, 1905	1,340,000
October 1, 1904	2,355,000
October 1, 1903	1,565,000

The absence of California from the above list is very remarkable, but about 100,000 qr. of Californian, Walla, and Blue Stem wheat are under contract for October and November shipment from Pacific ports, and we shall, therefore, see the Californian column once more tenanted by figures very shortly. No large exports, however, are probable.

The imports of flour last week were 86,480 sacks against 109,490 sacks last year, and 141,100 sacks two years since. The quantity on passage was thus estimated:—

October 1, 1905	246,000 sacks.
October 1, 1904	162,000 sacks.
October 1, 1903	426,000 sacks.

The top price of London flour is 2s. per sack lower on the year, and is now at a level identical with that of two years ago. The price of the best North-Western American flour is 29s., against 35s. on October 1, 1904, and 27s. 3d. on October 1, 1903. The present year in this respect occupies a position intermediate between the remarkable dearness of 1904 and the decided cheapness of 1903.

The imports of maize last week were 313,000 qr., or 30 per cent above estimated requirements. That prices are not quotably lower at the leading markets is a sign of sustained retail demand, but naturally the buyer has rather the best of the situation. The new crop in America is being secured in excellent condition, and is probably the largest ever grown. Supplies on passage are as follows:

October 1, 1905	1,120,000 qrs.
October 1, 1904	1,320,000 qrs.
October 1, 1903	1,280,000 qrs.

The imports for the complete nine months of the year thus compare:

January 1–September 30, 1905	8,300,000 qrs.
January 1–September 25, 1904	7,400,000 qrs.
January 1–September 26, 1903	9,000,000 qrs.

The price at New York on Saturday was 19s. 3d. per qr., against 18s. 3d. at this time last year.

Supplies of English barley are increasing, but they are still below the average. The samples from North East England and South East Scotland give fair satisfaction; not so for the most part those for East Anglia and Essex. Quality in the West is very varied, we have seen some really fine lots from Somerset and Wilts. The Severn Valley and Welsh marches report, on the other hand, a general discoloration of the grain, and there is a great deal of badly sprouted corn. The French, German, and Italian barley crops are all lacking in quality, but Hungary, Bohemia, and Roumania are fortunate, and some malting quality is expected from Asia Minor. Prices range from 30s. to 34s. for the majority of British malting samples.

Foreign barley, for feeding purposes, is a trifle lower for the week. The imports last week were 175,000 qr., or 25 to 30 per cent. above requirements. The supply on passage is thus returned:—

	Qrs.
Russian	310,000
American	60,000
Asiatic	100,000
Various	30,000
Total	500,000

There were 700,000 qr. afloat at this time last year. The stocks in the Russian ports are said to be rather small, but the new crop is admittedly a large one.

Oats have recently been very well held, and 3d. rise is quoted at Bristol, Hull, Plymouth, and Birmingham. The London trade tends in the same direction, though up to the close of September trade on Saturday afternoon actual advance had not been quotable. The increased shipments from America are the chief threat to the buoyant market of to-day, how far America may increase her exports is a very moot point. The large purchases of Russian oats for Germany are a feature of this autumn's trade, and are likely to balance, at least to some extent, the effect of America having returned to the arena as a shipper. Imports into the United Kingdom last week were 115,000 qr., about an average summer supply, but not up to full autumn wants. The London share of the total imported has been rather larger than usual, which accounts for metropolitan prices being simply firm, while some other ports were quoting some advance.

Russia is a free shipper of rye, in addition to which both Roumania and America are shippers. Prices are in consequence decidedly low, 22s. is accepted for good English and Russian, 24s. for fine French. The price of beans tends to favour the seller. Some of the new English samples are of exceptional weight and quality; the same applies to samples of new English tares.

Peas are fairly firm, but India offers enough to prevent the market rising. Dari is rather dearer for fine samples, but Persian, at a guinea, meets the needs of many chandlers, etc., who have contracted to deliver "Dari" without further being tied. There is a steady sale for Carobs, which, under their very misleading market name of locust beans, are in danger of being ranked with pulse. They command five guineas per ton for good Cyprian, somewhat less being accepted for Portuguese.

Linseed has improved a little since the middle of September, but is lower on the month by a full shilling. Prices thus compare for large wholesale transactions:—

	Per Qr.
September 30, 1905	37s. 0d
September 30, 1904	35s. 0d.
September 30, 1903	35s. 6d.
September 30, 1902	48s. 0d.

OIL SEEDS.

MARK LANE, MONDAY.
October, 2.

LINSEED.	per 416 lb. s. s.
Russian	42 to 43
Morocco	46 to 48
American	40 to 41
Dutch	41 to 45
Ca'cutta	37 to 38
Argentine	36 to 37
Turkish	41 to 43
Persian	38 to 39

COTTONSEED.	per cwt.
Egyptian	5/6 to 5/6
Indian	4/6 to 4 9

RAPESEED.	per 416 lb. s. s.
Dutch	52 to 54
Cawnpore Yellow	37 to 38
,, Brown	35 to 36
Calcutta ,,	35 to 36
Gujerat	41 to 42
Ferozepore	35 to 36
Roumanian	33 to 37

POPPYSEED.	per 377 lb.
Indian	39 to 40

SUNFLOWERSEED.	per 418 lb.
White	41 to 48
Black	42 to 43

POTATOES.

Spitalfields. Saturday.—Arrivals were on a good scale, but met with slow support. Quotations: Puritans, 60s to 65s; Royal Kidneys, 60s to 65s; British Queen, 60s to 70s; Blackland, 55s to 60s; and Up to dates, 60s to 65s per ton.

Borough. Saturday.—A good quantity was on offer this morning, for which a steady demand prevailed. Quotations: Best Sills, 55s to 65s; Blacklands, 45s to 50s per ton.

Manchester. Saturday.—Potatoes: Cheshire, 3s 6d to 4s 6d per load (18 stones); Bedford, 3s 6d to 4s per cwt. Turnips, washed, 40s to 45s; carrots, washed, 40s to 45s per ton.

York. Saturday.—There was a moderate supply of potatoes, and the appearance of disease and the fact that picking has commenced led to somewhat improved prices. Seeds made 50s to 60s, and Warps, 35s to 45s per ton.

TO-DAY'S MARKETS.

MARK LANE, MONDAY, October 2.

[FIRST REPORT.]

English wheat samples continue to show good quality. Prices to-day were rather difficult to maintain, however; buyers were sometimes (not always) able to get corn at 6d. decline. Foreign tended in purchaser's favour also, but no quotable alterations occurred. The Russian sorts were decidedly weaker than American, while Indian descriptions might be written firm. Maize on spot was stiffly held for full prices; a certain weakness in futures does not affect current business. Barley was 3d. cheaper on the week for Russian kinds, and English descriptions also inclined to favour buyers. Oats were very well held, but the attempt to advance prices was for the most part resisted by buyers. Beans and tares were the turn dearer. Peas were steady. Rye was cheap. The market for oilseeds on spot was firm for poppyseed and rapeseed, steady for linseed, and rather cheaper for cottonseed.

CLOSE OF THE MARKET.

THE CLOSE OF THE MARKET WAS A LITTLE WEAK FOR MAIZE AND OATS, AS WELL AS FOR WHEAT AND BARLEY.

THE FLOUR TRADE.

MARK LANE, MONDAY, October 2.

London makes were held for September's closing prices. Country flour was a good sale at 23s. for good roller whites. American made 29s. for the very best ex granary and 26s. c.f.i. for the like type November shipment. American First Bakers' made 21s. ex. granary, with 20s. 3d. c.f.i. accepted for November shipment. New Kansas patents were quoted 24s. 6d. c.f.i. November shipment. Hungarian flour favoured buyers, few sorts exceeded 30s. per sack. Some Canadian made 26s. 9d. French and Australian sorts were unchanged, and La Plata was firm through scarcity. Bran, pollard, and middlings were steady; barley meal advanced 2s. 6d. per ton.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were indicative of a stronger feeling for wheat:—

WHEAT (per cental).

No. 2 American Red	7s. 0d.	Oct. delivery.
,, ,,	6s. 9d.	Dec. ,,
,, ,,	6s. 8d.	Feb. ,,

MAIZE (per cental).

American	4s. 9d.	Oct. delivery.
,,	4s. 4d.	Jan. ,,

American Red Winter wheat to-day made 6s. 9d. for December delivery. American maize made 4s. 4d. for January delivery, and there were some transactions for March delivery at 4s. 3d. This is the remotest maize future yet dealt in.

SEEDS

London. Monday.—Winter tares moving off freely; prices unchanged. Seed wheats in good demand, prices firm. There is a growing inquiry for spring sowing seeds, but prices are only developing.—JOHN PICARD AND CO.

London. Monday.—W. H. and H. Le May, 67, Borough, London, report:—There has been a good trade done to-day at current rates, one-third of the English crop has already passed into consumers' hands. English hops are the best value at any offering.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—Trade continues quiet, and at the moment there is no new feature to report. Prices for most grades of home made appear favourable to buyers.—GREENHILL BROS. (Belfast).

Offals.—Bran continues in good demand; prices advanced generally about 2s. 6d. per ton. GREENHILL BROS. (Belfast).

Flour.—Higher prices are asked for shipment, but there is no change on spot. Grain.—Indian corn dull at 13s. 6d. per 280 lb. There has been a brisk demand for foreign oats at advancing prices. Scotch oats are of finer qualities, also rather dearer. Barley cheaper on spot, owing to arrivals. Pease dull. Beans quiet. Oilcake 2s. 6d. per ton up. Mill Stuffs.—Bran and common thirds the turn lower. Fine thirds scarce and dear.—MCKINNON AND MCDONALD (Glasgow).

Arrivals of wheat are large, principally from Russia. Trade is quiet, and prices are rather in buyers' favour. Flour unchanged in value. Maize a slow sale, and prices are rather lower. Barley in large supply from Russia, and prices are 1½d. to 3d. lower. Oats a slow sale at late rates.—COVENTRY.

There is no change in milling offals. Steady trade at last Monday's prices.—JOHN BAWCOMB AND CO.

FEEDING STUFFS.

London. Monday.—Linseed cake: Trade has been a little dull the past week, but wit hhardly any foreign arrivals the firm tone is well maintained. The oil market being again weaker there is no chance of London made decreasing in price. Cotton cake: Two large parcels of Egyptian made have arrived during the week, and with little or no demand tends to weaken values. Decorticated cotton cakes and meal: Stocks are small, and a good inquiry exists, which helps sellers to advance prices 1s 3d to 2s 6d. Linseed: Steady at last quotations.

English Linseed Cake	ex mill	7 17 6	to 8 0 0
American Calcutta Linseed Cake	ex quay		
,, Western ,,	to arrive	7 7 6

ROBERT AND JOHN HEWETSON.

THE BALTIC, 1 p.m.

STATE OF TRADE.

The firmest holders are those of oats; cargoes of wheat and linseed are steady. In the cases of barley, maize, and cottonseed cargoes, business has opened in buyers' favour.

BUSINESS DONE.

WHEAT.—Walla, 32s 3d per 5001b., October shipment; Blue Stem, 33s per 5001b., October shipment; Red Walla, 31s 9d per 5001b., October shipment; Roumanian, 31s 9d per 496lb., October shipment; Roumanian, 31s 3d per 492lb., October shipment; Australian, 33s 6d per 480lb., on passage; No. 2 Manitoba, 30s 3d per 480lb., October shipment; No. 3 Manitoba, 29s 9d per 480lb., October shipment.

MAIZE.—Argentine, 23s per 480lb., October shipment; American, 20s 6d per 480lb., January shipment.

BARLEY.—Azoff, 19s per 400lb., October shipment.

OATS.—Odessa, 15s 3d per 304lb., October shipment.

BEANS.—Smyrna, 33s 3d per 480lb., prompt shipment.

LINSEED.—Bombay, 38s per 416lb., November shipment; Argentine, 26s 3d per 416lb., November shipment.

RAPESEED.—Roumanian, 35s 3d per 424lb., November shipment; Ferozepore, 35s 6d per 416lb., November shipment; Guzerat, 40s 6d per 416lb., November shipment.

POPPYSEED.—Bombay, 37s 9d per 377lb., November shipment.

PROVISIONS.

London. Monday.—Bacon: The arrivals of bacon last week were from Ireland 2,260 bales, and from foreign ports 11,775. There was a steady trade for bacon last week, but at the same time the market closed rather quietly, with:—Irish, 60s to 62s up to 66s; Danish, 52s to 61s up to 64s; Canadian, 56s to 58s up to 60s. Butter: The butter market was steady, with finest selections in good demand: French, 90s to 114s; Danish, 122s to 124s; Russian, 94s to 100s; Irish, 100s to 118s; Canadian, 88s to 114s; Australian, 96s to 114s; American, 86s to 102s. Lard: The lard market was quiet:—Irish, 50s to 64s; Danish, 52s to 58s; American, 36s 6d to 38s 9d.

GAME AND POULTRY.

Smithfield. Saturday.—Supplies larger; quieter demand. Fowls, Yorkshire, 2s 6d to 2s 9d; Essex, 2s 6d to 3s; Boston, 2s to 2s 6d; Surrey, 2s 9d to 3s 6d; Sussex, 2s 6d to 3s; Welsh, 2s to 2s 3d; Irish, 1s 8d to 1s 10d; geese, 5s to 6s; Aylesbury ducks, 2s 3d to 2s 9d; country, 2s to 2s 6d; quail, 1s to 1s 6d; Bordeaux pigeons, 9d to 11d; feathered, 7d to 9d; wild rabbits, 8d to 11d; tame, 1s 2d to 1s 6d each; Australian, 6s 5d to 8s 6d per dozen; venison (haunches), 12s to 18s each; fore quarters, 3d per lb.; young partridges, 2s 6d to 2s 10d; old, 1s 4d to 1s 5d; young grouse, 5s to 5s 6d; old, 3s per brace; English hares, 2s to 2s 6d; leverets, 1s 4d to 1s 9d; Scotch hares, 1s 6d; wild ducks, 1s to 1s 6d; teal, 6d to 8d; snipe, 4d to 6d; woodcock, 2s each.

CATTLE.

Metropolitan Market, Islington.

	Monday, Oct. 2, 1905. British.	Total. Oct. 1, 1904.	Monday,
Beasts	1,150	1,420	
Sheep and Lambs	6,600	6,780	
Calves	10	10	
Milch Cows	58	50	

Quotations per 8 lb. (sinking the offal):—

ENGLISH.

	Inferior.	Second.	First.
Beasts	3s 10d to	3s 9d to	4s 6d
Sheep	3s 10d to	4s 9d to	5s 10d

Milch cows, per head, £16 to £21.

British arrivals include as follows: Scotland, 911; Eastern Counties, 39; Midland, Home, and Western Counties, 1,017 Devon, 30; Ireland, 64.

We note to-day a decrease of 270 head in the number of beasts offered for sale compared with Monday last, the greater part of the supply being drawn from the Midland Counties and Ireland, these latter consisting of 44 Dublins (10 of which were black polled cattle) and 20 Waterfords. Trade was of a dull and dragging nature, nevertheless salesmen were able in most cases to maintain last week's currencies; on the other hand, English cattle showed a downward tendency to the extent of 2d. per 8 lb., this latter remark also applies to fat butchering cows and bulls, these also sharing in the general depression. A clearance in this part of the market is considered doubtful.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Oct. 1, 1904.
Devons	4s 4d to 4s 6d	— —
Herefords	4s 4d to 4s 6d	4s 4d to 4s 6d
Runts	4s 0d to 4s 4d	4s 0d to 4s 6d
Lincolns	3s 8d to 3s 10d	3s 10d to 4s 2d
Irish	4s 0d to 4s 5d	4s 0d to 4s 2d
Fat Cows	3s 4d ex 3s 6d	3s 6d to 3s 8d

There was a decrease of 270 in the number of sheep and lambs penned compared with Monday last. For both wethers and ewes trade was of an extremely slow nature, salesmen having to concede to a fall of 2d. per 8 lb. to effect sales. There was a large supply of Irish, but these met with no corresponding increase in the demand, consequently a fall in value was inevitable; on the other hand Scotch descriptions were fairly steady at late currencies. Lambs met with very little demand, consequently are unquotable. There is very little prospect of a clearance being effected. The supply included 300 Scotch, 2,171 Irish, and 391 from the Eastern Counties.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Oct. 1, 1904
7½ to 8 st Downs	5s 8d to 5s 10d	5s 10d to 6s 0d
9 st Downs	5s 6d to 5s 8d	5s 6d to 5s 8d
10 st Half-breds	5s 4d to 5s 6d	5s 4d to 5s 6d
8 st Scotch	5s 8d to 5s 10d	5s 8d to 6s 0d
10 st Irish	5s 0d to 5s 2d	5s 0d to 5s 2d
10 st Down Ewes	4s 0d to 4s 2d	4s 0d to 4s 2d
11 st Half-bred ditto	3s 10d to 4s 0d	3s 10d to 4s 0d
5 st Down Lambs	—	5s 8d to 5s 10d

Calf trade nominal.

No pigs on offer.

London (Central). Monday. — Fair supplies; quiet demand. Beef, Scotch, 4s to 4s 8d; English, 3s 4d to 3s 5d, American, 3s to 3s 6d. Mutton, Scotch wether, 4s 8d to 5s; ewes, 3s 4d to 3s 6d; English wethers, 4s 6d to 4s 10d; ewes, 3s 2d to 3s 6d. Lambs: Scotch, 4s 8d to 5s; New Zealand, 2s 10d to 3s 6d. Veal: 3s to 4s 8d. Pork, 4s to 5s 10d per 8lbs.

St. Ives (Hunts). Monday.—Beasts 539, sheep 1,959, pigs 435, horses 22. Beef, 8d to 7s 9d; mutton, 8s 2d to 10s 6d; pork, 6s 6d to 7s 6d. Fat and store cattle and sheep fair demand. Fat and store pigs good demand. Milch cows fair show, and trade £15 to £22.

FOREIGN

Liverpool. Monday.—Supply of cattle was larger than Monday last; demand and prices if anything lower. Larger supply of sheep; demand slow. Finished sheep about maintained late quotations. Strong and rough sorts difficult to cash even at reduction of 2s per head. Beef 6½d to 4½d per lb; mutton, 8½d to 5½d. At market: 1,621 cattle and 7,822 sheep.

Deptford. Monday.—Beasts, 1,265. To-day's supply of beasts, compared with Monday last, showed a decrease of 188 head, and consisted of 840 from the United States and 425 from Canada. Trade was of a generally firmer and steadier nature, rates ruling from 1d to 2d per 8lb higher for the former. The best States on offer were quoted at from 4s to 4s 1d, occasionally 4s 2d; Canadians, 3s 8d to 3s 10d; seconds, 3s 6d to 3s 8d per 8lb (offal given in); 804 Canadian ewes were offered for sale, and were quote dat from 3s 10d to 4s per 8lb. On Saturday 1,943 beasts from the United States were offered for sale, and with a fair trade were quoted at from 3s 9d to 4s; seconds, 3s 7d to 3s 8d per 8lb. (offal given in).

COLONIAL DAIRY PRODUCE.

London. Friday.—Butter: The weather generally is cold and unsettled, with cloudy skies and consequent freedom from frosts. There has been more inquiry for Canadian butter this week, owing to the rise in the c.i.f. quotations from Canada, which are now considerably above spot values. This advance in Canada is largely due to the demand for butter for storing purposes for their own winter consumption, stocks of which are reported to be light. Holders on this side of the Atlantic are firm at last week's quotations, whilst the c.i.f. prices have advanced 3s to 4s per cwt. "Choicest" [illegible] saltless are making 112s. per cwt., and salt 108s to 110s. "Finest" lots of saltless are bringing 106s to 108s, and salt, 102s to 104s. Shipments of Canadian butter from May 1 to September 17 this year are 88,579 boxes more than in 1904, and 204,692 more than in 1903. The demand for Australian butter is good, particularly for "Choicest" brands. Prices are unchanged on the week. To the surprise of the trade here the Copenhagen [illegible] tion remains unchanged at 105 kroner. Cheese: There has been a fair trade in Canadian this week at 56s to 57s per cwt., there being only a very small supply at 58s. Other quotations are about 2s. per cwt. above spot [illegible]. New Zealand factories are holding their output [illegible] at 55s. c.i.f. London, and it is reported there are buyers at these figures. Shipments of Canadian cheese from May 1 this year to September 17 are 3,752 [illegible] in 1904, and 383,691 boxes less than in 1903. W. WEDDEL AND CO.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington Cattle Market on Monday there was an increase in the supply. Trade for fat beasts of both prime and second quality was of an exceedingly dull and dragging nature, partly due to the inclement weather. Rates for good Herefords and Devons were only barely maintained, and middling quality ruled decidedly easier. Fat butchering cows and bulls, notwithstanding there being only an average number on offer, met with such a limited demand that salesmen had to accept from 1d. to 2d. per 8 lb. to effect sales. The Irish arrivals consisted of 38 Dublins (ten of which were black polled cattle), 36 Waterfords, and 10 store cattle, these latter meeting with practically no inquiry; the former shared in the general depression, nevertheless, all sales were governed by last week's currencies. On Thursday there was no demand for fat cattle, and a slow sale, with a downward tendency in value, for fat butchering cows, bulls, and rough cattle. At Deptford, trade was of a slow nature, rates ruling 1d. per 8 lb. in favour of the buyer.

The total number offered at both markets was 5,476, as against 4,528 during the preceding week, consisting of 1,410 British (increase 150) and 4,066 Foreign (increase 798), consisting of 3,143 from the United States and 923 from Canada. The following were the top rates paid per 8 lb. (sinking the offal): — 80 to 90 stone Devons, 4s. 6d., ex. 4s. 8d.; 90 to 95 stone Herefords, 4s. 6d., ex. 4s. 8d.; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 110 stone ditto, 3s. 6d. to 3s. 8d.; 80 to 95 stone Irish, 4s. to 4s. 5d.; 90 stone States, 3s. 10d. to 4s.; 95 stone Canadians, 3s. 10d.; 90 stone fat cows, 3s. 4d. to 3s. 6d. At Islington the supply in the sheep market was slightly larger, trade ruled fairly steady for both wethers and ewes at late currencies; on the other hand, the Scotch and Irish, were of a slower nature, rates ruling 2d. per 8 lb. in favour of the buyer. On Thursday ewes maintained late values, but wethers were quoted 2d. lower. Lambs on Monday were in short supply, and difficult to vend. At Deptford a small consignment of ewes were offered for sale, and made good money. The total number penned at both markets was 8,458, as against 8,693 during the previous week, consisting of 7,890 British (decrease 370) and 568 Foreign (increase 105). Best pens made per 8 lb. as follows (offal given in): — 7½ to 8 stone Downs, 5s. 10d. to 6s.; 8 stone Scotch, 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 8d. to 5s. 10d.; 10 stone Irish, 5s. 2d. to 5s. 4d.; 10 stone halfbreds, 5s. 4d. to 5s. 6d.; 10 stone ewes, 4s. 2d. to 4s. 4d.; 8½ stone Canadian ewes, 4s. 4d.

Calves numbered fifteen, and, with a slow trade, were quoted at from 5s. 2d. to 5s. 4d.

Pigs (60): Trade very quiet, the best on offer made 4s. 6d. per 8 lb.

Trade in the West.

The past week has witnessed a slight improvement in prices on what they have been, this applying not only to the innumerable Michaelmas stock sales in progress all over the district, but also to the fairs, where in some cases lambs are bringing distinctly improved prices, though ewes on the whole are not meeting such a good trade. This is being strikingly exemplified at the great Poundbury sheep fair at Dorchester on Thursday, when in some cases prices showed a decline of from 2s. to 4s. a head.

As regards cattle, barreners, with a slow demand, are making about £20 to £27, this price being just now but rarely exceeded. With milch beasts there is a distinct improvement, not only in demand, but still more in price, the best heifers being now worth any price between £16 10s. and £21, which is quite £1 to £1 10s. in advance of what has been paid for good milchers for some time past.

There is no great change to note in the price of either fat cattle or sheep. The few really prime steers and heifer now to be met with (principally Devons) command a very good price at from £16 10s. (for small heifer) to £22 or £23 for fairly heavy steers (or from 11s. to 12s. per score, according to finish). Fat cows lack demand and low prices as a consequence rule; these we may quote at from £16 to £18 10s. each (or 9s. 6d. to 10s. 6d.).

Veal is finding a very fair sale, though at a trifle less money than has been obtained of late. Occasionally something very choice makes 8½d. and a trifle over, but the general run for ordinary stock is from 7½d. to 8d.; whilst poor quality animals only bring 6d. to 7d. The best class of fat mutton keeps very firm, with prices well maintained, these ranging from 8d. to 8½d. per lb., and occasionally more; secondary grades and young ewes, 7½d. to 8d.; and rough ewes and inferior sheep, 6d. to 6½d.

The pig trade is again showing signs of revival, especially for the neater weights of porkers, which sell from 9s. 6d. to 10s. per score (or from 40s. to 65s. each); baconers, 8s. 6d. to 9s., with a very fair sale; but coarse, heavy pigs and old fat sows are in no great demand at 7s. to 8s. per score, and for excessive weights even less than what we have quoted.

Trade in Scotland.

The number of fat cattle on offer this week has been large, but the great bulk were of secondary descriptions. A good demand was experienced for the best class at prices similar to the preceding week, but all others would be about £1 a head cheaper. Fat sheep have also been shown in full average numbers. For the best class trade was steady and prices without change, but secondary sheep and ewes made from 1s. to 2s. a head less money. Fat lambs in shorter numbers, and they maintained previous prices. A large show of calves, the best descriptions being dear. Pigs in average numbers, and they also commanded good prices. More store cattle on offer, and a slightly better demand has been experienced with a good clearance of the better descriptions, a few of the secondary class being left over. A large supply of store sheep, many of an inferior class. Trade has been fairly good, but a fall of 1s. a head had to be accepted for anything in moderate condition. Milch cows a fair show, and these met a slightly better demand at prices corresponding with those of the previous week. Quotations:—Top price of best cattle, per live cwt., 38s.; Current, 33s. to 35s. 6d.; Irish, 32s. to 34s. Mutton from 7½d. to 9d. per lb.—JOHN SWAN AND SONS, LIMITED.

Trade in Ireland.

There was again a good attendance of local and country butchers at Thursday's Dublin Market, but exporters were a small company, owing to bad trade on the other side. Shippers were disposed to hold off for easier terms, and best qualities of cattle were lower by 10s.; and in other sorts there was a drop of from 15s. to 20s. per head on the week. Prime ox and heifer beef was worth from 50s. to 54s., and in a few cases up to 56s. per cwt.; good second-class beef from 46s. to 48s.; inferior from 42s. to 45s. per cwt. The live weight figures of the day were from 6d. to 1s. per cwt. under those of the previous Thursday, the best average top price being from 29s. to 30s., and for choice Aberdeen-Angus lots up to 31s. and 32s. per cwt. Cow beef sold slowly at from 22s. per cwt. (live weight). All classes of sheep were lower, home buyers hanging back from purchasing; while London and English Midland hoggets were also lower in price. Notwithstanding the easier rate, a large number of sheep were left over unsold. Prime wether mutton sold at from 6½d. to 7½d.; ewe, from 6d. to 6½d.; and inferior sheep from 5d. per lb. upwards. Large, heavy hoggets sold at from 42s. to 54s. each, and light to medium ditto from 32s. to 40s. each. Only a small number of lambs sold at from 24s. to 40s. each, according to size and quality. Veal of good quality was in request, but coarse and inferior calves were not wanted. Choice veal was worth from 7½d. to 8½d. per lb., and other sorts from 5d. per lb upwards. Milch cows were in good request for choice heavy springers, which sold at from £17 to £21 each; other descriptions irregular and slow at from £8 upwards. The store cattle trade continues very dull and cheap, excepting for such as are in forward condition. Several large auctions of stores were held in Dublin during the week, but sales were disappointing on the whole. There was a fair supply of pigs, and about the usual attendance of buyers. Trade opened quietly, but got brisker as the day advanced, and a good clearance was effected, but with no quotable advance in prices.

LONDON.

Islington, Thursday.—Beast supply consisted chiefly of fat butchering cows and bulls, including a small consignment of prime quality cattle. Trade, taken as a whole, was very disappointing, prices ruling in favour of buyers, though not sufficiently so to quote. There was absolutely no demand for fat beasts, consequently neither trade nor quotations can be recorded. Top prices: Fat cows 5s. 6d. fat bulls 5s. 10d to 5s 2d per 8lb. Decrease of 50 in number penned in sheep market compared with last Thursday. Trade for wethers slow, at reduction of 1d to 2d per 8 lb. Ewes, however, sold fairly well, late prices governing all transactions. Best pens made, per 8 lb. as follows: 8 stone Downs, 5s 10d.; 9 stone ditto, 5s. 8d.; 10 stone ditto, 5s. 6d.; 10 stone halfbreds, 5s. 4d. to 5s 6d; 10 stone Down ewes, 4s 2d. to 4s 4d. Calf trade not worth noting. Pig trade very quiet. Quotations per 8 lb. sinking the offal: Beasts, 2s. 10d to 3s 6d; sheep, 3s. 10d. to 5s. 10d.; calves, 5s. 6d.; pigs, 2s. 8d. to 4s 6d.

London (Central), Friday.—Heavy supplies were received for which a slow demand again prevailed, but at late values. Quotations:—Scotch short sides, 4s 4d to 4s 8d; long sides, 4s to 4s 4d. English, 3s 4d to 3s 6d; American Dressed Lilled, 4s 2d to 4s 6d; Liverpool sides, 4s 4d to 4s 4d. American refrigerated hindquarters, 3s 9d to 4s, forequarters, 2s 3d to 2s 5d; Rancher beef, from 1s 6d to 3s; New Zealand hindquarters, 2s 3d to 2s 4d; forequarters, 1s 8d to 1s 9d; River Plate hindquarters, 2s 2d to 2s 3d; Argentine chilled hindquarters, 2s to 2s 4d; forequarters, 1s 7d to 1s 8d. Mutton: Scotch wethers, 4s 8d to 5s; ewes, 3s 4d to 3s 6d; English wethers, 4s 6d to 4s 10d; ewes, 3s 4d to 3s 6d; New Zealand, 2s 6d to 3s; River Plate, 2s 2d to 2s 4d; Dutch wethers, 4s 2d to 4s 4d. Lamb: Scotch, 4s 8d to 5s; New Zealand, 2s 10d to 3s 6d; Dutch, 4s to 4s 6d. Veal: English and Dutch, 3s to 4s 8d. Pork: English, 4s 2d to 4s 10d; Dutch, 4s to 4s 8d per 8lb.

COUNTRY.

Ashford, Tuesday.—A quiet trade prevailed for beef, the best steers making up to 4s 8d, and inferior up to 4s per stone. Mutton in large supply, scored heavily, but was not quotably cheaper; best Down wethers made up to 5s 10d and Kents up to 5s 6d. Pork rose 2d on a brisk demand, best roasters making 4s 4d. Veal a little dearer.

Basingstoke, Wednesday.—At Raynbird and Sons' saleyard there was a good attendance of buyers to meet a supply of 33 fat beasts, 67 calves, 486 fat sheep and lambs, 269 pigs, and 138 head of dairy and store cattle, for which the following prices were realised: Fat Shorthorn steers made up to £19 5s; heifers, £18; and cows, £15. Polled cows up to £14; fat calves, 62s 6d to £5 5s; small, 20s to 50s; fat hogs, 69s to 97s; fat porkers, 48s to 60s 6d; small, 30s to 40s; store pigs, 11s 6d to 26s 6d; dairy cows, £11 5s to £21 5s; Down wether and young ewes, 52s to 58s; smaller, 46s to 48s; old ewes, 32s to 38s; eight-months-old Down lambs, 48s to 56s; smaller, 38s to 46s; cross-bred Scotch wethers and young ewes, 45s to 47s 6d; cross-bred lambs, 34s 6d to 37s; rams, 45s to 52s; three months-old sucking lambs, Downs, 28s to 35s; cross-breds, 26s 6d; Southdowns up to 32s. Fat beasts of prime quality and moderate weights sold readily and late rates well maintained for them; half fat and second class and inferior cattle a bad trade with lower prices. A good show of fat sheep and fat calves met with a ready inquiry, prices well kept up with a satisfactory clearance. There was a good competition for the very best young cows and heifers; for secondary sorts a slow trade must be reported. Store cattle continues a very quiet trade. Fat calves met a firm trade at a slight advance on last week's quotations. The pig trade, both for fat bacon pigs and porkers, was brisk, with a quick demand. Store pigs, with a short supply, sold readily. Ruling values:—Best fat beasts, 6¾d to 7d; second ditto, 6d to 6¼d; bulls, cows, and inferior, 5d to 5½d per lb.; best fat sheep and big lambs, 8¼d to 9d; second ditto 7¾d to 8d; old ewes, rams, and inferior, 6d to 6½d; choice fat sucking lambs, 9d to 10d per lb.; fat calves, 6d to 8½d per lb.; fat porkers, 9s 6d to 11s per score; fat hogs up to 9s 6d per score.

Berwick, Saturday.—Cattle numbered 217, 111 more than the previous week. Attendance of farmers and buyers small; quality of stock good; trade dull. Heifers, £8 10s to £10 10s; stirks, £8 to £11; two-year-olds, £12 10s to £13 15s; three-year-olds, £13 to £14 10s; cows, £16 10s to £23.

Birmingham, Thursday.—Small supply of beasts and sheep; fair quantity of pigs. Trade slow. Quotations:—Beef, 5d to 6¼d per lb.; mutton, 6¼d to 8¼d per lb.; lamb, 7¾d to 8¼d per lb.; bacon pigs, 9s 10d per score; porkets, 10s 6d per score; cutting pigs, 9s 10d to 10s per score; sows, 8s 3d per score.

Bristol, Thursday.—Beef was in moderate supply, but demand limited, and values of secondary qualities declined slightly. There was less mutton than usual, and trade was slow, prices of all sorts going up ½d per lb. Pigs were again not numerous, and porkers went up to 10s 6d, whilst baconers advanced to 9s 3d.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s.	d.
6sc. 10 lb. to 9 sc. 10 lb.	2½ in. and under	9	3
Under 10 sc. ...	...Not exceeding 2½ in. ..	9	3
Under 11 sc. 10 lb. ...	,, 2¾ in. ...	8	9
Under 12 sc.	,, 3 in. ...	8	3

C. AND T. HARRIS AND CO., LTD.

Canterbury, Saturday.—Fair trade at prices rather lower. One run of 200 good ewe tegs ranged from 46s to 50s 6d; wether tegs, 38s to 42s; South Down ewes, 24s to 35s; wether lambs, 23s to 33s per head.

Carlisle, Saturday. — To-day's supply on the Sands constituted the best show of the season, there being over 400 Irish cattle forward, including some exceptionally good heifers. Buyers were numerous, and trade showed an improvement. Wintering heifers, £8 10s to £11 10s; heifers for finishing off, £14 to £15 10s; bullocks, £8 10s to £10 10s.

Chester, Thursday.—The market was well supplied with all descriptions of stock, and buyers attended in large numbers. The demand generally was not so good, except for dairy cattle, which sold well. Prices were about the same as last week. A very large show of sheep and lambs, and a fair amount of business was transacted at the advanced rates current recently. Quotations:—Milch cows, £17 to £23; calves, £16 to £20; barrens, £10 to £13; heifers, £9 to £15; stirks, £6 to £10; sheep, 16s to 44s.

Chichester, Wednesday.—Prime Devon steers, 4s 4d to 4s 8d; prime Southdown wether sheep, 6s 4d to 6s 8d; prime West Country, 5s 8d to 6s; fat ewes, 4s 4d to 4s 8d; veal, 4s 6d to 5s; porkers, 3s 8d to 4s. Stock at the market: Cattle, 638; sheep, 4,484; pigs, 687; calves, 159; horses, 22; total, 5,990. Tolls, £34 10s 5d.

Colchester, Saturday.—Trade was good, and there was a good supply, except in mutton, of which there was not much offering. Beef: Stall fed, 5s per stone of 8 lbs.; grass beef, 4s to 4s 6d; mutton, 5s 8d to 6s 4d; and pork, 9s per score.

Exeter, Friday.—Usual number of beasts; quality not up to the average. Steers and maiden heifers, 11s; cows, 10s; several unsold. Good quality sheep scarce, and trade dull. Ewes, 6d; some very small mutton, 9d to 10d. Bridgwater sheep made lower prices than of late. Calves, 7½d.

Doncaster, Saturday.—Good supply of cattle, but a small entry for sheep for the time of the year, though plenty for all requirements. Trade was steady. Milch beasts were a trifle dearer. Others made late rates, milch beasts realising £15 to £22; bullocks, £11 to £16; heifers and drapes, £10 to £15; stirks, £5 to £7; young stock, £4 to £6; ewes, 46s to 56s; and lambs, 38s to 43s; and rams, £7 to £9 each.

Dorchester, Saturday.—At to-day's cattle market there were good offers of stock, both at Messrs. Duke's and also at Messrs. Symonds's and Sampson's sales. Milch beasts were again in good request, at from £17 to £21 15s. for the best, and £11 to £16 10s for secondary grades. Barreners still a dragging trade at from about £20 to £25 per pair. Fat bullocks were in heavy supply, and included some very choice beasts, but as the supply was somewhat overdone prices ruled low. Fat steers made £17 10s to £21 10s; and heifers from £16 to £21 (or 10s 6d to 11s per score); smaller heifers, £14 to £15 10s; bulls,

£10 to £13. Not a heavy supply of mutton by any means, what there was on offer meeting a steady demand at 48s to 51s for wethers, and ewes, 38s 6d to 42s (or 7d to 8d per lb.)

Dublin, Thursday. Numbers in market: Beasts 3,651, decrease 283; sheep 8,569, decrease 570; calves 42, increase 2. A heavy dragging trade was experienced for all classes of stock. Finished cattle, which were few in number, with difficulty realised last week's rates; other sorts were considerably reduced in value and a clearance not effected. Choicest lots of sheep for home use barely making late rates; shipping qualities not so easily placed at prices favouring buyers. Lambs getting out of season. Cattle (live weight), best, 28s 6d to 30s 6d per cwt.; and for exceptional sorts, 32s per cwt; secondary and inferior, 25s to 28s per cwt. Mutton (dead weight), 5½d to 7½d per lb. GANLY, SONS, AND CO.

Edinburgh. Wednesday. A fair trade for cattle and sheep, but milch cows quiet. Coloured Polled bullocks, £11 to £15 15s; black bullocks, £12 12s to £13 13s; Cheviot Dinmonts, 28s to 40s; Cheviot ewes, 22s to 32s; grey-faced sheep to 37s; Shorthorn cows to £25; secondary, £20 to £24.

Glasgow, Wednesday.—Moderate supplies and a fair demand at barely late rates. Top Scotch cattle, 64s., extreme 66s to 67s; current Irish, 58s per cwt.; top heggs, 9d.; secondary, 8¾d to 8¾d; wedders, 7¾d to 8¼d; lambs, 7d to 9d per lb. Dead meat slow. Values easier for mutton, but stationary for beef. Best Scotch beef, 6d; States, 5¾d to 5¼d; Canadians, 5½d to 5¾d per lb.

Gloucester, Saturday. Messrs. Bruton Knowles and Co. report their sales as follows: As usual, on the market following Barton Fair, there was a very short supply of both cows and calves and store cattle. Prices for the former were good, the highest being £23 10s.

Hereford, Wednesday.—Some good quality beef in the market, and supply altogether was fairly large. Trade had recovered, and in some cases best bullock and heifer made 7d per lb., but the ruling prices were from 6¼d to 6¾d per lb. Cow best about 5d per lb. There was a fair supply of calves, and trade being firm veal made 7½d per lb. We had heavy consignments of sheep, and trade was fairly brisk, wethers at 8d per lb., fat ewes 6d to 6½d., fat lambs about 8d per lb., and store lambs selling dearer. In the pig market there was also a larger supply and brisker trade in porks and bacons, porks up to 6d per lb., and baconers from 5d to 5¾d. Store pigs were scarce, and selling well at good figures. The store cattle trade was dull although the supply was not over large.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report smaller supplies of fat cattle, which were in good demand, stall-fed animals making up to 9s and grass cattle to 8s per stone. At the sale of store cattle about 400 were entered, which was beyond requirements; these included 100 Westmoreland and Cumberland Shorthorns of nice quality from twenty to fourteen months old. There was a fair attendance of buyers, all the best animals nearly maintaining last week's values; but there was a decided fall on all that were not first-class quality. A grand lot of about fifty roan Buckinghamshire Shorthorns, two years old, made £12 17s 6d to £11 15s; North Country steers, £11 to £7 5s; Polled steers, eighteen to sixteen months, £10 to £7; Irish calves, £5 17s 6d. At a special sale of dairy stock seventy cows and heifers were catalogued. Trade was slo wand prices ruled lower, the best cows, fresh calved, from £19 to £16; heifers with calves by side, £17 to £14. Short supply of fat sheep, which met a firm trade. Suffolks to 63s; half-bred shearlings to 57s. Lambs were in strong demand, and ewes sold freely. At the final sale of Suffolk and other rams about 100 were disposed of. Suffolks, 9½gs to 3gs; Lincolns, 7½gs to 4gs. A larger supply of swine, which were sharply competed for up to 7s per stone. Numbers at sale and market: 1,127 cattle, 2,012 sheep, 1,306 swine.

Leicester, Saturday.—Larger consignments of home-bred bullocks. Trade brisker for choice qualities, but inferior descriptions were dragging at irregular rates. Choice milch cows, £19 to £23; good lots, £17 to £18; secondary, £14 to £16; short-horned bullocks, £12 to £14 10s; Irish bullocks, £11s 10s to £15; Welsh cattle, £9 to £12 10s; calves, 15s to 35s each. Sheep were in small supply, and sold readily at firm prices.

Lynn, Tuesday.—Average show of fat beasts, trade hardly so good as of late, 7s to 7s 9d per stone. Few store beasts £6 to £17 each. Fat sheep average show, 9s to 9s 6d per stone; stores 38s to 44s each; store lambs, 30 to 40s; rams, £6 to £7; ewes, 45s to 55s each.

Manchester, Friday.—Beef, firsts, 5½d; seconds, 4d to 4¾d; thirds, 3½ to 3¾d; mutton, firsts, 7¼d; seconds, 6½d to 7d; thirds, 5½d to 6d: veal, firsts, 6½d; seconds, 5½d to 6d; thirds, 4½d to 5d; bacon pigs, firsts, 5¾d, seconds, 4¾d to 5¼d; thirds, 3¾d to 4¼d; porket pigs, firsts, 7d; seconds, 6½d to 6¾d; thirds, 6d to 6¼d.

Norwich, Saturday.—Fat beasts in good supply, and trade same as previous week, prices averaging from 7s to 7s 6d per 14lb.; 8s to 8s 6d paid for choicest animals; increased number of stores, and trade very dull, prices receding in some instances 5s to 10s per head; £6 to £17 per head was the average. Poor demand for sheep and lambs, at 45s to 62s per head for breeding ewes, and 28s to 38s for lambs; fat sheep made 9s 6d to 10s 6d per stone, 11s being paid for very best, values dropping quite 6d per stone compared with previous week, and there was increased supply. Fat pigs met with good trade, at 6s 9d to 7s per stone.

Nottingham, Saturday. — Good show of milch beasts, with rather better trade. Best milch cows, £18 to £23; in-calf heifers, £14 to £19. An average show of store beasts, with a fair trade. Strong heifers and steers, £10 to £15; and younger beasts, £6 to £10. Calves, 25s to 50s. No sheep or pigs.

Preston, Wednesday. — The attendance of dealers was hardly so large as usual, and trade was dragging, prices showing a downward tendency. There was a good show of cattle. Sheep were slow to sell, and calves also did not go well. Cows and bulls made 43d to 5¼d: heifers and bullocks, 5¾d to 6¼d; calves, 7¼d; hoggs, 8d to 8¾d; lambs, 8d to 8¾d; ewes, 6d to 6½d; and tups, 5d to 5¼d.

Retford, Saturday.—The value of good milch beasts kept well up to the mark, making £16 12s to £20, but very few were shown and business was on a small scale. Two-year-old steers and heifers were quoted at £8 to £11 10s; yearlings £6 to £9, and calves 40 per head. Best quality cows and heifers with calves, £18 to £20 10s; secondary, £16 to £17 15s; in-calf cows and heifers, £17 to £18 15s; fresh barreners, £12 15s to £16 5s; stirks, £7 10s to £8 15s; steers, £10 to £11 5s; ewes, 37s 6d to 45s; wethers, 42s 6d to 50s; wether lambs, 36s 6d to 37s 6d; ewe lambs, 30s to 35s.

Romford, Wednesday.—Average supply of fat beasts, trade fair. Best animals, 4s 2d to 4s 4d; middlings, 3s 10d to 4s per stone. Calves scarce, trade better at 5s to 5s 4d per stone. Short supply of sheep, trade better. Best, 5s 4d to 6s; middlings, 5s to 5s 2d; ewes, 4s to 4s 4d per stone. Slow demand for store beasts. Good supply of pigs, trade improved.

Shrewsbury, Tuesday. Quotations: Beef, 5½d to 6¾d per lb.; mutton, 7¾d to 8¼d per lb.; lamb, 8d to 8¾d per lb; veal, 6¾d to 7d per lb; porket pigs, 9s 6d to 10s per score; bacon pigs, 9s 3d to 10s per score. Numbers offered as follows:—452 cattle, sheep and lambs 3,418, calves 79, pigs 510.

Thame, Tuesday. A large attendance, trade rolling brisk for all descriptions of stock, veal and bacon selling especially well. Store stock meeting a good demand. Messrs. Bond and Burrows' sale comprised 104 fat beasts, 260 fat and other sheep, 150 fat an dowening calves, and 106 fat and store pigs. Fat oxen made from £17 5s to £21 2s 6d; fat heifers, £15 to £18 10s; fat wethers, 48s to 60s; fat ewes, 40s to 54s 6d, fat lambs, 7s to 8s 6d; fat calves, £5 to £5 2s; weaning cow calves, 26s to 68s; bull calves, 10s to 54s; porkers, 26s to 48s; bacon hogs, £3 10s to £5 10; store pigs, 12s to 26s.

Truro, Wednesday. Business fairly brisk; attendance good. Fat bullocks, 59s to 60s per cwt.; barreners and store bullocks, 40s to 45s; cows and calves, £11 to £15 each; rearing calves, 25s to 35s; ewes, 35s to 44s; wethers, 7d to 7¼d per lb.; ewes, 5½d to 6d; lambs, 7¼d; pigs, 8s 6d to 40s each. Mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured, 6d to 7½d; cured, 7d to 9d; pork carcase, 4¼ to 5¼d. Number in cattle market—371 bullocks, 75 calves, 561 sheep, 151 pigs, 26 horses, 37 live fowls and ducks.

Wolverhampton, Wednesday. — Fair supply all round; slow trade. Quotations: Beef, 5d to 6¼d per lb.; mutton, 6½d to 8¾d per lb.; veal, 6d to 7d per lb.; lamb, 8d to 8¾d per lb.

Worksop, Wednesday. — Small show of beef and mutton, with trade fairly brisk, especially for mutton. Best beef, 7s to 7s 6d; secondary qualities, 6s 3d to 7s per stone; Southdown wether and cross-bred shearlings, 7½d to 8½d; ewes, 6d to 7d; lamb, 9d to 9½d per lb.

FOREIGN.

Yorkhill, Tuesday.—Fair supplies of Canadian and American cattle were on offer at the usual weekly sales held to-day, 705 head being penned in the fairages, as compared with 888 on the corresponding day of last week. With the exception of 62, they were all from Montreal, and all were delivered in fair shape and condition. Bullocks were, as usual, plentiful, but trade, following upon the holiday, was very slow, and the demand even for top qualities was moderate, while rough and heavy beasts met with a very quiet inquiry, values all round being a shade easier than those ruling last week. Bulls were scarce, and made about late rates for prime animals. Bullocks of useful description were cashed from 55s to 56s per cwt. dead weight, while secondary, middling, and inferior qualities realised from 52s to 54s per cwt., and bulls made from 46s to 48s per cwt.

BUTTER

Thursday.—Birmingham 1s 2d to 1s 3d. Brigg: 1s to 1s 2d. Devizes: 1s 4d to 1s 5d. Driffield: 1s to 1s 1d. Evesham: 1s 1d to 1s 2d. Kidderminster: 1s 1d. Northtawton: 11d. Penistone: 1s 2d. Penzance: 1s 2d to 1s 3d. Plymouth: 1s 4d to 1s 5d. Ripon: 1s 5d to 1s 7d per 24oz. roll. Scarborough: 1s 3d. Wellington (Salop): 1s 2d to 1s 3d. Wetherby: 1s 1d to 1s 2d.

Friday. Altrincham: 1s 3d to 1s 4d. Ashburton: 1s to 1s 1d. Barnstaple: 1s 2d to 1s 3d. Chester: 1s 2d. Congleton: 1s 2d. Crewe: 1s 2d. to 1s 3d. Camelford: 1s 2d. Dartmouth: 1s 4d. Derby: 1s 3d to 1s 4d. Exeter: 1s 3d to 1s 4d. Helmsley: 10d to 11d. Knutsford: 1s 2d to 1s 3d. Leyburn: 1s 5d to 1s 6d per 24 ounce roll. Lincoln: 1s to 1s 1d. Lostwithiel: 1s. Macclesfield: 1s 2d. Nantwich: 1s 2d. Northwich: 1s 3d. Otley: 1s 7d. to 1s 9d. per 24 ounce roll. Redruth: 1s 2d. Runcorn: 1s 3d. Stamford: 1s 2d to 1s 4d. St. Austell: 1s 2d to 1s 4d. Stockport: 1s 2d to 1s 3d. Tavistock: 1s 1d to 1s 4d. Totnes: 1s 1d to 1s 2d.

Saturday.—Appleby: 1s to 1s 2d. Berwick: 1s to 1s 2d. Bridgnorth: 1s 1d to 1s 3d. Carlisle: 1s 3d. Doncaster: 1s 2d. Grantham: 1s 2d to 1s 3d. Howden: 1s to 1s 2d. Ipswich: 1s to 1s 2d. Lancaster: 1s 2d to 1s 2½d. Malton: 10d. Pontefract: 1s 2d to 1s 3d. Retford: 1s 1d to 1s 3d. Richmond (Yorks): 1s to 1s 2d. Shrewsbury: 1s 1d to 1s 2d. Skipton: 1s 1d to 1s 2½d. Stokesley: 1s 1d to 1s 2d. Whitby: 1s 1d. Worcester: 10d to 1s 3d. York: 1s to 1s 2d.

EGGS.

Thursday.—Birmingham: 8 and 9. Brigg: 12 and 13. Devizes: 10. Driffield: 12 and 13. Evesham: 11d to 11½d per dozen. Kidderminster: 10. Penzance: 1s 2d to 1s 3d per dozen. Northtawton: 12. Penistone: 9 and 10. Plymouth: 10. Ripon. 10. Scarborough: 10. Wellington (Salop): 10 to 11. Wetherby: 9 and 10.

Friday.—Altrincham: 8 and 9. Ashburton: 1s 1d to 1s–2d per dozen. Barnstaple: 10 to 12. Camelford: 11. Chester: 9. Crewe: 9. Congleton: 10. Dartmouth: 1s 4d to 1s 5d per dozen. Derby: 9 and 10. Exeter: 10. Helmsley: 12 and 13. Knutsford: 9. Leyburn: 10 and 11. Lincoln: 12 and 13. Lostwithiel: 14. Macclesfield: 9 and 10. Nantwich: 10. Northwich: 9 and 10. Otley: 9 and 10. Redruth: 1s 6d per dozen. Runcorn: 8 and 9. St. Austell: 12. Stamford: 7 to 9. Stockport: 8. Tavistock: 10. Totnes: 1s 4d to 1s 5d per dozen.

Saturday.—Appleby: 9 and 10. Berwick: 1s to 1s 2d per dozen. Bridgnorth: 10. Carlisle: 8 and 9. Doncaster: 10 and 11. Grantham: 12 and 13. Howden: 11 and 12. Ipswich: 10 to 12. Lancaster: 7 to 9. Malton: 12. Pontefract: 10. Retford: 1s 8d to 1s 10d per score. Richmond (Yorks): 8 and 9. Shrewsbury: 11 and 12. Skipton: 9 and 10. Stokesley: 10 and 11. Whitby: 9 and 10. Worcester: 9. York: 10.

CHEESE.

Glasgow, Wednesday. Moderate arrivals. Retailers are not disposed to lay in stock as prices are not at a level to induce them to do so. The quality is giving satisfaction, but what is desired is a cheap cheese. These are hard to get, holders being firm owing to the dearness of Canadians. Cheddars, 56s to 61s per cwt.; Dunlops, 52s to 58s.

Newport, Wednesday. —A good supply and business was brisk. Quotations: Caerphillies, 44s to 50s per cwt.; fancy dairies, 51s to 54s; truckles, 52s to 58s; Cheddars, 56s to 58s.

POTATOES.

Southwark Waterside, Saturday. — During the past week the arrivals have been limited, for which the demand has been steady, with prices higher for best samples. The following are this day's quotations:—Essex, Kent, and Surrey Up-to-dates, 50s to 65s; ditto Pioneers, 50s to 60s; ditto Brutish Queens, 50s to 55s; Lincoln Evergoods, 50s to 60s; ditto Up-to-dates, 55s to 65s; Blackland Up-to-dates, 45s to 50s; ditto British Queens, 40s to 50s per ton.

Goole, Wednesday.—Plenty of potatoes, but trade was slow owing to the scarcity of buyers. In the retail market potatoes are selling at 4d to 6d per stone.

FEEDING STUFFS.

Hull, Tuesday. [illegible] with [illegible] 2s 3d [illegible] at 4s to 5s 4d [illegible] 5s 6d to 5s 9d [illegible] made 3s [illegible] 5s 1s 9d to 5s 1s 6d [illegible] 5s 1s 6d. Oilcake [illegible] Hull made at 2s 6d per ton decline, but foreign are unaltered. Cotton cake [illegible] demand. RUDDICK, MARTIN AND CO.

London, Thursday. [illegible] owing to a rather [illegible] were [illegible] some Oil [illegible] Sept-Oct 2s 6d, April 2s 3d [illegible] better demand. Oil [illegible] passage 2s 6d, September-October 2s. Dec. [illegible] and Jan.-Feb. 2s 3d. Rapeseed [illegible] quotations. Brown Cawnpore, Sept.-Oct., 35s 4½d; Brown Calcutta, Sept-Oct., 35s 3d. Cottonseed [illegible] been quiet, but closes with rather more [illegible] September, £5 12s 6d. Oct., £5 10s 9d. Feb.-Mar. £5 15s 9d. Nov.-Jan., £5 13s 9d. Oil cakes: Linseed cakes firm. London made £7 15s to £7 17s 6d. Cotton cakes quiet. London made £4 12s 6d. THE PRODUCE BROKERS CO. LTD.

Mark Lane, Monday. Linseed cakes [illegible] general complaint from all districts of absence of demand, probably caused by the continued open weather, and also for the reason of the [illegible] with limited foreign supplies and small home produce values are in no way affected, but, on the contrary, a slight advance is asked in some [illegible] main scarce, and command last week's full prices. American and East Indian seed [illegible] are unchanged. London made are in moderate request, and also unaltered. Cotton cakes: Egyptian are fairly plentiful, and with only a poor inquiry values rule quiet, while for November-April shipment there are sellers at rather less money. English meet a slow sale, and are slightly cheaper. Decorticated: London made is relatively cheap [illegible] cake meal and £5 5s for special digestive meal, with American "Open Hand" brand offering at £7 and meal at £6 12s 6d. Rape cakes dull; East India and Ravison unchanged. Maize germ meal; White American for winter despatch has changed hands with [illegible] English is, if anything, the turn dearer. Maize gluten meal is nominally quoted at £5 15s per ton. Rice meal: Rangoon shippers have retired from the market, but some secondhand parcels may still be bought at £4 16s 3d to £4 17s 6d ex ship terms. Broken Rangoon rice in bags is particularly good value at £4 15s per ton. Locust beans are firmly held at £5 5s per ton for whole and £5 10s per ton for kibbled. Nitrate of soda is unaltered at £10 15s per ton ex quay.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt. each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

HOPS.

Canterbury, Saturday. Business fairly [illegible] healthy and bright samples of all kinds. Values of [illegible] Est and Mid-Kent hops up to 70s per cwt.; [illegible] difficult to sell.

Worcester, Saturday.—Our market was well supplied with samples, as, with a few exceptions, growers have finished picking. Choice lots are found to be relatively scarce, and may be called dearer. Medium samples [illegible] late rates, and more attention was paid to sound, well-cured samples which have lost their colour. These offer excellent value on account of their good brewing properties. Four thousand and eighty three [illegible] weighed this week.—CHARLES FARAM AND CO.

HAY AND STRAW.

Birmingham, Friday.—Small supply. [illegible] Quotations: Old hay, £5 17s 6d to £6 10s per load; new hay, £3 to £5 7s 6d per ton; straw, 2s 6d per cwt.

Derby, Friday.—New hay, 75s to 85s; best hay, 85s to 90s; other hay, 75s to 80s; [illegible] wheat straw, 35s to 70s; pressed [illegible] straw, 50s to 60s; peat moss litter, 35s to 40s.

Manchester, Friday. [illegible] 6d; straw, wheat, [illegible] stone.

Whitechapel, Saturday. — [illegible] were [illegible] leed, and a quiet demand [illegible] prices. Straw [illegible] 75s to 80s; [illegible] 75s; good [illegible] 70s to 75s per load. Clover and meadow [illegible] mixture and sainfoin, 70s to 75s per load; straw, 27s to 30s per load.

The Dairy Show.

So great is the interest taken in this year's Dairy Show that several hundreds of pounds' worth of admission tickets have been disposed of long before it opens to the public to-morrow (Tuesday) morning. This agreeable announcement Lord Northbourne and his colleagues on the Committee were enabled to make at a preliminary gathering held at the Agricultural Hall on Monday. Various causes have combined to bring about this happy result, which augurs well for the attendance at the thirtieth annual exhibition of the kind which has been held at Islington. The importance of a good and pure milk supply for the millions of the Metropolis, and, indeed, for the whole country, is a matter that has arrested public attention of late. This is one of the aims which the British Dairy Farmers' Association keep steadily in view, and the show does more than a little to promote so desirable an object. A walk round the Agricultural Hall gives evidence of this at every turn, for the improvements manifest in the vast assemblage of appliances and machinery all tend to greater cleanliness and efficiency in all departments of dairy farming and dairying. Then, with regard to the cattle themselves, the system of judging by results rather than by appearance, makes it imperative upon the judges to award some of the principal prizes to animals yielding the largest quantity of milk of the highest quality; consideration being, of course, given to the time that has elapsed since calving, according to a recognised scale of points. This system, of which many owners of cattle fought shy when it was introduced, has now become so popular that it is extended from cows to heifers, while the standard to be kept in mind has been adjusted in such a way as to render it unlikely that many of the prizes will be withheld—and only in the case of cows proved to be deficient in merit from the point of view of milk-production. Again, the bulls shown are all the produce of cows that have won prizes or certificates of merit in a milking trial or butter test.

The total prizes offered amount to upwards of £2,500 (two thousand five hundred pounds), of which the cattle are allocated £542, besides a number of valuable extra premiums, including two cups offered by the Lord Mayor and Corporation of London, a £50 challenge cup provided by Mr. Titus Barham, another of the value of fifty guineas given by Mr. J. F. Spencer, £10 donation by the Shorthorn Society, the Blythwood Challenge Bowl offered by Sir James Blyth, and 18 gs. assigned for competition by tenant farmers only. In this connection, the society's definition of what is meant by "a bona fide tenant farmer" is interesting, viz.—"One whose principal occupation is farming, and whose income is mainly derived from the land which he rents." Thus, regular dealers in cattle and wealthy gentlemen occupying farms for pelasure rather than profit, are excluded from winning these particular prizes.

Although the show has been organised on a basis that has resulted in a record entry of 7,677 exhibits in no fewer than 504 classes. In some of the latter the competition is so keen that they have been sub-divided and the prizes trebled. The highest entry in any previous year was 7,332. Ten years ago the exhibition was considered a large one, with 6,060 entries. The limits of the available space seem now to have been reached.

Goat lovers will be pleased with the conspicuous position given to their favourites. Several are beautiful creatures that will assuredly come in for a large share of admiration. The breeds include Anglo-Nubian, Anglo-Chitral, Alpine, Toggenburg, Saanen, and a few crossbred ones, but the visitor will look in vain for the old-fashioned British goat.

In the produce department a great improvement is noticeable. This section, very much larger than it has ever been, is as far as practicable accommodated in the Minor Hall, where there is the most representative collection of British and Colonial butter that has ever been brought together, totalling 641 entries, or nearly 100 more than in any previous year. Part of this increase is due to the greater number of Colonial butter factories and creameries (notably in New South Wales, Victoria, New Zealand, and South Australia) that have contributed special consignments. In other classes, many lots of butter come from Irish creameries, in rolls, in boxes, and in pyramids. In order to test the keeping quality of the "cured" butter—nearly all from Ireland—it was required to be delivered a fortnight before the show. The same building contains an attractive collection of cream, honey, bacon, hams, milk-bread, and ornamenal butter.

The cheesemakers of England and Scotland have sent more freely than last year. All the principal varieties of cheese seem to be well represented, with the exception of Leicester, of which only a small quantity is consumed in London. Yet Stilton cheese, mostly from the same locality, fills the classes more than we remember seeing for many years, a circumstance probably due to the fact that one of the champion prizes offered by the Lord Mayor and Corporation of London is to be given to that variety. Roots for cattle feeding include many remarkable examples of fine results achieved by agricultural skill.

A special feature of the show, and one that is bound to prove of extensive interest, consists in the trials of refrigerating machinery in competition for the Gold Medal. The exhibits in this class are in King Edward's Hall, and are to be seen in operation. Each machine will be required to cool 100 gallons of milk in the morning, and 100 gallons in the afternoon, from 80 to 45 degrees, at the rate of not less than 100 gallons per hour, the machine to work not less than six hours a day. The use of ice is excluded. The prices of the competing plant vary from £134 to £195. The machinery section of the show comprises a fair number of new or improved inventions, such as a sterilising machine, a homogenising machine for breaking up fat globules so that cream remains suspended in milk, a capillary heater and cooler combined, one or two "speedy" churns, and various appliances for which the makers claim special merit.

The galleries are in the main devoted to about 5,500 head of live poultry and pigeons, a display of "table poultry," in which the birds are sent killed, plucked, and trussed; and a large number of incubators, hatching chickens day by day, chicken rearers, poultry houses, pigeon aviaries, and other exhibits connected with the poultry-yard.

Other popular attractions include demonstrations of up-to-date methods of trussing, boning, and shaping table poultry for market; the band of the Scots Guards; and the butter-making contests by dairymaids, who are up from all parts of the country more numerously than ever. They will be busily engaged in large batches each morning, afternoon, and evening of the show—i.e., from Tuesday morning till Friday evening, there being as many as 206 entries, necessitating more than that number of churnings.

The classes for milkers are likewise the largest since they were instituted. It is especially interesting to note the keen competition amongst the women milkers, twenty-four of whom are coming from Scotland, Wales, and various English counties to try their skill at 7 o'clock in the morning of Friday next. Exactly the same number of men have entered in a separate milking contest at the same hour, while in the afternoon eighteen boys and girls intend to compete.

The list of exhibitors includes the names of the Duke of Devonshire, Duchess of Abercorn, Duchess of Newcastle, Earl Cadogan, Earl of Radnor, Lord Burnham, Lord Chesham, Lord Deerhurst, Lord Hindlip, Lord Portman, Lord Rothschild, Lord Wenlock, Lord Windsor, Lord de Ramsey, Countess of Craven, Countess de la Warr, Countess of Home, Lady Henry Bentinck, Lady Wantage, Lady Greenall, Lady de Rothschild, Lady Smyth, Lady Evelyn Cotterell, Baroness Burdett Coutts, Sir George J. Armytage, Sir Walter Corbet, Sir H. G. Hainey, Sir Charles Sceley, Sir Mark J. Stewart, Sir J. T. Hibbert, Col. Sir J. W. Ottley, Admiral Hon. T. S. Brand, Hon. A. Holland Hibbert, Hon. Mrs. Murray Smith, Hon. Sybil and Florence Amherst, Right Hon. Ailwyn E. Fellowes, M.P. (President of the Board of Argiculture), Hon. A. F. Jeffreys, M.P., the Bishop of Ipswich, and about two thousand others. All these have sent of their best, and it will be worth while going to Islington to see the many sights.

Preston Cheese Fair.

There was an excellent display of Lancashire cheese at the September fair at Preston on Tuesday, the pitch consisting of 97 lots and 1,529 cheeses, an increase compared with the corresponding fair of last year of 43 lots and 595 cheeses. This large pitch was due to the unusually large prices realised at the August fair, but trade was dull and dragging, and prices showed a downward tendency, none but the finest cheese commanding the values of last fair. Cheese of medium quality ranged from 55s. to 57s. 6d., and best 59s. to 62s. 6d., while one or two exceptionally choice dairies realised 65s.

Dumfries Horse Fair was held last week in excellent weather, and the harvest being finished there was a larger show of horses than there has been for several years. The trade, however, was exceedingly quiet, there only being a demand for the best class of animals fit for city work. The dealers declared that the trade was the worst experienced for twenty years. The largest lots were in the hands of Mr. W. Johnstone, and Mr. R. Maxwell, Maryholm, who sold at prices ranging from £28 to £70.

ADVERTISEMENTS RECEIVED TOO LATE FOR CLASSIFICATION.

THE HOME FARM, BILLINGTON. Three miles from Leighton, three from Cheddington, and four from Dunstable Stations.

ANNUAL DISPERSAL SALE.

MESSRS. CUMBERLAND & HOPKINS have received instructions from Mr. Clement Keevil

TO SELL BY AUCTION,

On THURSDAY, the 12th of OCTOBER, 1905, at 11 o'clock, Several Weighty SHIRE FILLY FOALS (Prize Winners), MARES and FILLIES, also some HIGH-CLASS YOUNG HACKNEYS with grand action by the King's London 1st Prize Stallion, Field Marshall (9886); also by Prospector (65 6), and Generosity (5631); dams of Lord Derby (116); Confederate (158); and Danegelt (174) blood.

About 100 HEAD OF CATTLE, viz., Fat Herefords and Shorthorn Oxen, and some Down calving, forward In-calf and Barren Heifers.

200 Down, Suffolk, and Cross-bred SHEEP and LAMBS, and some Fat Sheep and Lambs; about 20 PIGS, viz., 9 In-pigs and 11 Down pigging Sows, Middle White Boar, and 60 Porkers; 120 HEAD of POULTRY, principally pure breed.

N.B.—A Foal purchased at this dispersal Sale by a local Lad at Tring, 1905, won yearling Champion at Dunstable Show, 1905.

Luncheon at 11 o'clock. Tickets, 2s. each, to be returned to purchasers of £2 and upwards.

Catalogues of the Auctioneers, Leighton Buzzard, or of Mr. Clement Keevil, as above.

GREAT NORTHERN RAILWAY.

SCOTTISH KENNEL CLUB'S 27TH SHOW OF SPORTING AND OTHER DOGS,

IN THE

WAVERLEY MARKET, EDINBURGH, OCTOBER 25TH, 26TH, AND 27TH, 1905.

The Great Northern Railway Company will convey exhibits for the above Show from Keighley, Halifax, Bradford, Doncaster, Worksop, Retford, Newark, Burton, Derby, Ilkeston, Nottingham, Grantham, Grimsby, Gainsborough, Lincoln, Horncastle, Louth, Alford, Sleaford, Boston, Spalding, Yarmouth, Cromer, Norwich, Sutton Bridge, Wisbech, Peterborough, Huntingdon, Sandy, Cambridge, Hitchin, Dunstable, Luton, Hertford, St. Albans, and other towns on and in connection with their system.

Through vans will be run wherever necessary for the conveyance of exhibits.

Rates for the conveyance of traffic may be obtained on application to any Great Northern Station Master or Agent, and they will be found in no case to exceed the rates in force by any other route.

Special arrangements will be made for the return of exhibits at the close of the Show.

A representative will be in attendance to give all information as to train service, carriage facilities, &c.

To ensure prompt attention, exhibitors should be careful to mark the address labels "per Great Northern Railway."

OLIVER BURY,
General Manager.

GREAT WESTERN RAILWAY.

The Directors of this Company are prepared to receive TENDERS for the SUPPLY of:—

6,500 Quarters of Oats.
1,200 ,, ,, Beans.
3,000 ,, ,, Maize.
800 Tons of Hay—Upland Meadow.
700 ,, ,, Hay—Broad leaf Clover and Rye Grass.
150 ,, ,, Oat Straw.
450 ,, ,, Wheat Straw.
100 ,, ,, Packing Straw—Oat, Wheat or Barley.
200 ,, ,, Bran.

Forms of Tender (upon which alone Tenders will be received) may be obtained on application to the undersigned, by whom Tenders, marked outside "Tender for Provender," will be received on or before TUESDAY, the 10th OCTOBER.

The Directors do not bind themselves to accept the lowest or any Tender.

G. K. MILLS, Secretary.
Paddington Station, London,
28th September, 1905.

TRAVELLER (energetic, sober, honest) Wanted, 30 to 45, to solicit orders from farmers. Preference given to a farmer or farm bailiff. Farming knowledge essential. Constant employment and good payment to man who can work up business. Address, A. B., MARK LANE EXPRESS.

SEED WHEAT, Essex Conqueror, from King & Sons, 1904, stiff straw, heavy cropper, 38s. per qr. on rail, Thurlby, G.N. Sacks. Cash with order.—B. NICHOLSON, Burton, Market Deeping.

WOOL A. & J. MACNAUGHTON Manufactrs., PITLOCHRY, EXCHANGE or MANUFACTURE WOOL into TWEEDS, COSTUME TWEEDS, BLANKETS, RUGS, PLAIDS, &c., with the most Modern Machinery, at Reasonable Charges. We pay Carriage of Wool. Patterns Free. We have always a large Stock of our Famed Tweeds and other goods for Sale. Patterns on Application. LADIES' and GENTLEMEN'S TAILORING.

FARMS TO LET of various sizes in Kent, Sussex, Surrey, &c.—LANGRIDGE & FREEMAN, Agricultural Valuer, and Auctioneers, Tunbridge Wells, Kent, and 28, Queen Street, London, E.C.

AGENTS Wanted by an old-established firm for the sale of their Linseed, Cotton Feeding Cakes, Manures and Seeds. For further particulars apply to JOSEPH ASHWORTH & SONS, Ltd., Oil Cake Mills, Bone and Manure Works, Frodsham Bridge.

WANTED, a share in working Poultry Farm, with a view to partnership.—VARDON, Langton Vicarage, Tunbridge Wells.

Live Stock Record.

STOCK-KEEPING WITHOUT SYSTEM.

Impossible would it be to draw any satisfactory causes for the strange anomalies in the county agricultural statistics, the main particulars of the losses and gains of which we gave last week. Side by side we have large districts seemingly similarly circumstanced, and engaged in the like enterprises, yet how different are their returns, some of the counties having the greatest reputation for sheep-breeding decreasing their flocks, while others are increasing them very much. In respect to cattle, the surprises were not so great, but even in regard to these there are strange, unexpected anomalies, about which the only safe deduction to draw from the returns appears to be that the agriculturists belonging to the herds must be actuated by very different systems and principles of management.

The fact appears to be that an increased number of farmers do not regard systems or the best reputed principles of action very much, but rather proceed on a "hand-to-mouth policy." If the farmer before winter finds a shortage of winter food he sells the breeding stock he should have made every effort to keep on, or if he is not a breeder, refrains from buying, and in either case it may be difficult to replace other animals in spring, so as to bring up the number to the normal stockage before the statistics are taken. While a great many act thus, others act on system, and by wise, provident storages of hay, silage of straw fodder beforehand, manage to prevent their herds and flocks diminishing beyond a given standard in the worst seasons of food scarcity. If there is a shortage of roots they are eked out by being pulped, the pulp being intermixed with straw chaff, the ration being brought up to the required nutritive quality by the addition of oil cake, corn, or some other auxiliary feeding stuff.

This system has been more usually adopted in past times by provident flock-owners and cattle-breeders; but there are some other ways of preparing for emergencies, such as being studiously particular to avoid all waste of food, and to make as large storage of it as possible that the later may be reserves for the scarcity periods. This is done to a large extent so far as keeping old hay ricks goes; but how few make silage when grass or green crops are plentiful, or grow catch-crops for the special purpose of converting them to silage. The arable land is often allowed to remain fallow for months when it should be growing green crops to serve the object. The late Mr. C. S. Read was strong in his advocacy of the good policy of utilising such waste products as coarse grass under trees, the trimmings of banks, ditches, lakes, and walks in woods and plantations, all of which are available for silage, although of comparatively poor quality.

There are many who consider every bit of sweet straw wasted when employed for littering purposes, because it is so much more valuable as a food substance for stock, and if carefully preserved to serve that object, would be likely to prove invaluable at some future time. But the majority of farmers pay no heed to such things, and no doubt this is the chief cause why the numbers of their live stock vary so very much from one year to another.

STOCK AND SHOW NOTES.

By Herdsman.

At the final meeting of the Executive Committee entrusted with the local arrangements for this year's show of the Yorkshire Agricultural Society, at Hull, the City Treasurer (Mr. Milner), who acted as treasurer for the fund, said the total receipts had amounted to £1,977, whereas the expenses were only £40, and £100 was paid in local prizes, so that there was the handsome balance of £1,837 to hand over to the Society.

Mr. R. M. Knowles, of Colstor Bassett Hall, Notts, has been awarded a diploma by the International Jury of Awards for the Universal Exposition of St. Louis, U.S.A., as the breeder of Colstor Eclipse 1st (4722), who has taken the first prize for the best Large White Yorkshire boar, 18 and under 24 months old, the champion prize for the best boar one year old and over, and a grand champion prize for the best pig of any age. This pig was sold in Canada at a very high figure on leaving the Colstor Bassett herd, and is out of the celebrated champion sow Colstor Lass (11216), and is a combination of the Colstor and Borrowfield blood.

In the course of a speech at a recent show luncheon, Mr. H. S. Leon, of Bletchley Park, made an interesting suggestion. He said that he had sold a bull for 220 guineas to go to Germany, where nineteen farmers had joined together for the purchase of the animal. He had also sold another bull for 175 guineas, and that had gone to Germany, where thirteen farmers had subscribed the money amongst them. Now he thought that as British farmers individually could not afford to pay £150 to £200 for a bull, and had to put up with one costing about £15, £25, or £30, they ought to carry the co-operation principle into this question. They could purchase a good bull, like the Germans did, and thereby enter another branch of agricultural industry.

I learn that Mr. W. R. Trotter, of North Acomb, Stocksfield, has had the misfortune to lose, through death, his celebrated Clydesdale stallion Crusader. The deceased animal was bred by Lords Arthur and Lionel Cecil, at their farm near Tonbridge, in Kent, and was foaled in 1889, so was in his 17th year; his sire was the Royal 1st prize horse Claymore, and his dam the wonderful mare Edith Plantagenet, also a Royal winner, and sold as a yearling at Mr. J. M. Martin's sale at Auchendennan in April, 1884, for 300 gs., to Lords Cecil. Crusader passed into the hands of Mr. Peter Crawford, and at his sale in 1895 he was sold to Mr. A. Grandage, of the Bramhope Stud, for 400 guineas. He was travelled in Yorkshire one season, and left a lot of splendid stock. From Mr. Grandage he passed into Mr. Trotter's hands at £500, and was travelled by him in Tyneside for seven years, and during five seasons of that period he had the £100 premium of the Tyneside Agricultural Society. It would be difficult to calculate the amount of money the produce of Crusader has realised on Tyneside. Nine foals by him were sold at one of Mr. Trotter's sales at an average of £36 8s. each, and geldings have been sold for very high prices. Mr. Sparkes, of Oldfield, Altringham, paid £145 for his celebrated Oldfield Duke, the winner at the Royal last year, and it is probable that never before or since has a Tyneside-bred gelding realised such a price.

The whole of Sir John Milbanke's pure-bred old-established Southdown Hill flock (Registered No. 236 in Flock Book), consisting of about 1,000 head of ewes and ewe lambs, in flock ages, will be sold by Messrs. Stride and Son, of Chichester, at Eartham estate, near Chichester, on Thursday next, owing to the estate having been sold. The Eartham flock is one of the old standard Hill flocks of the Southdown breed, having for more than half a century past continuously received the greatest care and judgment in its breeding, selection, and drafting. With true Southdown type and character, and the finest quality of both mutton and wool, these ewes possess exceptional size, strength, and constitution, and the lengthy growing mutton-making lambs from this flock have for many years been one of the features of the Southdown lamb sales in Chichester market.

On the day previous to the above sale the same auctioneers will dispose of another well-known Southdown flock, namely, that belonging to Mr. F. Elmer-Speed, at the Home Farm, Knowlton Court estate, Dover. The remainder of the farm stock will also be brought under the hammer. The catalogue includes the herd of twenty-four pedigree Aberdeen-Angus cattle, the small but choice herd of seven pedigree Sussex cattle, fourteen blue-grey steers and heifers, rising two years old, seven pur-bred polled Angus steers and heifers, four pure-bred Galloway heifers, ten active cart horses, 120 Yorkshire and Berkshire pigs, etc.

Within the next fortnight Mr. J. Thornton and Co. will conduct two important sales of Berkshire pigs, viz., on Friday next, the 6th inst., they will bring under the hammer close on one hundred of Mr. Nathaniel Bengafields' well-known pigs, at Motcombe, Shaftesbury, Dorset, and on the following Thursday (October 12), will sell about eighty from the Duchess of Devonshire's herd, at Green Street, Eastbourne. As is well known, both herds are of the highest quality, and have supplied numerous prize-winners at our various shows, so that these sales afford an opportunity for obtaining some first-class stock, and breeders are not likely to let the chance slip by.

The Ayrshire Agricultural Association have issued the prize schedule for their annual dairy and farm produce show at Kilmarnock, which will take place on the 19th and 20th inst. The classification and prize-money are on the same liberal scale as formerly, but there are one or two important alterations in the cheese classification, which is the principal department of the show. The committee have this year restricted class 3, which is for two flat cheese, to dairies where flat-cheese are made exclusively throughout the season; and they have made class 7, known as the small dairy class, open to all dairies not exceeding twenty-five cows. Formerly that class was limited to Ayrshire. The committee have also provided a new class for one-half ton of flat cheese, competition restricted to dairies where flat cheese are made exclusively throughout the season. For some years there has been a growing feeling that flat cheese did not receive the attention which their merits entitled them to, and the committee in giving the additional class trust that it will get good support. Entries close on Friday next, October 6, with the Secretary, Mr. J. Howie, 58, Alloway Street, Ayr, N.B.

In consequence of the estate having been sold, the herd of pure-bred Shorthorn cattle belonging to Mr. C. H. Jolliffe, Goldicote, Stratford-on-Avon, is to be sold by auction on Friday, October 20, at Goldicote, by Messrs. J. Thornton and Co. The herd is a large and remarkably well-bred one, and the quality of the animals can be judged when it is mentioned that at the Birmingham Spring show and sale, five of Mr. Jolliffe's bulls were sold at an average of over £230 per head.

I learn that a specially selected Large White boar and two sows have recently been shipped to one of the principal bacon factories in Denmark, by Messrs. Sanders Spencer and

Son, of Holywell Manor, near St. Ives, Hunts, whose old-established herd has supplied large numbers of Large Yorkshires to the members of the various Danish co-operative bacon factories during the last twenty years.

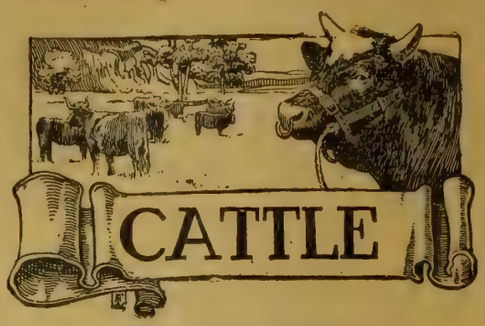
An interesting suggestion for encouraging the demand for Suffolk sheep in Canada has been made by the editor of the *Farmers' Advocate*, a Canadian agricultural journal. He suggests that the Suffolk Sheep Society purchase trios of the breed, each trio to consist of a ram and two ewes, and that such be donated to three or four of the agricultural al'eges in America, with a proviso that the blood is to be used in crossng and grading up the type of range sheep, generally of Merino extraction, at the experimental station of the Agricultural College, Madison, Wis., U.S.A., with which instituton it has been connected for two years. The Shropshires and Oxfords were being largely used for this purpose, and the resulting grades and crosses were shown at the experimental show, Chicago, and won a big share of the prizes for grade wethers, and were hardly distinguishable—that is, the second and third crosses, from the pure-breds.

"I think," he adds, "if the Suffolk Sheep Society could see their way to donate a few cheep in this manner that the effects would be far-reaching. In addition to the Wisconsin College, I would suggest the Agricultural College of North Dakota, at Fargo, North Dakota, U.S.A., of which Professor J. T. Sheppherd is director, and the Manitoba Agricultural College, of which Professor W. J. Black is principal. The Madison College would bring the Suffolk grades to the attention of the public at the Fat Stock Show, while the other two Colleges mentioned would be able to show the students, who are recruited largely from range districts in the West, where sheep are largely Merino grades, and whose owners are now looking for a good type of mutton sheep to grade them up for the market. Amongst other things in favour of the Suffolk is the bareness of wool on the face, this being the defect of the Shropshire in a country where alternate freezing and thawing of the snow causes ice to gather round the eyes." The matter has been under the consideration of the Council of the Society, but so far as I am aware no decision has been arrived at.

On Friday next, the 6th inst., Messrs. Cobb will sell in the Fair Meadow, Frindsbury, near Rochester, 68 pure-bred Kent rams and ram tegs, from the well-known registered flocks of Messrs. F. Baker and C. J. G. Hulkes, also 7 pure-bred Hampshire Down rams and ram lambs ,and about 3,318 Kent, Hampshire, and half-bred sheep and lambs from various flocks. The sale will commence at 11 o'clock.

Chesterfield September Fair, held on Monday, was well supplied with cattle and sheep, and trade generally was brisk at upward rates. Best milch cattle made up to £22, in-calf cows £14 to £20, in-calf heifers £12 to £18, fat cattle £16 to £20, and half-meated sorts £12 to £14 each. Nearly every pen of sheep was sold, Oxford rams making £4 to £6 6s., ewes 42s. to 54s., Lincoln ewes 44s. to 48s., Cheviots 28s. to 30s., lambs (best lots) 34s. to 36s., and inferior 24s. to 30s. per head. A few good Shire horses found a ready sale at £28 to £40.

Guernsey and Alien Landowners.—A White Paper issued last week shows that the King and the Privy Council have considered a Bill adopted by the Court of Chief Pleas in Guernsey by which it is sought to check the extensive acquisition of estate lands and houses in the island. The island is less than 40 square miles in extent, and it was stated that "the peculiar geographical position and limited area of the island make it imperative that special precautions should be taken with regard to the settlements in the island of foreigners who are not subjects of your Majesty." The King has accordingly approved the new law by which no alien or alien body can hold directly or indirectly land or buildings in the island for more than a year without first making declarations to the authorities as to family, profession and bona fides, and, in the case of a society, its title and objects. It will rest with the authorities as to whether continued possession or occupation of the property shall be permitted.



Notes and Jottings.

The fat stock markets continue on the whole dull, though very variable. It is rather singular that the Metropolitan (Islington) quotations should be exactly the same on Monday last as upon the corresponding Monday last year, namely, 4s. 8d. per 8 lb. sinking the offal. This quotation, however, refers only to choice Devons and Herefords, which at this particular season are invariably much more in demand, and at very much higher prices than the ordinary run of steers. In many of the provincial markets, too, just at this season a few extra fine animals often sell as well as at Christmas, or even in the spring months. At Michaelmas there are many annual pleasure fairs and other sorts of feasts going on when a few extra choice animals are required and make extra prices, contrasting strongly with the prices obtained for common animals, which are always too plentiful at this season.

At the Deptford Market the supplies of States and Canadian cattle appear to be upon a fairly liberal scale, and the prices cannot, or ought not, to be complained of, States cattle reaching to 4s. per 8 lb., and Canadians 3s. 10d. There are a great number of choice cattle amongst these, and the States-fed steers are great favourites with both butcher and consumer. The great improvement that has taken place in the breeding of the American and Canadian stock has much to do with the better quality there is no doubt, but so far as the butcher is concerned the thorough ripening that the cattle get upon the rations of cheap corn that can be bestowed upon them has also a great effect; this not only gives weight, but increases the offals very much in value, the quality of internal fat being much beyond the average.

The supplies at these markets are worthy of notice. At Islington on Monday, 25th inst., the supply consisted of 1,360 head of cattle, whilst at Deptford on the same day the number stood at 1,463, the foreign supply being 100 in excess of the British on the same day, and on the previous Saturday at Deptford 1,540 cattle were offered. The quantity of foreign meat, live and dead, that finds its way to our market now is altogether incredible, and though a great deal of it is of very high class, the best British-fed is much more relished by those who are connoisseurs, and these especially in country places invariably patronise the butcher who obtains his animals direct from the feeder, where they are quietly driven to the slaughterhouse, in many cases without the bruising and many other objectionable things that happen to stock that has been marketed two or three times.

Referring to the American cattle and their good corn finishing, an article in the *Breeders' Gazette* says "that a load of finished steers that went over the scales at the Chicago Market three weeks ago at 6 dollars 50 cents per cwt. did not pay the feeder more than 20 cents a bushel for his corn." The same article continues:—"It requires a feeding period long enough to overtax the staying powers of all but a few to make the beef that fetches these top prices," and "that the higher level corn market of this year will doubtless make the number of such cattle fewer than ever," and maintenance of present prices for the next three months is a reasonable prediction in that country. The majority of the best beef steers on the American markets appear to be graded up Herefords, Angus, and Shorthorns; in some instances purely-bred steers of those breeds.

The past fortnight has been a very busy one amongst Angus cattle, and the various sales appear to have made fair averages, though one would think scarcely good enough to satisfy the breeders who have, at great expense, time, and trouble, brought that breed to such a high state of perfection. A noticeable feature in the reports of most of these sales was the absence of foreign buyers. This has a great effect generally upon the averages. When two or more foreign buyers fix upon some outstanding individual, the result is usually a price running close up to four figures, and one such sale in a herd of forty or fifty animals means a rise in the average of £20 per head, or over, so that as good a general trade may be experienced at a lower average where there is an absence of any sensational price.

Some of the averages, however, are reported as being very disappointing. That of Mr. Clement Stephenson's must have been one of these. The many fine, indeed magnificent, animals that have been so universally admired in the past at our great Christmas shows that emanated from this herd, and were as near perfection as it is possible to breed cattle, would, one would have thought, been a sufficient inducement to cause a crowd of purchasers, and to be the means of obtaining long prices, and, when to this is added the many valuable strains of blood the herd contained, it does seem what may be called hard lines for their general owner when the highest price was 71 gs., and the average of forty head came up to but £26 14s. 5d.

Pedigree is now making a great difference to our foreign patrons, especially in the western hemisphere. The demand for long pedigreed stock, and the utter exclusion of short pedigrees, is one that all breeders at home and abroad will do well to ponder over very deeply. In England

Forthcoming Live Stock Sales.

Date.	Stock.	Owner.	Place of Sale.
October			
3	Hackney Horses	Mr. W. Oppenheimer ...	Ewell, Surrey.

6	Kent and other Sheep ...	Various	Frindsbury, nr. Rochester.
6	Kent or Romney Marsh Sheep and General Farming Stock	Mr. F. Neame	Ickham Court, nr. Canterbury.

of late years many of the leading animals at our Christmas shows have been of very short pedigree, and it is a notable fact with respect to milk even non-pedigree stock are proving superior to long pedigreed ones. It is quite probable that a reaction will take place on the other side of the water in a few years, when short pedigreed stock will return to favour. The majority of these short pedigreed animals are quite as purely bred, but the fact of not being tied to blood has enabled breeders of these in the first instance to use the best bull obtainable.

So much have some pedigree cattle been in demand of late at some of our Northern sales of bulls in the spring of the year that higher prices have been paid for these than for the long registered animals. In referring to this matter in the manner here followed, it must not be taken for a moment to mean that we do not advocate pedigree. By all means register the stock; they are then fit to go on with, but short pedigrees give the opportunity of using at the bottom some of the very best bulls that have ever been seen, and which, in the case of herds restricted to a more lengthy lineage, would perforce have to be foregone.

Since my last notes were written, particulars of the sales of two important herds of Shorthorns have taken place; that of Lord Rothschild, at Tring Park, and that of Mr. Roland Wood, at Thrapston. The former herd has been raised and bred almost entirely for milk production, and during the few years it has been in existence it has claimed quite a fair share of success in the milking trials at our various shows. The attendance, however, and average prices at the sale, were quite a little on the disappointing side, forty cows averaging £28 16s. 8d., and ten bulls £38 6s. 6d. At Mr. Wood's sale, where the dual-purpose has been kept much in view, the average of the cows was £2 per head higher, and the total average about the same, but from the latter herd sixteen bulls have been sold this year at the highly remunerative average of £82 18s. 6d. These, of course, did not come into the reckoning of the present sale averages.

If there is one of the many sales that have recently taken place more interesting and satisfactory than another it must be that of the sale of a large portion of the famous herd of West Highland cattle from Lord Southesk's splendid fold at Kinnaird Castle. It was a grand sale of these beautifully picturesque cattle and high-class beef producers. The highest price for a cow was £210, a three-year-old heifer £199, and a two-year-old also £210. Yearling heifers also went up to 100 gs., and calves to £36 15s. Altogether 78 head were sold, with the excellent average of £48 12s. 2d.; five ten-year-old bulls also brought 10 gs. There is no more beautiful sight in a field or park than these splendid cattle, either in the summer, when standing under the shade of fine timber trees, or, what they also love, in a stream of running water, switching their tails about, or, perhaps finer still, on in winter morning when the hoar frost is glistening all over their shaggy coats. And they pay, too.

Another interesting sale, though with less satisfactory results, was that of the very old established herd of Sussex cattle at Ashurst, which had been bred under different owners for 130 years without a break. In spite of a large attendance, very low prices prevailed, 19 gs. being the highest price of the day. Such low prices must have been very disappointing, but we do not know what the condition of the animals was. To go back a hundred and thirty years takes us to the days when the Sussex was a very different animal to what it is at the present day. It is on record that a Sussex steer once upon a time trotted six miles in the hour upon Lewes racecourse, and in the very early days of the breed they were amongst the very best cattle for draught purposes, as they are to-day even.

Sale of Mr. Handley's Cattle and Sheep.

Mr. John Handley's well known herd of pedigree Shorthorn cattle and flock of Wensleydale sheep were dispersed by auction at Brigflatts, near Sedburgh, on Wednesday, in the presence of buyers from all parts of the North of England. The pedigree Shorthorn cattle made from 6½ gs. to 28½ gs., obtained twice, whilst of the ordinary Shorthorn cattle heifer calves, varying in age from six to eleven months, made from 7 gs. to 8¾ gs., bull calves 6½ gs. to 7 gs., yearling heifers 8¾ gs. to 13 gs., September calvers £18 to £22 15s., October calvers £15 15s., November calvers £9 10s., December ditto £12 12s. 6d. to £21, March ditto £13 7s. 6d. to £14 15s., April calvers £13 10s. to £16 10s. The Wensleydale sheep were in great demand. Ewes fetched £2 10s. to £6, shearlings 3 gs. to 10 gs., tup lambs 2½ gs. to 5¼ gs., and gimmer lambs £1 10s. to 4¾ gs. Of the shearling rams Brigflatts Boy, by Blue Beard, was sold for 15 gs., and Scholbergh Hero and Young Peterkin, both by Peterkin, for 7 gs. each.

Sale of Captain Spicer's Jerseys.

The whole of Captain Spicer's herd of pure bred Jersey cattle, with the exception of three or four of the older cows retained for the dairy, was submitted to auction on September 22 by Messrs. Thornton and Co., at Spye Park, Chippenham. The animals had been kept for the dairy and not for exhibition purposes, but they included some nice animals of good quality that realised satisfactory prices. There were also about a dozen head included in the sale belonging to Miss Wyndham, at Wans, Chippenham, which had been bred principally from the Spye Park herd. A pair of choice two-year-old heifers, both bred in Jersey, were bought by Mrs. Spencer at 37 gs. and 35 gs.; whilst the Duchess of Somerset, the Duchess of Hamilton, Sir J. Wernher, Sir H. Pelly, and Lady Smyth were among the purchasers. The chief sales are appended:

The Late Mr. A. Smith's Lincoln Reds.

An important sale of Lincolnshire Red Shorthorn cattle took place at Surfleet, near Spalding, on Wednesday, for on that day the entire herd of the late Mr. Alfred Smith was dispersed by Messrs. Dickinson and Riggall, of Louth, in the presence of a large company. In all some eighty-three animals, including twenty-two calves, were disposed of, and the sale realised a total of 1,615 gs., an average, including the calves, of 20 gs. a head. The top price of the sale was 46 gs., given by Mr. Charles Garland, of Warwick, for Surfleet Dorothy, a prize-winning cow at the Lincolnshire and Peterborough shows. The same purchaser also gave 42 gs. for Surfleet Daisy, and he likewise purchased a number of others, including the pick of the animals coming under the hammer, at figures ranging at over 30 gs.

Others purchasers included Messrs. Fydell Rowley, W. J. Atkinson, George Freir, Fletcher and Andrews, T. Bett, and Marriott. For yearling heifers the top price was 57 gs., given by Mr. Topham, of Thorney. The highest price given for bulls was 39 gs., paid by Mr. C. Garland for Surfleet Baronet, a prize winner. The averages of the sale worked out as under: Cows, 24 gs.; calves, 12 gs.; yearlings, 19 gs.; and bulls, over 20 gs.

Mr. J. J. Cridlan's Aberdeen-Angus.

Seeing the widespread fame of Mr. J. J. Cridlan, Maisemore Park, Gloucester, as a breeder of Aberdeen Angus, and the numerous prizes he has won with his animals, it was naturally expected that good prices would be realised at his sale on Wednesday, but these were not forthcoming, and, on the whole, was extremely disappointing. With the quality of the animals no fault could be found, for there was indeed an unusual number of choice lots, and for the first time some Evergreens, the animals of which tribe many bids for annual sales have been offered for in the yards of Londonderry, really more championship blood runs than any other. May be that, coming on top of so many other Aberdeen Angus sales, buyers were not in the mood. Still, whatever the reason, prices were disappointing. The top figure was 75 guineas, though a few others made 60 to 70 guineas, went very cheaply at prices under a hundred guineas. Altogether thirty-two animals were sold for £838 8s., the eighteen cows averaging £26 6s.; five two-year-old heifers, £38 4s.; four one-year-old heifers, £23 7s.; three heifer calves, £15. The sale list was as follows:—

The Preston Bissett Aberdeen-Angus.

The Rev. C. Bolden's herd of pure-bred Aberdeen Angus cattle at Preston Bissett, Buckinghamshire, is one of the oldest and among the best known in England, it having supplied many prominent winners at our agricultural shows; therefore a sale of some of the animals always attracts a goodly company of buyers. Such was the case at the fifth sale, held on Tuesday last, but in common with other sales of this breed prices were on the low scale; in fact, scarcely all the buyers secured good animals at little or anything above store prices. The highest price of the sale was made by Venetta 4th, a big level cow, descended from the Maybush tribe. She evoked bids from many quarters, but finally was secured by Mr. Moorhead, an Irish buyer, at 70 guineas. Two-year-old heifers sold at moderate prices, for though none was very high the average was good. In the case of the yearlings, however, several were sold at moderate figures. The prize bull, Protestant, by Elgamore, an Erica sire, failed to reach his reserve at the ring, but was afterwards purchased by Mr. R. C. Swan, Rockcliffe, Darlington, at 75 guineas. Two of Mr. Bolden's animals were not offered, but the others all found purchasers, and the average for

THE TENS OF THOUSANDS of users of MOLASSINE MEAL should see that their stock have a portion in every feed all the year round, not simply as a condiment when an animal is out of condition, or occasionally as a fillip. MOLASSINE MEAL is the most valuable and economical food, displacing all condiments, and should be given in place of the same weight of oats, beans, grain, cake, or other feeding stuffs. Sold by all corn merchants and the MOLASSINE CO., Ltd., 36, Mark Lane, London, E.C. —[ADVT.]

the 37 head was £28 14s. 5d. Mr. J. H. Bridges, Langshott, Horley, Surrey, sent five yearling heifers from his well-known herd, but all were not sold, Laurel of Langshott, which was second at the Royal Show, failing to reach her reserve of 25 guineas. The four disposed of realised £94 10s., Sir R. Dashwood taking two at 28 gs. and 19 gs., Mr. Cridlan one, at 22 gs., and Mr. C. Stephenson the other at 21 gs. Appended is the sale list of Mr. Bolden's animals:—

Sale of Aberdeen-Angus at Perth.

A sale of Aberdeen Angus cattle was held at Perth by Messrs. Macdonald, Fraser, and Co., Ltd., on September 22, the catalogue consisting of over fifty animals from seven herds; these including the Airleywright herd, dispersed in consequence of Mr. William Hutcheon leaving the farm, the other consignees being Sir Donald Currie, Glenlyon; Mr. James Speid, of Forneth; Mr. R. Wylie Hill, of Balthayock; Mr. John M'Ainsh, Cougash; Mr. George Willsher, of Pitpointie; Mr. R. Grant, The Haugh, Cromsdale; and Mr James Corey, Larne. The Airleywright lot, which was the largest, consisted of eight cows, four heifers, three bulls, and nine calves. From Glenlyon there were eight yearling heifers; Mr Corey's lot was made up of ten heifer calves, and Mr Grant's of seven heifer calves and one bull calf. The Balthayock herd was represented by four cows and a two-year-old heifer; while Mr Speid had forwarded two cows and four two-year-old heifers; Mr. Willsher two cows and a bull, and Mr M'Ainsh two cows, a two-year-old heifer, a bull, and a bull calf.

As a whole, the animals were of very fair merit, and came in for a good deal of interest from the numerous breeders present, but trade was very poor, only a few animals selling at 20 gs. or over, the top price being but 40 gs., given by Mr. Robb, Belfast, for Fragaria of Glamis, a yearling heifer from the Droagh herd. The total realised for 67 head was £989 12s. 6d., being an average of only £14 15s. 5d. The highest herd average was reached by the Balthayock cows—£20 1s. 8d.—Mr. Speid following closely in the same section with £19 8s. 6d. The Airleywight cows brought an average of £17 15s. 9d., and those from Congash figured out at £17 6s. 6d. Pitpointie making £16 5s. 6d. The yearling heifers from Ireland made a very attractive appearance, and they were in good demand, the sum obtained for them representing an average of £18 9s. 7d. The Glenlyon and the Haughs of Cromdale heifer calves brought £11 13s. 8d. and £11 9s. 6d. respectively.

The Bardrill Aberdeen Angus.

The herd of pure-bred Aberdeen Angus cattle belonging to Mr. G. R. Sharp, Bardrill, was dispersed on the 21st ult. at the farm, near Blackford, Perthshire, by Messrs. Macdonald, Fraser, and Co., Limited. Although the herd has been in existence for a comparatively short period it was widely known, and had achieved considerable distinction at the Scottish, English, and Irish national shows, as well as at many local fixtures. A capital collection of animals was put into the sale ring, representing such families as the Queen Mothers, Heather Blossoms, Roses of Westerton, Rubies of Powrie, and the two branches of Ericas, and all were shown in particularly good form. The sale was attended by a representative gathering of breeders from all parts of the country and the demand was a little better than at some other recent sales of Black Polls. In all, forty head passed through the ring, and they realised £1,100 8s., or an average of £27 10s. 2d. In the cow section the best price obtained was 61 gs., which was paid by Mr. A. T. Reid, Auchterarder House, for the Trojan-Erica Extraction, bred by Mr. Clement Stephenson, Newcastle, and got by the champion Esmond of Ballindalloch. She is an eight-year-old. Mr. W. S. Ferguson was the runner-up. The next best figure reached was 37 gs., at which Mr. Hunter, Blakesley, Northampton, took out Ideal Pride, a three-year-old bred at Cullen House, and by Portsman of Aberlour. Among the yearlings, one of the prettiest was Eva of Culdees, a very smart Trojan-Erica, got by England's Eddie. She was fancied by several of those around the ring, but in the end the competition lay between Mr. W. S. Ferguson and Mr. M'Laren, Auchmaguie, and she ultimately went to the former at 71 gs; whilst 70 gs. was given by Mr. J. D. Fletcher, of Rosehaugh, for the stock-bull Just Rover II., which was looking quite as fresh as he was two years ago when he made the round of the principal shows with such success. A sale list is appended, while the averages were as follows:—Sixteen cows, £27 8s. 8d.; four two-year-old heifers, £28 7s.; six yearling heifers, £36 15s.; nine heifer calves, £15 5s. 8d.; two bull calves, £23 2s.; three bulls, £47 19s.

Cows.—Jemima 27th of Morlich, 10 years—Mr. Allan, Ballintoul, 26 gs.; Psyche of Innerpeffray, 10 years—Mr. Andrew Smith, Longriddry, 21 gs.; Rose of Culdees 10th, 9 years—Mr. Hunter, Blakesley, Northampton, 20 gs.; Pretty Bride of Wyrley, 8 years—Mr. J. Syme, Strathkinnes, 20 gs.; Extraction, 8 years—Mr. A. T. Reid of Auchterarder, 61 gs.; Larky Pride 6th, 8 years—Mr. J. Syme, 20 gs; Gipsy of Ballintomb 2nd, 5 years—Mr. Robb, Leaston, 25 gs.; Alford Jane 4th, 6 years—Mr. Hunter, Blakesley, 25 gs.; Fair Maid of France, 6 years, Mr. J. Syme 20 gs.; Gipsy of Ballintomb 2nd, 5 years—Mr. Robb, Lisnabrenny, Belfast, 28 gs.; Lady Bertie, 5 years—Mr. Robb, 25 gs.; Pride of Powrie 13th, 5 years—Mr. Sharp, Drumfad, 28 gs.; Coral of Wyrley, 5 years—Mr. Hunter, Blakesley, 21 gs.; Beauty's Promise, 4 years—Mr. Whyte, Inverquharity, 23 gs.; Ideal Pride, 3 years, Mr. Hunter, Blakesley, 37 gs.

Two year old Heifers.—Roving Lass of the Drum—Mr. J. Syme, 20 gs.; Pride of Beauty—Mr. Robb, Belfast, 24 gs.; Pride of Bardrill—Mr. Hunter, 35 gs.; Erica of Ardoch—Mr. Hunter, 29 gs.

Yearling Heifers.—Beauty of Bardrill—Mr. Whyte, Spott, 23 gs; Ruby Ring—Mr. W. S. Ferguson, 40 gs.; Lady Albion—Mr. Hunter, 18 gs; Jemima of Bardrill—Mr. Hunter, 38 gs.; Eva of Culdees—Mr. W. S. Ferguson, 71 gs.; Rover Queen—Mr. Robb, Belfast, 20 gs.

Heifer Calves.—Rose of Bardrill Mr. Sharp, Drumfad, 16 gs.; Ideal Pride 2nd—Lady Seafield, 20 gs.; Queen of Bardrill—Lady Seafield, 16 gs.; Pride of Bardrill 2nd—Mr. Stirling, of Kippendavie, 15 gs.; Hartzan—Mr. Smith, Leaston, 12 gs.; Princilla—Mr. W. S. Ferguson, 15 gs.; Gipsy of Bardrill—Mr. Menteith, Knowehead, 9 gs.; Beauty of Bardrill 2nd—Mr. Whyte, Hayston, 14 gs.; Queen of the Rovers—Mr. Crann, Morlich, 14 gs.

Bull Calves.—Ochil Rover Mr. Bruce, Tochineal, 22 gs; Mountain Rover of Bardrill Mr. Hum Bland, Kilquade, 22 gs.

Bulls.—Just Rover of Morlich 2nd Mr. J. D. Fletcher of Rosehaugh, 70 gs; Albion 2nd—Mr. M'Caull, Dumblane, 27 gs; Harvest King Strichen's Trustees, Aberdeenshire, 40 gs.

Sir Ashburnham-Clement's Sussex Cattle.

The entire herd of pure bred Sussex cattle belonging to Sir Architel Ashburnham Clement, Bart., was sold by auction by Messrs. T. Bannister and Co., of Haywand's Heath, at Pound Farm, Guestling, on the 23rd ult. The animals offered were descendants of the noted herd of the late Mr. Simes, of Poundsford Farm, Burwash, whose family had bred Sussex cattle for over 100 years. Sir Architel purchased the entire herd from Miss Brisco at the sale in 1895, and when it was resold in 1899 he again bought it for Broomham. Great care had been bestowed for many years in the selection of good registered bulls, but the produce was not entered in the Sussex Herd Book until 1903. The cattle had been kept under natural conditions at Pound Farm, exposed to all weather on high land, and were brought out in the best of condition. The attendance of buyers at the sale was on a large scale, but the prices realised were average ones, there being no reserve. The chief sales were as follows:—

Cows and Calves.—Polly 8776, c. 1895—Mr. Courthope, Wadhurst, 19 gs.; her bull calf, Broomham Fiscal Policy, s. Lord Guestling 1868, c. Oct. 5, 1904—Mr. H. S. Simmons, Battle, 12 gs.; Curly 8769, c. 1899—Mr. V. P. Miss, Uckfield, 25 gs.; her steer calf, s. Lord Guestling 1868, c. March 1, 1905—Mr. H. A. Rigg, Cowfold, 12 gs.; Broomham Polyanthus 8777, s. Peacemaker 3rd 1869, c. Jan. 1, 1900—Mr. Courthope, Wadhurst, 21 gs.; Broomham Diana 8781, s. Peacemaker 3rd 1869, c. 1900—Mr. V. P. Miss, Uckfield, 27 gs.; her steer calf, s. Lord Guestling 1868, c. Feb. 6, 1905—Mr. McEwan, 11½ gs.; Broomham Molly 8778, s. Peacemaker 3rd 1869, c. Dec. 30, 1900—Mr. Courthope, 30 gs.; Broomham Tiresome 8768, s. Peacemaker 3rd 1869, c. May 3, 1901—Mr. A. A. Holmes, Northam, 21 gs.; her bull calf, Broomham Termagant, s. Lord Guestling 1868, c. Dec. 25, 1904—Mr. Pronger, Cowfold, 12 gs.; Broomham Florence 8764 s. Peacemaker 3rd 1869, c. Nov. 5, 1901—Mr. V. P. Miss, 20 gs.; her heifer calf, Broomham Flora, s. Lord Guestling 1868, c. March 21, 1905—Mr McEwan, 13½ gs.; Broomham Paulina 8779, s. Peacemaker 3rd 1869, c. Dec. 6, 1901—Mr. V. P. Miss, 33 gs.; her heifer calf, Broomham Lena 9481, s. Lord Guestling 1868, c. Oct. 7, 1904—Mr. Courthope, 13 gs.; Broomham Amethyst 8753, s. Lord Guestling 1868, c. March 16, 1902—Mr. Holmes, 20 gs.; her steer calf, s. Ashburnham Boxley 1864, c. Oct. 4, 1904—11 gs.; Broomham Dinah 8763, s. Lord Guestling 1868, c. Oct. 13, 1902—Mr. W. A. Haviland, Brightling, 22 gs.; Broomham Primrose 8767, s. Lord Guestling 1868, c. Oct. 21, 1902—Mr. Courthope, 22 gs.; Broomham Ringlet 9145, s. Lord Guestling 1868, c. April 5, 1903—Mr. V. P. Miss, 20 gs.; Broomham Crystal 9141, s. Lord Guestling 1868, c. April 20, 1903—Mr. W. A. Haviland, 20 gs; Broomham Cowslip 9144, s. Lord Guestling 1868, c. Sept. 22, 1903—Mr. W. A. Haviland, 19 gs.

Bull.—Limehurst Forster, s. Bewbush Lad 2nd 1786, c. March 30, 1903—Mr. Haviland, 17 gs.

Mr. T. E. Williams' Shorthorns and Shropshires.

Messrs. Bruton, Knowles, and Co. held an important sale of farming stock at Hartley Farm, Gloucestershire, on September 22, for Mr. T. E. Williams, of Salterley Grange, for whom they had let the farm. The sale included the registered flock of 398 Shropshire sheep and a herd of pure-bred Shorthorn cattle. There was a numerous attendance of buyers. The highest price realised in the flock of Shropshire ewes was 60s., given by Mr. James Peter, of Berkeley. Shropshire lambs made up to 36s. The herd of cattle included some of the favourite Waterloo tribe, for which there was a good competition. Mr. James Peter gave 25 gs. for Lady Waterloo 36th, a roan cow calved February 28, 1901; for Lady Waterloo 37th, a red cow calved April 3, 1902, Mr. William Hitch gave 27 gs.; and the same price was given by Mr. Edward Blackwell for Lady Waterloo 38th, a red cow calved May 5, 1903. Mr. Hitch also purchased Lady Waterloo 39th, a roan cow calved May 13, 1903, for 27 gs.

The late Mr. Farr's Herefords.

The fine herd of Hereford cattle and flock of Shropshire sheep bred by the late Mr Edward Farr, were brought under the hammer at The Court of Noke, Pembridge, near Leominster. The late Mr. Farr was a most successful exhibitor, more particularly after he removed from Pipton (Breconshire) to Court of Noke, which is in the heart of the native home of the Herefords. He won many prizes at the Breconshire, Leominster, and other agricultural shows, and at the Birmingham and Smithfield Club Fat Stock Shows, and secured first, second, and fourth prizes in the class of yearling bulls at the April show of the H.H.B.S. His preparation and exhibition of Britisher brought Mr. Farr very much to the front, as he took amongst other prizes with him the championships at Lord Tredegar's show, the Royal, and Herefordshire and Worcestershire, and afterwards sold him to Mr. George Leigh, for whom he won the championship at the great Chicago show in 1902, where he again defeated the celebrated Protector. Mr. Farr was also very successful as an exhibitor of Shropshire sheep. Messrs. H. F. Russell and Son conducted the sale, and they had no fewer than 141 Herefords and 241 Shropshires to dispose of, but they got through the work in remarkably good time. The sheep were first offered, and met a ready trade. The three-year-old ewes averaged 56s. apiece, the highest price being 58s.; the two-year-old ewes averaged 59s. 6d. each, highest 60s.; yearling ewes 81s., 77s., etc.; and ewe lambs from 33s. to 51s. The two-year-old stock ram Frugal Swain was secured by Mr. H. R. Evans, at 164 gs., and some other rams, older, sold at 54 gs., 10 gs., and 6 gs., whilst the ram lambs, sired by Higher Eaton, Frugal Swain, and Next Door, sold at prices

ranging from 72s. 6d. to 155s. Luncheon followed, and then the Herefords came before the large company. Bids came fairly brisk but prices were not so large as some expected would be the case. Top figures were 93 gs., 62 gs., and 50 gs., and but very few others fetched over 30 gs., as the following list of the chief lots will show. The 93 gs. was given by Mr. W. H. Evans, The Lynch, Eardisland, for the four-year-old stock bull Earl Marshal, a grand animal and impressive sire. He began at 25 gs., and was bid for very briskly up to the top figure. His purchaser, who is a son of Mr. Frank Evans, the well-known judge of cattle and horses, has probably inherited his father's rare judgment.

COWS AND CALVES.—Primula, Mr. Howells, 24 guineas; her bull calf, Mr. Parr, Leebotwood, 22; Comely, Mr. Morrison, 17½; her bull calf, Earl of Coventry, 23; Stately and heifer calf, Mr. Peter Coats, Clifford, 30½; Chatty, Mr. Pantall, Old Letton, 23; her bull calf, Mr. Gamble, Presteign, 50; Columbine, Mr. Morrison, 19; her bull calf, Mr. Tanner, Shrawardine, 15; Regalia, Mr. Morrison, 18; her bull calf, Mr. Goodwin, Little Brampton, 25; Patch, Mr. Townsend, Raglan, 19; her bull calf, Mr. Marfell, Usk, 28; Gemima, Mr. P. Blatherwick, Elsdon House, 26; Godiva, Mr. P. Blatherwick, 31; her bull calf, Mr. James Davies, Newchurch, 62; Bud, Mr. Morrison, 19½; her bull calf, Mr. Townsend, Raglan Castle, 23; Britannia, Mr. Morrison, 20; Carmine, Mr. Pantall, 22; her bull calf, Mr. Edwards, Clifford, 21; Carolina, Mr. Cleasby, Stretford, 30; her heifer calf, Mr. Ricketts, 12; Julia, Mr. H. Christy, 25; her heifer calf, Mr. H. Christy, 16; Judy, Mr. Hope, Weobley, 20; Deborah, Mr. Evans, White House, 21; Phyllis, Mr. Prosser, Trevithel, 22, her heifer calf, Mr. Williams, 12; Fairy, Messrs. Torrome and Co., 30; Genius, Mr. Hamer, Penybont, 24.

YEARLING HEIFERS.—Pretty Polly, Mr. Hamer, 20 guineas; Minerva, Mr. Bounds, The Lowe, 20; Jaon, Liebeg's Extract Co., 25; Clara, Mr. H. Christy, 25.

BULL.—Earl Marshal 22105, Mr. W. H. Evans, The Lynch, 93 guineas.

THREE YEAR-OLD HEIFERS AND CALVES.—Gerty, Mr. T. Lewis, Llangibby, 29 guineas: her bull calf, Mr. Powell, The Heath, 20; Pekoe, Mr. T. Lewis, 22; her bull calf, Mr. Morris, Upperton, 18½; Spanker, Mr. Skitt, 27; her bull calf, Mr. Watkins, Duffryn, 21; Arathusa, General Curtis, 25.

TWO YEAR-OLD HEIFERS.—Olympia, Messrs. Torrome and Co. (for South America), 30 guineas; Dimity, Mr. Cleasby, 21; Cocoanut, Messrs. Torrome and Co., 24; Pimpernel, Messrs. Torrome and Co., 30; Amazon, Messrs. Torrome and Co., 30.

Big Prices for Sir Alexander Henderson's Shorthorns.

On Wednesday a large portion of Sir Alexander Henderson's far-famed herd of Shorthorns was offered for sale at Buscot Park, Faringdon, Berkshire, by Messrs. Thornton and Co. Through the great success of the herd in the showring, and the high prices realised by bulls sold from it, the Buscot Shorthorns have become celebrated, and it was a matter of no surprise that a great company gathered together to witness the sale. The most sanguine expectations, however, were far below the actual result, and, as will be seen by the list given below, splendid prices were realised throughout, but especially for the young stock and the bulls, most of which were by that great sire Wanderer's Prince. The keenest competition lay between Mr. Casares and Mr. Sandford, both buying for South America, the latter gentleman securing a very large proportion of the animals offered. The home breeders, however, competed well for many of the lots, and much regret was expressed that so many beautiful animals are destined to leave this country.

Two magnificent four-year-old cows were Sherborne Marchioness and Lady Oxford 2nd, and the former realised 170 gs., and the latter 210 gs., both being bought by Mr. Sandford; whilst Buscot Madge, a red three-year-old heifer, with her red cow calf, went to the same buyer at 220 gs., Marchioness Buscot, two years, at 195 gs., and Buscot Enchantress, a yearling, at 200 gs., the opposing bidder in the last instance being Mr. William Garne, of Aldsworth.

The bulls excited wonderful competition, Mr. Sandford being again to the fore taking half a dozen of the ten submitted, and paying, amongst other prices, 370 gs., 210 gs., 165 gs., and 105 gs. Mr. Torrome got a grand coloured bull in Buscot Boronet at 130 gs., and Mr. Casares another in Moss Trooper at 190 gs. Altogether the 56 animals realised £5,063 2s., the splendid average of £90 8s. 3d. per head. The following were the prices and buyers.

COWS AND HEIFERS.

The Canadian Cattle Question.

A Parliamentary paper was recently issued giving the reply of the Board of Agriculture, sent through the Colonial Secretary, to a petition from the Canadian Senate for the repeal of the Act of Parliament prohibiting the importation of live cattle into this country. The petition pointed out that Canadian herds are now, and have been for many years past, free from those particular diseases against which the embargo has been imposed.

The British Government's reply says experience has shown that the existing statutory requirement that all cattle imported into this country shall be slaughtered in wharves provided for the purpose at the port of landing is no obstacle to the development and maintenance of a large and valuable trade, and points out the great growth of such trade in the case of Argentina. The existing law does not cast a stigma or discredit upon Canadian cattle, for it holds good in the case of the United States and other foreign countries as well as in that of every British colony. The experience of Argentina in 1900 and the United States in 1902, has shown how suddenly and unexpectedly foot-and-mouth disease may make its appearance in a country irrespective of the maintenance of an efficient veterinary organisation.

The enormous losses which British agriculturists have suffered during the last thirty years, mainly by reason of the increased pressure of colonial and foreign competition, makes it more than ever necessary that every possible precaution should be taken against the introduction of disease consistent with the reasonable requirements of colonial producers, and in the interests of consumers at home. It is, therefore, in the general interest that no risk should be taken which can be avoided by the maintenance of a law which provides a considerable measure of security against the introduction of disease, and does so without any serious stoppage of trade or actions invidious to any particular colony or country.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Sept. 23, 1905:

NOTE.—The figures for the current year are approximate only.

At Market Rasen September Foal Fair, held on Monday there was an unusually large number of foals; trade, however, ruled extremely slow, and at the finish a good many remained unsold. The highest price marked was £19, while as low as £10 was accepted. For cart horses as high as £90 was asked, but no trade was done. A good business was done in Welsh drove animals, fillies realising £25 to £32, colts £20 to £32, and ponies £10 to £12 10s.

Horse Notes.

It seems a great pity that we do not make a better practical use of our thoroughbreds than we do. That we have got the material is shown every now and again in our various show-yards; and yet the cry is constantly heard that our thoroughbreds have deteriorated, and are of no use except for racing purposes. Time was when the best of our racehorses were available to tenant farmers for stud purposes, and I have in my possession an old bill of Hambletonian, in which it is stated that a few approved farmers' mares will be taken at 20s. each and 2s. 6d. the groom. It could scarcely be expected that such a state of things could prevail when locomotion became easier and when distance was shortened by railways. But even in the early railway days there was a better class of thoroughbred sire available for the tenant farmer's mares than is now the case, even with the Premium sires given in. The great increase in the value of the stakes run for has raised the price of thoroughbreds to such a height that the best are fast becoming unapproachable, and it is to this fact, rather than the thoroughbred itself, that deterioration is due.

But there are some of the fine old type of thoroughbred still to be found very often in the hands of a sporting farmer, and if we were to make the best possible use of them, I think we should soon have little cause for complaint. Many of my readers will doubtless remember Mr. Marcus Kendall's fine old mare Wild Mint, who a few years ago made such a clean sweep of the Hunter Brood Mare prizes in Yorkshire. She won at Malton, Ryedale, Easingwold, Stokesley, Darlington, and Northallerton several times, and at Doncaster once; and as a four-year-old she was third at the Yorkshire. A short-legged, powerful mare, she was not only a good hunter, but a good and prolific breeder.

Her pedigree is worth a moment's consideration. She was by Peppermint, who was by Camballo Mintdrop, by Lozenge; her dam, Minaret by Rataplan Manganese, by Birdcatcher, on the dam's side. A direct descendant of Mr. King's stoutest blood. Her dam was by False Alarm, a big, good-looking chestnut that the late Lord Middleton owned. He was by Trumpeter—Treacherous, by Pantaloon; her dam, Shiraz, by Camel—Medina, by Shebdeez. Her great granddam was by Pine Apple, by Economist, the sire of Harkaway; and her great great granddam was by Lanercost. The whole of Wild Mint's female ancestors mentioned were winners in the show-yard, and it should be noted that the Pine Apple mare came from Mr. Legard, of Easthorpe.

It was one of Wild Mint's peculiarities that her foals were all big and strong ones, and, without exception, they have done well, either in the hunting field, in the show-ring, or in both, and one of these has won races. This was the well-known Gold Mint, who won all over the country as a four-year-old for Mr. J. H. Stokes, and who won the Private Sweepstakes at Croxton Park and the Ladies' Purse at Melton for his present owner, Mr. Hanbury. Another of her foals was Gold Flake, a Royal winner, who was sold by Mr. Stokes for the King of Italy for 800 gs., and yet another won several prizes for Mr. Stokes before he was sold at his death for 666 gs. One of her foals is carrying the huntsman of the Cottesmore; Lord Rosebery has a breeding from another, and Mr. Hollins from another; whilst Mr. Marcus Kendall has a five-year-old daughter in Redmire, the winning brood mare at Easingwold and Stokesley, and two others.

I noticed another very good-looking and promising young thoroughbred at the Stokesley show. Mr. John Lotty's chestnut three-year-old filly by Red Eagle—dam by The Viking, the name of her pedigree I do not know. She is a big, good-looking mare, quite like making a brood mare. I merely mention this mare to show that Wild Mint and her near relatives are not the only thoroughbred mares that are going, but that there are others, and that, too, within a few miles of Red Hall, Ingo.

There would, I think, not be very much difficulty in establishing a stud or two on such lines as those of the late Sir George Cholmley and the late Sir Charles Strickland. That such studs would leave any margin of profit may reasonably be doubted at first, but I think that in time they would be made to pay their way well enough. At any rate, it is a pity not to use the material we have to the greatest advantage, and that we are certainly not doing at present. And I cannot help thinking that in the long run it would be more profitable to try to breed up our thoroughbreds to a higher standard than it will be to endeavour to evolve a hunter breed.

There is no more frequent cause of annoyance at shows than the objections on the ground of wrong height, and a disqualification on this score is always a grievance, and sometimes, I am afraid, a just grievance. One notorious case of disqualification in a harness class caused considerable comment at the time, and I have no doubt is still within the recollection of my readers. I have no intention to enter into the details of this famous case, but I would point out that the system which admits of a horse upwards of six years old being shown one year and disqualified the next in classes with the same height qualifications is one which is by no means satisfactory. Nor are the measurers to blame for the discrepancy. It is an acknowledged fact—at any rate it is one that is well known to any man who has had much experience in measuring horses—that a horse when greatly excited swells himself out, as it were, and measures more than he does when quiet at home. And it ought not to be necessary to insist upon the fact that it is impossible to ensure the same conditions for the measurement of a horse in succeeding years, as highly-bred horses in show condition are of so spirited a temperament that a trifle upsets them.

The suggestion that is made by the newly-formed harness horse and pony society is likely to find general acceptance amongst exhibitors of harness horses all over the country—at any rate it should do so, as it would most certainly save an immense amount of trouble. It is to the effect that every show horse and pony shall be measured at the beginning of every show season, and his height registered. The registered measurement would be the measurement for the year, and after six years old no further measurement would be required. It would, of course, be advantageous to the owner of the horse to have him measured at home, as it stands to reason that the horse's true measurement would be easiest got when he was amidst familiar surroundings. There would, however, be one thing against which careful provision should be made, and that is that the horse should not be measured in shoes somewhat similar to those in which he would be shown. A horse that is just on the border line would have a great advantage if measured in light shoes.

There does not seem much reason to complain about the demand for carriage horses if the prices made at Aldridge's on Wednesday are any criterion to go by. The twenty-one horses that have run the "Perseverance" coach on the London and Dorking road during the summer months realised the handsome sum of £1,785, or an average of £85. Four of them realised 100 gs. each, and several reached 90 gs. and upwards. It should be said that it is a long time since the horses out of any road coach have sold anything like so well.

It may not be generally known that the founder of Aldridge's, a Mr. Aldridge who flourished in the eighteenth century, was a well-known horseman and sportsman in his day. He was a keen patron of match trotting as it was then known, and he rode his own mare in a match against time—sixteen miles within the hour. The match took place on the London and Epsom road, eight miles out and in, and the distance was accomplished in 53 minutes 50 seconds. John Lawrence, the well-known author of the "History of the Horse," accompanied by Mr. Aldridge in his last match, which is worthy of being recalled to memory, inasmuch as Lawrence tells us that it was the first well-authenticated instance of sixteen miles being trotted within the hour. This is good road work even in the present day, but is very slow for match trotting. In 1780, however, the roads were very bad, for though Macadam was living, he had not then got started with the work which was to make his name famous for all time.

What is a lady's hack? That is a question which it would seem can be answered in many different ways. To judge from what I have seen shown in lady's hack classes during the last few months, I should feel inclined to describe a lady's hack—that is, a showyard lady's hack—as something that is not quite good enough to show in a hunter class. As a rule, the classes are very uneven and of very different types, and they are not very satisfactory classes to judge. I have seen more than once during the season a fourteen-stone hunter winning in a lady's hack class—one, too, that seemed inclined to catch hold of his bridle a bit too much. A lady's hack should, above all things, have good manners. If he has not, he is useless for an ordinary horsewoman, and, besides, however accomplished a horsewoman may be, she does not like to do rough riding. I have seen once or twice horses of the hackney type shown as ladies' hacks, and these are quite as much out of place as is the fourteen-stone hunter. It would be a good thing if secretaries of shows would, during the winter months, try to frame some conditions for lady's hack classes which would do away with these anomalies.

THE LOOKER-ON.

The Late Mr. Bryars' Shires.

Mr. Lloyd, of Frank Lloyd and Sons, of Wrexham and Crewe, offered for sale on Tuesday the Shire horse stud of the late Mr. J. H. Bryars, M.R.C.V.S., Intake Stud Farm, Sheffield. Mr. Bryars founded the stud about a dozen years ago, and, although small, it was recognised as one of the most select in the kingdom. Mr. Bryars, in addition to having a keen judge's eye, having spared neither trouble nor expense in getting together a stud of typical Shires. Although the bulk of the animals were sold the executors are retaining the well-known stallion Lockinge Albert, whose progeny have been so successful in show and sale rings. There was an excellent company at the ring-side, nearly every stud of note in the country being represented, including those of his Majesty the King, Earl Beauchamp, and Lord Calthorpe.

The yearling fillies were first offered. Intake Flower, a daughter of Dunsmore Willington Boy, went for 57 gs. to Mr. McNichol, of Welshpool; while Intake Nelly Blacklegs, a bay daughter of Brandwash, the cup winner at Derby County Show, was sold for 68 gs. to Mr. Whitehead, of Buxton. The two-year-olds came next, and for a lovely black, Wilby Magpie, Lord Calthorpe's representative paid 92 gs. St. Leger Beauty, a well-furnished daughter of Dunsmore Jameson, excited spirited competition, and was eventually knocked down at 170 gs. to Mr. Davison, of York. The next lot, Monk's Polly, a six-year-old grey mare, thrice a winner at the London Shire Horse Show, and last year reserve for the Female Championship, went to Earl Beauchamp's representative for 250 gs. For Knottingley Hazel Mr. Beswick, of Buxton, gave 76 gs.; while for her filly foal, by Childwick Harold, Mr. Grimes, of Palterton, paid 41 gs.

The best of the brood mares was Girton Hazard, a four-year-old brown half-sister to the London champion stallion Girton Charmer, and Lord Calthorpe's representative paid 220 gs. for her, while for her brown filly foal by Lockinge Albert, the Intake stud horse, Mr. Adam Scott, Epworth, paid 50 gs. Of the stallions, Childwick Harold was most admired, and at 430 gs. Mr. Nuttall, of Blackburn, purchased him. Intake King Albert, a two-year-old son of Lockinge Albert and Monk's Polly, was sold for 310 gs. to Mr. Harrison, of Breaston. Altogether, 21 animals were sold, and realised an average of considerably over £110.

Show and Sale at Cardiff.

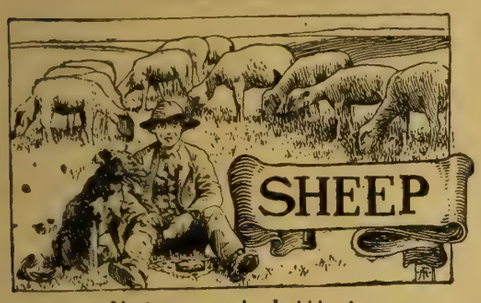
A special prize show and sale of various classes of horses was held at the Cardiff Corporation Horse Repository on September 22 and 23 by Mr. Philip E. Hill, and the event proved most successful, for the attendance was a capital one, and the business done very large, some of the best figures being as follows:—A chestnut gelding 85 gs., bay gelding 105 gs., dark chestnut gelding 108 gs., bay gelding 85 gs., grey gelding 56 gs., pair of roan cobs 115 gs., brown gelding 150 gs., a very fine hunter gelding 170 gs., and many prices from 30 gs. to 50 gs. Several good bids were made—380 gs. for Momento, a chestnut mare belonging to Mr. D. Evans (Llwyncadfor), which has won over 100 prizes, and won the first prize in Class 1; whilst Mr. Charles Radcliffe (Cardiff) was offered 1,050 gs. for Phœbe Walton and Marie Tempest, which have been winning all along the line lately.

Show and Sale of Clydesdales at Perth.

The twenty ninth annual show and sale of Clydesdale horses, held at Perth by Messrs. Macdonald, Fraser, and Co., took place on Tuesday, and was one of the most successful of the series. The numbers catalogued comprised in all a grand total of 458, the best on record, the number including 60 three-year-old colts and fillies, 189 two-year-old colts and fillies, 76 one-year-old colts and fillies, 76 colts and filly foals, 4 entire horses, and 22 work horses. There was a distinct improvement, on the whole, on the quality of the horses as compared with previous years, and this was

particularly noticeable in the one and two year old filly classes and in the foals. Many of the animals were well known prizewinners at local and other shows throughout the country during the past season, and were got by many of the famous sires which have been used in the various localities. The judges of the show were Messrs. A. H. Anderson, Kippendavie; Ferguson, Surradale, Elgin; Walker, nether Coullie, Udney; and Renwick, Meadowfield, Corstorphine. In every section of the show there was, as usual, exceedingly keen competition, and in some cases it was only after anxious deliberation that the selection was arrived at.

It was anticipated that a somewhat slow sale would be experienced, and so far as concerned the foals and three-year-old colts and fillies this held true, as the demand for these was somewhat stiff, unless for the best class. For two and one year old colts and fillies, however, a surprising sale was experienced, and prices were very little, if any, back from last year. All animals showing good breeding and promise met a brisk demand, and realised prices satisfactory to sellers. Geldings rising four years old made from £45 to £60; fillies of same age, £38 to £80; colts rising three years old, £25 to £68; three-year-old fillies, £34 to £56; two-year-old colts, £16 to £38 10s.; two-year-old fillies, £15 to £82; and foals, £12 to £37.



Notes and Jottings.

The demand for Lincoln sheep for the Argentine is a continuous one. Last week's reports show that more of the choicely bred sheep of this breed have left the country. These shipments include three choicely bred rams from Mr. Henry Dudding's flock at Riby, and several other lots of similar character.

The importation of Lincoln sheep into the Argentine during the current year has been a very large one indeed. The number imported from January 1 to July 31 last is given as 1,470 head, as against 588 during the same period last year. A notable increase, and one that it is sincerely hoped may not prove to be in excess of the demand.

The first sale of imported sheep held in the Argentine that has come to our notice is the one held by Messrs. Yariondo and Co. for Mr. James Sidey on August 30.

A dozen Oxford Down rams were offered, and those sold realised excellent prices; the best were as follows:—£33 5s., £30 15s., £28, £26 5s., and down to £15 15s.

Twenty-five Lincoln rams were also sold; these ranged in prices from £30 12s. 6d. to £17 10s. Four Shropshire rams were sold; here the range of prices was from £24 10s. to £15 15s. Another four Lincoln ram lambs disposed of made an average of £14 17s. 6d.

The prices quoted above are not high for any of the breeds, but the Oxford Downs certainly made the better ones. It must, however, be noted that so far as regards the Lincoln sheep, these were not the best, but quite ordinary rams, and hence this sale may be taken as indicating the probable value of the lower grade of Lincoln sheep.

Everyone connected with the sheep industry is fully aware of the large and increasing quantities of imported mutton shipped from the Argentine to this country; but few are aware how very largely the demand for Argentine live sheep has increased of late in Holland and Belgium. From some figures just to hand from the Argentine we find that during the past seven months no less than 34,789 head of Argentine sheep have been sent to Antwerp.

This large outlet for Argentine sheep is doubtless of some value to the breeder of English stud sheep, because it helps to make the industry more profitable in the Argentine. It is, however, a question whether or not the fresh development may not be the means of increasing the competition in our own markets. The journey from the Low Countries is a very short one indeed, and it is quite possible for Argentine sheep, slaughtered there, to be sent and sold in our London markets as fresh mutton. If this should be so it will be a serious source of competition.

The high prices reported at Lincoln sheep sales have made quite a sensation amongst breeders of other varieties of sheep, all of whom wish their breed would sell like the Lincolns. A sale of Border Leicesters recently reported shows there are breeders of these sheep who are prepared to pay for the best specimens of their breed, prices which are of high value. A yearling ewe in Mr. Scott's sale at Thornhome made £20, a four-tooth ewe made £17 10s., both of which we believe are the highest prices for ewes of these ages this season, and the averages realised for these two ages, i.e., £6 1s. 3d. and £7 19s. 2d., are almost if not quite the highest for this season also.

This sale brings out clearly how valuable the old-established stud flocks of this country are. Many who are owners of such fail to realise this, and the observation of the writer, coupled with a lengthy experience, fully confirms this.

How to bring this fact home to those who are fortunate owners of such flocks is a very difficult matter. The owners are, for the most part, somewhat old-fashioned in their ways, and very few take the trouble to make their flock and its merit fully known.

Only last week a business engagement took me to inspect a Southdown flock established before 1852, one of grand type and quality, and yet one to which no export buyer had ever been. Why? it may be asked. Simply because few but those of the immediate neighbourhood knew of its high merit and quality.

Many other similar cases could be quoted; but this is quite sufficient to show how needful it is, if the best demand is desired, to make the existence of the flock and its merit as widely known as possible.

Up to the present time we have not noticed many cases of lameness amongst the flocks that have been visited recently. The absence of this complaint is a matter of satisfaction, because nothing is more detrimental to the well-doing of any flock than for the sheep to become lame either from foot rot or any other cause.

Prevention is always better than cure. With this object in view, we urge that every precaution should be taken to keep the feet thoroughly sound. This can only be done by having the feet properly attended to. It is no use waiting until the sheep or lambs begin to drop lame, for when this happens the mischief has been done. Make it an invariable practice at least twice, if not oftener, each year to have every sheep in the flock turned, and its hoofs properly pared and shaped.

This is the best preventive of infection from foot rot, and from any other form of lameness. This work is also of value from other points of view, amongst which are the better it gives the sheep, the greater ease with which they can move about, etc. The work of paring the hoofs is not one generally appreciated by shepherds, and hence the necessity of the master insisting upon its being done and seeing it is.

If all the losses that the neglect of this simple but most important work has occasioned could be tabulated, its importance would be readily agreed to; but it is just because this cannot be done that the work is so often neglected.

A flock of stud yearling rams that was recently seen was found to have every one of its rams with something more or less seriously wrong with the feet or fetlock joint, all brought about by the neglect of having the feet properly pared. Here the loss was considerable, because some three or four otherwise good yearling rams were so deformed in the feet and over on the joint as to be almost useless and of that character that no leading flockmaster would care to [illegible] in his flock.

Do not neglect the stud ram during the period of service. At least once a week [illegible] should be led in a pen or exercised by them [illegible]. Shepherds will, probably, object to this as being a trouble and extra work; but the flockmaster who values his stud sheep knows that this must be done. In fact far more lambs and probably much more work would be got from every stud ram if each were taken from the [illegible] for at least three or four hours each day. A good plan, and one that has been tested and found [illegible] satisfactory, is to keep the stud rams shut up alone all day, and only allowed access to the ewes at night. This separation from the ewes gives them time to rest and recuperate, as well as to be properly fed.

Flockowners who have tested this plan can vouch for its efficacy, the cost in time and trouble and for extra food being fully repaid by the extra service secured.

"RATIONAL PIG-KEEPING."

Sheep Fairs and Sales.

The Bardrill Border Leicesters.

The Bardrill flock of Border Leicester sheep, belonging to Mr. G. R. Sharp, was dispersed by auction at the farm, near Blackford, Perthshire, on the 21st ult., in the presence of a large company. For 16 Border Leicester shearling rams disposed of the prices ranged from £6 to £10, the highest priced ram going to Rev. T. G. Little, Yorkshire. The average for the lot was £7 8s. 3d. A stock ram of Barrelwell breeding was sold at £8; and the best of the gimmers went at £9 to Mr. W. S. Ferguson, Pictstonhill, Perth.

Bridgwater.

The St. Matthew's fair at Bridgwater, held on Thursday, was well supplied with sheep, several thousand being on offer, and, on the whole, trade was brisk, at good prices. Mr. Horace Hurman had 1,600 in his auction. Bidding was keen, the whole being cleared under an hour. Dorset horn in-lamb ewes averaged 56s., Down ewes 47s. 6d., Cheviot lambs 19s., and Cheviot ewes 32s. Outside the auction prices were above the average. In the horse fair there was a very large supply of all classes, but trade was dragging.

Sir Merrik Burrell's Southdowns.

Owing to the estate having been let, the entire pure-bred flock of Southdown sheep, together with other farm stock, was sold by auction on Thursday at Park Farm, West Grinstead, by Messrs. H. Smith and Son, of Horsham. The flock was started in 1886 by the purchase of ewes from Mr. W. Stanford, Portslade, and the rams used for service have been bought from time to time of such well-known flockmasters as the Duke of Richmond and Gordon, Sir James Duke, Bart., Colonel Hammond, Messrs. Ellis, Emery, Heasman, C. J. Lucas, J.P., Penfold, W. Toop, etc. The lambs were all of Colonel Hammond's rams, and eligible for entry in the Flock Book. There was a good trade, and the sheep realised in all £830 19s. 6d., the average being as follows:—86 two-tooth ewes, £2 12s. 8d.; 54 four-tooth ewes, £2 14s. 6d.; 45 six-tooth ewes, £2 9s.; 33 full-mouth ewes, £2 5s. 4d.; 20 draft ewes, £1 19s. 6d.; 60 wether lambs, £1 15s.; 60 ewe lambs, £1 11s.; 18 mixed lambs, £1 5s. 6d.; 2 shearling rams, £7 12s. 3d.

Carlisle

Messrs. Harrison held a special sale of breeding sheep and lambs at their Carlisle Mart on Saturday, 13,000 ewes and gimmers, half and three-quarter bred, cross Down, cross Cheviot, and black-faced lambs being forward. The sale attracted a large gathering of buyers, and bidding was brisk, a steady demand being experienced. Prices:—Lambs: half and three-quarter bred to 33s., Oxford crosses 33s. 3d., Leicester crosses to 29s. 6d., Cheviots to 21s. 9d., black-faced to 14s. 6d. Feeding sheep: Half-breds to 38s., crosses 37s. 3d., Cheviots to 37s. 6d.; ewes and gimmers, half-breds to 45s., black-faced to 21s. 3d.

The Late Mr. Dewhurst's Blue Faced Wensleydales.

On Tuesday Mr. J. Downham, of Morecambe, acting under instructions from the executors of the late Mr. J. B. Dewhurst, dispersed the flock of 151 blue-faced Wensleydale sheep [illegible] at Aireville, near Skipton. [illegible] large and representative company assembled, and a very spirited sale was the result. The stock ewes made up to £11 per head, the [illegible] being £4 7s. 3d; shearling gimmers made up to £4 10s., the average for 23 head being £3 8s. 9d.; and gimmer lambs up to £4 7s. 6d. each, the average for 32 being £2 5s.; ram lambs—for which there was an excellent demand—[illegible] to £12

(Mr. Earle), the average for 25 being £4 17s. 3d. each.

Dorchester.

About 12,000 sheep were penned at Dorchester Poundbury Sheep Fair held on Thursday, and buyers were well represented, but trade on the whole was quiet, though most of the sheep changed hands. Prices were, on the whole, disappointing, falling from 2s. to 4s. below last year's rates. The judges awarded the first prize for the best 100 horns to H. Southall, Burton, Bradstock (for which he made 55s. apiece), and the second to C. Hawkins, Waddon. In Class 2, for the best fifty, J. Bryant, Berwick, Bridport, secured first prize, and W. Tucker, St. Andrew's, second. Mr. J. H. Creed, Burstock, Crewkerne, and Mr. R. B. White, Herringstone, Dorchester, were the judges. Horn ewes, as a general run, made from 45s. to 55s.; couples, 58s. to 66s.; wethers, 32s. to 36s.; wether lambs, 30s. to 35s.; chilver lambs, 35s. to 44s. In Downs, ewes sold from 42s. to 49s. 6d.; wethers, 34s. to 44s.; chilver lambs, 28s. to 33s.; wether lambs, 27s. to 32s. 6d.; Southdown lambs, 26s. to 27s.

Driffield.

At Driffield on Wednesday there were offered for sale by various auctioneers between 500 and 600 breeding sheep, together with rams of the Lincoln and Leicester type, from the flocks of some of the best breeders on the Yorkshire wolds. The ewes of both breeds sold well, and made up to 64s., whilst for shearling rams there was also a good demand at fair prices, the best recorded being 14 gs.

Market Rasen.

The annual September ram and sheep fair at Market Rasen on Monday was hardly so well attended as in some previous years, whilst the number of rams offered showed a falling off compared with last year, but prices were a decided improvement. The top price was 12 gs., obtained for one of Mr. Davy's Croxby rams and one of Mr. H. Abraham's Walisby rams. An average of £8 4s. 9d. was obtained for 13 of the latter breeder's rams, whilst eight of Mr. Davy's averaged £9 15s. 6½d., the highest average of the day. Last year the top price was 10½ gs., and the highest average £7 13s. At the sheep fair there was a fairly good trade, full average prices being realised. About 2,000 sheep were penned. Lambs made 32s. to 40s., gimmers 39s. 6d. to 55s., ewes 36s. to 50s., and tups 47s. to 67s. 6d.

Newark.

This annual sheep fair at Newark was held on Wednesday, when about 2,500 were penned, and there was a good demand, especially for lambs. The highest price for lambs was made by the executors of the late Mr. Welby, of Allington, who sent 90, which fetched 37s. 6d. to 48s. 6d. each. Forty shillings was about the average throughout the fair. The best figure for gimmers was 67s., made by Mr. Bembridge, of Hawton. A flock of 100 sent by Mr. Abraham Hawton realised 50s. 6d. to 59s. each. Forty-eight black-faced gimmers from Mr. Horner, of Averham, made 58s. to 64s. The trade in rams was poor, the best price being 13 gs.

Partney.

At Partney Ram Fair was realised one of the best, if not the best price of the year for a ram, namely, 650 gs., this big sum being given by Mr. Kirkham, of Louth, for a grand shearling from the flock of Messrs. J. T. and A. W. Needham, of Huttoft Grange, who sold 31 splendid rams for an aggregate of £990 13s. 6d., or the fine average of £31 19s. 1½d. per head. Other good prices were also realised at the fair, 30 gs. being paid for a shearling from the Baumber flock, the lot sent up by Mr. W. Taylor Sharpe averaging £10 8s. 1d. Messrs. J. W. Farrow and Son, of Strubby, sent half a score, which averaged £10 13s. 1d.; and Mr. W. Stovin, of Dexthorpe, sold a score at an average of £12 18s. 10d. Of the South Thoresby rams, the property of Mr. L. W. Stephenson, 25 averaged £10 12s. 11d. Eight of Messrs. Dean and Sons' Dowsby Hall rams averaged £8 13s. 1½d., whilst Mr. F. Ward, of Quarrington, sold 12, averaging £8 3s. 7½d. Altogether there was a fair demand for Longwool rams. At the fair itself there was an average number of sheep penned, with an improvement all round in prices. Some of the best lambs reached 40s. per head, whilst breeding ewes made up to 61s. for two-shear sheep.

Robertsbridge.

At this popular southern sheep fair, held on Monday, about 2,500 ewes and lambs were sold by Messrs. F. S. Mills and Son. The attendance of buyers was excellent, and a fast and brisk trade was done. Prices proved highly satisfactory. The best lambs ranged from 27s. to 33s., ewes from 20s. to 24s., and ewe tegs went from 40s. to 46s. Draft ewes were disposed of at 35s. up to 44s. The top price for Down rams was £5, and ram lambs were sold from 40s. to 55s.

The Thornhome Border Leicester Flock.

Mr. Scott's entire flock of 108 Border Leicester sheep was sold at Lanark by Messrs. Lawrie and Symington. Mr. Scott's decision to sell his flock at this time was come to somewhat hastily, and consequently there was not time to prepare it specially for a sale, the stock only being shown in nice natural condition. Although the Thornhome flock was only formed in recent years, it attracted a large circle of buyers, both local and from a wide radius, and from start to finish a very active selling trade was met at highly satisfactory prices. The top price was realised for a shearling ewe, for which Mr. Carr, Sremster, gave £20. The following is a list of the highest and average prices:—

SUMMARY.

	Highest. £ s. d.	Average. £ s. d.
24 Gimmers	20 0 0	6 1 3
13 One-crop ewes	17 10 0	7 19 2
4 Two-crop ewes	8 10 0	6 15 0
6 Three-crop ewes	7 10 0	6 0 10
4 Four-crop ewes	7 0 0	5 8 9
7 Aged ewes	4 10 0	3 17 1
23 Ewe lambs	13 10 0	3 19 4
1 Stud ram	14 0 0	—
26 Lamb rams	14 0 0	4 18 8

York.

The principal fair of the year for the sale of breeding sheep at York took place on Thursday, and it was estimated that fully 25,000 of all classes were penned. The weather was wet, but there was a numerous attendance of buyers, but trade on the whole was comparatively slow. That for North Country ewes was very sluggish, and whilst some of the best lots made 52s. each, the majority could be had from 44s. to 48s. North Country gimmers made 46s. to 52s., North Country lambs 26s. to 32s., and Cheviot ewes 26s. to 32s. The best twice-crossed shearlings met with a good inquiry at 45s. to 50s., Masham shearlings 38s. to 44s., and Masham ewes 38s. to 44s. There was good inquiry for twice-crossed lambs at 28s. to 34s., and one or two special lots made 38s., Masham lambs 22s. to 26s.

A few South Country ewes were on offer at 35s. to 44s. There was a good offer of rams, and a large number, comprising Oxford Downs, Lincolns, Wensleydales, and Leicesters were sold by auction. The quality was excellent, but, although there were plenty of buyers, prices were none too high. Oxford Down shearling rams ranged from 4½ gs. to 9½ gs. Some Oxford Down ram lambs averaged £4 1s., Lincoln long-wool shearling rams £5 9s. 3d. each, Leicester ram lambs 3 gs. each. The lot of nineteen improved Leicester shearling rams averaged 7 gs. each, the highest price paid being 16½ gs.

Cocoanut Oil and Margarine in "Butter."

At Kettering Police Court, on Wednesday, Messsr. Coopman and Young, provision merchants, of 48, St. John Street, Smithfield, London, were summoned by the Northamptonshire County Council for a breach of the Merchandise Marks Act by applying a false trade description to butter. Mr. Bye provision merchant, of Kettering, deposed to purchasing butter from the defendants, who guaranteed it as "St. John's butter, from the Fancy Creamery—Buckinghamshire quality—where the finest cows graze on the richest pasture."

Dr. Voelcker, county analyst, said the butter contained 20 per cent. of margarine, with cocoanut oil, mixed in such a clever way as to deceive the most careful analyst. To make certain, he mixed the ingredients himself and got the same extraordinary results. He was not at all surprised to hear that some analysts had passed the butter as pure. It was stated that the defendants did an enormous trade in the article, amounting to hundreds of tons per week.

Mr. Hope, for the defence, said as the defendants had been fined at Clerkenwell, the statute was answered.

The Bench convicted, and imposed a fine of £20 and 20 gs. costs.

The work of replanting the Black Country has been commenced by an association formed for the purpose, of which Sir Oliver Lodge, principal of the Birmingham University, is president. Fifty acres have been secured near Bradley, one of the blackest parts of the Black Country. Upon a portion of the land the Wolverhampton and neighbouring authorities are building a small pox hospital, and the remaining forty two acres are to be planted with young trees by the association, so that the best effect will be obtained. The association are negotiating for two other sites.

POULTRY.

Dry Food v. Moist Food for Chickens.

This is a subject which has given rise to much discussion amongst poultry-keepers on account of the advocates of dry food stating on many occasions that chickens thus raised are healthier and finer than any which are brought up on a moist diet. We do not advocate the use of sloppy foods for fowls or for chickens, but we have always found that a judicious mixture of moist and dry food produces healthier chickens and larger-sized birds than an entirely dry diet, and there are a great many of the largest poultry-keepers could bear us out in this statement.

We are personally acquainted with the system of management in vogue on nearly every large farm in England, and only a small percentage adopt the dry feed for their young birds. We have seen very healthy birds which have been entirely reared on dry food, but we have never yet seen any flock of young stock of the same size and vigour as those which have been brought up on biscuit meal, ground oats, and middlings, mixed with milk or water, and a judicious blending of groats, canary seed, small wheat, dari, etc.

We can quite understand that in some cases, where the owner of the young birds has to go to his daily occupation, it is an advantage to him to be able to leave the food for the chickens for the day, and the young birds on this system grow into healthy birds, but do not ever get the size or produce as large table fowls as those reared on the other system, which takes more time and attention, but for which there is a good return in the development of finer birds, which has always meant better table fowls in the cockerels and larger eggs from the pullets, for the small, under-sized fowl does not lay as large eggs as the well-developed birds of good size. By comparing birds of the same breed and strain reared on the two systems, we have proved this to be the case.

The dry-food system is not accepted amongst those who rear for the table any more than amongst the poultry farmers and breeders of good-class birds—the principal headway having been made by those who just rear their own fowls for laying.

A good mixture for the first two months is made of:—Groats 2 parts, wheat 2 parts, green peas 1 part, dari 1 part, buckwheat 1 part, millet 2 parts, and rice 1 part (all crushed up together), and, after that, 2 parts of wheat, 1 part of clipped oats, 1 of maize, and 1 of dari can be successfully used when the dry-food system is found to be more convenient.

Chickens which have fine biscuit meal which has been scalded given to them alternately with split groats for the first few days, and canary seed and wheat which has been crushed after that time, will not be troubled with constipation. They will thrive and grow quickly, and should symptoms of this disorder be noticed they should have a feed of boiled rice given to them, which will quickly correct that.

At the age of four weeks it is advisable to give the birds the coarse biscuit meal. The finest chickens are produced by giving a good proportion of Sussex ground oats, combined with the best biscuit meal obtainable. Scotch oatmeal is excellent for feeding chickens on, but it is much more expensive

Some writers advocate alternate meals of soft food and hard corn throughout the day, but we find it better to give soft food for the morning meal and during the day, and corn for the last two feeds at night. The corn which is used with the most satisfactory results for chicken-rearing is wheat of the best quality, combined with dari, French buckwheat, and a small proportion of hemp seed. Always bear in mind that chickens do not need a quantity of food, but they do need the little they have to be of the best possible quality.

Kent and Romney Marsh Sheep Breeders' Show and Sale.

The notable success that has attended the annual show and sale of registered Kent rams at Ashford, Kent, has completely falsified the freely-expressed opinions of those who were opposed to its establishment nine years back. Each successive year gives proof of its growing popularity and importance. And the attendance at the present sale was one of the best since its inauguration. The export demand was good, and many superior sheep were purchased from this section of the trade. Several fresh purchasers of registered rams are included amongst the list of buyers. Previously to the sale, the award of the prizes offered by the President, Mr. F. S. W. Cornwallis, Lord Harris, and Mr. L. Hardy, M.P., took place, and the judges to whom this important duty was asigned, Messrs. F. and B. Collard, W. E. Long, and J. Finn-Kelly, found the task one of great difficulty, on account of the marked quality and merit of the competitors. The yearling class was also a notable one, as this is the first occasion upon which any rams other than those bred in Kent have ever been in competition. The number of entries in this class was thirty-six, representing no less than eighteen distinct flocks. Such a class as this, so representative of the leading flocks of the breed formed, was a thoroughly interesting one to those buyers and breeders from the colonies and abroad, as it afforded them an excellent opportunity to judge the type, merit, and character of the several flocks represented, as well as to compare one with the other. The winning ram here was one from Mr. J. E. Quested's flock, Quested's No. 41 of 1904, a wide, deep, and thoroughly good ram; its flock mate, Quested's No. 25 of 1904, was made r.n. in this class, a notable success for any breeder to secure in so large a class of yearling rams. Messrs. W. Millen and A. Amos had a very close struggle for the second and third places, the awards being finally given in the order named. A ram of superior merit, and one keenly competed for in the sale-ring, from Mr. C. File's flock, was made h.c., and two others, sent by Messrs. H. Rigden and J. B. Palmer, were commended.

In the class for two-shear or older rams Mr. J. E. Quested was equally successful, for he won Lord Harris's Challenge Cup with Quested's No. 11 of 1904, and the r.n. for the same honour with Quested's No. 90 of 1904. Mr. Charles File taking the second place with that well-bred and level ram Windsor 63rd, and securing an h.c. with Elham No. 90 of 1900; the other h.c. awarded went to Mr. S. Kingsnorth for Farmer's No. 63 of 1902, a fine stud ram bred by Mr. G. Farmer.

The sale this year will be a memorable one. At no previous sale in recent years has the competition been so keen, nor has the demand from abroad or in the Colonies been so large. Fully a third of the rams sold were purchased for export, buyers being present from Argentina, Patagonia, Uruguay, Falkland Islands, and Australasia. The actual number of rams entered was 362, of which nine were absent and six unsold, making a total of 347 rams sold, that realised the excellent aggregate of £4,130 13s. 6d., and secured the record average of £11 18s., as against £10 14s. 8d. for 310 at the corresponding sale last year. The yearling rams this year, 329, averaged £12 0s. 9d.; those sold last year, 290, averaged £10 13s. 7d. Upon that occasion only one average exceeded £15; this year four did so. It will, therefore, be readily recognised how very much better the demand was this season than in 1904. The following brief references to each of the consignments gives some few of the principal prices and purchasers; the average realised and the range of prices.

Mr. J. E. Quested heads both the list of individual prices and also that for the average of yearling rams. The top price of the sale, and also the highest price made for many years, was 56 gs. for the champion ram purchased by Liebig's Extract of Meat Co., Ltd., for export to Uruguay. The r.n. ram in the yearling ram class also came from this flock, Mr. Arthur Finn paying 42 gs. for him, the same buyer taking another at 13 gs.; Messrs. Cooper and Nephews gave 21 gs., Mr. Farlow 16 gs., and the sixteen averaged £15 18s. 3d. The four old rams sold well, Lord Harris taking the ram that won his lordship's cup at 15½ gs., and Mr. Robinson, from Borstal, Rochester, that which won the r.n. in the same class for 10 gs., the four making an average of £9 11s. 7d. Mr. F. Neame's fifty were in great request, and each was keenly competed for. The top price here was 29 gs., at which price Messrs. Hobbs purchased two for export; the same firm also took several other excellent rams, paying, amongst other prices, 25, 24, 22½, 18½, 16½ gs., etc. Messrs. J. Thornton and Co. gave 26 and 12 gs., Mr. Clements 23 and 16½ gs., Mr. Green 24 gs., Mr. F. Baker 21½ and 18 gs., Major Powell Cotton 20 gs., and many others from 14 gs., the average of the whole consignment being £15 13s. 6d.

Mr. C. File had only thirteen yearling rams left, for so large has his private demand been this season; these, however, fully maintained his flock's high reputation, notwithstanding many of the best rams had been sold. The top price in this consignment was 48 gs., made by that grand ram which was h.c. in its class, Messrs. Cooper and Nephews being the purchasers. Messrs. J. Thornton and Co. took another at 21 gs., Messrs. C. Hobbs three at 20, 16½, and 9 gs., all for export, the average of the thirteen working out at £15 13s. 4d. The four old rams were also in request, making an average of £11 18s. 10d., Mr. G. Briley paying 18 gs. for the second prize ram, and Mr. Robinson 13 gs. for the h.c. and two shear rams

Mr. A. Amos, whose consignment numbered fifty, met with an excellent sale, for the prices, as a rule, were very level all through. The best price was 44 gs. to the Liebig's Extract of Meat Company, whose representative, Mr. Miller, secured a grand lot of rams. These gentlemen purchased others of this consignment at 15 gs., 14 gs., 15 gs., and 13 gs. Mr. J. E. Quested secured the third-prize yearling ram at 40 gs., a very good ram indeed; Messrs. C. Hobbs and Co. were large buyers for export, paying, amongst other prices, 25 gs., 19 gs., 15 gs., 15½ gs., 12½ gs., etc. Sir J. Croft gave 20 gs., Mr. T. Powell 31 gs., Messrs. J. Thornton and Co., Cooper Nephews, the Hon. S. P. Tufton, and other leading breeders were also purchasers.

Mr. J. B. Palmer, a fresh consignor, only sent four. These were in great request, his average being £13 15s. 7d., and best prices 17½ gs. to Mr. J. File and 16 gs. to Mr. C. E. Hawkins (Essex).

Mr. W. Millen's consignment numbered thirty, and as these were those left after a considerable number had been selected for export, the average realised, £12 14s. 9d., for the whole lot must be considered an excellent one. The second-prize yearling ram was in great request. The export buyers wanted him, but the Exors. of W. Elvey were fortunate to secure this fine ram at 32 gs.; Mr. Ascherson gave 21½ gs. for another. The Liebig Extract of Meat Company, 18½ gs. and lower prices; Mr. W. W. Chapman, 14 gs., etc.

The first consignment of rams from Lord Harris's flock at Belmont was made this year. These well-bred sheep were in good request. Mr. G. C. Swindell took two at 13 gs. and 11 gs., Mr. Burch two at 12 gs. and 10½ gs., Mr. Marchant one at 11 gs., and Messrs. Poels, who were large purchasers at the sale, took the other at 8 gs., the lot making an average of £11 9s. 5d.

Mr. G. Farmer's consignment were sold late in the sale, which accounts for the somewhat lower average, for these were fine rams. Messrs. Thornton and Co. gave 30 gs. for one, the top price, the same firm taking another one at 22 gs.; two went to Mr. N. W. Chapman at 12 gs. for export, and the remainder ranged down to 6 gs., to Messrs. Poels, the average working out at £10 19s. 5d.

Mr. J. D. Blount's consignment was the first sent to this sale from his flock; the whole were in good request, and the ten gave an excellent average of £10 19s. 5d. The best prices were 18½ gs. to C. Hobbs and Co., for export, 11½ gs. to Mr. Green, and 11 gs. to Mr. T. File.

Mr. G. Briley sold twenty; here again the demand was a good one, and the range of prices even, *i.e.*, from 15 gs. to 7½ gs. The top-priced ram went to Sir E. Dering, who also took a second ram at 14 gs., and a third at 11 gs.

Captain S. Webb sent eight yearling rams; these ranged in price from 17 gs. to 4½ gs., Mr. W. Pearce paying the top price. Two two-shear rams from this flock made 11 gs. and 6 gs. to Messrs. H. King and Cross.

Mr. H. Rigden, who, like several other leading breeders, had a good few selected for export, had but forty-seven rams to offer. These sold at prices which gave an average of £9 13s.; one of the best averages made by this flock for several years. Messrs. J. Thornton and Co. gave the top price, 22 gs., made in two instances; the next best price was 18 gs. to Mr. W. Pearce, Lord Hothfield's agent, Mr. A. Brown, five at from 12 gs. to 11 gs.

Mr. S. Kingsnorth's five averaged 8 gs., with the top price of 13 gs. for the yearling rams; and the same vendor sent five two-shear and older rams that realized an average of £7 6s. 10d. Mr. F. de B. Collard's consignment of seventeen rams were in request; these ranged in price from 15 gs. to 7½ gs.

Mr. J. File's rams, that numbered twelve, were last in the sale, but these rams, representing a flock so well known, were in good demand, the whole lot making an average of £8 3s. 7d., Mr. W. W. Chapman taking five of them at from 11 gs., and Messrs. C. Hobbs five for export at from 9 gs.

Mr. W. E. Long's rams, eight in number, averaged £6 15s. 10d., the top price being 8½ gs.

Mr. E. Hambrook's well-bred rams that only needed better doing to have made them in keen request, sold at from 8½ gs. to 4 gs., and averaged £5 13s. 4d. for ten.

Mr. C. E. Hawkins, who sent ten up from Essex, only sold four, the only vendor who did not sell all offered at the auction, for an average of £4 11s. 10d.

Frome.

The feature of the show of the Frome Agricultural Society is always the cheese classes, and that held on Wednesday proved no exception to the rule, and visitors had the pleasure of inspecting one of the finest, and perhaps, largest displays of cheese seen in England this year, for the cheese fair is held on the same day. This year the entries were larger than ever, and the marquee holding the exhibits was 240 ft. long by 42 ft. wide. The pitch at the fair was quite up to the usual quantity, but the attendance of buyers was distinctly smaller than in previous years. The greater part of the cheese on offer was Cheddar; the present high prices, however, somewhat checked sales. Eventually, a clearance was practically made of the whole pitch. Prices ran as follows: Fine Cheddars, 58s. to 64s.; medium, 50s. to 56s.; Somersets, 48s. to 56s.; truckles, 52s. to 58s.,

The connecting link between the fair and the show is brought about by the society offering £20 in prizes for the best lot of cheese pitched in the market by a farmer, dairyman, or factory, the lot to be not less than ½ cwt. for each cow in the dairy, or for every cow from which milk was taken to produce the exhibit. There were eighteen entries in all, including more than a dozen of noted cheese-makers. The first prize fell to Mr. J. A. Fricker, of Burton, Mere, Wilts, whose achievements in the main hitherto have been in the successful showing of well-bred pigs. The prizes ranged in value for this competition from £12 to £1.

In the open class for four cheeses of not less than 60 lb. each, any system or make, there were forty-seven entries, and the first prize went to Mr. H. White, of Mappowder, Blandford. The success of this maker at previous big shows this season, including the Mid-Somerset at Shepton Mallet, and the East Somerset at Wincanton, goes far to show that he has adopted a system which meets the requirements of the experts, and this was further corroborated by the fact that this exhibitor's son, Mr. E. T. White, also of Mappowder, took the first prize in the makers' competition, and with the same lot later was selected for championship honours. Besides these, other prizes fell to these first-class makers.

As regards the other sections of the show, these were satisfactory as regards quality, but the numbers were not what they might have been. The horses were not quite so numerous or so good as at many previous exhibitions, but the cart mares and foals were all right, and there were several first quality hunters. The cattle made a creditable display, although it was noticed with regret that the Jerseys, which are always such a feature here, looked a little like falling away, whilst Shorthorns, if not numerous, were first class.

Altrincham.

The Altrincham Agricultural Society is nothing if not enterprising, and their "pushfullness," to use a familiar term, has brought its own reward, for their show is now reckoned the largest one-day agricultural exhibition held in this country, whilst to the Lancashire and Cheshire farmers it is one of the events of the year. The Society offered this year prizes to the aggregate value of £1,750, and it is satisfactory to record that the entries were on a scale befitting such a liberal prize schedule, and the total showed a considerable advance on 1904, as did also the quality. The number was 5,447, as against 5,236 last year, and 4,676 in 1903. The entries in the less important classes chiefly accounted for the increase, but heavy horses were more representative than last year, the figures being 125, as against 103, but the light horse classes disclosed a decrease of even, whilst cattle fell from 133 to 122. The want of quantity in cattle was, however, made up in quality, the exhibits generally showing the benefit that has been derived from the encouragement given to breeders in the district. Earl Egerton of Tatton, Colonel Cotton-Joddrell, C.B. (Nantwich), Mr. S. S. Raingill (Ringway), and Mr. J. R. Newton (Warburton) were amongst the principal exhibitors. The special prize given by the Earl Egerton of Tatton for the best dairy cow in milk, to be competed for by tenant farmers, was awarded to S. S. Raingill, and the silver cup given by Colonel Henry

Langford Brooke to the breeder of the best heifer under three years old, went to J. Platt, of Tabley. Mr. R. Clarke, of Warburton, secured the cup given by the Society for the best bull under three years old. This animal also secured the prize of £5 given by the Society for the best bull in the show. Mr. G. Harrison, of Darlington, won first prizes in the classes for cow in milk or in calf, and for a bull under two years old.

In the horse section, Mr. J. G. Groves, M.P., offered a silver cup for the best pair of draught mares or geldings, open to the district, and this was won by two well-known prize-winners, Oldfield Duke and Oldfield Prince, owned by Mr. A. C. Sparkes, of Altrincham. This pair have never been beaten, and the same can be said of Oldfield Duke when shown alone. The latter horse won first honours and cup at the Shire Horse Show this year, two first prizes and a fifty-guinea cup at the Wirral and Birkenhead Show, also the premier prize at Park Royal, and the first and cup at Worsley. In the open class for draught horse (mare or gelding), Earl Egerton of Tatton's Rocks Madam, a very fine animal, won the first prize, Mr. Davies' (Warburton) Midlands Captain, which won a first prize in the class for a draught gelding, taking second place. Mr. J. Gould, of Lynn, was a big exhibitor in the heavy horse classes, and some of his well-known exhibits appear in the prize list as usual.

There were some splendid classes of light horses. Most of the exhibitors came from the Cheshire side, although Lancashire was fairly well represented. The Hunters' Improvement Society's medal for the best hunter filly not exceeding three years old was awarded to a horse owned by J. Prescott, of Kinderton, whilst the Hackney Horse Society's silver medal for the best hackney or pony mare registered or eligible for registration in the Hackney Stud Book, went to Heathfield Pansy, owned by Mr. A. L. Goodson, of Knutsford. Colonel Sir Lees Knowles, Bart, M.P., won his own prize —a silver cup—for the best gelding or filly not exceeding three years old. Some of his exhibits in other classes were also successful.

SHOWS IN BRIEF.

Ashbourne Shire Horse.

The entries at the show of the Ashbourne Shire Horse Society held on Thursday were not so numerous as last year, but the quality fully made amends for the deficiency, the open classes, in particular, being especially praiseworthy, including, as they did, animals from several well-known studs. The catalogue opened with an open class for mares foaled in or previous to 1901, with foal at foot, and here premier honours went to Mr. Hamar Towgood's well-known nine-year-old bay, Rolleston Fuchsia, which also was awarded the Edward Coke memorial prize, having been bred in the district. The three-year-old fillies were a good class, and was headed by Sir P. A. Muntz's Bonny Blue, a good symmetrical animal which had been placed first at Stafford, first at Burton-on-Trent, and second at the Shropshire and West Midland shows this year. The two-year-old fillies secured a big entry, of which Mr. T. Simpson Jay's Wimbledon Fuchsia was adjudged the best; whilst in the class for yearling fillies the Earl Egerton of Tatton's Tatton May Queen met the judge's eye for first honours, and thus she kept her record of not having been beaten in the show-yard. The Earl Egerton of Tatton also secured first for entire colts with Tatton Dray King. The colt foals constituted a big entry, and were generally considered a capital lot of youngsters. The first prize was given to an animal exhibited by Mr. H. R. Craig, of Billesden, Leicester. Besides being first in its class it also secured the valuable prize of the Ashby Foal Challenge Cup, valued at 30 gs., for the best foal on the ground. Mr. Farnsworth's Ratcliffe Conquering King was placed second, and also reserve for the foal challenge cup. The Earl Egerton of Tatton again proved successful in the class for filly foals. The much-coveted trophy, the Wainwright Challenge Cup, value 50 gs., was won by Mr. Hamar Towgood's Rolleston Fuchsia, after much consideration on the part of the judges Sir P. A. Muntz's Bonny Blue being given the reserve.

Gransden and District.

The Gransden and District Agricultural Society held their annual show at Great Gransden on Tuesday, and it was probably the best they have ever held, for the entries were good, both in quantity and quality, the weather was favourable, and the attendance of visitors most satisfactory; in fact, it was an all-round success. The show is a most comprehensive one, classes being provided for horses, cattle, sheep, allotment and garden produce, roots, corn, butter, cream, cheese, eggs, potatoes, driving, and labourers in husbandry. In each section prizes worth winning were offered, and some good competition was witnessed. Perhaps the feature of the show was the display of horses, particularly Shires and hunters, these including many noteworthy animals. The other sections, however, were all attractive, and, altogether, the show was a most interesting one.

Leighton Buzzard Foal.

The third annual show of the Leighton and Linslade Foal Show Society, held on Tuesday in Mrs. Swire's paddock, at the rear of Leighton House, was, as a whole, of a high order of merit, and the interest it aroused shows that each year the fixture makes substantial progress. There were 69 exhibitors this year, as against 63 in 1904, and the classes numbered 18 as against 16, whilst the animals shown were generally of excellent quality. In the competition for the championship cup for the best Shire foal in the show, the prize went to Mr. F. A. Johnson, of Soham, for a remarkably handsome filly foal. Mr. R. Keevil, of Billington, took first prize for a fine colt foal shown in the class for exhibits from a ten-mile radius; and the three silver medals offered by the Imperial Hunter Society, for best hunter colt foal, best hunter filly foal, and best hunter brood mare, were secured respectively by the Earl of Orkney with a chestnut foal of good symmetry and great promise, by Mr. Sayell, of Ledburn, and Mr. J. W. King, of Whitesfields, Aylesbury, with his well-known mare Postmistress.

AN ALFA-LAVAL CREAM SEPARATOR

means far more Butter and better quality than is obtainable by any other process.

If you haven't seen an ALFA-LAVAL Catalogue, get one—It costs you nothing and may save you a good deal.

These Three Tests:

APPEARANCE
ANALYSIS
PRICE

Are they Conclusive Guides for Valuing and Buying Compound Cakes and Meals.

?CAKES

WE ANSWER—MOST DECIDEDLY, NO!

For here the old proverb—that "Appearances are deceptive," is often true.

Analysis by itself cannot be relied upon, for damaged and inferior material analyses the same as sound fresh stuff, although the feeding value is very much poorer. Also it is often difficult to detect damaged ingredients when spiced and mixed with other stuff.

SILCOCK'S

Is the lowest priced article the cheapest? We are continually in competition with compound foods having as high, or nearly as high, an analysis as our brands, sold in some cases at 10/- or 15/- per ton less, and claimed to be "just as good as Silcock's." **This is not possible,** considering our exceptional facilities for manufacturing cheaply on a large scale, our extensive experience, and the many valuable patents we own for labour-saving machinery.

There will invariably be found a greater deficiency in feeding value than the difference in price implies.

We have no difficulty in retaining customers who have used our Cakes and Meals regularly, as the more our brands are known the better they are liked, but we have the difficulty of price to contend with in those feeders who do not know our goods. We specially invite such to make a comparative feeding test, feeling sure that it will bring us new customers and also benefit the buyer.

NOTE THIS.

Our first principle has always been to supply the best possible quality, and sell large quantities at a small margin of profit. In feeding stuffs the lowest priced article is certainly not the cheapest. SILCOCK'S brands are the highest standard of Compound Foods. Linseed Cake and Maize are at present priced above their feeding value, and by using Silcock's Cakes and Meals you will obtain really first-class articles and save money.

HORNE'S FRUIT TREE DRESSING

HAS STOOD THE TEST OF 17 YEARS.

WINTER MOTH.

A Male.

B Female.

Thousands of pounds' worth of Fruit have been saved by its use that otherwise would have been lost if left to the ravages of the Caterpillar Pest. Invaluable. It is obvious by catching the female moth in its ascent to deposit the eggs you are striking at the root of the evil. It will capture the Winter Moth, Mottled Umber Moth, March Moth, Apple Blossom Weevil, & Codlin Moth.

Illustrated Catalogue of up-to-date Fruit Trees and Potatoes, and Pamphlet giving full particulars, post free.

W. HORNE & SONS,
CLIFFE, near ROCHESTER, KENT.

THE

"BIBBY" CAKE *v.* LINSEED CAKE.

In out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the **"BIBBY" CAKE** to a competitive test.

Consider the saving! At the relative prices the cost of **"BIBBY"** is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on **"BIBBY" CAKE**, which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous **DAIRY CAKE** in Cakettes, Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in our well-known **DAIRY CAKE, CAKETTES**, and **MEAL.**

BIBBY'S QUARTERLY.

The new number of **BIBBY'S QUARTERLY**, edited by our Mr. JOSEPH BIBBY, is now out, and can be had during this month at all Smith's Bookstalls, price 1s.

There be those who say that BIBBY'S QUARTERLY is the best periodical which comes into the farmhouse, but there be also gainsayers who affirm that if it dealt more with live stock, and less with high ethics, it would be more acceptable to the average farmer; and we are rather of that opinion ourselves, but the Editor tells us that he edits BIBBY'S QUARTERLY to please himself, and we have to leave it at that; should, however, any reader of BIBBY'S QUARTERLY make a purchase at Smith's Bookstall, and is afterwards doubtful that he has not got his shilling's worth we undertake to make matters straight with him if he apprise us of his dissatisfaction within the present month.

R.A.S.E. FINANCE.

It is a source of great disappointment to members and well-wishers of the Royal Agricultural Society that the report of the Special Committee appointed last July did not shed some light upon the exact financial position of our national society. The report submitted to the Council on Wednesday last, as far as it goes, is satisfactory; but surely it did not take the united wisdom of a specially-appointed body to draw up and suggest such rough-and-ready reforms as those outlined.

According to the terms appointing the Special Committee, they were empowered "to call for any information from officials, and to employ professional assistance, if they consider it necessary, from accountants, solicitors, and valuers, to thoroughly investigate the entire position of the society, and to make a report to the Council after the recess as to what reforms and economies they consider desirable to put the society on a sound desirable to put the society on a sound footing." Surely the terms of this referendum were wide enough to include within their scope every imaginable point that would occur to the average man. How comes it that the report of last Wednesday is minus a balance-sheet? Any firm of auditors would be quite prepared to draw up a plain and unvarnished statement as to what the Society's liabilities are, be they mortgages, balances due to bankers, or any other imaginable claim.

How much is Harewood House worth? Why were not a firm of valuers charged to go over the whole of the premises and give an estimate of its worth, together with its contents? Then, again, what is the position of Park Royal, Limited? The Royal Agricultural Society are the virtual owners of the company, and the position should have been inquired into. Why did not the Special Committee's report tell the members the exact amount for which the land had been mortgaged; to what persons and at what rate of interest?

Again, the members should have been told by the Committee the exact conditions upon which the land was held. It is generally understood that the land is the absolute property of Park Royal, Limited, and that the company can do exactly what they think desirable with the sole exception that the vendor is to have the first option of the land at an agreed on figure per acre if it comes into the market within a certain period. Is this so, or are there any other contingencies to be reckoned with? If there are, the sooner they are disclosed the better, and the whole thing put on a proper basis.

As we have already said, the report of the Special Committee is in itself satisfactory. Most of the recommendations are of a shadowy nature, and they have been wisely relegated to the Standing Committee to carry out and modify if necessary. We have often urged in these columns, and are quite in sympathy with, the curtailment of administrative expenses; but how comes it that no allusion is made to the Show at all? Do the Committee, or the Council for that matter, think that the whole Show system is going on in the old sweet way, and that the present state of muddle can be solved by partial remedies?

In conclusion, we would earnestly impress upon the Council the absolute necessity of taking the members into their confidence, and telling them in £ s. d. where the Royal Agricultural Society stands. It is useless to go upon such partial balance-sheets as have been submitted to members in the past. Professional assistance should be sought, and the whole position disclosed and made clear.

PARK ROYAL, BLACKPOOL, or DERBY?

The invitation conveyed to the Royal Show, at the last Council meeting, from Blackpool and Derby brings forward very prominently the question of the holding of the Show next year. We presume that it will be admitted by all men, or a least the majority, that the Show must not be dropped by the Society,

but as to whether it is to be continued at Park Royal or should once again revert to the migratory system results in a sharp difference of opinion.

We must admit that we are inclined to believe that a show at Park Royal could eventually be made a success. The lines, however, on which it is to be run must be modified; in fact, the whole administration of the Show requires to reiterate an old watchword, "Retrenchment and reform." To drive home this point, it is only necessary to mention the fact that the present financial position is not due to Park Royal alone. The shows for years past have not been self-supporting. Park Royal has only accentuated the rottenness of the system, it has not been the cause of the moribund state of the Society.

We are open to conviction as to what should become of next year's show. We can understand that it might be necessary to hold the show at Derby or Blackpool while Park Royal was being remodelled and rearranged, and the whole state of affairs put upon a sounder basis, but this is the point upon which the members should be consulted, and even if it is decided to visit either the Midlands or Lancashire, that as little money as possible should be spent in fixing up the showyard. The Society has no funds at present to spend in a lavish manner, and the fittings for a four days show might partake of a more temporary character than has been the case in the past.

Seasonable Topics.

Record-making Rams.

The sheep world has been more than a little excited of late over the high prices obtained for pedigree rams, some of which are of a record character. Ashford, in Kent, has a wide reputation as a place where good sheep are bought and sold, and matters have been particularly flourishing down there this season, prices generally being good and animals plentiful. At a show and sale, held on September 29, a champion teg from Mr. J. E. Quested's flock was knocked down, after some brisk bidding, to Mr. Miller for South America at 56 guineas. Thus the auctioneers, Messrs. G. W. Finn and Sons, had the honour of establishing a record for Ashford, the previous highest price being 54 guineas, which was realised by Messrs. W. and B. Hobbs four or five years ago for a teg belonging to Mr. A. Amos. There can be no doubt about one thing: money does not stand in the way of the foreign buyer when he sees a ram that takes his fancy, and the growth of foreign trade holds out hopeful possibilities for British breeders.

Moles and Potatoes.

When witnessing some potato-digging operations in a field the other day our attention was drawn to a number of tubers which were badly eaten, and bore traces of the teeth of some animal. At first the diggers were at a loss to know what had caused the trouble, and rats were blamed, but eventually the burrows were found, and there remained no doubt about the fact that moles were the authors of the mischief. Beyond burrowing about, heaving up the soil, marring the appearance of fields, and making himself a nuisance in this way, the mole is not usually credited with doing much damage by devouring crops. In fact, we have had no experience before of moles eating potatoes, and it would be interesting to know whether any of our readers have suffered through their depredations. Of course we know the remedy—which is, catch the moles—but, considering what is paid on many estates to professional hands for this work, the farmer might reasonably expect his potatoes to be safe from them. Considering the disease there is this year we can do without losses in other ways.

Farm Competitions.

It is the custom of certain farmers' clubs and agricultural associations to offer prizes for the best cleaned and kept farms within their districts, and we cannot help thinking that these competitions must be productive of good. There are, of course, many farmers who would look upon such competitions as being something much too far ahead of the times, but the spirit of competition, properly displayed, is always good. When a man enters his farm for a prize you may depend that he is not ashamed of it, because when things are not quite up to the mark there is a natural desire to keep them from general inspection. We take it then that when a man enters his farm in a public competition he is proud of it. Just so, and if he wins a prize he is prouder still; but if he does not, he is the gainer, because the very fact of him competing prompts him to put forth stronger efforts than he perhaps would otherwise, and the farm is all the better for it. It is not always an easy thing to judge between one farm and another as to which is the best kept, because conditions vary so much, and the adjudicators often have a difficult task before them. They generally prove equal to it, however, and the eye of an expert can quickly tell whether a holding is in the hands of a lover of neatness and cleanliness who puts his precepts into practice. We like the idea of farm competitions and should be pleased to see it extended, because, apart from the honour of winning a prize, the mere fact that a man is competing is a means of stimulating his efforts, by the results of which he himself is the gainer.

The Dairy Show.

It seems peculiar that the Royal Show in London should attract so few people, and yet on the occasions of the Dairy and Fat Stock Shows all roads seem to lead to Islington, and interested persons from town and country flock to the Agricultural Hall as if the whole thing were something fresh and novel. While these notes are being written London is being invaded by agriculturists; and cheesemen, buttermen, milkmen, and poultrymen, to say nothing of the cattlemen, are jostling each other in order to see all that there is to be seen at the great show. We say men, but the expression needs qualifying, for the Dairy Show attracts ladies, as perhaps no other agricultural gathering of the kind can possibly do. This is not surprising because the produce department at Islington is a feature, and though we are told that cheese and butter-making are becoming lost arts amongst farmers' wives and daughters, the large entries at the Dairy Show and the interest taken in them prove that things are not so bad as all that. It is pleasant, indeed, in these days of show deficiencies, when many societies experience difficulty in carrying on, to think that the British Dairy Farmers' Association has a substantial banking account, and can run an annual show which increases in size and popularity. Visitors to the Dairy Show not only see accomplished work, but the way it is done, and not the least interesting part of the exhibition were the practical demonstrations in poultry trussing, butter-making, milking, etc., which took place. In another part of the paper a detailed report of the famous show is to be found.

Women as Milkers.

In the old days it was a common sight to see the daughters of even well-to-do farmers tripping across the yard to take their part in the morning and evening milking, and to be expert in this particular task was looked upon as an accomplishment. This was in the days of our grandmothers, but a change took place at a later period, and for some particular reason, which is not easily explained, farmers' daughters began to look upon milking as being *infra dig.* Perhaps education has had something to do with this, for one can hardly expect a young lady fresh from a boarding school training taking kindly to milking, even though her mother would not be averse to taking her place under a cow. Strangely enough, it is not only farmers' daughters who have got out of milking, but maidservants as well, and many of them would turn up their noses at a place where they would be expected to take part in this task. How things have changed, to be sure, when we make a comparison between now and the time when the first question asked by a farmer's wife when engaging a maidservant was, "Can you milk"? Now it is rather a question of not only can you, but will you milk? Be it far from us to advocate that women should be farm drudges, and we have seen females performing tasks for which men are more suited; but milking is not drudgery, and the supple fingers of females are well adapted for extracting the milk from the teats of the cows. Those who saw the different milking competitions at the Dairy Show last week will agree with us in this, and it was gratifying to know that the entry in the classes for milkers was the largest since they were instituted. It is true the milkmaid is a familiar figure to us all, but it is as a creature of fancy rather than reality. Artists have pictured her on canvas, sculptors have carved her in marble, song writers have described her in verse, and novelists in prose; no wonder she is familiar. But in real life the milkmaid is by no means so common, and in many cases when necessity compels her to perform the task she secretly hopes that none of her best friends will come along till it is over.

Expert Farm Labour.

We cannot help thinking that Lord Northbourne hit the right nail on the head at the meeting prior to the opening of the Dairy Show when he referred to the mistaken notion that all that need be done to reduce the number of unemployed is to turn them on the land. Both the plough and the pail, added Lord Northbourne, require skilled hands to make them pay. Just so. We have pointed out over and over again that if one goes in for agriculture, either as a farmer or merely as a labourer, knowledge is essential, and without it there can be no success. We have known cases in which men have started farming with plenty of money, abundance of energy, and a fair amount of ability, but without the practical knowledge. In some cases they have succeeded, mainly through getting good servants, but in others they have failed absolutely, and who can wonder at it? As with masters, so with men. Rural districts are being depopulated, labour is wanted on the land, but it must be skilled labour, not anything in the form of human shape. There are thousands of men walking the streets to-day who one would gladly see on the land if they were any use there, but for his cows a farmer wants an experienced stock man, for his sheep a qualified shepherd, for his horses a trained waggoner, for his fields an expert ploughman, and so on, and no man can perform the various tasks on the farm properly unless he has learnt how to do so in the school of practice. It is absurd to talk about putting men on the land who have no experience of agricultural crafts, and the pity of it is that amongst the thousands who have emigrated of late years there are many whom we can least afford to lose. There is room for them in Canada, but it is a loss to British agriculture when the best men go.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Sept. 30, 1905, together with the quantities imported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905.
	No.	No.		Cwt.	Cwt.

Lard	24 094	35,031			

The annual Statute Fair at Burton-on-Trent took place on Wednesday, and, although it was largely attended by country people, there was a considerable falling off in the number of shows, whose owners complained of trade depression throughout the country. Little hiring was done of female servants, but a fair amount of business was transacted with the males, whose ranks were augmented by a number of the unemployed, both men and boys, anxious to find occupation if only by getting "back to the land." This had the effect of lowering wages and adult labour went at from £14 to £22.

Agricultural Politics.

BY A LOBBYIST.

Mr. Jesse Collings is indubitably right in his new crusade — in the fine joust he is having with the well-meaning personages labouring under the colonisation-mania. The fevered character of the imaginations of the excellent philanthropists can be assumed from the defence of Mr. Bramwell-Booth of the Salvation Army purpose. To him, it would require no less than £500 to settle a single family in England, a fact absolutely discounted by every experience of small holdings' settlements. How successful those small holdings may be Mr. Rider Haggard has given us unlimited evidence. The records of Wiltshire and Worcestershire overwhelmingly illustrate the practicability of a national scheme. Of course, the spectacle of sturdy manhood unable to find in this land of ours, with its vast uncultivated acreage, opportunity for working out its destiny and realising its possibility, is a piteous one; but if one half (I thank Mr. Collings for this idea) of the enthusiastic generosity associated with this colonisation-business were devoted to the establishment of the people on British soil the vision would be deprived of a good deal of its pathos and drama. In a sense, of course, this benevolent friendship for the workless poor—the poor who deserve a stable habitation and a gratifying prospect—is an admirable sentiment. It must compel esteem. But the danger of divorcing brawn and a sturdy spirit from the pathetic army of the unemployed, leaving it an unalloyed body of wastreldom and wanton laziness, and, at the same time, exporting a human material that the labour-parched countryside needs, constitutes a grave menace to the home-land. Why not, Messrs. Booth and Wilson Carlile, land-settlements at home? Why not seek to utilise this brawn and sturdy spirit in the native atmosphere? The utilisation of this wasted but desirable material in this way might have another influence. It might even shake the loafers out of their inertia.

• • •

"The King is our only friend!" This sentiment is attributed to a well-known farmer wearied to death of the neglect of agriculture by statesmen and our Parliamentary institutions. That his Majesty is a friend to agriculture, and that to him the farmer is something more than a mere entity is certain. His Majesty, however, cannot take the place of Parliament, and it is assuredly well not to assume that he can. Not even he could, by a wave of his wand, summon into existence economic conditions under which the farmer would be able to evolve an immediate prosperity. What is certain, however, is that the King is revealing a keen and practical sympathy with certain phases of the rural movement. For instance, he has been deeply impressed with the success of the scheme of small holdings, which owes its inception to the practical and sagacious mind of his friend, Earl Carrington, and he believes, according to my information, that the wide extension of the principle of that scheme would be an act of wisdom. It would be interesting to know whether his Majesty would have this extension the result of a deliberate act of State intervention. Beyond this, too, the King has exhibited a keen interest in what I have already described as Garden City philanthropy. This fact I commend to Mr. Jesse Collings; it permits at least of the deduction that the throne would appreciate a judicious scheme of home settlements. I was assured a few days since that in his sympathetic anxiety his Majesty had despatched a special emissary in the person of a member of his family to Letchworth to report upon that colony. As a fact, the emissary was not a member of his family, but a trained observer in whose judgment the King has confidence. The incident provides a pleasant evidence of the royal purpose and anxiety. It is an admirable portent—it should be an excellent encouragement to Mr. Jesse Collings in the new purpose I would have him pursue; and, after all, if it does not compensate for Legislative sterility and indifference, it may tend to quicken statecraft and awake it to an intelligent sympathy.

• • •

We may have every reason for gratification at the pertinacity of Professor Long in denouncing the sterility of Parliament and the indifference of Mr. Balfour to agricultural needs; but we have also reason to ask if we have any assurance that the Liberals would reveal any more intelligent spirit? Sir Edward Strachey was quite right in emphasising, at the meeting of the British Dairy Farmers' Association, the fact that for the fourth session the Government had failed to pass the Butter Bill, and thus to prevent the fraudulent sale of waterlogged butter, but has Sir Edward received any assurance from his Liberal associates of their resolution to pass such a Bill? Is there, in fact, any certainty, with the clangorous clamour now raging in the Liberal ranks for a place of preference in the party programme, and with the majority of the farmers still in favour of pursuing the dulcet, modest, hesitating tone in all approaches to Parliament, that even in its fourth session the Liberal Government would accomplish more? Which suggestion, despite all the protests of politicians of the type of Mr. A. H. Lee, M.P., leads to the definite conclusion that if more is to be got out of Parliament there must be a defined Agricultural Group with a defined programme and a delegated duty. The one result of Mr. Lee's much-lauded "independence"—an independence which means dependence on partisan convenience and the instructions of the Chief Tory or Chief Liberal Whip—has meant the continued fraudulent sale of waterlogged butter. It has, of course, meant more than this; but this alone provides a sufficiently piquant illustration of the result of a too-ready complaisance to the official party design.

• • •

Can Mr. Lee or his friends point to any compensation for this butter-folly and evil? Of course, he cannot, unless he would utilise the Rating Bill for this purpose—a measure, by the way, whose effects the professional defenders of the railway companies now tell us must be redressed by the continuance of the present railway rates. No; there is only one possible escape from the prolongation of the Parliamentary indifference and sloth. Establish an insistent Agricultural Group, and you would have the esteem of the Olympian gods of the Front Benches.

• • •

Of course, I freely confess that the courtesy of Mr. Clement Dalley demands a reply from me. If this did not alone suffice, the fact that he had written a letter to Mr. Chamberlain, to which apparently he received no reply, would provide a sufficient necessity. Now, does Mr. Dalley really think that Canada would accept his scheme of preferential trading? If I understand him aright, the tax of 2s. per quarter which he would impose on the foreign competitor in our markets would be reduced to 1s. in the case of the Canadian. It is evident that Mr. Dalley comprehends nothing of the Canadian temper. If Mr. Chamberlain were to propound this scheme to Sir Wilfrid Laurier—who has, even this week, again shown that Canada's commercial patriotism means every possible market for the Canadians—he would evoke a perfect tornado of indignation and reprehension. Do not forget that with the new economy is associated a possibility of reciprocity. If another nation should be disposed to reduce her tariff against Great Britain, we should be willing to respond to the policy. What, then, if, under these conditions, Canada enjoyed no more favoured position than, say, Russia, or even the United States? I do not, of course, contend that this would inevitably be the case; we have, however, to look at the possibility. There would be such an embittered resentment of this sequel that filial affection would have a great strain placed upon it. Even if a shilling a quarter were placed on Canadian wheat and a corresponding tax on Canadian vegetables and fruit (a tax which also in the latter case might mean a profit as compared with the tax imposed on foreign produce), [illegible] Mr. Dalley [illegible] second [illegible] Canadian competition [illegible] cent. [illegible] [illegible] [illegible] cheap [illegible]?

• • •

Is there not something in [illegible] suggestion made at the Church Congress that if the labourers were given [illegible] homes they would never [illegible]? The policy may not have prevented the depletion of the villages of Northumberland and Lincolnshire, but I am persuaded that [illegible] the tide of migration to the towns would have had a greater volume but for its influence.

DAIRY.

Suggested Standard for Cheese.

The Chester Corporation have decided to support a petition to the Board of Agriculture for an order fixing a standard for cheese. The question arose on the receipt from the Town Council of Bournemouth of a copy of a report by their public analyst (Mr. Cripps) drawing attention to the widely-varying composition of cheese sold in that borough. The report shows that Mr. Cripps analysed five samples of cheese, four being Dutch varieties, and found them almost devoid of milk fat, and at the same time there was no corresponding increase in the proportion of proteids. Hence the nutriment value was very much reduced. The samples had been prepared from separated milk and contained an excess of about 10 per cent of water.

Mr Cripps points out that there is no legal definition of cheese, and he says it is a common practice to sell as cheese an article prepared from skimmed or separated milk. Therefore there is great doubt as to the result of any prosecution of these vendors. He suggests the desirability of asking the Board of Agriculture to issue an authoritative definition of cheese, making compulsory the adoption of some special name to designate separated milk cheese and skimmed milk cheese. His suggestion is that the minimum standard of milk fat in cheese should be 22 per cent., that all containing below 5 per cent. of milk fat should be separated milk cheese, and that cheese containing from 5 per cent. to 20 per cent should be termed skimmed milk cheese.

Agricultural Correspondents.

The appointment of country correspondents to the Board of Agriculture does not appear to have been a great success. The Board are good enough to say in their annual report that the innovation has been of considerable value, inasmuch as it had enabled them to acquire information on many matters of importance to agriculturists and in some instances to take action for the redress of their grievances.

It is added, however: "Perhaps the machinery thus created for the benefit of the agricultural class has not so far been fully taken advantage of by those for whom it was chiefly intended, but it is expected that as time goes on this important body of correspondents will become more and more a vital force in the agricultural progress of the country."

The King is patron of the Royal South Bucks Agricultural Association, whose annual ploughing match and exhibition took place at Chippenham, near Slough, on Wednesday. His Majesty gave five guineas for the best ploughman on the field, and a silver cup, value 20 guineas, for the best farmer cultivating the best growth of root crops generally. The cup was won by Mr. J. Twinch (Chippenham), who also secured a prize offered by the president (Earl Howe) for cabbages for agricultural feeding purposes. The Master of the Bucks and Berks Staghounds (Sir Robert [illegible]) presented £10 10s. as the second prize to the King's cup, and Mr. T. W. Purser (Colnbrook) was the winner. The Marquess of Downshire gave £5 for the finest clover hay, and this was awarded Messrs. Headington Brothers ([illegible]ham), who also secured £5 given by [illegible] ing, of Richings Park, Slough, for the best [illegible] acres of swedes in one piece.

Mr. John Sanders, [illegible] horse breeder, of Fleet Marston, near Aylesbury, was thrown from his horse and killed on Tuesday. Mr. Sanders had visited Aylesbury, and started for home on horseback. A short time afterwards he was found lying by the side of the road, about a mile from his home, in an unconscious condition. A doctor was sent for, but Mr Sanders died before medical assistance arrived.

Developing Forest Lands.

Reform Club, S.W., October 4.

SIR,—Returned from the country to-day, I have just received from Mr. Jesse Collings, M.P., the enclosed interesting letter, bearing upon the communication you did me the honour to publish in your last week's issue. It would be presumptuous in me to dilate upon what "you yourselves do better know"—the high services the right hon. member has rendered *à plusieurs reprises* to a quickening and awakening of an interest in agricultural reform in this country, and notably with a view to give a helping hand in that direction towards the promotion of any practical movement having for its object the training in agriculture and welfare in connection therewith of the sons of the humbler class of the population, as well as those of the higher grades. "Learning by doing"—if I remember aright—was the maxim he once inculcated; and it really covers all the ground.—Yours obediently,

CHARLES HANCOCK, B.L.

Reform Club, S.W., September 4.

The letter from Mr. Jesse Collings, M.P., says: "I enclose you copy of my letter to the *Times*, which has been referred to in the Press generally and parts of it quoted, thus showing the interest taken in the subject. To my mind—as I stated—the scheme is an 'appalling one.' The public seems, however, to take it quietly. They seem always ready to follow suggestions which are supported by sensation and parade; though they are lukewarm with regard to proposals, based on really economic and reasonable lines. There was a reply to my letter written by Mr. Bramwell Booth, which appeared in the *Times* of the 30th ult. It, however, goes round the question, but does not reply to my objections. I have just sent a rejoinder, which may possibly appear in the *Times*. It deals with Mr. Booth's statements. I have read with pleasure your article in the MARK LANE EXPRESS AND AGRICULTURAL JOURNAL, which deals with an important part of the great agricultural question and opens up in a legitimate way means of employment for suitable men. I agree with what you say about the agricultural schools in France (Fermes-Ecoles—now transferred into "Ecoles Pratiques d'Agriculture"), which I know well, as well as those in Germany (Ackerbauschulen) which are equally advanced. We in England have no conception of what is being done in this direction on the Continent. All our institutions of this kind—agricultural shows, etc., are 'top-heavy'! The only way is to keep pegging away! I am inclined to think that there is some little being done after all, as regards the awakening process! Unless we do give attention to agriculture and country affairs, and that pretty soon, I fear there is an evil day in store for England, in which wealth—which seems the god of the nation—will not avail us."

Hunting a New Industry.

SIR,—When asked to be a delegate to the Chamber of Commerce meeting at Liege, I accepted with pleasure as being likely to afford an opportunity of visiting a beet sugar refinery, of which there is not one to be found in the United Kingdom. The urgent need of a new industry in Kidderminster, and a desire to see if it could be adapted to any available building in our town, induced me to persevere under difficult circumstances in obtaining permission to visit the largest beet sugar refinery in the world.

The directors kindly allowed every facility for going over the works.

The works are situated admirably for their purpose. A broad navigable river giving cheap water carriage, and the railway alongside.

On the opposite side of the river, within a quarter of a mile of the factory, and connected therewith by an overhead wire tramway, high cliffs of limestone of unusual purity, the value of which will be understood when for every 100 tons of beetroots 4 tons of lime is required in the process of refining. Unfortunately, I was unable to see the plant at work, as the beetroots were not ripe, but engineers were busy getting all in order for commencing in a fortnight.

The machinery is of great size, consisting of washing, slicing, saturation plant, electric pumps, evaporating apparatus, vacuum pans, centrifugal and other apparatus in great number and variety the power provided from thirteen large boilers. The plant when at work turned out 400 tons of sugar per day. The slack consumed being equal to from 10 to 12 tons for every 100 tons of beetroots, and the limestone burned on the premises consuming 5 tons of coke for every 100 tons of beetroots.

The building is practically a shell of four walls with a very high roof, the ground being principally occupied by rows of electric pumps, the vacuum pans on concrete galleries, running round the walls.

It will be clear to everyone that a factory requiring 5 per cent. coke, 4 per cent. lime, 12 per cent. slack, 21 per cent. of the weight of the raw beetroots to be treated, if it is to have any chance of success, must be connected with a railway siding, and, if possible, with a canal, to insure cheap transit of these heavy but necessary materials, so that I am reluctantly compelled to admit there is no premises suitable for the purpose—but building sites are available in our town.

A large number of our great manufacturing businesses have developed from very small beginnings, but to have any chance of success, sugar refining requires to commence on sufficiently large a scale to allow the use of the most up-to-date machinery and methods.

To establish a new industry of this magnitude requires, in addition to capital, great industry, good organisation, tact, judgment, and perseverance.

Consider that anyone who introduces a new industry into any town or country, giving employment at fair wages, is a greater benefactor to the inhabitants of that town and country than one who builds a block of almshouses, a hospital, or distributes large sums in charities. The most important thing for most persons is regular employment at a living wage.

At present there is £18,000,000 worth of sugar imported, three-quarters of which might easily be grown in this country. Here is a chance for some young men to embark in an industry, all the raw materials for which can be produced at home, and customers are in every home in the kingdom, there being no necessity to send abroad for the raw materials or to find purchasers of the finished article.

Hundreds of experiments carried out during the last eight years have proved conclusively that beet can be produced in the United Kingdom of greater weight per acre and equal in sugar-producing capacity to any grown on the continent. The average weight of roots 16½ tons per acre, with 16¾ per cent. of sugar, with a contract price of 18s. to 20s. per ton of roots delivered to the factory. There are thousands of farmers ready to devote some acreage to their cultivation, finding labour and wages for the workers, improving the condition of the land, and a welcome addition to the meagre profits wrung from their present crops, and the circulation of the money stimulating and encouraging our home trade in every direction. The manufacture of beet sugar in the United Kingdom is certain to commence in the near future, and if Kidderminster is really in earnest in desiring a new industry, it will be necessary to wake up and do something to further that end.

October 4, 1905. CLEMENT DALLEY.

Prospects in Oxfordshire.

SIR,—Harvest may be said now to be practically finished, the late corn being gathered under more favourable climatic influences than the early grain. Threshing operations are now in real earnest. Winter oats appear satisfactory samples. Winter vetches in good condition, but poor yield, suffering from blight. Some samples of barley appear, but too early to form an adequate opinion of what the bulk in general might be when it appears on the markets.

Sheep selling well, especially at the Michaelmas farm sales. Stock doing fairly well on the pastures, which are now full of good herbage, and will be wanted to carry well on to the end of year, as the outlook on the whole is bad for roots of all descriptions, plenty of farmers having planted turnips two or three times, and now have nothing to show for labour and expense of same.

October 4, 1905. T. B.

Yields and Prices in West Somerset

SIR,—From time to time during the year I have seen reports of agriculture, but at no time have we been able to report more fully than now. We have had hay and corn harvest, and roots show themselves, as also grass. Sufficient to say, about 80 per cent. all round, and now the threshing machine is hard at work, and, as far as I can gather, this expectation is realised with corn; but the difficulty to find is the prices of products to meet expenses and give a fair balance.

October 4, 1905. A. B.

Crops in Devon.

SIR,—Corn a good yield, but some considerably damaged by the recent rains. Plenty of straw. Roots a very good crop, except potatoes, which are diseased, in some districts very bad, and are being offered at from 3d. to 5d. a score. Apples a fair average crop, and making good prices.

October 4, 1905. S. H.

Late Harvest in Hants.

SIR,—Owing to the exceptionally heavy rainfall (5.75 inches) during August, the harvest in the extreme north of the county was very late in being finished, and in many cases the crops were very much damaged. Wheat is coming out of soil in only fair condition, but good in yield. Barley not good in either quality or quantity, and oats in several places are very poor.

Potatoes are yielding well, but more or less diseased, especially the earlier varieties. Mangolds are heavy, but short acreage; and early turnips and late swedes are good. Hay ricks are numerous, and consequently this crop will this year hardly pay for growing and making.

Store cattle are cheaper, but really good dairy cows are scarce and dear. Sheep, both store and fat, still maintain a good price; and both bacon and pork are scarce. T. H.

October 5, 1905.

Crops in Durham.

SIR,—September rains delayed the harvest, but greatly improved roots and pastures. Wheat, as in other districts, is the crop of the season, a full average, and good quality. Barley is considered fair, but oats are disappointing, short in the straw, and much below an average.

Turnips, though they have improved to some extent, and here and there a field of nice turnips may be seen, are estimated at about only half a crop; and the same may be said of hay, more particularly old land, which is seriously deficient. Potatoes are well spoken of, and as yet but little disease is reported.

Farm work is well advanced, and wheat sowing has commenced under favourable conditions.

October 6, 1905. F. R.

Munster.

SIR,—The weather during the harvest was very wet, the consequence is a lot of spoiled corn, especially oats. However, for the past fortnight we have dry weather with an easterly breeze, which has helped to set matters right. A good deal of threshing has taken place. Wheat has given good results, but prices are low. Oats have given very poor returns, and barley is middling with a lot of inferior samples.

Cattle are doing well; so are sheep. The prices for both leave much to be desired, as it is only tip-top quality ensures a fair price, and the country is filling up with those cheap meat stores which must help to further reduce prices. Even French straw, in bales, is selling in the local markets at 50s. per ton.

All the hay crop is now secured and the bulk looks light; but the quality is the best, and unless a very severe winter sets in there ought to be a sufficient quantity on hands.

A good deal of autumn ploughing is done, and an excellent time it is for getting the stubbles clean.

Very soon the wheat sowing will commence here, and on account of the poor returns of the oats it is expected that a larger area of the former will be sown. Turnips and mangolds did well and look like turning out an average crop. These will help the supplies for winter feeding considerably, and help to produce forward stores for the early English market. P. F.

October 5, 1905.

The Northern Farmers' Convention.

The North-Eastern Counties' Agricultural Federation—which is the outcome of a preliminary conference of farmers of Northumberland, Durham, and Yorkshire, held at the beginning of September—is issuing broadcast to farmers the agenda paper of the Farmers' Convention to be held next week at Darlington. Accompanying the official programme of business is a detailed statement of the objects of the new movement. Since the September conference increasing interest has been shown all over the country in the departure made on the initiative of the Darlington Farmers' Protection Association, and there is reason to believe other federated centres will be formed after the Convention.

The subjects for discussion at the Convention include the continuation of the Agricultural Rating Act until the whole question of rating is dealt with, the absolute prohibition of preferential railway rates for foreign produce, better regulations for motor-car traffic, secondary education to be voluntary and not charged upon public funds, a Bill to prevent the adulteration of butter by fats, milk, water, or other substances, and the adulteration of milk by boracic acid or other substances; also the adulteration of margarine by colouring matters, and a Pure Beer Bill.

THE ROYAL AGRICULTURAL SOCIETY.

Special Committee's Report—Suggested Reforms.

The Monthly Council Meeting of the Royal Agricultural Society was held on Wednesday, Mr. F. S. W. Cornwallis (President) in the chair, when the following members were present:

Trustees.

The Earl of Coventry, the Earl of Derby, K.G., Sir Walter Gilbey, Bart., Colonel Sir Nigel Kingscote, G.C.V.O., K.C.B., Lord Moreton, Earl Spencer, K.G., Sir John H. Thorold, Bart.

Vice-Presidents.

Mr. J. Bowen-Jones, Mr. Victor Cavendish, M.P., Mr. Percy Crutchley, Mr. J. M. Dugdale, the Right Hon. A. E. Fellowes, M.P., the Hon. C. T. Parker, Mr. Charles Whitehead.

Other Members of Council.

Mr. George Adams, Mr. Charles A. W. Adeane, Mr. T. L. Aveling, Mr. S. N. Bankart, Mr. Richardson Carr, Mr. R. P. Cooper, Mr. J. P. Cross, Lieut.-Colonel Curtis-Hayward, Mr. John T. C. Eadie, Mr. W. Frankish, Sir John Gilmour, Bart., Sir Gilbert Greenall, Bart., Mr. R. Nevile Grenville, Mr. J. Harris, Mr. W. Harrison, Mr. J. H. Hine, Mr. R. W. Hobbs, Mr. J. Howard Howard, Mr. Walter F. Ingram, Sir Charles V. Knightley, Bart., Mr. Ernest Mathews, Mr. W. A. May, Mr. C. Middleton, Mr. T. H. Miller, Mr. T. S. Minton, the Earl of Northbrook, the Earl of Onslow, G.C.M.G., Mr. Ralph C. Palmer, Mr. Claude M. S. Pilkington, Mr. George G. Rea, Mr. F. Reynard, Mr. John Rowell, Mr. E. W. Shackle, Mr. A. J. Smith, Mr. H. H. Smith, Mr. E. W. Stanyforth, Mr. R. Stratton, Mr. Herbert Tallent, Mr. George Taylor, Mr. A. P. Turner, Mr. E. V. V. Wheeler, and Mr. C. W. Wilson.

Minutes of Last Meeting.

The minutes of the last meeting of the Council, held on August 1, 1905, were taken as read, and approved.

Report of the Special Committee.

The first business before the Council was the consideration of the following report, dated September 21, which was presented by the Special Committee appointed at the last meeting on August 1 "to thoroughly investigate the entire position of the Society, and to make a report to the Council after the recess as to what reforms and economies they consider desirable to put the Society on a sound footing."

The adoption of this report, which was discussed in private, was moved by Mr. Stratton, and seconded by Mr. W. Harrison.

In accordance with the resolution of the Council of August 1, 1905, your Committee met on September 20 and 21, and beg to report on the reforms and economies they consider desirable to place the Society on a sound footing.

2. The Committee desire to express their recognition of the services of the staff in the past; but in view of the financial position of the Society they are unable to recommend a continuance of so large an expenditure as is at present incurred under this head, and regret that they see no other course open to them but to request the Council to ask for the resignation of the whole staff as at present engaged at Hanover Square and Park Royal.

3. They consider that a sum not exceeding £1,500 per annum is all that the Society is at present justified in expending on the salaries of the Secretary and administrative staff.

4. They recommend that a Secretary (to devote his whole time to the work of the Society) should be appointed at a salary of £600 per annum, and an assistant at £300 per annum.

5. HAREWOOD HOUSE.—They recommend that if a satisfactory price can be obtained for Harewood House it shall be sold at as early a date as possible, and, failing this, that such part of the house not absolutely required for the purposes of the Society shall be let.

6. JOURNAL.—They recommend that the cost of the Journal, including distribution, shall not exceed £600 per annum.

7. SCIENTIFIC DEPARTMENTS.—They recommend that the Board of Agriculture be approached with a view to obtain a grant in aid of the scientific operations of the Society, which must otherwise be curtailed, unless such assistance can be obtained.

8. THE SOCIETY'S SHOW.—They recommend that no show be held at Park Royal in 1906, but that it take place in the provinces if a suitable site can be obtained and financial arrangements made; also that a sum of not less than £2,000 from the governors' and members' subscriptions be credited to the expenses of the annual show.

9. They think it would be most advantageous that a conference be held annually between the Council and officers of the Royal Agricultural Society and the secretaries of county, breed, and other leading agricultural societies to consider questions of general and mutual interest.

10. PARK ROYAL.—They recommend that immediate steps be taken for the disposal of the Society's interest in the Park Royal Estate.

11. SUBSCRIPTIONS.—The Committee desire to draw attention to and emphasize the desirability of encouraging members to give financial support to the Society beyond the minimum subscription.

THOMAS L. AVELING. T. S. MINTON.
RICHARDSON CARR. FREDK. REYNARD.
R. P. COOPER. JOHN ROWELL.
R. FORREST. R. STRATTON.
JOHN GILMOUR, Bt. G. TAYLOR.
GILBERT GREENALL. JOHN THORNTON.
W. HARRISON. C. W. WILSON.
CHRIS. MIDDLETON.

The Earl of Jersey and Mr. E. W. Stanyforth were unavoidably absent.

13, Hanover Square, London, W., September 21, 1905.

With the exception of paragraph 10, which was remitted to the Special Committee for further consideration, the Report was adopted, paragraphs 2, 3, 4, and 11 being referred to the Finance Committee, 5 to the House Committee, 6 to the Journal Committee, 7 to the Chemical, Botanical, and Education Committees, and 8 to the Special Committee to deal with.

House.

SIR NIGEL KINGSCOTE reported his election as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing year they be constituted as follows: Sir Nigel Kingscote, the President, the Earl of Northbrook, Sir Walter Gilbey, Bart., Mr. Crutchley, Mr. Matthews, and Mr. Thornton.

Journal.

SIR JOHN THOROLD reported his election as Chairman of the Committee for the year 1905-6. The Committee recommended that for the ensuing year they be constituted as follows: Sir John Thorold, Bart., the Earl of Derby, K.G., the Earl of Jersey, G.C.B., Mr. C. R. W. Adeane, Mr. F. S. W. Cornwallis, Mr. W. Frankish, Mr. R. Neville Grenville, Mr. W. A. May, Mr. R. C. Palmer, and Mr. C. Whitehead.

The Committee had discussed the cost of production of the Journal, and the possibility of reducing expenditure by abandoning some of the features of the present Annual Volume; but they deferred for the present any final recommendation on the subject of the next Volume.

Chemical and Woburn.

Mr. BOWEN-JONES reported his election as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing year they be constituted as follows:—Mr. J. Bowen-Jones, the Duke of Richmond and Gordon, Earl Cawdor, the Hon. C. T. Parker, Sir C. V. Knightley, Bart., Mr. R. M. Greaves, Mr. R. Neville Grenville, Mr. John Howard Howard, Mr. W. F. Ingram, Mr. C. Middleton, Mr. T. S. Minton, Mr. C. M. S. Pilkington, Mr. F. Reynard, Mr. H. P. Ryland, Mr. W. Scoby, Mr. E. W. Stanyforth, and Mr. A. P. Turner.

Botanical and Zoological.

MR. WHEELER reported his election as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing years they be constituted as follows:—Mr. E. V. V. Wheeler, the Earl of Onslow, Sir John Thorold, Bart., Mr. J. Bowen-Jones, Mr. F. S. W. Cornwallis, Mr. W. Frankish, Mr. R. Neville Grenville, Mr. C. Middleton, Mr. F. Reynard, Mr. Ernest Shackle, Mr. H. Tallent, and Mr. C. Whitehead.

Veterinary.

The EARL OF NORTHBROOK reported his election as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing year they be constituted as follows:—The Earl of Northbrook, the Earl of Derby, K.G., Lord Moreton, the Right Hon. A. E. Fellowes, M.P., the Hon. Cecil T. Parker, Sir G. Greenall, Bart., Sir J. H. Thorold, Bart., Col. Sir Nigel Kingscote, Mr. S. N. Bankart, Mr. Victor C. W. Cavendish, M.P., Mr. Percy Crutchley, Lieut.-Col. Curtis-Hayward, Mr. Joseph Harris, Mr. Ernest Mathews, Mr. T. H. Miller, Mr. F. Reynard, Mr. John Rowell, Mr. A. J. Smith, Mr. E. W. Stanyforth, and Mr. C. W. Wilson, with Prof. Sir George Brown, Mr. A. C. Cope, Prof. McFadyean, the Master of the Farriers' Company, the President of the Royal College of Veterinary Surgeons, and Mr. H. Swithinbank as professional members.

Stock Prizes.

MR. BOWEN-JONES reported the election of Mr. R. M. Greaves as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing year they be constituted as follows:—Mr. R. M. Greaves, the Earl of Coventry, the Earl of Northbrook, Lord Middleton, Sir G. Greenall, Bart., Mr. J. Bowen-Jones, Mr. Richardson Carr, Mr. R. P. Cooper, Mr. Percy Crutchley, Mr. J. T. C. Eadie, Mr. R. W. Hobbs, Mr. E. Mathews, Mr. T. S. Minton, Mr. F. Reynard, Mr. John Rowell, Mr. H. P. Ryland, Mr. A. J. Smith, Mr. R. Stratton, Mr. A. P. Turner, Mr. E. V. V. Wheeler, Mr. C. W. Wilson, and the Stewards of Implements.

The Committee reported that in consequence of failure to comply with the society's regulations as to [illegible] the following alterations in the awards of prizes to cattle exhibited at the last Show at Park Royal had been made:—

CLASS [illegible]

No. [illegible] First prize [illegible] for Pure Bred Shorthorn Bull [illegible] and eight commended.)

CLASS [illegible]

No. [illegible] First prize [illegible] for Cow [illegible] commended.)

CLASS [illegible]

No. [illegible] Second prize [illegible] for Wether Crossbred [illegible]

No. [illegible] Third prize [illegible] for Cheviot or Border [illegible] commended.)

Implement.

MR. FRANKISH reported his election as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing year they be constituted as follows:—Mr. W. Frankish, the Hon. C. T. Parker, Sir John Gilmour, Bart., Sir J. H. Thorold, Bart., Mr. George Adams, Mr. T. L. Aveling, Mr. J. Bowen-Jones, Mr. J. P. Cross, Mr. Percy Crutchley, Lieutenant-Colonel Curtis-Hayward, Mr. R. Forrest, Mr. R. M. Greaves, Mr. R. Neville Grenville, Mr. W. Harrison, Mr. John Howard Howard, Mr. C. Middleton, Mr. F. Reynard, Mr. H. P. Ryland, Mr. A. J. Smith, Mr. E. W. Stanyforth, Mr. H. Tallent, and the Stewards of Implements. Various questions arising out of the entries for the last Show had been discussed and settled.

Showyard Works.

MR. CRUTCHLEY reported his election as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing year they be constituted as follows: Mr. Percy Crutchley, the Hon. Cecil Parker, Mr. T. L. Aveling, Mr. F. S. W. Cornwallis, Mr. R. Forrest, Mr. W. Frankish, Mr. W. Harrison, Mr. G. G. Rea, Mr. H. P. Ryland, Mr. E. W. Stanyforth, and Mr. George Taylor.

Various details relating to the valuation and sale of timber, the refreshment contract, and work done for the exhibitors were discussed and settled. A report was received from the St. John Ambulance Association on the cases dealt with by the Ambulance Department at the late Show.

Selection.

SIR JOHN THOROLD reported that the elected members of the Committee, as constituted on August 1, 1905, had met, and appointed him as their Chairman for 1905-6. They recommended that, in accordance with the Standing Orders, the Committee of Selection be constituted for the ensuing year of the President, the Chairman of each of the Standing Committees, and the following six other members of the Council: The Earl of Onslow, Sir Walter Gilbey, Bart., Sir John Gilmour, Bart., Mr. J. P. Cross, Mr. W. Harrison, and Mr. Stratton.

The question of the vacancies at present unfilled of ordinary members of the Council for the electoral districts of Cornwall, Dorset, Essex, and South Wales was considered. The Committee were advised that, in view of the terms of Bye-law 90, it had devolved upon the Council to fill up these vacancies, but before taking steps in this direction, the Committee were of opinion that the electors of the divisions concerned should be given another opportunity of expressing their wishes in the matter. They proposed, therefore, that a circular (a draft of which they had approved) should be issued, acquainting each voter in these divisions with the fact that a vacancy existed in the representation of the county, and giving notice that nominations of candidates to fill such vacancies might be made up to Saturday, October 28. In the event of more than one candidate being nominated for one vacancy, the Committee thought it desirable, with the view of ascertaining the wishes of the majority of electors in a division as to the candidate whom they desired to be appointed as their representative on the Council, to follow the procedure relative to the issue of voting papers, etc, etc., adopted in the contested elections which took place in other divisions in July last.

Education.

COL. CURTIS-HAYWARD reported the election of Lord Moreton as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing year they be constituted as follows:—Lord Moreton, the Right Hon. A. E. Fellowes, M.P., Mr. J. Bowen-Jones, Mr. R. G. Garden, Mr. F. S. W. Cornwallis, Lieutenant-Colonel Curtis-Hayward, Mr J. Marshall Dugdale, Mr. R. M. Greaves, Mr. J. H. Hine, Mr. E. Mathews, Mr. R. C. Palmer, Mr. H. H. Smith, and Mr. E. V. V. Wheeler.

Dairy and Produce.

MR. DUGDALE reported his election as Chairman of the Committee for 1905-6. The Committee recommended that for the ensuing year they be constituted as follows:—Mr. J. Marshall Dugdale, the Earl of Derby, K.G., the Hon. Cecil Parker, Sir J. H. Thorold, Bart., Mr. Richard-

son Carr, Mr. Percy Crutchley, Lieutenant-Colonel Curtis-Hayward, Mr. R. M. Greaves, Mr. R. Neville Grenville, Mr. Joseph Harris, Mr. J. H. Hine, Mr Ernest Mathews, Mr. George Taylor, Mr. John Thornton, and Mr. E. V. V. Wheeler.

The Steward of Dairying, Mr. Ernest Mathews, had kindly offered to write reports on the experiments in the Dairy and on the Milk Yield and Butter Test Trials which took place in the showyard at the late Show, and the Committee recommended the grateful acceptance of Mr. Mathews' offer, and had referred the matter to the Journal Committee with regard to the publication of the report.

Derby or Blackpool for the 1906 Show.

Letters were read from the Mayors of Blackpool and Derby carrying invitations to the Society to hold its Show in these towns. Mr. Wheeler mentioned that the site available at Blackpool had already been inspected when a former invitation had been tendered in 1901. As to the Derby invitation, it was decided to request Mr. Carr, Mr. Cooper, and Mr. Crutchley (or, failing him, Mr. Wheeler) to visit Derby and report to the Council on November 1, with reference to the site and other facilities available. Other business having been transacted, the Council adjourned at 2.30 p.m. until Wednesday, November 1, at 11 a.m.

Press Opinions on the Committee's Report.

The Times.

The whole show question demands far more thoroughgoing treatment than it has yet received. The Royal Society, having broken away from its old system of provincial shows, cannot now revert to it with entire facility. Other societies which appear to be managed with greater success have to a considerable extent occupied the ground from which the Royal retired. The difficulty of finding a site in proximity to a large town seems to be increasing, and except in the vicinity of a large town a show has little chance of financial success. In other words, a show must attract immense numbers of people who are not agriculturists if the gate-money is to cover the expenses. Experience shows that it does not pay to hold a show in a purely agricultural district, or in the vicinity of London, where the people have a great variety of other amusements and distractions. That is a fact which suggests reflections concerning the real utility of agricultural shows, and prompts the question whether in the changing circumstances of the day the Royal Society ought not to think more of the other branches of its work.

Daily Telegraph.

Nor, we fear, will the troubles of the Society be over, so far as the show is concerned, even if Park Royal is sold and the old system is revived. Failure is difficult to shake off, and, above all, the great county shows—the off-shoots, as it were, of the Royal Show—are now so important and flourishing that their honours are almost as eagerly sought after as the honours of the Royal. This was one of the main arguments for a permanent show ground; will it not just as effectually prevent the Royal from regaining its old pre-eminence in the shires? However that may be, once the Royal Show quits Park Royal we doubt if it will ever return to a spot where it has never thriven, and the sale of that luckless site—towards which the frayed edges of London are rapidly extending—seems to hold out the best hope of setting the Royal Agricultural Society on its feet again.

Morning Post.

The other recommendations of the Special Committee which have been adopted by the Council seem to us to be open to the objection that they do not really face the main issue, which is how the work which the Royal Agricultural Society was established to carry on may be in future provided for in the fullest and most efficient manner possible. The economies recommended by the Committee can only be justified if they can be carried out without any sacrifice of efficiency, and if they can be so carried out it is difficult to imagine any more crushing condemnation of the past management of the Society.

Daily News.

No doubt the Society is taking the only possible course in this ruthless application of the pruning knife, but the question arises whether it would not do better to go a step further and ask the Board of Agriculture to relieve it entirely of the scientific work which, after all, properly belongs to a public department.

Birmingham Daily Post.

For the moment, however, the great thing is the fact that the Royal Agricultural Society have decided to once more "take to the roads," and appeal directly to the populations most concerned in the agricultural industry.

Yorkshire Herald

There remains one other point, not immediately connected with the well-being of the Society, but to be of considerable importance. The Society's sphere of usefulness is not and should not be bounded by its promotion of an annual show, interesting though that function may be, and great as may be its effect on agriculture and agriculturists. Its pursuit of science as applied to farming shows that this is recognised by those who have its fortunes in hand, and further recognition will be afforded by the crystallising of the remaining suggestion of the Special Committee.

Eastern Daily Press.

It is all to the good that the Society has, if somewhat late in the day, realised the folly of abandoning the provincial shows in favour of a permanent home in London, and one hopes that with the other measures adopted we may yet see the old organisation placed on a sound financial footing, and witness a return of its old prosperity.

Derby and the Royal Show.

The Council of the Derbyshire Agricultural Society met yesterday to discuss the possibility of the Royal Show being held at Derby next year. A resolution was passed heartily endorsing the action of the mayor in inviting the Royal Agricultural Society to visit the town, and undertaking to render every assistance calculated to achieve the desired object. A committee was also appointed to wait upon representatives of the Midland Railway Company, the owners of the proposed site at Osmaston, and to prepare a statement to be submitted to a deputation from the Royal Agricultural Society which is to inspect the ground and to attend to other preliminaries. At least 60 acres of land are stipulated for, and 100 acres are said to be available.

EAST ANGLIAN NOTES.

October! and well the farmers know it this year in the Eastern Counties, for their work has progressed so easily and freely for months past that they are casting about to know what to do with their farm hands. Ditching, draining, and hedge-trimming are now in full swing, in order to keep the regular men employed; and many a bushel of blackberries that another year would be so eagerly sought for now lie by the roadside cut down by the hedgeman, because this fruit is so plenteous that it would not pay to gather them for market, and this the poor man's harvest! Again we are reminded of the season, and the farmers cannot but look round with pleasure at the work accomplished towards the profits of the coming season, by the ruddy splendour of the Viginia creepers and their dainty cousins that hug so picturesquely the walls of the old homestead, and the glaring warning of the approach of winter that has been given by the envious gales that have tattered autumn's gilded robes in park and upland.

Our hedges and divisions of our agricultural lands is one of the great beauties of our island that is so repeatedly noticed by foreigners with admiration, for their neatness gives to the country its cultivated and garden-like appearance that marks it out amongst other countries as a scene of fertility and beauty. In fact, to the weary traveller who has crossed Asia, Africa, Australia, or America it presents a landscape of a richly-wooded and well-watered tract on which the eye rests with satisfaction.

From the punctuality of its arrival in East Anglia the wild pink-footed goose might almost be the "Michaelmas goose" of popular tradition, though it is seldom this wary new-comer can be brought to table. Still its advent proclaims the fact that "a year's rent is due." In this respect the writer has never seen the cottager more prepared to meet his landlord, and in the Eastern Counties money is freely forthcoming to meet the year's obligations. This alone is an index of the fact that agriculture is on the mend, and better times for our farmers are close at hand.

Among neglected crops, the sunflower is one of the most interesting. Few people who grow it for ornament have any idea of its usefulness. Birds of nearly all kinds thrive on the seed, and there is no more fattening food for poultry. Cattle like them, too, in their natural state or crushed and made into cakes; while the very stalks may be ground up and mixed advantageously with other fodder. So one cannot be astonished to learn that a Norfolk man objects to allow a gardner at Crediton, Devon, to proclaim that because he has a 12 ft. 6 in. sunflower with a breadth of 18 in., he has produced the finest sunflower this year. The Norfolk farmer, who hails from Buxton Lammas, states that he feels rather proud that Norfolk need not go so far as Devon for the championship for the best sunflower, for he has one now standing in his garden at Dudwick Gate, Buxton, 13 ft. 6 in. in height, and there are others 12 and 13 ft., and several flowers from 12 to 18 inches from petal to petal.

Midland Notes.

"Those that are weatherwise," says an old saw, "are seldom otherwise." It is easy assuredly to be too confident of one's weather wisdom, which is a very fallible thing, for "When God wills it rains with any wind"; but some of the ancient and traditional rhymes and proverbial warnings have enough truth to make them worth remembering. That which insists that there "are always nineteen fine days in October" is, no doubt, near the mark, taking the years one with another. If we are to have our due quota of fine days this year the last part of the month must be better than the first, for we have had much wind and rain just lately, and farm work has ceased to progress at the rapid pace of a few weeks ago. But St. Luke seems disposed to assert himself again, and to-day the plough and corn drill are at work once more under blue skies flecked with fleecy clouds, which might be appropriate to April.

Ploughing is already so well forward that a little check now can be of no great moment, and as has been noted already in this column it is long since the land has had so thorough a clearance from couch and all sorts of weeds as it has had this autumn. Meanwhile the pastures have been stimulated by the rain and the mild sunlight. They look now remarkably verdant for the time of year, and the many dairy farmers of Staffordshire, Derbyshire, Leicestershire, and some parts of Warwickshire, who have milk contracts to fulfil, are finding it easier and cheaper to keep up the due milk flow than it is sometimes at this season. The increasingly cold nights remind us, by the way, of the old question of housing stock. Remembering the experience of the Harper-Adams College experimenters, who find cattle left unhoused to thrive better than those taken in at night, stock owners may decide not to hurry over making their winter arrangements. But farm horses ought certainly to be in the stables now at night, and considering the heavy work which lies before them, there is no season when they can turn a liberal diet to better account.

Now that the potatoes are being lifted there is some curiosity among growers as to the results given by the much vaunted new varieties. The commonest verdict seems to be that they have resisted disease well, but that they have yielded poorly. A Derbyshire grower in conversation confessed to having very few new ones of marketable size. A correspondent in the Peterborough district, however, has done well with Northern Stars, Evergoods, and Royal Kidneys; and the two latter are also well spoken of in Notts. One hears of plots of Northern Stars in other places—Warwickshire, for instance, and Leicestershire—which are quite indifferent. So far as can be gathered, Sharpe's Express seems to be quite among the best of the new earlies. What is certain is that some of the old sorts have had their day. Up-to-Dates and British Queens, for instance, seem to have failed even where the season has been wholly favourable. Well, they have done good service for many years, and everywhere the old order must change, yielding place to new.

There are rumours in the air of another hop-growers' combine, this time with its headquarters in the Midland district. Considering the bulk of the crop, and the disappointing results of last season's syndicate, which had so much easier a task before it, the outlook can hardly be thought very hopeful. The one chance of success lies in the undeniable scarcity of first-rate hops among this season's crop. If growers can be induced to work together the effort to "corner" what there is of top grade samples may be worth while.

Some of the County Councils which have yet to learn what useful rural education is might do well to take a hint from Staffordshire. There are now thirty gardening classes in the county, including one at Brewood Grammar School, and sixty-four more in connection with the elementary schools. It is to its old Technical Instruction Committee that Staffordshire owes its ability to carry on the work, since for the past eleven years there have been classes in horticulture available for teachers, and so the usual difficulty in finding competent instructors has been avoided. What all this means to the rural life of the county is not easily to be estimated.

October 6, 1905.

Huddersfield Cattle Fair. Owing to heavy rain there was a smaller number of animals than usual at Huddersfield cattle fair, held on Wednesday, and a poor attendance of buyers. The number of horned cattle was 345, and of horses 272. Best milch cows realised £14 to £19, secondary sorts £10 to £12, stirks £7 to £8. Agricultural horses, 55 gs. to 60 gs.; secondary qualities, 35 gs. to 40 gs.; inferior cart horses and hacknevs, £10 to £20; unbroken Irish colts, £20 to £30.

By Lupulin.

Home Notes.

While spending a week-end in the hop county, I have not been able to find any hops. Throughout the parts of Mid Kent and East Sussex that I have visited nothing remains but the débris of the crop, which, until recently, covered the ground with exceptional luxuriance. The growers I have met with unanimously testify to the surprising weight of yield, and, if the experience of some of them may be accepted as approximately illustrative of the whole, there seems to be little room for doubt that the season's record will surpass any that have preceded it. Enquiries concerning the quantity left unpicked hardly confirm statements that have been circulated. It is not difficult to understand the reluctance with which a decision to abandon any part of a plantation is arrived at. To turn their backs upon the results of a year's thoughtful and anxious labour must be trying to planters, and I sympathise with one who told me that, after settling to leave a large piece, he changed his mind and filled his bins with hops which, when put upon the market, proved to be practically worthless, as the price realised did not cover the cost of the final operation. One of my Worcester friends, who has harvested a crop which is magnificent both in quantity and quality, visited me this week and expressed his confidence that the value of good hops would soon advance to £5, because "over 10,000 acres had been left unpicked in Kent". I was compelled to tell him that his informants had seriously exaggerated the position, and that although I could not give him exact figures I was of opinion that 1,000 acres would be nearer the mark. It is folly to shut one's eyes to facts, even when they are distasteful, and, while I regret that we are burdened with too many hops, many of which had more wisely been cast aside, we must face the situation as we find it and submit to its consequences.

The Borough.

has been very busy during the past few days. Merchants are looking after the coloury samples, and, finding that they are becoming scarce, and that the bulk of the crop is below the required standard, are willing to pay higher prices for selected lots. An advance of 5s. to 10s. per cwt. for the better sorts may be quoted, but lower grades have not profited thereby, and are either stationary or slightly weaker.

A circular to brewers, issued this week by one of our leading merchant houses, says: "A good supply of most kinds is on sale and a large business is doing in all healthy descriptions, the choice, fine-coloured samples being in strong demand. Currency has opened below any previous records, and considerably under foreign quotations." They recommend their customers to take advantage of the favourable opportunity, and to put "into cold store supplies sufficient to protect themselves against another scare, such as the trade passed through last season. Foreign quotations being comparatively high, all the good, healthy hops of the new English growth will be in early demand at present, or even higher rates. It is essentially an English year for consumers, and we look to an early clearance of all bright, healthy samples at present values. Considerable imports of Pacifics may be expected later on, but it is doubtful if prices for this class will come to the present low level of English hops."

Mr. H. Le May, in his address to the Tunbridge Wells Farmers' Club on Friday last, was not able to give much present encouragement to growers. He seemed to be doubtful about the future, and although he did not consider that the outlook was hopeless he admitted that the industry was experiencing the effects of a very serious blow. The growing season had been easy and inexpensive, but it could not result in profit. The most remunerative season was generally the most troublesome, and a bountiful crop resulted in a bad time for planters as far as the selling price was concerned. His remedy for the present unsatisfactory position was the imposition of an import duty, or the adoption of a system of reciprocity with respect to hops, the abolition of tied beer houses, and the establishment of free trade in beer. Several of the planters warmly supported Mr. Le May's views, and urged immediate and definite action in the direction indicated. I trust this feeling may be developed, and that a practical issue may result.

In the Hop Yards.

While the hop is well known as one of the ingredients of a much appreciated beverage, its growth and preparation are entirely ignored by many who appreciate its flavour. Recently a somewhat pleasant party connected with the brewing trade decided that they would visit Worcestershire and see the hops as they are grown and prepared for the market. [illegible] somewhat like John Gilpin, they had pleasure in their mind they were also on business bent. They had the idea that possibly there might be things in connection with the actual drying and preparation of hops that a man, though an expert, had he not studied the process, might be deceived in. Worcestershire, yes, it has a peculiar charm, the Severn running through it from end to end, its New Red Sandstone giving the warmth which causes its fruit and vegetable crops to grow as though the breath of the Gulf Stream had given them the aid that it gives to Kent. Worcester, the ever-faithful city, where the statue of Charles before the Town Hall has for three centuries held the Cathdral in its hand, and Queen Anne has smiled on Charles II, who looks as if High Street was not such a congenial place as Nell Gwynne's quarters in Whitehall. The old cathedral, also the Commandery, St. John's Gate, and the Chapter House would have taken the party many hours to explore; but the Hop Market offered a field of interest more to the mind of the party. It was a matter of surprise to them to find how on that market absolutely little was known as to the state of the crop; rumours of every sort were flying round. It was impossible, even with the closest study, to ascertain whether the prospects of a great crop were justified or not

The party had no definite programme, and were rather disappointed to find themselves drifting into hopyards which did not realise their ideas of the advancement in cultivation and curing of hops of which they had read. A hopyard with poles in no way carries out the idea which they expected, and it was with astonishment that the party found that in many cases the hopyards were carried on as they had been a hundred years ago. The growers seemed to think that it was not worth spending money or adopting new ideas, but in Powick, Martley, in the valley of the Teme, indeed, each place visited, the mention was made of a place called Northingtown, where, almost with a sneer, it was said that all kinds of new-fangled ideas were carried out, and everything was done on a plan different to that which the speaker and his father had found good enough. To see the abode of these heretics in hop growing became the idea of every one of the party, and they therefore were very glad to be able to arrange to visit Northingtown, the farm belonging to Messrs. Jones Brothers, who, they learned, were the inventors and patentees in 1901 of the process for drying hops by driving pure hot air through them. At Northingtown they found no longer a farm, but a great business concern worked with the precision of a factory, organised and regulated on the lines of an industrial concern.

Acres upon acres of hopyards, with poles and wires for carrying the hops, were able to be washed during their early growth by a complete system of pipes laid underground, into which the necessary wash was pumped, whereas in dry weather the same pipes were utilised for pumping water for irrigation purposes. The powerful engines and boilers which did this work later on performed another function. The hops, as they are gathered, are laid on vast floors and pure hot air is driven through them by a great wheel. The hops, once dried, travel on moving floors into the packing room, there again machinery is used in bagging, weighing, and finally placing the hops in the warehouses where they remain until sold. But not alone is machinery used in the work of preparing the hops for market. From an out altruistic point of view the cultivation of hops has a large claim on public consideration at Northingtown; to-day over two thousand people from the Black Country are finding a holiday which they could not have were it not for this industry. They are lodged in comfortable tents with every arrangement made for fires for their cooking and for giving them the enjoyment of vegetables and other things grown in the country to which, alas! the poor of the towns have so little access. The children wander free in great orchards, and one sees happy faces as they pick up pears and apples, treasures hardly known to them. Electric light is used in their quarters, and, as far as possible, consistent with business principles, all is done for their safety, comfort, and enjoyment. Indeed, to do this is a wise policy for the grower, as if his yards are popular ones he can always find good careful hands.

A feature to be noticed at Northingtown is the large number of pigs. They are the factor on which the hop crop rests, the question of providing the purest and most natural of manures without the introduction of the chemical compounds so much in use to-day is very important. At Northingtown two principles seem to be paramount: the one to grow hops with natural heat, the other to dry them without direct contact with coal or coke, and to by means of the pure air system an article is placed in the hands of the brewer which is beyond doubt without impurity. The party learnt that hop growing to be successful must be carried out on business principles and as a commercial undertaking. The same must of a great hop farm and a manufactory are one and the same, requiring organisation, intelligence, and capital to secure a successful result.

Foreign Notes.

Burgundy.

A further report of the proceedings at the Dijon hop fair states that planters, being dissatisfied with the offers for their produce, generally refused to sell. The prices named are certainly inadequate to cover the cost of production, although the yield is large. Great variations in quality are found in this district, as elsewhere, and it is very difficult to decide upon average values. Present quotations range from 45 to 55 francs (average 40s. English) for choicest samples.

BARLEY AND MALT.

Barley Show at Dorchester.

The eighth annual show of malting barley and other grain was held in the Corn Exchange, Dorchester, on Saturday last, under the auspices of the Dorset United Farmers' Clubs. There was a record entry, and the quality of the various exhibits was progressive as to growing and harvesting, but a very considerable number of them was spoiled by bad threshing. The judges for barley were Mr. Frank Flinn, chairman of the County Brewers' Association, and Mr. A. R. Baily, Frome, whilst the wheat awards were made by Mr. H. Scutt, who had the finest lot of wheat samples ever brought together set before him. The oats were hardly up to usual merit.

In the class for malting barley, drawn from a bulk sample of 50 quarters, the first prize went to Mr. W. Bedford, Bere Regis, for Chevalier barley, that won on its merits, despite the fact of its being heavily handicapped by indifferent threshing. An interesting history attaches itself to this seed, as it originated from one peck of the Champion barley at the Brewers' Exhibition six years ago. This peck, when first sown, produced crop of six and a half sacks. This in turn was utilised, and produced a return of over a hundred sacks. This barley subsequently won the championship; a fresh exhibitor, Mr. F. J. Johnson, was second, and Mr. R. Hayne third. In Class 2, for barley drawn from a bulk sample of 30 quarters, Mr. Bedford was again successful, Colonel Brymer, M.P., being second, and Mr. G. Bissell third. In Class 3, from bulk sample of 20 quarters, Mr. C. Trawbridge was first, Mr. W. J. Spicer second, and Mr. J. G. Tory third.

The white wheats constituted a grand class, Mr. J. Cossins being first with a lovely sample of Ambrose's Standup, Mr. W. R. Little being second, and Mr. F. Taylor third. But the most superb class of all was for red wheats, Mr. T. B. Sprake's winning sample scaling 68¼ lb. per bushel. Mr. E. W. Drew was second with another very weighty sample, Mr. J. Lockyer being third.

It was a decidedly weak show of oats, the quality being far from fine. There were not quite so many flints as usual, but there was an admixture of other grains. Mr. J. J. Wyatt was first with a very compact oat that were as straight as though they had been clipped, and lying so close they made a heavy weight per bushel. Messrs. Cossins and Trowbridge's oats were not up to the usual merit, oats evidently not being the crop of the season. In the barley section trade was fairly brisk at from 28s. to 33s. per qr.

Barley and Hop Exhibition in Germany.

The twelfth annual German Barley and Hop Exhibition, organised by the German Agricultural Society and the German Hop Growers' Exhibition will be held in Berlin from the 7th to the 15th of this month. According to the notices already received, there will be 150 hop exhibits, 160 barley exhibits, and 100 competitors for the special prize given for the best new variety of barley. The money prizes will exceed £500, including £100 given by the Prussian Board of Agriculture, which has also instituted an award of a silver medal for the winning competitor in both classes, barley and hops. The Brewery-Machinery Exhibition, which is held at the same time and place, has also received a large number of applications for space.

CORN MARKETS.

LONDON.

Mark Lane. Wednesday.—There was only a limited attendance, and quiet buying in the various departments occasioned very little difference in prices compared with last Monday's close. Though new English wheat meets a fairly ready sale the tendency is scarcely as good as a week ago, and so far millers seem hardly to realise the excellence of quality. Good reds delivered up to London are worth 29s 6d per quarter 504lb. On the south side reds usually range at 28s to 28s 6d, and whites 28s 6d to 29s 6d. Imported descriptions unchanged. Purchases continue to favour holders, while so much of the arrivals still go to Continental destinations. Trade requirements seem more or less satisfied concerning flour movements in general, and the force of competition is still felt, with regard to American and country makes, and not until genuine spring patents appear more freely during the next few weeks can anything otherwise be considered. Of bakers' grades, Iron Duke fails to meet with buyers over 20s 9d ex store, but 21s is still asked. Town households No. 1 quality 25s 9d per sack delivered in. Country flour steady. Good roller whites 23s to 23s 6d. Best patents, old run up to 27s, and new 24s to 25s. Grinding barley rather lower since Monday, apart from forward maintenance. Good types of new English malting between 30s and 33s meet with favour. Russian oats dull of sale, and rather less inclining in holders' favour. Quotations, however, tended much the same. English oats maintained, and in moderate supply. Maize quiet, and against sellers. Imported beans and peas continue well held.

Mark Lane. Friday. — Conditions once more moved harmoniously in holders' favour, but, with so much still resting on harvest markets from abroad, pressing needs just now are not felt, and price changes have been quite unimportant since the last meeting held. Attendance moderate. English wheat, as it steadily comes up, can be bought at a rather cheaper range than a week ago, but there is no actual giving way any more at Mark Lane than in local districts. Delivered up to London good reds were again held for 29s 6d. On South side, milling reds usually range at 28s to 28s 6d, and East Anglia gives runs at 28s per quarter. Imported descriptions continue steady but dull, while measured against competition of native grain, supplies are anything but large, as so much still finds its way to Continental destinations, Germany in particular. The market for flour was in no pleasanter state since Wednesday last, though maintained in a measure. Buyers of American still await something more definite as regards spring patents, and meanwhile rely mainly on new crop Kansas.

COUNTRY.

Ashford. Tuesday.—Wheat trade dull, at 27s to 30s, with some difficulty in finding purchasers. Demand for malting barley was very slow, and prices wer not maintained, nothing being quoted above 28s. Peas were firm, and few were to be had at 30s. New Mazagan beans made 28s to 29s, and new ticks 31s to 33s. Maize unchanged at 25s to 27, and oats unchanged at 16s to 20s. Tares were a little dearer, making up to 6s 9d a bushel.

Banbury. Thursday.—Wheat, red, new, 27s to 28s per qr; barley, 24s to 30s; beans, new, 29s to 30s; old, 32s to 33s; oats, 16s to 20s; peas, 27s to 30s.

Berwick. Saturday.—Fair attendance, with large supplies of barley on offer, which met a trade similar to last week. Wheat and oats small show. Wheat, 27s to 30s; barley, 23s to 28s 6d; oats, 17s 6d to 20s 6d.

Birmingham. Thursday.—There was a slight falling off in the attendance, and trade generally was quiet. Russian wheats have declined 3d on the week, other foreign sorts being unchanged, the demand being slow. English wheats are rather easier to buy, values being from 28s to 30s per quarter (496lb.). English oats and beans were firm at late rates. Grinding barley was 3d easier at 19s per 400lb., at Sharpness. Both Plate and flat maize were 3d lower.

Brighton. Thursday. Very quiet demand for wheat, and prices unaltered. Very slow trade and small attendance. Barley 28s to 33s; grinding ditto, 21s to 22s; oats, English, 16s to 19s; peas, 30s to 31s; beans, 31s to 33s; oats, 6d dearer.

Bristol. Thursday. — Trading has been rather slow since our last. English wheat was fairly plentiful on market to-day, finding a ready sale at 3d. to 6d. advance. Foreign unaltered. Flat maize, 3d lower. Round maize 3d to 6d lower. Barley unchanged. Oats 3d dearer. Flour very steady, a good demand having been experienced during the past week.—GRACE BROTHERS.

Bury St. Edmunds, Wednesday. — Wheat supplies seem to be getting smaller, but with millers holding fair stocks, it appears difficult to establish an advance. Prices were unchanged; reds or whites, at 27s 6d to 28s 6d; revets, at 27s 6d to 28s per quarter. Barley: We had a fair average supply, and with a few buyers operating with some freedom, a good quantity of business was done; ordinary to medium malting runs steady at 27s to 30s per quarter; fine bright samples sold readily at 31s to 37s per quarter. Feeding corns, oil cakes, and other feeding stuffs all firm at fully last week's prices.

Cambridge. Saturday. Supplies are not too abundant, as farmers are now getting busy with their autumn sowings. There was a smaller supply. Wheat made the full prices of last Saturday. Red 27s to 29s, and white up to 30s per 504lb. Barley was unchanged. Beans quiet, but quite as dear. Oats firm.

Canterbury. Saturday.—A good inquiry for oats, and prices are 6d per quarter higher, 40lb. spring corn making 18s and black winters are up to 20s 6d; wheat a firm trade, 29s to 31s; barley, rather dragging, with choice qualities held for an advance.

Carlisle. Saturday.—Small supply of oats in our market; good demand at full prices; 18s to 18s 6d per 336lb.—THOMAS ROBINSON.

Chester. Saturday.—Trade not very active. English grain commanded last week's full prices, and oats were rather dearer for prime samples. Indian corn also the turn dearer. Quotations:—Wheat, white, 4s 3d to 4s 5d; red ditto, 4s 2d to 4s 6d per 75lb; barley, grinding, 3s to 4s 1d per 64lb; beans, old, 5s 9d to 6s per 496lb; oats, new, 2s 2d to 2s 5d; ditto old, 3s 2d to 3s 4d per 46lb; Indian corn 14s 9d to 15s 3d per 480lb.

Chichester. Wednesday. — Small attendance, but fairly good trade at the prices below. New white wheat, 28s to 29s; new red ditto, 29s to 29s 6d; barley, 26s to 28s; grinding ditto, 24s 6d to 25s; oats, English, 15s 6d to 16s; rye, 24s to 25s; peas, 28s to 30s; beans, 32s to 34s; tares, 6s to 7s 6d; maize, 24s 6d to 26s; flour 25s.

Colchester. Saturday.—Moderate supply of wheat here to-day, but trade at fully late rates. Barley fair show; malting parcels sold readily at about current prices. Beans, peas, and oats firm; supply very small for this time of year.—JOSEPH WILES AND SON.

Coventry. Friday.—A very fair attendance, and good supply of wheat on offer. Prices of last week maintained for samples of good quality. Barley quiet trade. Prime samples of oats scarce and enquired for. Quotations:—Wheat, old, 10s 6d to 12s per 196lb; new, 10s 6d to 11s 3d per 196lb; barley, 29s to 33s per 448lb; oats, old, 23s to 25s per 336lb; new, 18s 6d to 20s per 336lb; beans, old, 12s 6d to 13s per 196lb; new, 11s 6d to 12s per 196lb; peas, 11s 6d to 11s per 196lb.

Derby. Friday. Wheat firm, but quiet and unaltered in value. Spring corn unchanged. Wheat, new white, 28s to 29s; red, 27s to 28s; malting barley, 26s to 28s; beans, old, 33s to 34s; new, 30s to 31s; oats, old, 23s to 24s; new, 17s to 18s.

Devizes. Thursday.—There was a larger supply of corn. There was a fair demand for all descriptions, and prices show no quotable alteration from last week. The following were the quotations:—Best old wheat, 16s to 17s 6d; secondary ditto, 13s to 14s; new wheat, 14s 6d to 15s 6d; best barley, 26s to 32s; secondary ditto, 20s to 24s; rye, 22s to 24s; old black oats, 21s to 23s; white ditto, 20s to 23s; malting barley, 26s to 32s; beans, 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster. Saturday.—Moderate supply of English wheat, and late prices firmly held at 10s to 11s per load. Foreign also firm. Oats scarce and firm. Nice dry samples of malting barley in good demand, and late prices maintained. Beans advanced 3d to 6d per quarter. Other things unchanged.

Dorchester. Saturday.—Owing to the grain exhibition to-day there was a larger attendance than usual, but trade was generally inactive, and late rates were only with difficulty maintained, either for English or foreign. Samples of malting barley came very plentifully to hand, but there is very little, if any, change to note in the values; and the same may be written of grinding descriptions. No great demand for feeding stuffs of any kind, and prices generally may be quoted as the same.

Dublin, Friday. — Wheat, 15s to 17s 6d; malting barley, 15s to 15s 6d; grinding ditto, 15s 6d to 14s 6d; malt, 18s 6d to 20s; oats, 10s to 13s 3d; oatmeal, extra pinhead, 12s to 14s 6d; flour, 10s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter, Friday.—Trade slow. English wheat somewhat firmer. Grinding barley a shade easier, being largely offered. Plenty of new English barley on the market; although 3s 9d was in some instances fetched; prices ruled from 3s 3d to 3s 6d. Flour 3d cheaper. Maize firm. Oats 3d to 6d dearer. English wheat, 3s 6d to 3s 9d; superfine flour, 25s to 28s; fine, 23s to 25s.

Glasgow. Wednesday.—There was the usual attendance at our Corn Exchange to-day. Wheat firmer, but little doing, and flour quiet and unchanged. Maize quiet, and 3d to 4½d per boll cheaper, owing to fresh arrivals. Barley firmer, and 3d per boll dearer since Wednesday. Foreign oats practically unaltered, but Scotch a shade easier. Beans in good demand, but unaltered. Pease unchanged. Bran and thirds a fair trade passing at unaltered prices. Oatmeal 6d per sack cheaper on the week, but demand limited. GIBSON AND CLARK.

Grantham. Saturday.—Large attendance, and business generally was brisk. Wheat, 27s to 29s; barley, common, 23s; ditto best, to 33s; beans, 30s to 32s; blue peas, 38s to 46s; oats, 16s to 19s per quarter.

Glasgow. Friday.—Wheat and flour slow, and prices here and there in buyers' favour. Mixed American maize steady at 13s 7½d per 280lb., with occasionally more money asked. Plate quiet at 13s 9d. Home and foreign oats slow and rather easier. Barley steady. Beans quiet.

Gloucester. Saturday. — English wheat in moderate supply at late rates. Reds make 3s 6d to 3s 7d, and whites, 3s 7d to 3s 8d. Foreign in quiet demand, but prices are firm, and any change is in sellers' favour. Grinding barley and maize 3d cheaper. Oats held for 3d advance.—WAIT, JAMES AND Co.

Hereford. Wednesday.—Slow trade at fully last week's prices for English wheats. There was very little doing in barleys, and values were nominal. Oats firm. Beans continue steady. Wholesale quotations: Wheat, 3s 3d to 3s 6d per 62lb.; barley, 2s 9d to 3s 9d per 56lb.; oats, old, 2s 6d to 3s; new, 2s to 2s 6d per 40lb.; beans, old, 4s to 4s 6d; new, 3s 6d to 5s 9d per 65½ lb.; vetches, 5s 6d to 6s 6d per 65½ lb.

Ipswich, Tuesday. — Wheat was in moderate supply and just firm, with no quotable change on last week's prices. Reds, 28s to 29s; whites, 28s to 29s 6d per quarter. Barley in good average supply, and with a healthy demand for malting sorts, but especially for fine, bright skinned barleys. Ordinary descriptions steady at 27s to 29s, finer sorts very firm at 30s to 35s per quarter. Altogether, although some buyers were holding off, a good steady business was done. Feeding corns are all firm. Oats at 17s 6d to 19s, beans at 33s to 34s, round maize at 23s 9d, flat at 24s 3d, and lentils at 25s to 25s 6d per quarter. Linseed cakes remained firm at £8 to £8 10s, and bran at £4 15s per ton.

Leeds. Friday. — Both English and foreign wheats firmly held at Tuesday's full prices. Americans and Indians favouring sellers. Flour held for late advance, with a hardening tendency. No change in beans, peas, oats, barley, maize, or other feeding stuffs.

Leeds. Tuesday.—There has been less animation in the trade since Thursday, buyers generally being well supplied and perhaps hoping for a reaction. The Continent continues to be a large buyer, and, shipments to the United Kingdom being below our requirements, the quantity of wheat on passage continues to shrink, America, so far, failing to send more liberal supplies. Prices on the week are unchanged for foreign, but English wheat is the turn dearer. Malting barley in larger demand. Prices steady. Feeding stuffs slow at late rates. DENNS AND Co.

Leicester. Saturday.—Good attendance of buyers and dealers, and large supplies of home-grown wheats in excellent condition. Trade ruled steady at very firm rates. Red wheats, 28s to 30s; white wheats, 29s to 31s per 36 stones; malting barley, 23s to 28s 6d per 32 stones; oats, 19s to 20s per 26 stones; beans, 30s to 33s per 38 stones.

Lincoln. Friday.—A good attendance, but a small show of English wheat, which sold at the full price of last week 28s per quarter on rail, 29s delivered. Malting barley in fair supply at unaltered rates, ranging from 24s to 33s per quarter, according to quality. Oats in fair supply, and unchanged.

Liverpool. Friday.—Wheat: There has been a larger attendance at the market and wheat is in better demand, a fair trade being put through at about unchanged prices. American winters and the lower grades of Plate, however, are ½d lower. Flour: A small consumptive trade in foreign at about unchanged prices. English brands very quiet at 6d per sack lower than last market day. Maize: Mixed is steady, with a moderate trade passing at ¼d over Tuesday. Plate, owing to fresh arrivals, is ¼d lower, but meets a fair inquiry at the decline. European sorts are steady, without change. Barley: Malting steady, with a moderate trade at unchanged values. Feeding firm at full prices. Beans: Foreign firm and getting scarcer; a fair business is doing in English, which are more plentiful. Peas steadily held at last Tuesday's prices, with a moderate demand. Oats firmly held with a better demand at fully late rates to some advance for both English and foreign sorts. Oatmeal inactive, but steadily held at late rates. Oilcake quiet for foreign, but steady for English cakes, which have a fair sale at last prices.—SEGAR AND TENNANT-CHEFF.

Manchester, Thursday.—English and foreign wheat was unchanged. Flour quiet. Indian corn somewhat easier. English oats scarce, and holders firm at an advance of about 1d per bushel. Beans quietly steady. Peas also quiet. Bran and thirds have a dearer tendency.

Newark. Wednesday. A small show, which made 6s per quarter more money. Barley moved quietly at last week's price. Oats and beans unchanged in value. Quotations: Wheat, 27s to 28s; barley, 23s to 30s; oats, 16s to 18s; beans, 29s to 34s per quarter.

Newcastle-on-Tyne. Saturday. Wheat at our to-day's market was firmly held at last week's prices, without, however any big demand. Maize quiet, and prices unchanged from last Saturday. Oats steady, and in sellers' favour. Beans firm at fully late rates. Peas unchanged. Barley sold at irregular prices, ranging from 22s to 28s, according to quality and condition.—JOSEPH POLLARD AND Co.

Northampton. Saturday. — Better attendance and more inquiry for barley. Prices firm. New wheat, 27s to 28s, malting barley, 25s to 32s; barley, 26s to 30s; new white oats, 17s to 18s 6d; new black oats, 16s to 18s; new beans, 28s to 30s; peas, 27s to 28s; flour, 24s 6d to 28s 6d.

Norwich, Saturday.—Wheat was in small supply at our market to-day owing to wet weather preventing threshing, with a firm trade. Barley was also in small supply for the same reason, at late rates. Wet and rough weather has prevailed during the past week. Wheat, red, 28s to 29s per quarter, weight 63lb. per bushel imperial. Corn inspector's return for the week ending October 2, 1905:—Wheat, 2,695, 27s; barley, 13,879, 24s 1d.—J. ARTHUR MILLS.

Nottingham. Saturday. Wheat in less supply, and an advance of 6d per quarter was established. Barley only a moderate show, and values well supported. Oats but few offering, and 6d dearer. Beans firm.—ROBT. HUBBLE.

Peterborough, Saturday. There has been a small supply of wheat; trade was firm, and it could scarcely be bought as well as last week. Barley was a quiet trade, without quotable change in price. Oats fully as dear.—THOMAS HILL AND SON.

Plymouth, Thursday.—There was a very fair attendance on our market to-day. Wheat unchanged. Barley an dmaize quiet at last week's prices. Oats 3d to 6d dearer. ORLANDO DAVIS AND Co.

Reading. Saturday. There was but a small attendance, and trade was very dull. A little wheat changed hands at last week's prices; barley realised 25s 6d to 35s per quarter; oats, 16s to 24s; beans, 32s to 38s; bran scarce and dear; straight run realising 90s and broad bran from 97s 6d to £5 per ton; tares, 6s to 7s 6d per bushel.

Retford. Saturday. There was not a very large supply of wheat. Average attendance. Although prices were decidedly firmer, with a strong upward tendency, there was no change in the quotations of wheat at 27s 6d to 28s; seed lots up to 29s per quarter. The malting barley on offer was of an inferior character, and lower by 1s, only the best keeping up to the mark; best sorts, 28s to 29s; inferior, 24s to 27s; grinding, 23s 6d; maize, 26s; black oats, 16s to 17s; white, 17s 6d to 18s; English beans, 30s; rye, 20s per quarter.

Ripon. Thursday. Barley is the chief feature, of which there is a good supply, which is making late rates. A good attendance, but little business passing. New wheat, 27s to 29s; wheat, foreign, 32s to 36s; barley, grinding, 22s to 23s; barley, malting, 26s to 28s 6d; new oats, 17s to 18s; maize, round, 25s to 26s; flat, 25s 6d to 26s 6d per qr.

Shrewsbury. Saturday.—Quotations:—Wheat, 12s to 12s 9d per 225lb; old white oats, 15s to 16s; new oats, 11s 6d to 12s 6d; peas, 11s 6d to 12s 6d per 240lb; beans, 13s 6d to 14s per 240lb; barley, 15s to 19s per 280lb.

Stamford, Friday.—There was a very firm tone in the market, which was largely attended. Wheats, 26s to 27s; barley, 27s to 29s 6d; oats, 17s 6d to 18s; new beans, 30s to 32s; old ditto, 31s to 34s; peas, 35s to 45s per quarter.

Sunderland. Saturday.—Wheat firm, and rather dearer. Barley also in sellers' favour. Oats steady. Arrivals nil.—E. AND F. RICHARDSON.

Tunbridge Wells. Friday.—New white wheat, 28s 6d to 29s; new red ditto, 27s 6d to 28s; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 16s to 19s; rye, 23s to 24s; peas 31s to 36s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 25s. Hay a very dull trade.

Winchester, Saturday.—English wheat a fair supply, and a shade dearer on the week. Foreign unaltered. Barley and oats unchanged. Maize 3d advance. Flour a good, steady demand at fully late rates.—FEAR, COLEBROOK AND Co., LTD.

Warwick, Saturday.—Small supply of wheat, and best samples make fully last week's prices; inferior and damp lots unsaleable. Several samples of autumn barley on offer, best samples making up to 30s. Very little change in other grain. Feeding stuffs rather easier.

Wisbech, Saturday.—Very little grain offering owing to the mustard seed markets being now on. Wheat firm at late rates; reds, 28s to 28s 6d. Oats dearer to buy. Barley, 24s to 27s.—JAMES FLETCHER.

Wolverhampton. Wednesday. — There was a good attendance, and a brisker trade was recorded. Quotations: New wheat, 11s 6d to 12s 6d per 216lb.; flat corn, 25s 6d to 26s 6d per 480lb.; English beans, old, 15s; new, 13s 6d; new oats, 10s 6d to 11s 6d; old oats, 14s to 15s per 196lb.

Worksop. Wednesday. — Fair attendance, and moderate show of grain. Barley more in demand. White wheat, 27s to 29s; red ditto, 26s 6d to 27s; malting barley, 28s to 30s 6d; secondary qualities, 26s to 28s; grinding barley, 23s to 25s; new white oats, 17s to 18s; old ditto, 21s to 23s; old black oats, 19s to 21s; new ditto, 17s to 18s; maize, 25s 6d to 26s 6d per quarter.

Yeovil. Friday.—Good offer of grain. Wheat sold at from 5s to 6d per quarter more money. Barley quiet and unchanged. Maize down 5s. Oats firmly held, and a few sales at 6d advance. Best quality English wheat made from 31s to 33s per quarter; secondary, 28s 6d to 29s 6d; foreign wheat, 32s 6d to 35s; malting barley, 31s to 35s; feeding 20s to 22s 6d; foreign, 19s 3d to 19s 6d; oats, white, 16s to 19s 6d; black, 17s to 20s; maize, 25s 3d to 26s 9d; beans, 32s 6d to 37s 6d; rye, 20s 6d to 22s 6d; vetches, 6s to 7s per bushel. Flour selling more freely on the basis of 24s 6d per sack for fines. Milling offals in good request at the full rates of last week.

York. Saturday. There was a good attendance, and a firmer tone about the market. Wheat was in moderate supply. Fine white made 29s to 30s; red and mixed, 28s to 29s per quarter of 36 stones. Barley was very variable in quality, and in good supply, but met with a slow trade, at 23s to 29s per quarter of 32 stones. Oats scarce and firm, from 17s to 18s 6d per quarter of 24 stones. Beans, peas, and maize firm at late rates.

FOREIGN

Paris. Wednesday. — Offers are still somewhat restricted in the provincial markets, and the same firmness predominates. Millers, in order to resist this tendency as much as possible, are only buying from hand to mouth so as just to cover their immediate requirements. At the Bourse de Commerce business is still quiet to a large extent, and buyers are extremely reserved. There is consequently very little doing, and prices, which opened at yesterday's level, finally fell off from 5c to 10c for wheat and from 5c to 15c for flour. Rye: Nothing doing. Oats quiet, at practically late prices. At the weekly spot market considerable difficulty is still being experienced in obtaining supplies of good dry home-grown wheat, for which good prices are being paid so as to mix them with moist qualities. It will be difficult to form any large stock, unless the winter should be cold. Business continues difficult, and prices show a marked difference in several places. The sale of consumption marks of flour is also difficult, as bakers have now sufficient stocks for the next fortnight, and will not make further purchases till prices have improved in the term market. Rye was very firm, and prices remained steady; buyers endeavoured to bring about a fall in prices, but the movement was unsuccessful, due to the opposition of sellers. Offers of oats still continue restricted, but farmers are showing a little more desire to sell; unfortunately the weather continues unfavourable for threshing. Offers of barley are less pressing; the sc districts which have good barley are keeping up their prices.—DORNBUSCH.

THE BALTIC.

Wheat cargoes have been in steady request. Transactions include Rosario at 30s. 3d. per 480 lb., Bahia Blanca at 31s. 6d. per 504 lb., White Walla at 32s. per 500 lb., Red Walla at 31. 9d. per 500 lb., No. 1 Blue Stem at 33s. per 500 lb., Roumania at 31s. 9d. per 492 lb., Australian at 33s. 9d. per 480 lb., and No. 2 Manitoba at 30s. 9d. per 480 lb. There are free offers to buy the latter at 30s. 6d., but holders stand out for the threepence difference.

Maize cargoes for arrival this side of Christmas are 3d. dearer; 23s. 3d. paid for Argentine and 22s. 9d. for American, both nearly due and per 480 lb. Other cargo sales have included Odessa barley at 18s. per 400 lb., White Clipped American oats at 15s. 9d. per 320 lb., Argentine linseed at 35s. 3d. per 416 lb, Ferozepore rapeseed at 36s. 3d. per 416 lb., and Egyptian cottonseed at £5 10s. per ton.

The London Corn Trade Association c.i.f. quotations, for the settlement of rejections and difference in weight on wheat under Rule No. 4 of the Association East Indian Wheat Contract, are as follows:—No. 2 Club Calcutta, 32s. 3d.; Soft Red, 30s. 6d.; Bombay Soft White Delhi, 32s. 3d.; Kurrachee Soft White Delhi, 32s. 3d.; Kurrachee—Choice White, 32s.; Soft White, 31s. 3d.; Soft Red, 30s. 9d.; all per 492 lb. These prices will govern cargo arrivals til a new list is issued.

The arrivals of grain and seed-laden vessels at ports-of-call for the week were 4 wheat (3 Melbourne, 1 Port Wakefield); 1 linseed (1 Rosario). Total 5.

The sailings of grain and seed-laden vessels from ports-of-call were 2 wheat (1 Antwerp and 1 Bremen), 3 linseed (1 Bremen, 1 Harburg, 1 Rotterdam). Total 5.

Since January 1, 1905, the total arrivals have been 288 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 6 maize, 1 beans, 4 locust beans, and 49 linseed. Total 377.

Last year during the same time the arrivals were 239 wheat 1 wheat and maize, 35 barley and wheat, 17 barley, 5 maize, 5 beans, 4 locust beans, 1 rye, 35 linseed, and 1 Canaryseed. Total 343.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The weather of September was favourable to the completion of harvest in the North and to the commencement of autumn ploughing in the South. The comparatively low temperature prevented a good deal of sprouting with the corn, which the heavy rains of later August had found cut but not carried. But the cool air did not prevent very grave discolouration, especially in a large quantity of barley. The weather record for the first nine months of the year thus runs:—

1905	Rain inches.	Sun hours	Warmth Degrees	Month Character
January ...	1·08	45	36·0	Dry
Feb uary ...	0·70	61	42·5	Dry
March	3·70	108	48·0	Showery
April	1·80	90	47·5	Chilly
May	0·81	215	52·0	Dry
June	1·50	174	59·0	Wet
July	1·17	240	65·0	Hot
August	3·00	150	59·0	Cool
September .	1·30	100	54·0	Cool

The threshings of wheat and barley continue to show a good bulk, yielded wheat averages a good weight, and also shows fine quality. Barley is rather over average weight, but usually rather coarse quality.

Austria, Hungary, Roumania, and Bulgaria are now securing their maize crops, which, without exceeding an average, are a considerable improvement on the very poor yield of last year. Russia reports a very busy sowing season, and the crops have been such a mainstay of the Empire during the war that it is not surprising that great efforts should be made to keep up and even extend the area. Labour, however, is scarce, owing to the vast forces detained in Asia despite the peace. Stocks of corn awaiting shipment at the chief ports are: 1,179,000 qr. of wheat, 481,000 qr. of rye, 345,000 qr. of barley, and 1,211,000 qr. of oats, against 1,089,000 qr. of wheat 296,000 qr. of rye, 555,000 qr. of barley, and 344,000 qr. of oats at this time last year. The great increase in the quantity of oats awaiting export will not fail to be noted by intending buyers in this country.

The American journalist in speaking of the maize crop just secured, may find it difficult to avoid the accusation of drawing the long bow, for from all the information which reaches us from commercial and agricultural sources, the yield is really extraordinary. There are no estimates, even the most conservative, which put it at less than three hundred million quarters, and the usual reports give the total at 330,000,000 qr. The effect of this vast production on trade in 1906 cannot fail to be great, but the crop, being one that is not useable for food until fully two months after the cob has been detached from the stalk, the influence will not be real until 1906 is with us. Maize for prompt delivery is firm at full prices, and for November delivery there is almost equal firmness.

The wheat crop in the Canadian Dominion is threshing out beyond expectation, not only in Manitoba, from which September reports came for the most part, but in Canada proper to the east, and in Saskatchewan, Assiniboina, and Alberta to the west and north-west of Canada's principal wheat district. The export samples of wheat for the Dominion is put at fully six million quarters.

The stocks of wheat in the chief ports of the United Kingdom on October 1 are now published, and, as compared with a year ago, show an increase in Liverpool, Manchester, Hull, Gloucester, Bristol, Dublin, and Londonderry. On the other hand, there are diminished holdings in London, Edinburgh, Belfast, and Limerick. The grand total is a little larger on the twelvemonth.

Holdings of flour are increased in Dublin and Limerick, but reduced in London, Liverpool, Glasgow, and Belfast. Holdings of barley show a general reduction, those of oats a general increase. Maize shows increased holdings in London, Liverpool, Manchester, and Bristol, but a reduction in the stocks at Hull, Edinburgh, and Glasgow.

The sales of English wheat at the statute markets since the beginning of the new cereal year have been very heavy, and, in fact, have been nearly double those of the like period in 1904.

	Per Qr.
This season, 456,000 quarters, at	28s. 11d.
Last season, 241,000 quarters, at	29s. 10d.

The sales of English barley have been rather smaller than usual, but they are now increasing.

	Per Qr.
This season, 264,000 quarters, at	25s. 8d.
Last season, 290,000 quarters, at	28s. 3d.

The sales of English oats have been as follows:—

	Per Qr.
This season, 142,000 quarters, at	15s. 11d.
Last season, 136,000 quarters, at	18s. 11d.

The most discouraging feature about these figures is the fall of 1s. 7d. in barley despite smaller supplies, and the failure of oats to improve in price despite the very material reduction in the market supply.

Imports of the United Kingdom last week were as follows:—

Wheat, 476,000 quarters; a large supply.
Flour, 100,000 sacks; a moderate supply.
Barley, 222,000 quarters; a very heavy arrival.
Oats, 90,000 quarters; a small supply.
Maize, 240,000 quarters; exceedingly good arrivals.

The imports of linseed and cottonseed were liberal, of beans and peas small.

Supplies on passage show a great decline in the case of wheat, and are now decidedly below the mean.

	Quarters.
Californian	30,000
American	90,000
Russian	385,000
Indian	241,000
Argentine	215,000
Australasian	200,000
Various	60,000
Total	1,221,000

The expectations of flour are 240,000 sacks, or less than half an average.

Of maize the expectations are as follows:—

	Quarters.
Round corn	30,000
Flat corn	250,000
Yellow corn	800,000
Total	1,080,000

This is larger than usual.

Of barley the expectations are 590,000 qr., and of oats are 425,000 qr. In each of these cases the mainstay of the trade is Russia.

The supplies of rice on passage have fallen to 26,000 tons.

Of oilseeds they are linseed 197,000 qr., rapeseed 9,000 qr., and cottonseed 19,000 tons.

London supplies of grain for the first nine months of 1905 have been as follows:—

	Wheat. Qrs.	Barley. Qrs.	Oats. Qrs.	Maize. Qrs.
Jan.	255,000	96,000	224,000	179,000
Feb.	284,000	138,000	311,000	182,000
March	345,000	34,000	251,000	137,000
April	401,000	90,000	272,000	139,000
May	299,000	105,000	363,000	90,000
June	285,000	28,000	328,000	100,000
July	414,000	21,000	494,000	124,000
Aug.	240,000	56,000	369,000	118,000
Sept.	282,000	175,000	364,000	190,000

The September totals were good, but not overwhelming. The scarcity of barley from the end of May until about a month ago was remarkable, but September has, it will be seen, rectified this.

The supply of flour includes large country consignments, but the small supplies from America have resulted in the totals being by no means excessive. They are: January, 215,000 sacks; February, 338,000 sacks; March, 273,000 sacks; April, 342,000 sacks; May, 283,000 sacks; June, 202,000 sacks; July, 215,000 sacks; August, 223,000 sacks; and September, 227,000 sacks. London imports of linseed January 1 to October 7 were 451,000 qr., against 677,000 last season.

London stocks of minor staples not given in our usual "Corn Statistics" are as follows:—

	1 Oct., 1905.		1 Oct., 1904.
Beans (qrs.)	7,010	....	13,667
Peas (qrs.)	15,130	....	21,856
Malt (qrs.)	2,321	....	3,386
Tares (qrs.)	586	....	2,388
Linseed (qrs.)	4,416	....	7,764
Rapeseed (qrs.)	1,179	....	731
Rye (qrs.)	100	....	329

Average weekly sales in London for the quarter from midsummer to Michaelmas Day are estimated to have been 73,122 qr. of wheat, 17,666 qr. of barley, 83,815 qr. of oats, 28,588 qr. of maize, 525 qr. of beans, 1,934 qr. of peas, 19,357 qr. of malt, 9,000 qr. of linseed, and 31,367 sacks of flour.

The visible supply of wheat in America is thus cabled:—

	Quarters.
7 Oct., 1905	3,612,000
8 Oct., 1904	3,653,000
9 Oct., 1903	4,130,000

The firmness with which American farmers are holding their excellent new crop is a feature of the present campaign.

Shipments from America last week were very moderate, but are none the less in excess of the extremely low figures of a year ago. Actual exports were 105,000 qr. of wheat, 174,000 sacks of flour, 44,000 qr. of barley, 79,000 qr. of oats, and 103,000 qr. of maize. Argentina sent off 65,000 qr. of wheat, 210,000 qr. of maize, and 10,000 qr. of linseed.

From the Old World shipments were: From Russia, wheat 625,000 qr., barley 420,000 qr., oats 441,000 qr., and maize 9,500 qr.; from Roumania, wheat 375,000 qr., and barley 85,000 qr.; from India, wheat 48,000 qr., and linseed 18,000 qr.; and from Australia, wheat 5,000 qr.

TO-DAY'S MARKETS.

MARK LANE, MONDAY, October 9.

[FIRST REPORT.]

English wheat to-day was a little more confidently held from the 2nd inst, and the prices made ranged from 28s. to 30s. for the great majority of samples. Foreign was 1s. cheaper for Manitoba, and 6d. lower for some Russian kinds; while all Indian, Australian, and Argentine samples had a slight tendency to appreciate in value. Barley was a rather active trade, and new English malting touched 37s. for the best, which included offers of Yorkshire, Suffolk, and North Norfolk grain. The bulk of Norfolk and Fenland offers came at 30s. to 33s., and there was too large a proportion of samples for which 27s. to 29s. was the price. Foreign was a fair offer of Persian at 18s. and 18s. 6d., and of Russian at 19s. or thereabouts. Oats were steady for English and firm for foreign. The price of maize was fully as high on spot as on the 2nd inst. 24s. was paid for the most part. Beans were held for 6d. advance. Peas, rye, and buckwheat were steady. A quiet market in rice was reported.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH A DISTINCT DECLINE IN MANITOBA AND A LESS MARKED FALL IN U.S.A. AND RUSSIAN WHEAT. OTHER ARTICLES, INCLUDING ENGLISH WHEAT, CLOSED FIRMLY.

THE FLOUR TRADE.

London and country makes of flour commanded an excellent consumptive demand, especially the country flour from Cambridgeshire, Suffolk, and Norfolk. Prices were not altered, sellers being content to book large orders and clear large stocks at the currencies that October had already established. American flour, under the pressure of this good trade in British, fell fully 6d. per sack, but failed to attract any large increase of inquiry at the fall. Whole meal declined 1s. per sack on the fortnight. There was a declining tendency last Monday, but not enough to justify our writing prices definitely lower, as we do to-day. Hungarian and Australian sorts of flour were firm, but there were few buyers of French. Argentine was so scarce that the quotations were hardly a test of value.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	No sales	Oct. delivery.
,, ,,	6s. 9d.	Dec. ,,
,, ,,	6s. 8d.	Mar. ,,

MAIZE (per cental).

American	4s. 10d.	Oct. delivery.
,,	4s. 10d.	Nov. ,,
,,	4s. 9d.	Dec. ,,
,,	4s. 4d.	Jan. ,,
,,	4s 3d.	Mar. ,,

The feature of to-day's trade in wheat futures was the offer of American for May shipment at 6s. 8d., with acceptances at 6s. 7d. per cental. Maize was offered for March, April, and May delivery at a level 4s. 3d. per cental. There were some buyers for all three months.

CHEESE.

Glasgow, Wednesday.—Good supplies of cheese, especially of Cheddars; business rather disappointing; prices obtained practically those ruling a week ago. Cheddars, 56s to 61s; Dunlops, 52s to 58s.

Newport, Wednesday.—A good supply, and business was fair. Quotations:—Caerphillies, 45s to 50s per cwt; fancy dairies, 50s to 53s; Truckles, 54s to 58s; Derbys, 62s to 64s; and Cheddars, 56s to 58s.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—Notwithstanding American quotations, trade continues quiet, and for spot flour prices remain unchanged. Offals.—There is a fairly good demand for bran; no further change to report in prices. GREENHILL BROTHERS (Belfast).

Flour.—Arrivals of flour are increasing, but the demand is poor. Spot prices unchanged. Shipment prices quite 1s. per 280 lb. above spot values. Grain.—Indian corn firm at 15s. 7½d. per 280 lb. Plate maize now plentiful. The demand for foreign oats is quieter. Fine Scotch oats are 3d. per boll up. American barley is arriving freely, but is being delivered mostly against contracts. Beans and pease are slightly in buyers' favour. Mill Stuffs.—Bran and Common Thirds dull. Fine Thirds continue to be asked for. MCKINNON AND MCDONALD (Glasgow).

Flour has met a quiet demand to-day at the full prices of this day week.—T. S. MEDILL AND SONS, LTD.

Arrivals of wheat are liberal. There is a quiet trade, and prices are unchanged. Flour sells slowly at late prices. Maize and grinding barley are 3d. per qr. dearer. Oats unchanged in value.—COVENTRY AND CO.

Milling Offals.—There is a better demand all round, but prices, although firm, remain unchanged from last week.—JOHN BAWCOMB AND CO.

FEEDING STUFFS.

Mark Lane, Monday.—Linseed cakes: There is a slight improvement noticeable in the consumptive demand, but buyers are unwilling to operate beyond their immediate requirements, the general impression being that prices will ease down as the winter advances. Russians sell steadily at £7 6s 3d to £7 7s 6d in mats, and £7 8s 9d to £7 10s in bags. American offer at £7 5s ex steamer just arrived. East India seed pures make £7 10s. London-made are in moderate request at £7 15s to £7 17s 6d per ton. Cotton cakes: A fair quantity of Egyptian is still available in warehouse, which, however, meets a poor inquiry, and values are quiet at £4 11s 3d to £4 12s 6d, with sellers in November-April position at 2s 6d per ton less money. English find a slow sale at £4 12s 6d to £4 13s 9d, and Bombays at £4. Decorticated London-made are in good request, being attractively offered at £6 17s 6d for cake, £7 for meal, and £5 5s for special digestive meal, while American "Open Hand" brand may be bought at £7 and meal at £6 12s 6d. Rape cakes: Dull; East India £4 15s, Ravison £4 10s. Maize germ meal: White American for winter shipment is still obtainable at £5 5s to £5 6s 3d c.i.f. terms, and English makes at £5 8s 9d to £6 10s per ton. Maize gluten meal is nominally quoted at £5 15s per ton. Rice meal: The market is almost bare of stocks, while for arrival sellers demand £4 17s 6d to £4 18s 9d ex ship. Broken Rangoon rice is relatively good value at £4 15s per ton. Locust beans again tend dearer, to-day's quotation being £5 5s for whole and £5 12s 6d per ton for kibbled. Nitrate of soda is unchanged at £10 15s per ton ex quay.—PINNOCK BROS., 30, Mark Lane, E.C.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt. each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are held more confidently, and maize is no worse from Saturday's close. A quiet trade in cargoes of oats and barley is reported. Not much is doing in cargoes of linseed or of pulse.

BUSINESS DONE.

WHEAT.—Australian, 33s 6d per 480lb., on passage; Rosario, 30s 6d per 480lb., on passage; Walla Walla, 32s 3d per 500lb., prompt shipment; No. 1 Manitoba, 31s 6d per 480lb., prompt shipment; White Kurrachee, 32s per 492lb., October shipment; fine Russian Azima, 34s per 492lb., October shipment; Odessa Ghirka, 31s 6d per 492lb., October shipment; Hard Taganrog, 30s 6d per 492lb., October shipment.

MAIZE.—Argentine, 22s 3d per 480lb., November shipment; American, 21s per 480lb., shipment before Christmas; American, 20s 6d per 480lb., January shipment; Russian, 23s 6d per 480lb., November shipment.

BARLEY.—Theodosia, 18s per 400lb., November shipment; Kustendje, 19s per 400lb., on passage; Californian, 26s 6d per 448lb., November shipment; Oregon, 26s 6d per 448lb., November shipment.

OATS.—Petersburg, 15s per 304lb., on passage; American, 15s 3d per 320lb., November shipment.

LINSEED.—Calcutta, 37s per 410lb., arrived; Bombay, 38s 3d per 416lb., November shipment.

COTTONSEED.—Egyptian, £5 10s per 2,240lb., November shipment.

CATTLE.

Metropolitan Market, Islington.

	Monday, Oct. 9, 1905. British.	Total.	Monday, Oct. 10, 1904.
Beasts	1,949	1,949	1,399
Sheep and Lambs	6,059	6,059	6,679
Calves	10	10	—
Milch Cows	50	50	40

Quotations per 8 lb. (sinking the offal).

ENGLISH

	Inferior.	Second.	First.
Beasts	3s 10d to	3s 6d to	4s 0d
Sheep	4s 2d to	4s 4d to	4s 8d

Milch cows, per head, £16 to £22.

British arrivals include as follows: Scotland, nil; Eastern Counties, 41; Devon, 25; Ireland, 67.

We note to-day a decrease of 110 head compared with Monday last, due to a smaller consignment from the Midland Counties. Trade for both prime and second quality fat cattle was of a very dull nature; nevertheless, late currencies ruled all transactions. The Irish supply consisted of 39 Dublins (9 of which were black polled cattle), 18 Waterfords, and 10 heifers from Cork; trade was slower, rates ruling in favour of the buyer. Fat butchering cows and bulls met with a limited inquiry by country buyers, consequently salesmen had to submit to a decline of from 1d. to 2d. per 8 lb. to effect sales.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Oct. 10, 1904.
Devons	4s 4d to 4s 6d	4s 0d to 4s 4d
Herefords	4s 4d to 4s 6d	4s 4d to 4s 6d
Runts	4s 6d to 4s 4d	4s 2d to 4s 6d
Lincolns	3s 10d to 4s 0d	3s 10d to 4s 0d
Irish	3s 10d to 4s 0d	4s 0d to 4s 2d
Fat Cows	3s 2d to 3s 6d	3s 6d ex 3s 8d

There was a decrease of 600 in the number penned in the sheep market compared with Monday last. Trade for all grades of wethers and ewes early in the morning was of a brisk nature at a rise in value of 2d. per 8 lb., but as the day advanced became slower at a decline on late rates. Scotch sheep sold well at 2d. per 8 lb. more money, whilst Irish, notwithstanding their being in shorter numbers, were very much in excess of the inquiry, and consequently fell 2d. per 8 lb. in value. The supply included 400 Scotch, 1,826 Irish, and 345 from Norfolk, Suffolk, and Essex.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Oct. 10, 1904.
7½ to 8 st Downs	5s 10d to 6s 0d	5s 10d to 6s 0d
9 st Downs	5s 8d to 5s 10d	5s 8d to 5s 10d
10 st Half-breds	5s 6d to 5s 8d	5s 6d to 5s 8d
10 st Irish	5s 0d to 5s 2d	5s 0d to 5s 2d
10 st Down Ewes	4s 4d to 4s 6d	4s 2d to 4s 4d
11 st Half-bred ditto	4s 2d to 4s 4d	4s 0d to 4s 2d

Calf trade not worth noting.

No pigs on the market.

FOREIGN.

Deptford, Monday.—Beasts 675. To-day's supply of beasts compared with the corresponding day last week showed a decrease of 590 head, and consisted entirely of shipments from the United States. Trade taken as a whole was of a decidedly firmer nature, both in regard to tone and value. Best States beasts to dress about 680 lb., 4s 1d; seconds, 3s 10d. No sheep on the market for sale to-day. On Saturday the supply of beasts consisted of 1,340 from the United States and 574 from Canada, trade for which was of a fairly firm and steady nature. The best of the former were quoted at 3s 10d to 4s 1d, and the latter from 3s 7d to 3s 10d. Sheep numbered 443 from Canada, and met a slow trade at 4s per 8lb. (sinking the offal.)

Liverpool, Monday.—Smaller supply of cattle in market to-day. Notwithstanding this, demand was slow, and prices were in buyers' favour. Large decrease in supply of sheep. This had beneficial effect on trade, and clearance was readily effected at advance of from 1s to 2s in price. Beef, 6¼d to 4¼d; mutton, 9d to 6d per lb. At market: 1,183 cattle and 5,305 sheep.

SEEDS

London, Monday.—The autumn sowing demand is drawing to a close. Winter tares are now moving off slowly. Seeds wheats still in fair demand; prices firm. There is more inclination to entertain the new clover seeds, but as there is little actual business prices are unsettled.—JOHN PICARD AND CO.

HOPS.

London, Monday.—W. H. and H. Le May, 67, Borough, London, report:—The demand for the bright hops is exceedingly good, and they are being taken as fast as they arrive for cold storage purposes. Brown hops are also being taken at the low prices ruling and for copper purposes. The imports of hops for the month ending September 30, 1905, were 4,606 cwt.; for the corresponding month last year, 28,117 cwt. The exports of hops for the month ending September 30, 1905, were 1,224 cwt.; for the corresponding month last year, 747 cwt.

EGGS.

(Number is 1s., except where otherwise stated.)

Thursday.—Axminster: 1s 1d to 1s 2d per dozen. Birmingham: 7 to 9. Brigg: 10 and 11. Devizes: 10 to 12. Driffield: 13 and 14. Evesham: 12. Kidderminster: 8. Penzance: 1s 1d to 1s 3d per dozen. North Tawton: 9. Penistone: 9 and 10. Plymouth: 9 and 10. Ripon: 8 and 9. Scarborough: 10. Wellington (Salop): 10 and 11. Wetherby: 8 to 10.

Friday.—Altrincham: 7 and 8. Ashburton: 1s 3d to 1s 4d per dozen. Barnstaple: 10 to 12. Camelford: 10. Chester: 8 and 9. Crewe: 8 and 9. Congleton: 8. Dartmouth: 1s 6d per dozen. Derby: 9. St. Austell: 10. Stamford: 8 to 10. Stockport: 7 and 8. Tavistock: 8 and 9. Totnes: 1s 4d to 1s 5d per dozen.

Saturday.—Appleby: 7 and 8. Berwick: 1s to 1s 2d per dozen. Bridgnorth: 10. Carlisle: 8. Doncaster: 8 and 9. Grantham: 10 to 12 and 13. Howden: 10 and 11. Ipswich: 10 to 12. Lancaster: 7 to 10. Malton: 11. Pontefract: 9 and 10. Retford: 2s 4d to 2s 6d per score. Richmond (Yorks): 7 and 8. Shrewsbury: 10 to 12. Skipton: 8 and 9. Stokesley: 10 and 11. Whitby: 8. Worcester: 9. York: 10.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

For fat beasts of both prime and second quality trade, practically confined to Monday, opened on that day very slowly, last week's quotations only being obtained for Irish cattle, the supply comprising 44 Dublins (10 of which were prime Black Polled cattle) and 20 Waterfords. Both prime and second quality English beasts met with a dull and dragging trade, rates favouring the buyer to the extent of 2d. per 8 lb. in most cases. For fat butchering cows and bulls on both market days trade was of a depressing nature, the former on Monday meeting with a fall of 2d. per 8 lb. on late currencies; rough cattle were also slow of sale on both market days.

At the Foreign Cattle Market, Deptford, the arrivals were somewhat larger this week; the supplies were drawn as usual from the United States and Canada. Trade on Monday was a firm and steady one, but it became slower as the week advanced, with a decline in value. The total number of beasts on offer at both markets was 4,739, as against 5,476 during the preceding week, consisting of 1,180 British (decrease 230) and 3,559 foreign (decrease 1,507, these latter comprising 2,560 from the United States and 999 from Canada. The following were the top rates obtained per 8 lb. (sinking the offal): 80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 8d. to 3s. 10d.; 80 to 95 stone Irish, 4s. to 4s. 5d.; 90 stone States, 4s., ex. 4s. 2d.; 95 stone Canadians, 3s. 8d. to 3s. 10d.; 90 stone fat cows, 3s. 4d., ex. 3s. 6d.

The sheep trade at Islington on both market days was of a slow nature, on Monday salesmen having to accept 2d. per 8 lb. less money to effect sales; even at this reduction a clearance was not effected. Irish descriptions also met with a downward tendency in value, whilst on the other hand Scotch sheep were fairly steady, late currencies being maintained. A few lambs were offered for sale, but met with little or no demand, rates remaining unquotable in consequence. At Deptford a small consignment of Canadian ewes were offered for sale; prices, however, were 4d. lower than on the previous week. The total number on offer at both markets was 8,447, as against 8,458 during the previous week, consisting of 7,200 British (decrease 600) and 1,247 Canadians (increase 679. Best pens made per 8 lb. as follows (sinking the offal): 7½ to 8 stone Downs, 5s. 10d.; 8 stone Scotch, 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 8d.; 10 stone Halfbreds, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 4s. to 4s. 4d.; Canadian ewes, 3s. 10d. to 4s.

Calf trade nominal, numbering 20 head.

Pigs numbered 50; the best small breeds were quoted from 4s. 6d. to 4s. 10d.; these all cleared.

Trade in the West.

The improvement in the milch beast trade to which we referred in our last issue has been, with a steadily-increasing demand, fully maintained for all the more useful descriptions, even if the plainer grades fail to find quite as much favour with buyers. So far, it is mostly the best milchers that are in request, and these are selling readily from £17 up to £22, which has to be paid for really good heifers; plainer kinds, with a much quieter sale, make from about £16 10s. down to as low as £11 or £12 for aged cows. Barreners, on the contrary, continue very much neglected; and some ascribe this to its being somewhat early as yet to begin purchasing this class of stock; though buyers who will be wanting graziers a month hence can hardly do wrong in buying somewhat earlier than usual, seeing the favourable conditions now offering, as it requires something exceptionally good now to realise from £24 to £25 per pair—animals, too, that are in a very fair way on to beef.

Sales of sheep, as we have more than once predicted, are proving rather disappointing. It is not the want of buyers that is having such an adverse effect on the trade, for these are plentiful enough; but it is more the question of price, as unless they can make their purchases at a medium figure these wanting sheep show but little inclination to buy.

Some of the fat stock now coming out, especially the Devons, is of excellent quality, but the supplies are too plentiful to admit of anything like high prices ruling very long. Anything prime readily brings 4s. 8d. to 4s. 10d. per stone, and occasionally 5s. is reached, but this must be for something very special; secondary grades, 4s. 4d. to 4s. 6d.; a few decent cross breds are selling at 4s. 4d. to 4s. 8d. Calves, which are again much wanted, are none too plentiful, and the best are consequently making a good price—5s. 4d. to 5s. 6d. for best, and 5s. for seconds (or from £4 10s. to £6 10s. per head for really well-finished lots); rougher grades sell at 4s. 6d. to 4s. 10d. In mutton there is a good steady trade passing, especially in wethers, which are bringing 6s. to 6s. 2d. for the best weights, and for other grades 5s. 4d. to 5s. 8d. Down ewes are not selling so well, except for anything young and choice, which in some cases sell up to 4s. 10d., though a more average figure is from 4s. to 4s. 6d. Young mutton is in request by the bettermost class of purveyors, to whom quality is of greater importance than price; and in these cases 10d. to 11d. per lb. is paid for the primest weights. Pigs are again showing a slightly hardening tendency, the best weights in porkers being up again to 10s. and 10s. 6d. per score, and baconers from 9s. to 9s. 6d. and over.

Trade in Scotland.

The number of cattle on offer has been rather smaller. The best class still continue to be shown in moderate numbers, and these met a good trade at satisfactory prices. Secondary cattle are very difficult to dispose of at low prices. Fat cows have also been shown in smaller numbers, and they met a satisfactory trade. Fat sheep were shown in fewer numbers. For those adapted for shop purposes previous prices were realised, but secondary sheep and ewes are more difficult to sell. Fat lambs scarce, and those of good quality met a good trade. Fat calves and pigs were dear. There was a smaller supply of store sheep, and generally of a secondary description. Trade was dull, except for those of the better class, and a portion of the inferior sheep were left unsold. There was a fair supply of store cattle. The best class met a fairly good trade, but secondary kinds met a quiet demand, and disappointing prices had to be taken. A large show of milch cows met a slow trade. Quotations:—Top price of best cattle per live cwt., 39s. 2d.; Current, 35s. to 36s. 6d.; Irish, 30s. to 35s.; Mutton, 7½d. to 9d. per lb.—JOHN SWAN AND SONS, LIMITED.

Trade in Ireland.

Ballinasloe Fair, which was held during the past week, was the chief centre of attraction to those interested in the Irish cattle and sheep trade, as the transactions there are supposed to give the tone to the other markets for the end of the season. In the matter of sheep, Ballinasloe Fair shows a great falling off from former days, only about 15,000 being sold, and 3,000 left unsold. The best price for a big lot of wethers was, as usual, got by Mr. Smith, of Masonbrook, who topped the fair with 63s. each. The fair, on the whole, was a bad one, but the drop in price for cattle was not as much as was expected. Kerries, which always form a feature of great interest at Ballinasloe, were fully 10s. per head under last year. In Thursday's Dublin Market several well-known buyers were conspicuous by their absence, probably owing to Ballinasloe Fair. There was a large supply of cattle—3,849, or 218 over previous market—but only 7,553 sheep, a decrease of over 1,000. Buying for cattle was very discouraging, and 30s. (live-weight) was about the working price. For coarse cattle the buying was very slow and uneven, and for cow beef the market was cheap and sales hard to make. A large quantity of beasts—good, middling, and bad—were left over unsold. The dead-weight quotations for beef were:—Choice ox and heifer from 52s. to 56s. per cwt.; good medium beef, 46s. to 47s.; and inferior, 42s. to 45s. per cwt. Although supplies showed such a decrease, the mutton market was better as regarded trade, which was brisk for anything good. Some lots of sheep purchased in Ballinasloe Fair, and sent up, made from 1s. to 2s. per head more money. Nice wether mutton made 6¾d. to 7½d. per lb.; ewe, 6d. to 6½d., and inferior from 5d. to 5½d. per lb. Veal sold at about the same rates. Some fine, well-fed calves sold as high as £6 to £9 each, or from 7d. to 8½d. per lb. Coarse calves irregular, at from 5d. per lb. upwards. Milch cows in poor request, with only choice heavy milchers bringing satisfactory prices. No improvement in the store cattle trade generally, but at a large sale of over 1,000 head held on Thursday by one of the Dublin salesmasters, good prices were realised. The best figure given was for a lot of nice two-and-a-half-year-old bullocks, which sold at £14 15s., while some choice heifers of the same age made up to £16 each, which represented 33s. per cwt. (live weight). Most of the consignments were purchased for Yorkshire and Scotland. In the pig market there were few buyers in evidence at the opening of business, but later on they turned up, and buying became brisk, at a better tone than on the previous Thursday. Choice light-weight pigs sold at from 52s. 6d. up to 55s. per cwt.; inferior from 36s. to 44s. per cwt.

LONDON.

Islington, Thursday.—Supply of beasts consisted chiefly of fat butchering cows and bulls, and a few fat beasts. Trade for the former was very slow, nevertheless last Monday's quotations governed all transactions, but prime quality beasts were practically unsaleable, consequently quotations unquotable. Top prices: fat cows, 3s 4d to 3s 6d; fat bulls, 2s 10d to 3s 2d per 8 lb. Decrease of 450 in number penned in sheep market, supply consisting entirely of Downs and half-breds. No Scotch or Irish sheep being offered. Trade very quiet, with downward tendency in value, but not sufficient to quote. Best pens made per 8 lb. as follows:—8 st. Downs, 5s 10d; 9 st. ditto, 5s 8d; 10 st. ditto, 5s 6d; 10 st. half breds, 5s 4d to 5s 6d; 10 st. Down ewes, 4s to 4s 2d. Calf trade nominal. Pig trade slow, but steady, at advance of 2d to 4d per 8 lb. best small breeds quoted 4s 10d per 8 lb. Quotations per 8 lb., sinking the offal: Beasts, 2s 10d to 3s 6d; sheep, 3s 10d to 5s 10d; calves, 5s 6d; pigs, 2s 10d to 4s 10d. Total supply: Beasts, 30; sheep, 550; calves, 10; pigs, 50; milch cows, 5.

London (Central), Friday. Good supplies and slow trade at the following quotations:—English beef, 3s 4d to 3s 6d; Scotch sides, 3s 10d to 4s; ditto shorts, 4s 2d to 4s 6d; Deptford and Liverpool killed, 3s to 3s 6d; refrigerated hindquarters, 3s 8d to 3s 10d; ditto seconds, 2s 6d to 3s 2d; ditto forequarters, 2s to 2s 4d; inferior beef, 2s 4d to 2s 8d; mutton, Scotch wethers, 4s 8d to 5s 4d; ditto tegs, 4s 4d to 5s; ditto ewes, 3s 2d to 3s 6d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 2d to 3s 6d; foreign sheep, 3s 10d to 4s 4d; English lamb, 4s 4d to 5s; English veal, 3s 4d to 4s 8d; English pork, 4s to 4s 6d; Dutch pork, 4s to 4s 4d per 8lb.

Manchester, Friday.—Beef: Firsts, 5d; seconds, 4½d to 4d; thirds, 3d to 3½d. Mutton: Firsts, Cheviots, Scotch, 7½d, and others 7d; seconds, 6d to 6½d; thirds, 5d to 5½d. Veal: Firsts, 6½d; seconds, 5½d to 6d; thirds, 4½d to 5d. Bacon pigs: Firsts, 5½d; seconds, 4½d to 5d; thirds, 3½d to 4d. Porket pigs: Firsts, 7¼d; seconds, 6¼d to 6¾d; thirds, 5¼d to 5¾d per lb.

COUNTRY.

Ashford, Tuesday. Beef trade was dull, but best steers made up to 4s 8d; most animals shown were, however, only half fat, and these ranged from 4s to 4s 4d. Mutton trade scarcely so good as last week; best made up to 5s 10d. Veal a little cheaper, up to 5s 6d. Pork still dear, best making 4s 4d.

Basingstoke, Wednesday. At Raynbird and Sons' sale yard there was a large attendance of buyers to meet a supply of 54 fat beasts, 93 calves, 304 fat sheep and lambs, 253 pigs, and 232 head of dairy and store cattle, for which the following prices were realised:—Prime quality Shorthorn steers, £19 15s; heifers up to £21; cows, £19; Devons from £18 to £21 15s; two-year-old Polled steers from £16 10s to £20; fat calves, 70s to £6 2s 6d; small, 20s to 50s; fat hogs, 65s to 92s; porkers, 45s to 60s; small, 28s to 42s; store pigs, 8s to 26s; dairy cows, £9 15s to £21 10s; prime Down wethers and ewes made up to 52s 6d; old ewes, 34s to 40s; cross-bred Scotch wethers, 47s; nine-months old lambs up to 55s 6d; small, 35s to 40s; a few three-months old sucking lambs made from 28s to 32s; rams, 42s to 52s. The supply of fat beasts included a good number of prime quality Devons Shorthorns and black Polled beasts, for which there was a good demand at late rates; half fat and inferior cattle a bad sale and prices lower. There was an average show of fat sheep and fat lambs, nearly all good quality Downs, and, with a brisk demand, a satisfactory clearance was made, more money being given for good fat ewes; for wethers and lambs previous prices were well maintained. There was a large supply of dairy cattle on offer, which met a good demand, most of the lots being cleared at an advance on last week's prices. Store cattle of good class received more attention, but the trade cannot be quoted appreciably higher. Fat calves of good quality met a brisk trade at late rates. Both fat hogs and porkers met a quick demand and were cleared at last week's quotations; store pigs continue a good trade. Ruling values:—Best fat beasts, 6½d to 7d; second ditto, 6d to 6½d; cows, bulls, and inferior ditto, 5d to 5½d per lb.; best fat sheep and big lambs, 8¼d to 9d; second ditto, 7½d to 8d; old ewes, rams, and inferior sheep, 6d to 6½d per lb.; fat calves, 6d to 8½d per lb.; fat hogs up to 10s per score; porkers, 9s 6d to 11s per score.

Berwick, Saturday.—Over 200 cattle were penned. Heifers, £7 10s to £10 10s; stirks, £8 15s to £10 10s; two-year-olds, £12 10s to £15 10s; three-year-olds, £13 10s to £16 10s; polled bullocks, £8 10s to £12 10s; horned bullocks, £12 to £15.

Birmingham, Thursday.—Small supply of beasts, sheep and pigs. Trade fair for pigs, but slow for beasts and sheep. Prices: Beef, 5½d to 6½d per lb.; mutton 6½d to 8¾d per lb.; lamb, 8d to 8¾d per lb.; bacon pigs, 9s 10d per score; cutting pigs, 10s per score; porkets, 11s. to 11s 8d per score; cows, 8s 3d per score.

Bristol, Thursday.—Market was quiet all round, and values showed a tendency to decline. Beef was in good supply, but demand limited, and trade was dull at late rates, the highest price being 58s per cwt. Mutton was more plentiful, but inquiries scarce, and quotations showed a fall of ½d per lb. on best wethers. Pigs not numerous, and prices unchanged.

Calne Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s.	d.
6sc. 10 lb. to 9 sc. 10 lb...	2¼ in. and under ...	9	0
Under 10 sc.	Not exceeding 2¼ in.	9	0
Under 11 sc. 10 lb. ...	2¾ in.	8	6
Under 12 sc.	3 in.	8	0

C. AND T. HARRIS AND CO., LTD.

Canterbury, Saturday. Good demand for best breeding stock; rams, 9 to 15 guineas; ewe tegs of average quality, 48s to 52s; and best up to 62s. Wether tegs in poor demand. Best, 42s to 44s. Lambs up to 30s per quarter.

Carlisle, Saturday.—The supply of Irish stock on the sands continues large, and business was fairly brisk. Small wintering heifers, £8 to £10 10s; and stall-feeding cattle, £14 10s to £15 10s; bullocks, £8 10s to £11 10s.

Chester, Thursday.—Large supplies of stock, and a fair demand at the opening; later buyers proved rather indifferent, and were not inclined to purchase except at lower prices, consequently there was a bad finish, with quotations decidedly weaker. A very large show of sheep; trade was quieter. Milch cows, £17 to £22; calvers, £15 to £17; barrens, £10 to £13; heifers, £9 to £15; stirks, £6 to £10; sheep, 16s to 35s each.

Colchester, Saturday.—Grass beef, 4s 4d to 4s 8d per stone; mutton, 5s 8d to 6s 4d; pork, 8s 6d to 9s per score. Mutton was rather dear, and there was a slow trade in pork. Little mutton was offering, but there was a good supply of pork and beef.

Doncaster, Saturday.—Moderate supply of cattle, and fair attendance of buyers. Trade improving, and bullocks a shade dearer. Milch beasts, £16 to £22; bullocks, £12 to £17; heifers and drapes, £11 to £14; stirks, £7 to £9; young stores, £4 to £6 each. Smaller supply of sheep than last week, and trade rather slow. Ewes, 45s to 55s; lambs, 32s to 40s each.

Dorchester. Saturday.—Messrs. Ensor and Son had a very full market to-day, the only exception being mutton, which came, as usual, sparingly to hand. Milch beasts in active request for the best up to about £21, ranging down to £16 10s; whilst the plainer grades sold more quickly at from £13 to £15 15s. Barreners still in large supply, which had a somewhat depressing effect on prices, £22 10s to £24 10s per pair being the top rate for the best; where sold singly a little more money was made. A few store bulls made £8 10s to £10 10s each. In beef prices were fairly good, heifers making £15 15s to £17 10s each (or 10s 6d to 11s per score); fat cows, £14 to £15 10s; fat bulls, £14 10s. Mutton showed but little quotable change in value for late quotations.

Dublin, Thursday.—Numbers in market: Beasts, 3,849, increase 218; sheep, 7,553, decrease 1,027; calves, 49, increase 7. Another dull market for all descriptions of cattle choice qualities with difficulty bringing late rates; middling and inferior sorts lower, and a number left unsold at close of market. The large decrease in sheep caused a brisker trade and a better clearance at practically last week's prices. Cattle, live weight (best), 28s to 30s per cwt.; middling and inferior sorts, 25s to 27s 6d per cwt. Mutton, dead weight, 5½d to 7½d per lb.—GANLY, SONS, AND CO.

Edinburgh, Wednesday.—There was a fair trade, and prices maintained for cattle and sheep. Polled bullocks, £13 13s to £15 15s; stirks, £9 9s to £10 10s; Cheviot Dinmonts, 30s to 38s; Cheviot ewes, 20s to £29s; blackfaced ewes, 20s to 25s; best Shorthorn cows, £26; Ayrshires, £15 to £21; and crosses, £18 per head.

Exeter. Friday. 340 beasts, but only the best quality in demand at late prices; 11s per score for steers and maiden heifers; cows, 9s 6d to 10s; 1,234 sheep, but only big lambs and hogs in demand, and these sold readily at 8d; ewes, 6½d; small choice, 9d to 10d; 105 calves, 7½d.

Glasgow, Wednesday. — Supplies moderate and demand fair. Prices steady. Top Scotch cattle, 63s to 64s per cwt; top hogs, 9d; secondary, 8¼d to 8¾d; top wethers, 8d to 8¼d; secondary, 7d to 7½d; best lambs, 9d per lb. Dead meat slow, with values unaltered. Best Scotch beef, 6d; best States, 5½d; best Canadians, 5d; best cows, 4½d; hoggs, 7¾d per lb.

Gloucester, Monday.—Messrs. Bruton, Knowles and Co., report their sales as follows:—Cattle: A short supply with improved trade. Sheep and lambs: A fair supply with trade hardly so good. Pigs and calves: A short supply with very good trade.

Gloucester, Saturday.—Messrs. Bruton, Knowles, and Co. report their sales as follows: Cows and calves, a very large supply (115), with trade hardly so good, except for the best quality, which sold readily. Store cattle a moderate supply, nearly all changing hands.

Hereford, Wednesday.—The dulness which has characterised the beef trade for some time past appeared to be rather accentuated. There was a good supply for the time of year. Bullock and heifer sold at 6d to 6½d, a few prime animals reaching perhaps another farthing. Fat cows were at a low price. The sheep trade was not quite so brisk; they were certainly not so dear, and there was not an over-supply. Choice quality wethers made 8d, and fat ewes 5d to 6d per lb. Several nice bunches of store lambs met readily with customers. Fat calves went a trifle easier, at about 7d to 7½d per lb for nice quality. Well-bred store calves in demand. We had a fair supply of nice quality porks and bacons; small porks, 5½d to 6d per lb; baconers, 5d to 6d per lb. Fair trade for good strong store pigs. Store cattle trade continued quiet.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons' report an average supply of fat cattle; well-finished yarded animals met a brisk trade, but grass cattle were slow with prices in favour of buyers. At the special sale of store cattle about 350 were penned, including 150 choice North-country Shorthorns; trade was dull, and for all but a few of the best lots prices ruled lower; Shorthorn steers, 2½ years old, forward in condition, made from £13 7s 6d to £11 10s; North-country steers, from 18 to 14 months old, £10 10s to £7; Shorthorn steers, 18 months, £8 2s 6d to £7 10s; Polled ditto, £8 10s to £7 15s; Irish calves, £5 2s 6d. Several cows were offered, but the demand was slack, and values showed no improvement. Fat sheep were penned in moderate numbers, and prices ruled rather lower; half-bred hoggets to 54s 6d; shearlings to 55s 6d; store lambs were in fair request, small Suffolks and half-breds going at from 32s 6d to 38s 6d. Fat swine continue to come sparingly to market; trade was firm at from 7s to 6s 3d per stone; well-bred stores dear at from 32s to 22s. At the second Michaelmas sale of horses at the Drill Hall, 110 were catalogued. There was a large attendance of local and distant buyers, and all the best animals sold well; cart horses to 36 gs.; colts to 35½ gs.; hacknevs to 27 gs. Numbers at sales and market: 884 cattle, 1,424 sheep, 1,696 swine, 134 horses.

Leicester, Saturday.—Larger consignments of home-bred bullocks. Buyers were moderately represented, and trade ruled sluggish at easier rates. Choice milch cows, £20 to £22 10s; good lots, £17 to £19; secondary, £14 to £16; Shorthorn bullocks, £11 to £14; Irish cattle, £12; Welsh bullocks, £10 to £14 10s; young stock, £6 to £9; calves, 10s to 30s each. Sheep sold slowly at rather irregular rates.

Lincoln, Friday.—Fair show of beasts, which sold well at last week's prices. The sheep pens were well filled, and good prices were realised. Young ewes, 40s to 50s; drape ewes, 25s to 35s; lambs, 28s to 40s; gimmers, 50s to 60s.

Lynn, Tuesday.—Average show of fat beasts, 7s to 7s 9d per stone; larger show of stores of better quality, £5 to £20 each. Average show of fat sheep made late rates, 9s to 9s 6d per stone; stores, 38s to 45s; lambs, 28s to 40s; breeding ewes, 45s to 55s; and rams, £5 to £7 each.

Norwich, Saturday. Supply of fat beasts quite equal to demand, trade ruling on same lines as last week, 7s to 7s 6d per stone, 8s being paid for best qualities; majority store beasts offered were Irish, trade being dull, and values unchanged. Good demand for store sheep and lambs, which made 45s to 62s, and 28s to 38s per head respectively. Fewer fat sheep offered, trade again firm at 9s 6d to 10s 6d per stone; few lots of lambs sold for 10s per stone. More fat pigs offered, and demand maintained at 6s 9d to 7s per stone.

Preston, Wednesday. There was a capital show of cattle and sheep, but only a moderate attendance of buyers, and trade all round was dragging. Beef prices were again in buyers' favour. Cows and bulls made 4¾d to 5d, heifers and bullocks from 5¾d, calves 5d to 7¾d, hoggs 8¾d to 9¾d, lambs, 8¾d to 9¾d, ewes 6d to 6¾d, tups 5d to 5¾d. Numbers at market: 225 cattle, 2,189 sheep, and 146 calves.

Retford, Saturday.—The prices of store stock showed a slight decline, but the show was limited, and the business transacted was small.

Romford, Wednesday.—Short supply of fat beasts, trade no better. Best, 4s 2d to 4s 4d; middlings, 3s 10d to 4s per stone. Calves scarce, trade better at 5s 2d to 5s 4d per stone. Sheep in short supply, trade fair; best, 5s 10d to 6s; middlings, 5s 2d to 5s 4d; ewes, 4s to 4s 4d per stone. A few store beasts on offer, but slow demand.

Shrewsbury, Tuesday.—Quotations:—Beef, 5¾d to 6¾d per lb.; mutton, 7d to 9d per lb.; lamb, 9d to 10d per lb.; veal, 7d to 7¾d per lb; porked pigs, 2s 6d to 10s per score; bacon pigs, 8s 10d to 9s 6d per score. Numbers offered as follows: 685 cattle, sheep and lambs 2,825, calves 78, pigs 512.

Thame, Tuesday.—There was a large entry of all descriptions of stock, and a capital attendance of buyers. The beef trade was decidedly slow, only choice animals meeting with support. The sheep pens were well filled, and continue to sell satisfactorily. Veal slow. Bacon and pork maintain previous prices. Messrs. Bond and Burrows' sale comprised 127 fat beasts, 254 fat sheep, 151 fat and weaning calves, and 124 fat and store pigs. Fat oxen made from £16 to £20, fat heifers £15 to £18, fat wethers 42s to 57s, fat ewes 38s to 57s, fat lambs 28s to 38s 6d, fat calves, £3 to £4 10s, weaning cow calves, 28s to 68s, bull calves 10s to 50s, bacon hogs £4 to £5 17s 6d, porkers 28s to 45s, store pigs 12s to 20s.

Truro, Wednesday.—Business fair, attendance very good. Fat bullocks, 54s to 58s per cwt; barreners and store bullocks, 40s to 45s; cows and calves, £11 to £16 each; rearing calves, 20s to 40s; ewes, 40s to 50s each; wethers, 7¼d per lb; ewes, 5d; lambs, 7½d; pigs, 10s to 45s each; beef, 6d to 8d; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured 6d to 7½d; cured 7d to 9d; pork carcases, 4½d to 5½. Number in cattle market; Bullocks, 470; calves, 77; sheep, 562; pigs, 304; horses, 5.

Wolverhampton, Wednesday. Trade slow all round; supply fair. Prices:—Beef, 5d to 6¾d per lb; mutton, 6d to 8¼d per lb; lamb, 8¼d to 8¾d per lb; veal, 6d to 7½ per lb.

Worksop, Wednesday.—Moderate supply of stock, Trade fairly good, especially for sheep. Best beef, 7s to 7s 6d; secondary, 6s 6d to 7s per stone; best Southdown wethers and cross-bred shearlings, 8d to 8¾d; ewes, 6d to 7d; lamb, 8¾d to 9¾d per lb.

York, Thursday.—A smaller supply of sheep, only about 16,000 being penned, and a slightly better trade for lambs, which fetched a shade more money. Twice-crossed lambs made up to 35s, half-breds 26s. Masham ewes to 46s, North Country ewes 50s to 55s, and long-wool sheep 56s to 57s. There was a fairly good trade for rams. Ram lambs made £3 10s to £4, a few secondary lots fetching about 50s. Leicester and Lincoln rams made £3 15s to £5. There were only about 1,500 beasts shown, which included a few English store cattle, for which there was no demand, and prices were not quoted. There were no cows on offer. A good show of Irish store cattle. Best three-year-old heifers made up to £16 10s, and two-year-olds £13. There was a fair demand for two-year-old bullocks, which made up to £11 10s, stirks ranging up to £9 5s.

FOREIGN.

Yorkhill, Monday.—Large supplies of Canadian and American cattle were on offer at the usual weekly sales held to-day, no fewer than 1,155 head being penned in the lairages. There was a large attendance of town and country buyers, but business was very quiet at the opening, and continued on slow lines till the close, sellers having to concede from 1s to 2s per cwt on last week's rates to effect sales. Bullocks were generally of useful quality, and for animals of really choice merit a steady demand at the reduced quotations was experienced, prices ranging to 54s, but secondary, middling, and inferior sorts were not in great request, and were cabled as low as 50s per cwt dead weight. There were not many bulls on offer, and prime beasts sold at about late rates, viz., 47s to 48s per cwt.

GAME AND POULTRY.

Smithfield, Saturday.—There was a fairly good supply and demand. Prices: Geese, 6s to 7s; country ducks, 2s 3d to 2s 9d; Surrey fowls, 2s 6d to 3s 6d; Essex fowls, 2s 3d to 2s 9d; Lincolnshire fowls, 2s to 2s 9d; Irish fowls, 1s 6d to 2s; Russian fowls, 1s 6d; black game, 1s 6d; wild ducks, 1s 6d; quails, 9d to 1s 3d; feathered pigeons, 8d to 9d; Bordeaux pigeons, 9d to 1s 1d; English hares, 2s 6d to 3s; leverets, 1s 9d; Scotch hares, 1s 6d; tame rabbits, 1s 4d; wild rabbits, 8d to 11d; live hens, 1s 6d to 2s each; Australian rabbits, 6s to 7s 6d per dozen; pheasants, 5s to 6s; young grouse, 6s to 6s 6d; old, 3s 6d; young partridges, 2s 6d to 3s; old, 1s 8d per brace.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—There was a steady demand for a full supply of fruit and vegetables. Quotations: Apples, 3s to 12s per bushel; blackberries, 1s 6d to 2s per peck; pears, 3s 6d to 7s per half-sieve; ditto, 8s to 12s 6d per crate; grapes, 6d to 3s; peaches, 3s 6d to 12s; green figs, 6d to 1s 6d per dozen; cobnuts, 4s 6d to 5s 6d; filberts, 4s to 5s per 12lb.; damsons, 2s 6d to 4s per half-sieve; melons, 9d to 1s 9d; tomatoes, 1s 6d to 3s 6d; Brussels sprouts, 1s 6d to 2s 3d per half sieve; mushrooms, 8s to 12s per 12lb; parsley, 1s 6d to 2s; mint, 1s 6d to 2s 6d; leeks, 1s 3d to 1s 6d; turnips, 1s 6d to 2s 6d; radishes, 6d to 9d per dozen bunches; cos lettuce, 9d to 1s 6d per score; onions (English), 4s 6d to 5s 6d per cwt.; celery, 8s to 12s per dozen rolls; cabbages, 3s 6d to 4s 6d; cauliflowers, 3s 6d to 5s 6d per tally; horseradish, 8s 6d to 12s 6d per dozen bundles; cucumbers, 1s 6d to 3s 6d; endive, 9d to 1s 3d per dozen; beetroots, 1s 6d to 2s; scarlet runners, 1s 6d to 2s 6d per bushel; parsnips, 2s 6d to 3s 6d per bag; potatoes, 45s to 70s per ton.

COLONIAL DAIRY PRODUCE

London, Friday.—Butter: Unsettled weather has been pretty general over the United kingdom this week, with the temperature considerably below the normal. There is no improvement in the demand for Canadian butter this week over last, although arrivals are very much lighter. Values remain virtually unchanged. For choicest lots of unsalted on the spot there is a good demand at last week's figures, but for quality below choicest the demand is slow. Owing to the rise in c.i.f. quotations which took place last week there is not much business passing. In Australian butter, choicest brands still meet a good demand, whilst for other qualities holders are not quite so firm as they were last week. Choicest salted butter is making 110s to 112s, and choicest unsalted 114s to 116s. Arrivals during the week have been small. The market in Denmark is quiet, and the Copenhagen official quotation is unchanged. Cheese: There has been a good general demand for Canadian cheese at an advance of 1s per cwt on last week's prices, although the speculative element just now is quite dormant.—W. WEDDEL AND CO.

FEEDING STUFFS.

Hull, Tuesday. Linseed: Linseed early in the week advanced about 1s per qr, but has again turned quiet, and practically the whole of the advance has been lost. River Plate, spot offers at 24s 9d is lighter, afloat 25s, September-October nominally 25s 3d, and October-November 25s 6d. Cottonseed: The market for Egyptian has been quiet with a declining tendency all the week, and sales made of old crop on spot down to £5 9s. New September done at £5 1s 6d to £5 2s 9d, and a fair quantity October changed hands at £5 1s 9d to £5 2s 9d, also November-January at £5 1s 6d to £5 1s and to day £5 2s 9d accepted for latter months. Bombay has been neglected owing to sellers' values being much above the market. Oils: Exports for the week ending September 26, 1905: Linseed oil: 7 America, 2 Denmark, 1 Egypt, 5 Germany, 5 Norway; total 20 tons. Cottonseed oil: 2 Belgium, 2 Egypt, 11 Germany, 29 Holland, 6 Italy, 1 Norway, 5 Sweden; total 14 tons. The market is quiet. Linseed oil: 14s 1½d spot, 14s 6d Oct.-Dec 14s 10½d Jan.-April. Cottonseed oil: 14s 6d spot 14s 9d Nov.-April. Crude oil: 13s 6d spot, 13s 7½d Nov.-April. Ravison naked: First quality, 19s 9d, spot. Oilseed cakes: Linseed cakes firm, unchanged, with rather more demand. Oilcakes 5s dearer. Cotton cakes: Best unchanged. Bombay 2s 6d per ton dearer. Demand slightly better.

London, Thursday. Linseed: The market has been very dull, with scarcely any desire for business; at the close, however, there is rather more inquiry. Calcutta, London, spot, 36s 9d, and afloat 36s 9d, September October, 36s 6d, April June 35s 6d. Rapeseed firm, but continues inactive owing to the high prices asked. Brown Cawnpore, Oct.-Nov., V36s 9d.; Ferozepore, Oct.-Nov., 36s 6d. Cottonseed: A considerable business has taken place at a decline of 2s 6d per ton. London, October, £5 11s 3 wanted, November-January £5 11s 3d. Hull, spot and passage have been sold at £5 6s 3d to £5 5s. Bayoumu quoted £5 8s 9d, October to January £5 8s 9d. Linseed oil has fluctuated somewhat during the week, but closes steady at about last week's prices. We quote spot and month in pipes £16 10s, barrels £16 15s, November-December £16 17s 6d, January-April £17. Hull naked spot £14 10s, October-December £15, January-April £15 10s. Oil cakes:—Linseed cakes firm. London-made £7 15s to £7 17s 6d. Cotton cakes quiet. London made £4 13s 9d.—PRODUCE BROKERS CO., LTD.

HAY AND STRAW.

Birmingham, Friday. Small supply, trade quiet. Hay, £3 7s 6d to £3 15s per ton; clover, £3 15s to £4 per ton; straw, 2s 6d per cwt.

Derby, Friday.—Hay, new, 75s to 80s; best, 80s to 90s; other kinds, 75s to 85s; best old, 80s to 90s; straw, wheat, 61s to 70s; pressed, 50s to 55s; oat, 50s to 60s; peat moss litter, 35s to 40s.

Whitechapel, Saturday.—A fair supply was available, but the demand proved of a rather quiet nature, at late rates. Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 75s; good ditto, 65s to 72s; inferior ditto, 45s to 60s; mixture and sainfoin, 67s to 72s 6d; straw, 27s to 36s per load.

HOPS.

Canterbury, Saturday.—Large trade in all descriptions of healthy hops, and for choice Goldings values have advanced 5s per cwt. on the week. Prices, however, are very low, most of the business in really sound hops being done between 50s and 60s per cwt., while those that are off colour or slightly diseased have to go at about the cost of picking and drying.

Worcester, Saturday.—There was a falling off in the attendance at market to-day, as many growers have cleared out their growths, and others have taken off their hops from offer at the present prices. Values ruled about the same as last week, choice and fine hops being most sought for. The rush of the trade is over, but hops are going very steadily into the hands of consumers; 4,039 pockets have been weighed over this week.—CHARLES FARAM AND CO.

WOOL.

Canterbury, Saturday.—Falling off in demand for Kent wool, and recent prices only maintained for best lots. Kent fleeces quoted 1s 0¼d; lamb wool, 8d; half-breds, 1s 0¾d; Down, 1s 1d to 1s 1½d; and locks, 4d to 5d per lb.

Glasgow and Leith.—The firmness that has characterised Scotch wools since the new clip came on the market has continued during the past month. Although no auction sales have taken place there has been a large turnover in all classes by private bargain. Half-bred and cross-bred wools have realised a slight advance over the previous month's rates, and Cheviots have been largely dealt in, and are decidedly dearer. In blackfaced a good deal has changed hands for both home and foreign consumption. Stocks of all kinds continue to diminish steadily, and holders adhere very firmly to their quotations.—J. AND W. GREIG.

London, Saturday.—English—per pkge. of 240lb.—Fleeces, South Down hoggs, £14 to £14 10s; half-bred hoggs, £13 to £14; do. wethers, £12 10s to £13; Kent fleeces, £13 to £13 5s; South Down ewes and wethers, £13 10s to £14 10s; Leicester ditto, £12 10s to £13 10s; Colonial—per lb.—Vic.—Fleece super, 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d; N.S.W., secondary average, 1s 8¼d to 1s 9d; greasy average, 11½d to 1s; S. Aus., greasy average, 9d to 9¾d; N.Z. scoured average, 1s 9½d to 1s 10d; greasy average, 10½d to 11½d; Cape scoured super., 1s 10d to 1s 11d; fleece average, 10d to 10½d; greasy average, 7½d to 8¼d Natal, scoured, 1s 5d to 1s 6d; greasy average, 8¼d to 9¼d; cross-breds—Grs.—Vic., good to super., 1s 2d to 1s 3½d New Zealand, fine, 1s 2d to 1s 3d; ditto medium, 1s 0¼d to 1s 1d; ditto coarse, 11d to 1s 0½d

POTATOES.

Borough, Saturday.—Good supplies were delivered and met a fair demand. Best silts, 55s to 65s; blacklands, 52s per ton.

Southwark (Waterside), Saturday.—During the past week the arrivals have been limited, for which there has been a good inquiry at improved prices. The following are this day's quotations:—Essex, Kent, and Surrey Up-to-Dates, 60s to 65s; ditto Pioneer, 60s to 65s; ditto British Queens, 55s to 60s; Lincoln Evergoods, 55s to 60s; ditto Up-to-Dates, 55s to 65s; Blackland Up-to-Dates, 50s to 55s; ditto British Queens, 45s to 55s—per ton.—R. G. BROWN.

Spitalfields, Saturday.—A rather heavier supply was available and trade made very slow progress; Puritans, 60s; Royal Kidneys, 55s to 60s; Beauty of Hebrons, 60s; British Queens, 55s to 60s; Blacklands, 55s; Up-to-dates, 60s to 70s; and Scotch, 60s to 70s per ton.

Sheep Fairs and Sales.

Bridport.

At Bridport Fair on Wednesday the supply of sheep was not so large as usual, only about 2,000 penned. The sales were not particularly fast, lambs as a rule meeting a readier demand than ewes. Still, a good clearance was effected. Horn ewes sold from about 37s. to 43s.; horn couples, 56s. to 58s.; horn lambs, 26s. to 32s.; Down wether lambs, 30s. to 35s. 6d.; Down chilver lambs, 35s. to 37s.; Down ewes, 37s. 6d. to 40s.; mixed lambs, 28s. to 33s. 6d.; crossbred lambs, 24s. to 27s. 6d.

Wensleydale Blue-Faced Sheep.

The annual show and sale of Wensleydale rams, the property of the members of the Incorporated Wensleydale Blue-faced Sheep Breeders' Association and Flock-Book Society, was held at the Hellifield Auction Mart on Tuesday, when the show was larger than in any preceding year, and some splendid stock was forward. In the class for aged rams the first prize was awarded to an animal owned by Mr. Thomas Woof, of Borrett, Sedbergh, which was bought by Mr. J. C. Clapham, of Bentham, for £8. The second prize-winner in the same class belonged to Mr. J. Hoggarth, Manor House, Slyne, Lancaster, and was secured by Mr. Whittaker, Garstang, Lancashire, for £8 10s. Mr. H. Dawson-Green, of Whittington, Kirkby Lonsdale, was the owner of the third prize-winner, and £5 5s. was the price at which Mr. Walker, Moor Row, became the purchaser; others sold down to £3.

Shearling rams elicited some keen competition and spirited bidding. The executors of the late T. Willis, Carperby, were the owners of the first prize-winner, a splendid animal which fully deserved the distinction. In addition to winning the prize in its class this animal carried off the championship bowl offered by the Society for the best animal in the show. Bidding commenced at 20 gs., and was carried to 31 gs. before the purchaser was declared to be Mr. Fothergill, of Ravenstonedale. Lord Henry Bentinck, Underley, Hall, Kirkby Lonsdale, was the owner of the second prize-taker, which was no stranger to the prize ring, having been successful at the Royal, Lancashire, and other shows. It was bought in by Mr. Chapman, Silton, Northallerton, for 22 gs.

The class for ram lambs, open to members who keep more than ten ewes, was a very large one, and here the first prize-winner belonged to Mr. William Milner, Slyne, Lancaster, and was sold to Mr. Horsman, Richmond, for £10 15s. The second and fourth prizes belonged to the executors of the late T. Willis, Carperby, and were bought in by Messrs. H. D. Green and Kirkby, Richmond, for £12 10s. and £10 respectively. A lamb owned by Mr. W. Rhodes, Lundholme, Westhouse, and sired by the winner of the championship, fetched £14; but for another of Mr. Rhodes's rams in the same class Lord Henry Bentinck paid £16, after spirited competition.

Ram lambs, the property of breeders with not more than ten ewes, were not a big class. The first prize-winner was from the stock of Mr. Stainton, Killington, Kirkby Lonsdale, and was sold to Mr. S. Shutt, Hellifield, for £10, others selling from £6 12s. 6d. Consignments of three ram lambs attracted a large entry, and here Lord Henry Bentinck was the successful exhibitor, his batch being sold for an average price of £9 6s. 8d. each. In the ram lamb selling class, Lord Henry Bentinck once more came to the front, this time winning both first and second prizes, and the animals were sold for £6 15s. and £7 7s. 6d.

Major Milbanke's Southdowns.

Major Sir John Milbanke, Bart., V.C., having left Eartham and sold his estate, the whole of the well-known pure-bred Southdown flock of 938 ewes in ages, stock ewe lambs, and rams were disposed of by auction on Thursday, Messrs. Stride and Son, of Chichester, being the auctioneers. As may be supposed, the disposal of such an excellent and widely-known flock brought together many prominent sheep breeders from all parts of the country, for the Eartham flock has made a great reputation, and this was shown by the very high prices realised at the sale. Eighty shillings was the top price for ewes, and this must be almost a record for Southdowns. Eleven rams came under the hammer, and one very fine shearling ram bred by Colonel W. W. Hammond was knocked down at 16½ gs. for the Duke of Richmond. Another ram, combining the Hobgen and Eartham strains, was sold to the Hon. W. Portman, of Kingston, Somerset, for 13 gs. The 217 shearling ewes realised £735 3s., 198 four-tooths £680 12s., 210 six-tooths £693 15s., 85 full-mouthed ewes £232 15s., and 217 ewe lambs £455 13s. 6d., the grand total for 927 being £2,797 18s. 6d.

British Possessions
beyond the Seas
AND THEIR
London Representatives.
NOVA SCOTIA.

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets. Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.

The Birling Manor Herd of Sussex Cattle.

The sale of a portion of the Hon. Ralph Nevill's well known and prize winning herd of pedigree Sussex cattle, including the well-known champion bull, Lord Comp, together with a number of Shire horses, drew a large company of breeders to Birling Lodge Farm, near Maidstone, on Thursday, and the sale was a successful one. The prices were good, and for several lots the competition was exceedingly keen. The fifty-three Sussex bulls and cows made a total of 1,003½ gs., and the twelve Shires £371. Lord Comp, the well-known prize-winner, which Mr. Nevill said he regarded as an old friend, was the only lot upon which a reserve price was placed, and it was sold for 50 gs. to Lord Northbourne. Another fine bull, Birling Grand Duke, was knocked down to Mr. Budd, of Wadhurst, for 42 gs. Amongst the cows, Birling Chickweed, a splendid two-year-old heifer, fetched the highest figure, 33 gs. The Shire horses were in excellent condition, and made from 20 to 46 gs.

Sale of Berkshire Pigs at Motcombe.

The village of Motcombe is well known to breeders of pigs throughout the world, the names of Wistock and Bengafield being noted for the good stock bred both at Short's Green and the Manor Farm. At the sale of Friday last of a large number of Berkshire's from Mr. Bengafield's herd there were many breeders present, and there was some good stock to be offered. Many of the lots, however, were only farrowed since June this year, consequently the average price was low, but the older pigs sold well. The Hon. Claud Portman secured the typical three-year-old boar, Commander-in-Chief, winner of many prizes, at 20 gs., and also one of the best gelts by Rensea at 10 gs. Lord Wolverton's agent took several choice lots to Quorne Minster at fair prices; and Mr. J. N. Notley obtained five or six to go into Hampshire.

The good lot of boars offered sold well, Captain Behrens giving 10 gs. for a youngster for his Yorkshire estate, and Sir John Hollams 10½ gs. for another.

Among other purchasers may be noted Lord Portman, Mr. W. J. Chick, Mr. J. Jefferson (who gave 15½ gs. for a beautiful young gilt), Mr. James McMonies, and Mr. R. B. Vincent. The eighty-three head sold (including many three-month-old pigs), averaged £4 17s. 6d., and was considered a most satisfactory sale. The auctioneers were Messrs. John Thornton and Co.

Royal Veterinary College: Motors and Horses.

The winter session of the Royal Veterinary College was inaugurated on Monday, the introductory lecture being given by Mr. W. Hunting, F.R.C.V.S., who took for his subject the question of motor cars v. horses. He said there were pessimists who told them that the ever-increasing importation of dead-meat would cause diminution in our home live stock; that the advent of electric and other motors would drive the horse off our streets and fields; that the onward progress of legislation and preventive medicine would so decrease the prevalence of disease that there would soon be little to treat; that the multiplicity of veterinary schools would so inflate the numbers of the profession that a time would shortly arrive when they would be the most overcrowded of callings. He believed none of these things. The influx of dead-meat, by cheapening food, might probably affect to some extent, the growth of our herds, but the demand for milk and butter, which was now far ahead of supply, must lead to increase of our dairy stock.

As to the motors which were to displace the horse, he admitted that electric tramways were a serious competitor. Probably 20,000 horses had already been displaced in Great Britain by electricity, and more were sure to follow. The motor-car had also displaced a few horses, but in many cases the owners had returned to the animal. The only motor-car which at present permanently competed with the horse was the one used for fast work, and the carriage of a few people. The motor-omnibus and the motor-lorry had yet to develop considerably before they would displace horses. Their first six months' work, whilst the machinery was new and everything sound and taut, had deceived people into believing that it was their permanent condition. Owners would have a rude awakening and be glad to resume horse-haulage.

Probably in time engineering skill would surmount all difficulties, and the inanimate motor would be a practicable and economic article—but that time was not yet. Even when the motor took its place as a reliable carrier there would still be men and women who would prefer to ride or drive the horse. There woul dbe racing at Epsom and Newmarket, and hunting with the Quorn and the Pytchley. The stag and the fox would at least have to go before the horse was discarded. South Africa had shown that the horse was still a military necessity, and they might rest assured that the Army would require veterinary surgeons for a long time to come.

There was still another bogey, and it was usually put in the form of a question: What are we going to do in the face of the ever-increasing sale of quack medicines and the mendacious advertisements by which they attracted purchasers? They could do nothing except hope for the enlightenment of stock-owners, and perhaps lend a helping hand to spread knowledge. We suffered from quacks owing to the errors of our forefathers. For centuries it was the custom for medical and veterinary practitioners to assume a mystery in connection with drugs, and an omniscience in relation to disease that had misled the human patient and the owners of domestic patients. The public had acquired a notion that each disease had a specific cure, and that something in a bottle was necessary and would probably be efficient. What might be in the bottle or pill was to them quite immaterial so long as some printed assurance was given with it. This simple faith in advertised preparations would probably exist as long as men had little scientific education, and were taught blindly to trust in authority.

ADVERTISEMENTS RECEIVED TOO LATE FOR CLASSIFICATION.

SEED WHEAT, Blue Cone, Specially Selected for Seed, clean and true, at 34s. per quarter. H. S., Esq., writes: "The Blue Cone I had from you last year, turned out a remarkably fine crop quite the best about here. I have not threshed it yet, but it will run very nearly, if not quite, 8 qrs. per acre. I had to cut the crop by hand as it was far too heavy for the binder, and even a self-delivering machine I tried, could not part it. Send 4 qrs. at once to Kineton."
B. ASHWIN, Littleton Pastures, Evesham.

FARM STEWARD seeks re-engagement. Has had charge of 5,000 acres in hand on Estate in Hampshire, and is leaving through farms being now let.—Apply Sir WILLIAM PORTAL, Bart., Laverstoke House, Whitchurch, Hants.

SEED WHEAT.—Garton's New Iron, off limestone, beautiful sample, 30s. per qr. (196 lbs.). Nailsworth Station.—RAMSAY, Superintendent Farm, Nailsworth, Glos.

LEICESTER ANNUAL FOAL SHOW AND SALE.

IMPORTANT SALE OF SHIRE FOALS AND HORSES.
WEDNESDAY NEXT, OCTOBER 11th, 1905.

MESSRS. HINCKS & LAURENCE will SELL by AUCTION, in the Paddock adjoining the Cattle Market,
61 SHIRE FOALS.
22 ONE, TWO, and THREE-YEAR-OLD COLTS and FILLIES, and BROOD MARES.
This year's Sale includes prize-winners at local and other shows and many animals of great promise.
All animals must be on the Sale Ground by 9.30 o'clock prompt. Judging 10.15.
SALE at 12.30 o'clock PROMPT.
Descriptive catalogues on application to the AUCTIONEERS, 25, Halford St. Leicester, and Stenford.

THE KENNEL CLUB'S JUBILEE SHOW, CRYSTAL PALACE, SYDENHAM, OCT. 10, 11 & 12, 1905,
THE
GREAT NORTHERN RAILWAY COMPANY will convey exhibits for the above Show from Inverness, Aberdeen, Perth, Dundee, Oban, Glasgow, Edinburgh, and other towns, on and in connection with their system.
Through vans will be run wherever necessary for the conveyance of Exhibits.
Rates for conveyance of traffic may be obtained on application to any Great Northern Station Master or Agent.
Arrangements will be made for the return of exhibits at the close of the Show.
The Company's representative will attend each show prepared to give all information.
Exhibitors should mark their address labels "per Great Northern Railway."
OLIVER BURY,
General Manager.

GREAT NORTHERN RAILWAY.
MANCHESTER SEVENTH ANNUAL SHOW OF POULTRY, PIGEONS, RABBITS, CAVIES AND APPLIANCES, BELLE VUE GARDENS, MANCHESTER.
OCTOBER 17th, 18th, and 19th, 1905.
The Great Northern Railway Company will convey exhibits for the above show from all towns on, and in connection with, their system.
Through vans will be run to Manchester wherever necessary, and the rates for conveyance, which will in no case exceed those in force by any other route, can be obtained on application to any Great Northern Station Master and Agent.
Special arrangements will be made for the return traffic at the close of the show, and the return labels should be marked "PER GREAT NORTHERN RAILWAY."
A Great Northern representative will be in attendance at the show prepared to give every information to exhibitors and others.
OLIVER BURY, General Manager.

Live Stock Record.

HOGGETS ON TURNIPS.

At what time of the winter, or at what age, wether lambs become hoggets has never been determined, but in many parts of the kingdom farmers commence terming them so when they put them on turnips for their winter feeding. Naturally, sheep are put on turnips much earlier on some farms than on others, and this autumn grass is so abundant that in many cases winter folding on the arable will be delayed longer than usual. But in other cases highly-fed lambs grazing for mutton will have been feeding on rape all through September, and white turnips will have to be their main dietary in succesion to rape. As the latter are more watery and less nutritious than the former, the lambs should have a little more cake, corn, or whatever feeding stuff is being given. About a week before the transition period it will be well, also to give a folding of the turnips at one part of the day, and one of rape the other, that the change may not be too sudden.

Farmers who keep what are termed "dry flocks" often purchase their wether lambs in September, and they are placed on turnips at about the present period, or a little later; but their system of feeding differ, as, if it is intended to make them lay on flesh so as to be disposed of fat in the spring, auxiliary feeding stuff of some kind or other will be given. The best approved method is to gradually increase the allowance, commencing with about a quarter of a pound of cake, meal, or corn per head per day, and then, after a few weeks, giving half a pound, and about February three-quarters, until at the close nearly or quite one pound is given. This is probably the more economical course to be pursued, as well as that of consuming the common turnips first ere proceeding to feed off the swedes. Hay has to be given to all kinds of sheep as the cold weather comes, and throughout winter; or if none can be spared, straw chaff fermented with root-pulp, or made tasteful by intermixture of corn, makes a good substitute.

A great many, however, still follow the old system of buying in sheep merely to consume their turnips, that the land on which they are grown may be in a fit state to be cropped to barley in spring. Hay is usually placed in the folds, that the sheep may eat what they like of it; but they are given no other auxiliary food, and, according to the state of trade, have often to be sold in spring for less money than was given for them. However much the system answered the object in the old days, when live stock was kept merely to manure the land for corn, it is entirely ill-adapted to existing times and circumstances.

There is also rather a large class of turnip growers who, instead of buying sheep, prefer to let the feed to the dealers or to neighbouring large flock-owners. In some seasons they are able to let their common turnips at from £3 to 4 per acre, if they supply hay as well; and for swedes from £5 to £6 per acre is sometimes given. There have often been seasons of abundance, however, when they have been unable to sell at any price, and have been known to implore the dealers to send flocks to consume their crops gratis. In so doing they act injudiciously, no doubt, as if the turnips were ploughed into the ground far more manure would be given for future crops than the droppings of the sheep consuming them on the land would leave. But a much more remunerative method than either may be taken under such circumstances, that of pulping the roots, and putting the pulp together with the green tops in alternate layers with straw chaff into a pit or store-house.

Turnips are not so very abundant this season, but the young ones grew so rapidly last month that it is to be hoped most farmers will find what they have, with due economy, to prove sufficient for their purposes. Although good wether lambs have commanded rather high prices at recent markets and fairs, they are likely to yield good returns in being fed for mutton on roots during the coming winter.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Sept. 30, 1905:—

Swine Fever.	Swine Slaughtered as Diseased or Exposed to Infection.	No.	38	45 17 329		2,908	4,863 6,140 6,259
	Outbreaks.	No.	13	6 15 31		643	1,038 1,385 1,393
Sheep-Scab.	Outbreaks Reported.	No.	4	6 4 2		676	1,089 1,200 1,132
Rabies	Cases Confirmed. Oth'r Anim'ls.	No.	...	...		...	 11
	Dogs.	No.	...	...		...	 12
Glanders (including Farcy).	Animals Attacked.	No.	46	49 68 41		1,626	2,129 1,937 1,576
	Outbreaks.	No.	26	24 31 19		940	1,196 1,150 884
Foot-and-Mouth Disease	Animals Attacked.	No.	...	...		...	 190
	Outbreaks.	No.	...	...		...	 1
Anthrax.	Animals Attacked.	No.	37	29 6 15		1,056	1,106 887 830
	Outbreaks.	No.	27	20 6 10		745	742 585 570
Period.	Week ended Sept. 30, 1905			Corresponding week in ... 1904 1903 1902	Total for 39 weeks in 1905		Corresponding period in 1904 1903 1902

NOTE.—The figures for the current year are approximate only.

An interesting incident marked the Dairy Show week—namely, the presentation of an illuminated address to Dr. J. J. L. van Rijn, Friesland's Agricultural Commissioner to Great Britain and Ireland, by those members of the Agricultural Press whom he conducted on a tour throughout Holland in May last. The address took the form of a handsomely bound book, which not only conveyed the good wishes of the party, but was also beautifully and tastefully illuminated with the English and Dutch flags and scenes depicting rural Holland. It conveyed in suitable language the thanks of the party for the rare opportunity they had had in viewing Dutch agriculture, and was signed, on behalf of the whole party, whose names were attached, by Dr. Fream (chairman) of the *Times* and Mr. A. W. Stanton (hon. sec.) of the MARK LANE EXPRESS. The presentation was made by Dr. Fream, who, with a few well-chosen words, assured the recipient of the esteem in which he was held, and their appreciation of the excellent programme he arranged for the tour. Amid applause the address was handed to Dr. van Rijn, who suitably thanked the donors for their good wishes.

STOCK AND SHOW NOTES.

By Herdsman.

The Council of the Doncaster Agricultural Society have fixed Wednesday and Thursday, July 4 and 5, 1906, as the date of the Society's next exhibition.

That the Suffolk horse is still very popular in Australia is proved by the report in a recent issue of the *Sydney Morning Herald* of the eleventh annual sale by auction of pure Suffolk Punch stallions, bred by Messrs. A. A. and R. H. Dangar, of Baroona and Neotsfield, held at Fennelly's Bazaar. There was a good attendance of buyers, not only from various parts of the State, but also from Queensland and Victoria. There were twelve lots, and the total amount realised was 2,275 guineas, an average of nearly £200 each. The highest price obtained was 320 guineas, which was paid for Courage, described as possessing all the typical points of the breed, a dark chestnut bred at Baroona, foaled in September 1902, sire Sudbourne Spark (imported), by Heywood's Lowestoft. The next highest price, 255 guineas, was given for the imported Bentley Carbineer, bred by Mr. Courtauld, Cuthedge, Halstead, foaled in 1891, sire, Courtauld's His Grace, by Eclipse, whilst others made from 230 guineas downwards. A few such prices as these would be appreciated by breeders in the Old Country.

Ten Shearling Hampshire Down ewes and ten ewe lambs have this week been shipped to South America from the Buscot Park flock.

The great reputation held by the Walton herd of pedigree pigs, owned by Sir Gilbert Greenall, Bart., of Walton Hall, Warrington, has been exemplified during the past few days, specially selected drafts having been made from it for exportation abroad. On the 23rd ult. a grand trio of Middle Whites, a boar and two sows, were shipped to New York from Tilbury Dock per the steamship "Minnehaha." On the 30th ult. a very fine Large White boar and an in-pig sow were shipped from Parkeston Quay to Esbjerg, Denmark, and on Tuesday last a boar and two in-pig sows of the large breed were dispatched via Grimsby to Hamburg. These pigs were personally selected by their new owners, who have recently visited Walton, the high order of merit exhibited in the animals fully sustaining the prestige of the herd.

Mr. George Harrison, of Gainford Hall, Darlington, the well-known exhibitor and breeder of Leicesters, has just sold to go to New Zealand the two Leicester shearling rams which were placed second and third respectively in their class at the last Royal Agricultural Show The sheep are for Mr. Greenwood, of Canterbury, and were shipped in the "Rimutaka" from London.

On Wednesday next, the 11th inst., Messrs. J. Thornton and Co. will conduct a sale of pure-bred Jersey cattle at Bletchley, Bucks. About eighty animals are catalogued, and they are from the herds of various well-known breeders, whilst several prize-winners are included. The breeders contributing to the sale are Earl Cadogan, Culford Hall, Bury St. Edmunds; Capt. Campbell, Weasenham House, Swaffham, Norfolk; Mr. J. Carson, Crystalbrook, Theydon Bois, Essex; Mr. W. C. Cooper, Whittlebury, Towcester; Lieut.-Co. Coote, Highgate House, Creaton, Northamptonshire; Mrs. Dauncey, Horwood House, Winslow, Bucks; Capt. Gisborne, Allestree, Derby; the Bishop of Ipswich, Burgh House, Yarmouth; Mr. J. A. Knight, Welford House, Welford, Rugby; the Rev. E. Y. Orlebar, The Rectory House, Steeple-Morden, Royston, Herts; Messrs. C. and M. Palmer, Stewkley Grange, Leighton Buzzard, Bucks; Lady de Rothschild, Aston Clinton, Tring; Mr. G.

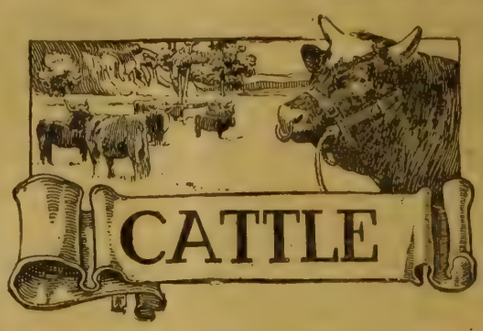
Murray Smith, Gumley Hall, Market Harborough; and Mr. R. B. Ward, Westwood Park, Droitwich.

The Danish Government appears to be determined to take every possible means to preserve the high character which the bacon produced in their prosperous little country has obtained. During the last month one of their Konsulents has been in this country inspecting the principal herds of Large White pigs. The fact that at least half of the Danish bacon is of Holywell Manor blood it was only natural that this herd should be the first one visited. The whole of the stock boars and breeding sows were carefully looked over, their qualities and their performances in the show and breeding pens, recorded with their pedigrees, the latter were compared with those of the many pigs which have during the last twenty years been imported into Denmark from Holywell. After a fortnight's absence reviewing other herds Mr. Morkeberg returned to Holywell accompanied by Mr. Peter Nielson, who possesses perhaps the finest herd of Large Whites in Denmark, and Mr. H. Hansen, a keen judge of a bacon pig.

Two days were spent in the selection of to pigs of former exportations. In this some difficulty was experienced owing to the unusual circumstance that although the herd is the largest extant, yet, unlike all others, it has for many years been self-supporting i.e., the sows are all of those tribes which have been kept in the herd for over a quarter of a century, and the boars used have been mainly Royal and other prize-winners bred in the herd. Only pigs so bred have been exhibited for nearly thirty years. Mr. Morkeberg remarked that their system of continuously breeding from the very best specimens bred in the herd, and noted for their excellence for exhibition and practical purposes, rendered the pigs far more valuable both for crossing purposes and for breeding pure-bred stock, but it also increased the difficulty in the selection of boars and gelts for use in the pure-bred herds in Denmark, which were almost entirely of Holywell foundation. This difficulty would not arise in other English herds visited, as the pigs generally were of such mixed breeding, although, of course, all pure-breds and entered in the herd books. This combination or mixture of blood rendered the pigs less prepotent, and rendered it uncertain if the produce would develop the desired points and qualities desired in the bacon curers' pigs.

Another point which Mr. Morkeberg remarked upon was what he termed the wonderful breeding properties of all the sows in the herd. In the private herd book many striking records were in evidence; amongst these was that of Holywell Kathleen, with her seventy-seven pigs farrowed in five litters within two years and a month; Holywell Accident, who produced eighty-six pigs at six farrowings within two and three-quarter years; Holywell Czarina II., who brought forth ninety-six pigs within three years and three months; Holywell Gigasoline did even better, as she farrowed the enormous number of 101 pigs within three and a half years; whilst a younger sow, Holywell Crump Ear, has been successfully exhibited, and had ere she was three years and one month old brought forth four litters respectively of fourteen, seventeen, fifteen, and sixteen pigs. One boar and two sows were shipped from Parkeston Quay on the 23rd ult., and on the 30th ult. three boars and four sows. These were all from the Holywell Manor herd. The second lot were accompanied by four boars, half of Holywell Manor blood, from the Warren herd, and an aged boar and a gelt from the Walton herd.

Peterborough Bridge Fair, an annual event, took place on Tuesday, when there were about 2,000 cattle for sale. While fat beasts were making £23 outside, the best price for store beasts was £19 in the fair. There were fewer Herefords than usual, and these averaged £13 10s., milking cows £14 to £16, in-calf heifers £20, and useful Shorthorn steers £12 to £14. For the first time probably in the history of the fair, there were no Lincoln Longwool rams. Cotswold appeared for the first time, and besides these and Hampshire and Oxford Downs Messrs. Scott and Angel had about 180, and reported a fair trade at £5 to £8. Hampshire Down lambs averaged £4 to £5. Of horses there were about 1,000. Useful cart mares could be had from £40 to £50. The best Irish horses, likely to make hunters, averaged £49 to £50.



Notes and Jottings.

The time of year is now coming on when cattle are apt to be eating things that do them great mischief. The pastures are wet and the grass cold in the early morning, and at night they often look after and eat leaves that are falling as nature's corrective to the scoury grass. The majority of these leaves are not injurious, beyond sometimes causing stoppage in the bowels if eaten of too freely; but should any yew be accessible to them, such as boughs being broken off by the autumnal gales, the result is often very disastrous, a whole herd sometimes succumbing to this poisonous shrub. Another evergreen that is also very injurious, though not such a deadly poison, is the rhododendron.

Last winter a friend of the writer had a herd of bullocks lying out in a field adjoining a plantation where a considerable quantity of rhododendrons were growing, and, owing to a gap in the fence, the cattle strayed into the plantation and ate so ravenously of the shrubs that nothing but great attention saved their lives, and they were several months before they began to thrive again. The time of the year seems to give them a propensity for wandering, and it is therefore good policy to look round any fences and strengthen the weak places where there is any possibility of the stock getting into any dangerous quarters of this kind. It is one of those cases in which prevention is strictly better than cure.

The live versus dead meat question is constantly recurring, conjointly also with the question of the importation of Canadian stores. As a proof that in spite of all restrictions upon the importation of live cattle for slaughter, it has been pointed out that there is a steady progressive increase in our importation of dead meat, showing that neither consumers nor consigners are suffering, so far as an outlet for their produce is concerned for the one party, and so far as the food supply is concerned for the other party. At the foreign market at Deptford during the months of July and August no less than 36,578 oxen were received for slaughter, whilst the supplies of dead meat at the Metropolitan Market were considerably in excess of the same period last year.

The reiteration of the paragraph that the Shorthorn continues to be the breed par excellence so far as demand is concerned the world over may be a little sickening to the eyes of breeders of other varieties, but the extraordinary sale of the Buscot Park herd the other day is certainly worth making one paragraph of. It was altogether a remarkable sale in more respects than one, and must teach all English breeders a lesson that they ought not to forget, and to inspire them with hope for the future, and encourage them not to relax one iota of interest and energy or capital in maintaining their herds at full pressure so far as numbers are concerned for breeding, and to maintain the quality.

At this sale in all 56 head of cattle were sold at the splendid average of £90 8s. 3d. per head, and figures rising up to 370 gs. per head were realised. This in itself is very satisfactory and reassuring to breeders, but when we have to add that one purchaser, Mr. Sandford, from South America, took more than £3,000 worth, numbering about 30 animals, breeders must see how vast the demand is for foreign countries, and how almost certain this demand is to continue and increase as time goes on. Each succeeding year proves that though other countries, such as America (North and South) and our colonies at the Antipodes, can breed good cattle, yea, it may be said high-class, yet they cannot maintain the English standard without continued recourse to blood from here.

THE TENS OF THOUSANDS of users of MOLASSINE MEAL should see that their stock have a portion in every feed all the year round, not simply as a condiment when an animal is out of condition, or occasionally as a fillip. MOLASSINE MEAL is the most valuable and economical food, displacing all condiments, and should be given in place of the same weight of oats, beans, grain, cake, or other feeding stuffs. Sold by all corn merchants and the MOLASSINE CO., Ltd., 36, Mark Lane, London, E.C. —[ADVT.]

In addition to the countries named, the vast extent of land in South Africa that has recently come into our hands is already requiring stock from us in small quantities, and when it becomes better cultivated, and the virtues of the English-bred cattle become fully known, and the stock acclimatised, there is a certainty that similar demands to that experienced at Buscot Park on behalf of South America will be repeated on African account; whilst as Russia becomes quieter and the blessings of peace, so essential to agricultural prosperity, are shed abroad in that country the demand there will be enormous; and in both the last-mentioned countries other breeds are pretty certain to share the good fortunes of the red-white-and-roan.

Several other sales of cattle that took place after our last notes were penned were not as successful as might have been anticipated, especially those of some of the very noted English herds of Aberdeen Angus. The famous Maisemore Park herd that has furnished so many excellent cattle of the breed not reaching quite £26 per head. Two or three herds of Lincoln Red Shorthorns also averaged rather badly, as did some Hereford, Sussex, and Jersey sales. Events of one kind or another have been too thickly sprung upon breeders lately, dates clashing, and some, in such cases, must go to the wall. There are still a number of important sales to be held before winter closes the scenes for a time.

The principal event in show circles last week was the holding of the annual show of the British Dairy Farmers' Association at the Agricultural Hall, the cattle classes at which are to be devoted, it may be said, entirely to the production of milk and butter; for, though prizes are given for the best animals, with a view to retaining the breed character of the various breeds shown, as well as to check the coarseness and want of symmetry that follows almost invariably when breeding for milk and butter only is followed, yet the judges, by inspection, very frequently appear to act as though they were to try to select the animal by inspection that would come out best in the tests. This ought not to be.

The cattle generally at this show could not be called at all superior to those of other years, several breeds showing very distinct decline. The quality, too, of their produce cannot in some cases be at all highly spoken of, as in the Jersey butter tests, which were completed when these notes were written, half the animals competing required 20 lb. of milk and over to produce 1 lb. of butter. This is not satisfactory, especially upon the very high feeding and careful manipulation of the milk as practised at these shows. The total quantity of butter yielded from these cows, too, was not at all creditable under the circumstances. Only some half-dozen or so giving over 2 lb. per day.

In the cross-bred classes, which were also open to other breeds for which no special classes were provided, some very fine cows of the South Devon breed were catalogued, and took their places, doing remarkably well. In this class, also, the famous old cross-bred cow Doctor, that did so well at last year's show, was standing. She is now about twenty-four years old, and though last year she appeared quite past doing anything more, yet she has since then produced another calf, is milking very heavily, and looks much fresher than a year ago, having apparently taken a fresh lease of her life. The exact cross of this cow is not known, but appearances rather favour Ayrshire and Jersey, or some such a mixture.

So the final blow at Park Royal appears at last to have been struck. It is to be hoped the committee thoroughly discussed all matters affecting such a drastic change. It seems scarcely credible that so much money can have been spent upon good permanent roads and other arrangements to be scattered to the winds with so little discussion and upon the opinions of so few. It is to be hoped the measure will not have the effect of taking the society out of the frying pan and putting it into the fire. So far, however, as the subjects of these notes are concerned (cattle), there is no doubt that the day of this change will be a bad day. Cattle, it was generally admitted last show, were about the best display ever seen at the Royal, and trade in them was certainly the best ever experienced.

What more, on the part of breeders of cattle, could be desired? Then the position was so accessible from all the main lines of rail; indeed, this had much to do with the excellent display. When the migratory shows were in force it was very seldom that all the various breeds were shown. In the north, several of the southern breeds were practically absent; and, by the same rule, when in the south the northern breeds were scarcely visible; but at Park Royal every breed could be seen. However, the motion has been suggested and received so far; whether the general

public and the provinces, where it is intended in the future to hold the shows, will be agreeable remains yet to be seen, and whether, if all are agreeable, the thing will prosper, is quite a speculation.

Sale of Messrs. Adamson and Clarke's Shorthorns.

A successful joint sale of Shorthorns, the property of Mr. T. Adamson and Mr. T. E. Clarke, of Harwood Lodge, Bolton, was conducted by Messrs. Thornton and Co. on Thursday at Ainsworth Lodge, Ratcliffe, Lancashire. The sale consisted of the entire herd from Harwood Lodge and a large portion of that belonging to Mr. Adamson, while Mr. W. Heaton and Mr. J. H. Maden each contributed a good bull. The weather, though cold and windy, was more favourable than that experienced at Mr. Vickers' the previous day, and a large local company had gathered round the ring by the time the sale commenced, an auction of this description being an unusual event in the thickly populated manufacturing district round Bolton. No great prices were obtained, but a number of the animals made from 40 to 50 gs., and an average of over £28 per head was considerably more than had been anticipated.

Mr. Clarke's Hettie, a very massive yellow red cow, bred by Mr. Ashworth, was taken by Mr. A. Darby to Shropshire at 31 gs., and a capital red two-year-old heifer with a red cow calf at foot went to Mr. Lowcock, of Nottinghamshire, at 62½ gs. Mr. R. R Rothwell, of Preston, became the owner of a pair of nice animals in Mr. Clarke's Rosie 5th at 37 gs. and Mr. Adamson's Marigold 45th at 47 gs. Mr. R. Vernon got a nice heifer from the Ainsworth Lodge herd at 38 gs., and Mr. A. Melville a red cow of a rare dairy type cheap enough at 37 gs. Mr. Clarke's Stanley Empress, a well-developed roan yearling with several local prizes to her credit, remains in the district, being purchased at 45 gs. by Mr. W. Heaton, who also took several other good lots. Mr. Adamson's fine stock bull, Wales Waterloo 4th, bred by Lord Lathom, was a bargain to Mr. W. Britten at 26 gs., and there being no foreign competition, Messrs. Bateman and Melville were enabled to secure very good bulls at 37 gs. and 41 gs., which in both cases should prove a profitable investment.

The best prices and buyers were as follows:—

COWS AND HEIFERS.

	Gs.
Honeydew (Mr. Clarke's), red roan, c. May 12, 1894; s. Lord of the Manor 62912 ..... Mr. W. Heaton	20
Hettie (Mr. Clarke's), red and little white, c. Oct. 3, 1898; s. St. Clair 2nd 66268 ..... Mr. A. Darby	31
Florentine 3rd (Mr. Clarke's), roan, c. May 27, 1899; s. Cairo 72151 ..... Mr. S. Davis	29
Ainsworth Queen (Mr. Adamson's), red, c. Aug. 29, 1899; s. Prince Arvon 73258 ..... Mr. A. Melville	37
Jenny Ingram 3rd (Mr. Adamson's), red and little white, c. Sept. 3, 1899; s. Ingram's Crown 70648 Mr. J. Francis	35
Sweet Bride 2nd (Mr. Clarke's), red, c. Nov. 9, 1900; s. Lord Victor 74938 ..... Mr. L. Broadbent	28
Daisy 5th (Mr. Adamson's), red and little white, c. Jan. 5, 1901; s. Sirdar 75649 ..... Mr. W. Heaton	25
Ainsworth Baroness (Mr. Adamson's), roan, c. March 10, 1901; s. Sirdar 75649 ..... Mr. W. Heaton	25
Rachel 2nd (Mr. Clarke's), roan, c. Dec. 1, 1901; s. Tommy Atkins 82456 ..... Hon. Colonel Lawson	24
Faithful Alice 8th (Mr. Clarke's), roan, c. May 7, 1902; s. Adamson's Arvon 75886 .. Mr. W. Bateman	31
Lotherton Darling (Mr. Clarke's), red and little white, c. July 29, 1902; s. Buckhanger 74143 Hon Colonel Lawson	21
Ainsworth Maid (Mr. Adamson's), roan, c. Aug. 25, 1902; s. Dunottar's Style 76580 .... Mr. W. J. Thom	20
Hettie 2nd (Mr. Clarke's), red, c. Jan. 5, 1903; s. Forest King 78902 ..... Mr. R. Lowcock	45
Ainsworth Duchess 2nd (Mr. Adamson's), roan, c. March 10, 1903; s. Baron Bolton 80402 Mr. R. Vernon	38
Rosie 5th (Mr. Clarke's), roan, c. July 21, 1903; s. Magnet 81590 ..... Mr. R. R. Rothwell	37
Rosedale's Beauty 4th (Mr. Adamson's), rich roan, c. Aug. 29, 1903; s. Magnet 81590 .... Mr. A. Arthurs	42
Rosebud 14th (Mr. Adamson's), red and little white, c. Nov. 5, 1903; s. Highland Monarch 74702 Mr. J. Francis	24
Faithful Alice 9th (Mr. Adamson's), roan, c. April 30, 1904; s. Highland Monarch 74702 .. Mr. W. J. Thom	20
Stanley Empress (Mr. Clarke's), roan, c. June 22, 1904; s. Royal Recorder 84646 ..... Mr. W. Heaton	45
Marigold 45th (Mr. Adamson's), roan, c. June 30, 1904; s. Ainsworth Silver Prince 82689 Mr. R. R. Rothwell	47
Rachel Halton (Mr. Clarke's), roan, c. July 5, 1904; s. Forest King 78902 ..... Mr. W. Heaton	20
Ainsworth Queen 2nd (Mr. Adamson's), red roan, c. July 24, 1904; s. Ainsworth Silver Prince 82689 Mr. W. J. Thom	23
Daisy 6th (Mr. Adamson's), roan, c. March 2, 1905; s. Ainsworth Silver Prince 82689 .. Mr. R. Lowcock	22

6 bulls	26 15 6	166 13 0
41 head	28 5 0	1,158 3 0

Sale of Mr. John Vickers' Shorthorns.

The entire herd of Shorthorns bred by Mr. John Vickers, of Churchfield, Tunstall, Kirkby Lonsdale, Westmorland, was sold on Wednesday in consequence of Mr. Vickers retiring from business and giving up the farm. Owing to the bad weather there was not a very large company, but a number of breeders from Northumberland, Lancashire, Hertfordshire, Nottinghamshire, Cambridgeshire, and Shropshire put in an appearance and bid well for the animals, which were large-framed and of good Shorthorn character. The most attractive of the lots was Primrose, a roan six-year-old cow with a grand udder, which made 60 gs. to Mr. Timberlake, and her yearling bull, which, after good competition with Mr. Oswell, was bought by Mr. G. Maynard at 88 gs. The fine stock bull, Beau Estelle, was sold cheaply to Mr. Nesham at 40 gs., as his stock are of much promise. Mr. F. Straker, of Morpeth, secured several lots, among them being a choice young cow, Fantasia, at 35 gs.; while Mr. Melville took a handsome pair of roans at 38 gs. and 41 gs.

The following were the best prices with buyers' names:—

COWS AND HEIFERS

	Gs.
Duchess 4th, roan, c Oct. 24, 1890; s. Royal Ingram 50374 ..... Mr. T. Hunter	17
Her B.C., red and little white; s. Beau Estelle 85320 Mr. T. Handyside	19
Model Beauty, red, c. Aug. 1, 1896; s. Sittyton Lad 69615 ..... Mr. H. Mellish	24
Maude, roan, c. Feb. 28, 1898; s. Postmaster 69254 Mr. J. W. Fothergill	27
Chance, roan, c. April 3, 1899; s. St. Andrew 71541 Mr. W. R. Trotter	21
Gentle Annie, red and little white, c. July 19, 1899; s. Bard 69912 ..... Mr. F. Straker	30
Primrose, roan, c. Nov. 24, 1899; s. Bard 69912 Mr. R. Timberlake	60
Her C.C., red, c. July 29, 1905; s. Beau Estelle 85320 Mr. J. B. Silcock	19½
Kirkby Beauty, red, c. Jan. 2, 1900; s. Bard 69912 Mr. G. Willan	21
Concordia 4th, roan, c. March 30, 1900; s. Bard 69912 Mr. G. Allison	31
Clara (Mr. J. Dargue's), roan, c. May 4, 1900; s. Keverstone Kit 70700 ..... Mr. R. Cock	24
Gala Day, roan, c. June 26, 1900; s. Bard 69912 Mr. A. Melville	38
Ruby Duchess 3rd, red, c. July 10, 1900; s. Bard 69912 Mr. C. F. Ducksbury	41
Blanche (Mr. J. Dargue's), roan, c. Aug. 23, 1900; s. Cairo 72151 ..... Mr. J. Winterbottom	29
Fantasia, red and little white, c. Oct. 24, 1900; s. Bard 69912 ..... Mr. F. Straker	38
Scotch Flower 3rd (Mr. W. Taylor's), white, c. Nov. 3, 1900; s. Gold Finder 76802 ..... Mr. F. Punchard	30
Clarantine, red, c. March 19, 1901; s. Adolphus 75994 Mr. S. Wilson	22
Concordia 5th, red and white, c. May 13, 1901; s. Bard 69912 ..... Mr. S. Wilson	20
Furrow Maid, roan, c. July 17, 1901; s. Harmonist 76838 ..... Mr. G. Allison	20
Florence Douglas (Mr. W. Taylor's), roan, c. March 5, 1902; s. Admiral Douglas 78211 .. Mr. A. Melville	41
Tunstall Maid, red, c. April 2, 1902; s. Adolphus 75994 Mr. F. Hornby	20
Princess Ruby 2nd, red and white, c. April 7, 1902; s. Adolphus 75995 ..... Mr. W. Bateman	20
Real Beauty 2nd, roan, c. May 17, 1903; s. Gainford King 81103 ..... Mr. R. Vernon	40
Verity, red and white, c. Aug. 6, 1903; s. Gainford King 81103 ..... Mr. S. Wilson	21
Munrose, roan, c April 10, 1904; s. Politician 81869 Mr. W. Bateman	27
Regalia, red and little white, c. May 20, 1904; s. Count Douglas 83192 ..... Mr. I. Bargh	28

Sale of South Devons at Totnes.

The first of the autumn sales under the auspices of the South Devon Herd Book Society, took place on Tuesday. It has been customary to hold one sale a year, and last April the record was broken by the prices obtained for the best animals, many of which were secured for exportation to South Africa. Last week's sale must, therefore, be regarded as in the nature of an experiment—a merging of the sales which would otherwise have taken place at Totnes Fair in October and in the markets of the locality. Perhaps the fact that there were to be two sales this year had the effect of improving the prices in April last, as breeders did not then overcrowd the sale ring as on some former occasions. On Tuesday there were entered half a dozen cows and heifers, and upwards of sixty bulls. On the whole, their quality and condition did not compare favourably with those offered earlier in the year, most of the bullocks having probably been running rough during the summer. The two-year-olds were not very numerous, and only a couple of them changed hands. The older yearlings were a fairly even lot, and some of them were of exceptionally good quality. The younger animals were somewhat uneven, and breeders would have studied their interests had they kept some of the animals at home until the spring. Prices showed a drop, and though at times the biddings were brisk, there was nothing like the competition experienced in April, top prices being 43 gs., as compared with 58½ gs. at the April sale. The highest figure on Tuesday was 43 gs. The chief sales were as follows:—

COWS AND HEIFERS.—Mr. W. M. Roberts's (St. Germans) Peggy 5th (3774), sold to Mr. J. P. Page (Cornworthy) for 18½ gs; bull calf, Mr. Scott James (Chagford), 5½ gs; Mr. J. Luscombe, jun.'s (Ugborough) Primrose (4177), 20½ gs, Mr. Hunt (Totnes); bull calf, Mr. B. Luscombe (Aveton Gifford), 4½ gs.

BULLS CALVED 1903.—W. H. Pain's (Kingsbridge) High House Champion (1898), Smith (Rame), 12 gs; J. Wakeham's (Revelstoke) Mark Time (1930), A. Rogers (Holbeton), 14½ gs.

BULLS CALVED 1904.—J. Bartlett and Son's (Dartmouth) Stars and Stripes (2246), J. Wills (Liskeard), 15 gs; J. A. Stidston's (Bishopsteignton) Candidate (2078), A. Hall (Marldon), 18½ gs; J. A. Stidston's Renown, J. S. Hallett (Sherford), 26½ gs; E. B. Luscombe's (Woodleigh) Woodleigh Duke (2270), J. Vintle (Kingsbridge), 43 gs; W. M. Roberts's (St. Germans) Chief (2084), Buckpitt (Abbotskerswell) 15 guineas; W. M. Roberts's General (2136), Luscombe (Stoke Gabriel), 22½ gs; J. S. Ford's (Yealmpton) Forest King (2133), Hine (Pentille); J. S. Ford's The Monarch (2250), A. Rowe (Dawlish), 25½ gs; W. Bradgude's (Coryton) Daisy's Duke (2108), H. Harvey (Hennock), 15 gs; J. Hoare's (Staverton) Varmer Giles (2251), Pearce (Gwinear), 16 gs; Mrs. F. G. Luscombe and Son (Crownhill), Warleigh Masher (2265), Dolbear (Newton Abbot), 15 gs; F. G. Luscombe and Son, Right Sort (2220), Hoskin (Newton Abbot), 15 gs; Toms and Son (St. Keyne), Cousin Jack (2100), Squires (Holbeton), 17 gs; B. Luscombe's (Aveton Gifford) Manager (2173), Whiteley (Paignton), 35½ gs; B. Luscombe's Hector (2150), B. Trant (Menheniot), 20 gs; J. Sparrow Wroth's (Aveton Gifford) Duke of Fife (2159), Creber (Landkey), 29½ gs; D. Camp's (Modbury) Sunbeam's Councillor (2249), Curtis (Altarnun), 21½ gs; A. E. Stidston's Goldsmith (2140), E. H. Hoskin (Liskeard, 28 gs; Benjamin Butland's (Plympton) Farm Boy (2128), Brock (Kenn), 25 gs; H. Bradridge's (Ashburton) Lo Ben, W. J. Crossing (Plympton), 30½ gs.

BULLS CALVED 1905.—W. Bradridge's (Coryton) Merry Boy (eligible for entry), Beer (Buckfastleigh) 10½ gs; T. W. Luscombe's (Totnes) Stancombe Lad (eligible for entry), Sanders (Liskeard), 20½ gs; J. Wakeham's (Brent) Leyman (eligible for entry), Ellis (Yealmpton), 22½ gs; H. Bradridge's (Ashburton) Masterpiece (eligible for entry), T. Winnow (Paignton), 23½ gs; Benjamin Butland's Leigham Laddie (eligible for entry), Coryton (Pentillie), 26 gs.

BULLS CALVED BEFORE 1903.—Mr. N. C. Crump's (Torquay) Tidwell Prince (eligible for entry), Gloyn (Plymouth), 15½ gs; B. Luscombe's (Avean Gifford) Usher (769), Voysey (Battery), 27½ gs.

Forthcoming Live Stock Sales.

DATE.	STOCK.	OWNER.	PLACE OF SALE.
October 10	Romney Marsh Rams ...	Mr. A. Finn	Ashford Market, Kent.
10, 11, 12, 13 and 14	Horses	Various	Crewe Horse Repository.
10	Shorthorn Cattle	Mr. W. Duthie and Mr. J. Marr	Tillycairn, Old Meldrum, N.B.
11	Jersey Cattle	Various	Bletchley, Bucks.
11	Shire Horses, Geldings, and Town Mares	Members of the Worcestershire Horse Society	The Cattle Market, Worcester.
11	Shorthorn Cattle	Mr. J. Wilson, Mr. A. M. Gordon, and Mr. Summers	Pirriesmill, Huntley.
12	Berkshire Pigs	Duchess of Devonshire ...	Eastbourne.
12	Ponies	Rev. D. B. Montefiore ...	Islip, nr. Oxford.
12	Shorthorn Cattle	Mr. M'William and Mr. Watson	Stoneytown, Keith.
13	Hereford Cattle	Messrs. A. A. and G. W. Firkins	Paunton Court, Bishop's Frome.
13	Shorthorn Cattle	Various	Agricultural Hall, Aberdeen.

Sale of Lincoln Red Shorthorns at Louth.

The third annual amalgamated sale of registered Lincolnshire Red Shorthorn cattle at Louth was held on Thursday, and attracted a large number of buyers, and ninety-two animals were entered. The sale is organised by a committee of local breeders, and the auctioneers were Messrs. Dickinson and Riggall. A number of prizes were awarded as follows:

Cow in calf, exceeding three years old: 1, T. Wells, South Somercotes, Louth; 2, E. H. Cartwright, Redbington Grange, Louth. Heifer in calf, between two and three years old: 1, R. Chatterton, Stenigot, Lincoln; 2, J. W. Farrow and Sons, Strubby Manor, Alford. Female, between 9 months and 2 years old: 1, R. Chatterton; 2, T. B. Freshney, North Somercotes. Heifer calf, not exceeding 9 months old: 1 and 2, J. Borrill, Manby Hall, Louth. Bull, not exceeding 15 months old: 1, E. H. Cartwright; 2, R. Chatterton.

The prize winner in the last class was sold for 41 gs.; whilst the principal prices given for cows and heifers ranged from 19 to 33½ gs., and young bulls were sold at from 18 to 23 gs.

Sale of the Stonebrook Herefords.

Mr. T. Fenn, the well-known breeder of Shropshire sheep and Hereford cattle, is retiring from farming, and following the successful dispersal of his famous flock, Messrs. Edwards and Russell and Son last Thursday disposed of the Herefords. The herd was founded in 1861 with cows from the herds of Mr. John Hewer, Mr. Roberts, of Ivingtonbury, and Mr. Yeld, of Twyford, also from the Adforton, Stocktonbury, Leen, and Chadnor Court herds. For many years Mr. Fenn and Mr. W. Tudge used sires conjointly, one of them being the celebrated Lord Wilton, for which they gave 1,000 gs. Mr. Fenn's most notable successes included winning the champion prize for the best herd of any breed at the Paris International Show in 1889, and of breeding the steer which, exhibited by the Hon. H. M. Cochrane, at Chicago, won the championship for the best carcase of any breed. Despite unfavourable weather there was a large company present at the sale, which was a satisfactory one, though some bargains were obtained. Three animals fetched a three-figure price each—namely, Loving Cup, a magnificent heifer, sold to Mr. Rowlands for 170 gs.; the stock bull, Roderick, bought by Mr. Cole at 120 gs.; and another stock, Royal Rupert, sold for 100 gs. to Mr. Knight, Downton Castle. The twenty-six heifers and calves averaged £44 18s. 10d.; three two-year-old heifers, £26 12s.; fourteen yearling heifers, £38 3s. 6d.; and the ten bulls, £48 1s. 2d.; whilst the seventy-eight lots averaged £30 4s. 9d. A list of the chief lots and purchasers is appended:—

COWS AND HEIFERS.

Philippa, Mr. Woodgate, Liverpool, 36 gs; her bull calf, Montrose, Mr. Cole (the incoming tenant), 25 gs; San Toy, Mr. J. B. Hill, Orleton, 20 gs; her heifer calf Perdita, Mr. Cole, 13 gs; Fairy, Mr. Cole, 40 gs; her bull calf, The Baronet, Mr. Nock, Shifnal, 22 gs; Wisteria, Mr. Cole, 26 gs; her heifer calf, Sweetbriar, Mr. Cole, 16 gs; Lovelock 2nd, Mr. Cole, 24 gs; her bull calf, Silver Star, Mr. Harries, Llwynsdarn, Pontardulais, 10 gs; Lady Abbess, Mr. Cole, 20 gs; her bull calf, Florian, Mr. J. Howells, Leinthall, 7½ gs; Budding Maid, Mr. Beer, 18½ gs; Teme Lady, Mr. Cole, 26 gs; her heifer calf, Adeline, Mr. H. Dent, 10 gs; Turtle Dove, Mr. Cole, 20 gs; Bashful Maid, Mr. Cole, 30 gs; Downton Select, Mr. H. Dent, 36 gs; her bull calf, Border Chief, Mr. A. Tanner, 33 gs; Real Ruby, Mr. Price, Upper House, Ivington, 42 gs; her heifer calf, Firefly, Mr. Cole, 15 gs; Downton Fineta, Mr. E. E. Morris, The Field, Hampton Bishop, 24 gs; her heifer calf, Lady Bountiful, Mr. John Tudge, Duxmoor, 24 gs; Lovelock, Mr. T. Griffiths, Dilwyn, 40 gs; her heifer calf, Flower Girl, the Earl of Coventry, 27 gs; Morning Star, Mr. Rowlands, Evesbatch Court, Bromyard, 66 gs; her heifer calf, Heartsease, Mr. Rowlands, 40 gs; Monitress, Mr. Woodgate, 24 gs; her heifer calf, Bracelet, Mr. Cole, 24 gs; Bartonia's heifer calf, Bridesmaid, Mr. E. E. Morris, 18 gs; Loretta, Mr. Rowlands, 60 gs; her heifer calf, Fairy Queen, Mr. Rowlands, 50 gs; Lady Clare, Mr. Woodgate, 26 gs; Gipsy Queen, Mr. Cole, 21 gs; her heifer calf, Clarinda, Mr. Cole, 16 gs; Priceless, Mr. T. Williams, Castell Du, Pontardulais, 32 gs; Pine Apple, Mr. Grasett, 28 gs; her bull calf, Twin Prince, Mr. W. T. Cooke, 12 gs; First Fruit, Mr. Cole, 33 gs; Downton Irene, Mr. Cole, 27 gs; Heather Bloom, Mr. Cole, 31 gs; Gladsome, Mr. Cole, 24 gs; Countess Sarah, Liebig's Extract of Meat Co., Uruguay, 45 gs; Downton Ladylike, Mr. F. Bibby, Hardwick Grange, Salop, 55 gs; Loving Cup, Mr. Rowlands, 170 gs; Day Dream, Mr. Cole, 33 gs; Czarina, Mr. Cole, 20 gs; Downton Elena, Mr. Cole, 27 gs; Rose Grove, Mr. Cooke, 30 gs; Milkmaid, Mr. Cole, 22 gs; The Songstress, the Earl of Coventry, 21 gs; Parma Violet, Mr. Cole, 30 gs.

STOCK BULLS.

Royal Rupert 20976, Mr. A. R. Boughton-Knight, Downton Castle, 100 gs; First Choice, Mr. Woodgate, 60 gs; Downton Bonanza, Mr. J. Morris, Gwern-y-goe Farm, Glan Newport, 51 gs; Beauchief, Mr. Morrison, Thresholds, Lechlutwood, 21 gs; Gentleman Joe, Mr. Cole, 55 gs; Roderick, Mr. Cole, 120 gs; Young Duke, Mr. Newton Jackson, Blackbrooke, Pentrilas, 20 gs.

At Ballinasloe, County Galway, on Tuesday a small sheep fair was held, but quite sufficient for the demand, which was slow throughout. Prices were considerably under recent fairs, more especially for ewes, a good many of which remained unsold. Over twelve and under twenty-four months old, first class, £2 4s. to £2 6s.; second class, £2 to £2 2s.; third class, £1 8s. 6d. to £1 10s.; two-year-olds and upwards, first class, £2 7s. 6d. to £2 18s.; second class, £1 18s. to £2 7s.; third class, £1 10s. to £1 12s. 6d.

Horse Notes.

Many a horse is made or marred at this period of the year. The thoroughbred—as seems to be generally admitted by those who are lookers on, rather than breeders for sale—is too much pampered and too highly fed on stimulating food in order to get him forward for sale as a yearling; and there is no doubt that many a premature break down may be primarily attributed to injudicious forcing in the autumn of the first year of a horse's life. Similarly, good-looking foals that are intended for show purposes as yearlings are frequently very injudiciously fed, and the consequence is weak fetlocks and many other minor infirmities, which make, in the aggregate, a pretty formidable indictment.

It is always as well with weaning foals to keep them as much in a state of nature as possible, by which I mean that they should not be kept in hot boxes, as I have frequently known. Exercise and good food are essential, and the best plan is to turn the weaned foals on to a good pasture and feed them with the best of oats. Wm. Day, in his book, "The Horse: How to Breed and Rear Him," says that a feed and a half of oats per foal, given three times a day, is sufficient for a foal up to January. Oats, however, are not the only hand food that should be given to foals. A little sweet hay in the morning before they are let out—foals should, I think, always be kept in a warm shed at night—and a mash two or three times a week is comforting in cold weather.

The great difficulty in training foals for exhibition as yearlings is that the men who look after them are never—or, at least, very seldom—satisfied "to leave well alone." If they take an interest in their charges, and it is only fair to say that they generally do take a very great interest in them, they are so eager to get them forward that they over-feed them. They want to see the nice bright coat which is to them one of the beauties of the horse, and they quite forget that there is a time when that bright coat will come of itself if the young horse is carefully and judiciously fed and groomed. So they sometimes fly to adventitious aids in the shape of drugs and highly stimulating foods, which should be carefully avoided in all cases where horses are healthy.

If some foals are overfed, it is equally true that many more are underfed. I know of no more pitiable sight than that of two or three foals standing shivering in a wet October or November afternoon, with their sides clapped together, waiting to be let in to a close, stuffy box and indifferent food. The foals should always have access to shelter; if they have, and if they are well fed, it is astonishing how they will stand out in rough, wild weather and seem to enjoy it. Care must always be taken when foals are running together that one does not become the "master" and eat food that should go to the others. It is better when it can be managed that foals should have separate places at night, as by that means alone can it be assured that each foal gets his due share of the food apportioned to him. It is, however, not always possible to do this, and when it is not possible, the greatest care should be taken that no foal should be allowed to become a weakling, or, as they call him in Yorkshire, "an underlout." If there is any danger of this he should be separated at once.

The hard and fast ration of oats I do not care for myself. It is all very well for the thoroughbred foal who has been fed on stimulating food almost from the moment of his birth to have his corn ration limited to the amount mentioned by Mr. Day in his book. But it is, I think, quite otherwise with the foal of the working mare during the few weeks immediately succeeding weaning. It is very probable that during the last few weeks he has been with his dam, the milk she has given him has not been of very good quality. The heavy work of harvest will have told its tale on that, and the consequence is that unless a foal is liberally, and very liberally, treated during the first few weeks he spends away from his dam he will be sure to "slip." It may be urged that if his dam's milk has been losing in quality he cannot miss it very much. But one effect of the loss of quality in the milk will be that the foal has got a little weakened, though may not be perceptible at first. When, however, he is weaned and the cold nights and mornings come, and the wild storms of autumn sweep across the fields, he is sure to lose condition rapidly unless he is well cared for. The most critical period of a horse's life is from September to March after he is foaled.

Many subsequent troubles are caused by injudicious feeding. I remember having a very useful Clydesdale foal which, as is very unusual with Clydesdales, had indifferent feet. Unfortunately for him and for me he was a rare topped one, with good legs and fine bone and action. So, being young and foolish, and withal ambitious, I showed him and won a few prizes with him. In the autumn, after he was weaned, I said to my man, "We will do him well." We did. We did him better than well; for my man, a sufficiently obstinate individual, gave him steamed potatoes unknown to me. "Steamed potatoes improve their skins," said he to his fellows. They improved this horse's skin, but they completely ruined his feet. He got fever in the feet eventually and was useless. He left two good mares behind him, and a really good horse was wasted by injudicious treatment.

John Lawrence advises that foals should be treated on somewhat similar lines to what I have suggested, and he points out that a run on uplands, where that is possible, is highly beneficial. He, however, suggests hulled oats instead of whole ones, alleging that many breeders consider the oat husks injurious to the teeth of young foals. In these days, however, crushed oats are given to all horse stock that are not doing fast work. Lawrence says he has weaned foals well upon fine pollard, oats, straw, and carrots. Pollard I do not like at all, it is too heating. Carrots, however, where easily obtainable, should always be given; but swede turnips will be found a good substitute where this is not the case.

It is a curious fact in connection with English horse-breeding that in every age there have been found men, not wanting in knowledge and experience, who have deplored the way in which some breed or all breeds were deteriorating. Writing prior to 1809 Lawrence speaks of the many virtues of the old Suffolk Punch, which he tells us was then extinct. He describes them as "Middle-sized, from 14 hands 3 inches to 16 hands high, with rough coarse head, not seldom abruptly fastened to the neck, and that short; the shoulders low and round, and the breast full, the waist often long, and the barrel round with a good carcase. Buttocks high and full, aspiring, as it were, above the forehand, whence greater energy in draught was supposed to be derived. Legs somewhat long and round in conformity with the barrel. Feet not of the soundest, subject to thrushes, and the legs to grease."

Considerably more than fifty years after Lawrence wrote a relative had a horse which answered exactly the description he gives of the old Suffolk Punch, down to the greasy leg. He was not more than 15 hands 3 inches, and a better worker never went on to the land. In only one respect did he differ from Lawrence's description, and that was that he was by no means a long-legged horse, and I am inclined to think that Lawrence was not strictly accurate in describing the old Suffolk Punch as "long-legged." Careful a writer as he was, I am also rather sceptical as to the accuracy of the statement that the New Suffolk Punch, as he calls him, was the result of a cross from Yorkshire stallions—that is, from Yorkshire Coaching horses or saddle horses, which I suppose are synonymous with Hackneys. I do not think that any Suffolk breeder will admit for a moment that there is such an adulteration of his pet breed, but I have no history of the Suffolk horse at hand so cannot enter into details about his origin here. I have never seen a Suffolk horse of any other colour but chestnut, and I am quite certain that had the Cleveland Bay or Yorkshire Coaching horse been so much used in crossing the Suffolk mares as to produce the flat and coaching shoulder of which Lawrence speaks, but which I have never seen when paying visits to Suffolk studs, the colour would have been materially affected, for it is breeding true to colour is one of the signs of the prepotency of the Yorkshire breeds which were bay for generations.

During the last few days a very important book has been published—"On the Origin and Value of the Thoroughbred Horse," by Professor Ridgeway. I have not yet had an opportunity of looking into it, and it is possible that I shall not have for at least ten days, so that notice of the Professor's conclusions will have to be postponed for a fortnight. Next week I shall have something more to say about the Suffolk Punch.

THE LOOKER-ON.

Seaham Harbour Stud Sale.

The annual unreserved sale of pedigree Clydesdale horses, hackneys, and hackney ponies, store cattle, and sheep, the property of the Seaham Harbour Stud, Limited (formerly the Londonderry Stud), was held on Thursday in a field near the Stud Farm, Dawdon Dene, Seaham Harbour. The stock submitted comprised eleven filly foals, fourteen colt foals, three yearling fillies, one two-year-old filly, two three-year-old fillies, three yearling colts, one two-year-old colt, nine brood mares, and one gelding a total of forty six Clydesdales together with nineteen hackney and hackney pony colts and filly foals, and one pony mare. There were also offered sixty store cattle, all in fine thriving condition; also forty-eight sheep, all of a cross seldom met with, and highly recommended for breeding purposes.

In the Clydesdales offered, all the famous strains of blood were represented. They had not been much exhibited, showing being almost exclusively confined to national and county shows, but considerable success had been won by them whenever they had been sent to the showyard. Mr. Robert Brydon, the managing director of the Stud Company, spared neither time nor expense in procuring the very best mares obtainable when the stud was formed, and as these have been mated with high class stallions, the general character and standard of the Stud has been steadily improved and maintained.

An informal luncheon was served in a marquee, and a start was afterwards made with the cattle, which were sold in lots of from two to five. The highest price was £17, paid by Mr. Rickett, of Haswell, for two Angus and Hereford cross steers, and the lowest (£10 10s.) given by Mr. Gibson, of Kelloe Hall, for five heifers by a Shorthorn bull out of pedigree Angus cows. The total for the sixty was £825 7s. 6d., an average of £13 15s.

The top price for sheep was 50s each, given by Mr. Walby, of West Rainton, for ten gimmers, a cross between Cheviot ewes and Border Leicester ram. Mr. Pickersgill, of Bedale, gave 48s. for other ten, a cross between Wensleydale mule ewes and Border Leicester ram. The total for forty-eight animals was £114 7s.

The Clydesdale horses began with eleven filly foals. The best price was 70 gs., given by Mr. Bain, of Mauchline, Ayrshire, for an animal which won the first prize at the Northumberland Show. The total for this section was £394 16s., and the average a little over £35 17s. In the colt foals the highest price was 50 gs., paid by Mr. Marshall, of Stranraer, for an animal with a very good pedigree. The total for fourteen was £358 11s. 6d., and the average £25 12. Three yearling fillies brought a total of £98 3s. 6d., an average of £32 14s. 6d. Mr. Furness, of Dunfermline, bought one for 43½ gs.; Mr. Aitkenhead, of Polmont, bought a two-year-old filly for 50 gs.; and Mr. Brown, of Dunfermline, a three-year-old at the same figure. There were nine brood mares, and some good prices were obtained. The highest was £75, given by Mr. Shepherd, of Kelso, who also bought another for 51 gs. Mr. Cox, of Morpeth, secured one for 67 gs., and Colonel Pilkington one for 50 gs. The total for the nine was £405 6s., and the average £45. The grand total for the sale was £2,692. A list of the principal horse sales is appended:—

CLYDESDALES.

FILLY FOALS.

Sale of Shetland Ponies.

A sale of Shetland ponies from various studs was held at Earlshall, Leuchars, N.B., on the 30th ult. by Messrs. Crow, Sunderland, and, the weather being favourable, there was a large attendance of buyers, whilst trade was good, prices ranging up to 90 gs. This figure was paid by Mr. Crawford, V.S., Leeds, for the Ladies Hope's Royal champion Haldor. Mr. R. W. R. Mackenzie had some choice animals forward, and he realised the next best price of the sale, 42 gs., this being given by Miss Broughton, Exeter, for the mare Prairie Belle, whilst the same lady gave 41 gs. for the mare Dorrie. The following were the results of the sale:—

Mr. Mackenzie, 14 head, £361 14s 6d, average, £25 16s 9d; The Ladies Hope, 1, £94 10s; Mr. Miller, 10 head, £141 15s, average, £14 3s 6d; Miss Nicol, 3 head, £24 13s 6d, average, £8 4s 6d; Executors of Mr. Fawcett, 18 head, £244 2s 6d, average, £15 11s 3d; Miss Irvine Fortescue, 4 head, £29 8s, average, £7 7s; Messrs. Anderson, 10 head, £49 17s 6d, average, £4 19s 9d; Mr. Fletcher, 9 head, £106 1s, average, £11 15s 8d; Captain Forbes, 3 head, £29 8s, average, £9 16s, Mr. Mungall, 4 head, £33 1s 6d, average, £8 5s 4d; Mr. Gourlay, 7 head, £84 10s 6d, average, £12 1s 6d; Mr. Duncan, 7 head, £65 12s 6d, average, £9 7s 6d; Mr. Sime, 5 head, £54 1s 6d, average, £10 16s 3d; Mr. Mathewson, 5 head, £41 9s 6d, average, £8 5s 11d; Mr. Marshall, 1, £10 10s; Mr. Banks, 4 head, £27 6s, average, £6 16s 6d. For 106 head sold the sum realised was £1,408 1s, giving an average of £13 5s 8d.

Sale at York.

Messrs. Walker and Sons, York, held their first October horse sale on Thursday, at the Repository, York, and they had a catalogue of seventy horses. There was a good attendance, and some fair prices were realised. Cicero, ch gelding, the property of Mr. H. March, realised 120 guineas, and others made up to £95. The following were the principal prices realised:—

Black gelding (6 years), 15.3 hh; 34 gs; bay gelding, 15.3 hh, 34 gs; grey mare (5 years), about 15.3 hh, 30 gs; Bess, bay mare (5 years), 15.3 hh, 38 gs; Sunshine, bay horse (9 years), 16 hh, 36 gs; bay gelding (rising 5 years), 16 hh, 37 gs; chestnut mare (7 years), 15.1 hh, 35 gs; Shiela, bay mare (rising 5 years), 16 hh, 35 gs; black-brown gelding (6 years), 16.1 hh, 60 gs; Actress, bay mare (7 years), 15.1 hh, 37 gs; Safeguard, grey gelding (rising 7 years), 15.3½ hh, 77gs; chestnut mare (5 years), 16 hh, 57 gs; chestnut mare (6 years), 15.3½ hh, 45 gs; Rattler, brown gelding (7 years), 16 hh, 32 gs; Engineer, brown gelding (aged), 16.1 hh, 30 gs; Cicero, ch. gelding (6 years), 16 hh, 120 gs; Punch, bay gelding (aged), 16 hh, 35 gs; bay mare (6 years), 16 hh, 60 gs.

Sale of Ewell Stud Hackneys.

On Tuesday Mr. Bainbridge brought under the hammer at Ewell, Surrey, some of Mr. W. Oppenheimer's famous hackneys, and though prices were, with two or three exceptions, not so good as could have been expected by the seller, the sale must be regarded as satisfactory when the season of the year and other drawbacks are taken into account. Twenty six of the Ewell hackneys were disposed of for an aggregate of 1,740 gs., which works out at an average per head of £70 5s. The pick of the sale was the brood mare Knowle Belinda, a five year old by His Majesty out of Garton Birthday, and for her there was keen competition between Sir Griffith Boynton and the representative of Miss Schintz. The latter, however, stayed the longest, and secured one of the finest hackney mares living for 600 gs. This was the top price of the sale, and no others came near it, for the next best for one of Mr. Oppenheim's lot—was £135, given by Mr. Benon for the harness horse Ewell Matchless. The other prices will be seen from the sale list appended. Some animals from Mr. R. C. Evans's stud were included in the catalogue, and these sold well, although Woodhatch Rameses, by Lord Ramsdale, dam B.B. Iris, was withdrawn at 140 gs. Mr. John Jones, of Colwyn Bay, secured the bay five and six year old own sisters by Leighton East Riding at 160 gs., whilst Mr. Blackman gave 60 gs. for the three-year-old bay gelding by Polonius out of Spring. The following is the sale list:

Property of Mr. W. Oppenheimer.

BROOD MARES AND FOALS.

	Gs.
Speedwell, c., 15 h. 3in. 10 yrs.; s. Chocolate Junior — Mr. W. W. Bourne	49

Brown yearling colt; s. Garton Duke of Connaught — Mrs. Hunt	35
Bay Gelding, 3 years; s. Polonius .....Mr. Blackman	60

Shire Sale at Peterborough.

The autumn sale of pedigree Shire stallions, mares, fillies, and foals by Messrs. Sexton, Grimwade, and Beck at their Peterborough repository, took place on Wednesday, when nearly 200 animals were catalogued, some very useful horses being entered, amongst others, by the Earl of Dysart, Lord Calthorp, and Sir Walter Gilbey. In connection with the sale Messrs. Sexton offered prizes amounting to £30 for mares and foals. In the colt foal class first prize went to Mr. E. B. Proctor, of Gosberton. Mr. W. Richardson supplied the winner in fillies. Mares were headed by Sir Walter Gilbey's old prize winner, Saxon Kitty, Mr. E. Gee's Elder Wallflower, another prize winner, being second. Saxon Kitty, a brood nine-year-old bay, was afterwards secured at auction by H.M. the King at 150 gs., the highest price of the sale. The other chief prices were as follows:—

Mr. R. Lenz's (Sheffords Bargeon, b. mare, foaled 1899, 54 guineas; Stondon Firststyle, filly, foaled 1903, 35; Stondon Heartsease, filly, foaled 1904, 49; Redlynch Cœur-de-Lion, stallion, foaled 1903, 43; Stondon Carnation, mare, foaled 1902, 62. Mr. A. T. Umfreville's (Hemel Hempstead) Constance of Hempstead, mare, foaled 1902, 30 guineas; Bonnie Brown, mare, foaled

1898, 37. Lord Calthorpe's Red Princess, mare, foaled 1896, 61 guineas; Elvetham Princess, filly, foaled 1903, 32; Elvetham Radiance, filly, foaled 1904, 43. Mr. J. Topham's (Thorney Park) Desford Daniel, mare, foaled 1900, 34 guineas; Thorney Beauty, mare, foaled 1900, 35; Desford Stylish, mare, foaled 1897, 32 Mr. F. W. Griffin's (Borough Fen) Hampton Violet, mare, foaled 1893, 35 guineas; Bluebell, filly, foaled 1904, 32. Mr. W. Richardson's (Doddington) Barrow Betty, mare, foaled 1896, 44 guineas; bay filly foal, s. Barrow Watnall Duke, 40; Normoor Liberty, mare, foaled 1900, 45; Lockinge Muscat, mare, foaled 1901, 54. Earl of Dysart (Grantham) Buckminster Daisy, mare, foaled 1901, 33 guineas. Mr. F. W. Horrell's (Thorney) Desford Alberta, mare, foaled 1894, 36 guineas; Mignonette, filly, foaled 1904, 45. Mr. C. W. Burt's (Spalding) Star Queen, mare, foaled 1901, 40 guineas. Exors. of Mr. A. Ransom's (Hitchin) bay filly foal, s. Hitchin Royal Duke, 38 guineas. Mr. J. Aldham's Ware Rosebud, filly, foaled 1903, 36 guineas; bay filly, foaled 1904, 36. Sir Walter Gilbey's Saxon Susan, filly, foaled 1903, 38 guineas; Saxon Blackbird, stallion, foaled 1902, 82; Saxon Hindlip, stallion, foaled 1898, 56; Saxon Eleanor, mare, foaled 1901, 41; Rokeby Lady Love, mare, foaled 1899, 40; Saxon Kitty, mare, foaled 1896, 150; Belladonna, mare, foaled 1893, 40. Mr. W. Oxney's (Newark) Tom of Bollam, colt, foaled 1904, 40 guineas. Mr. F. Palethorpe's (Market Deeping) Queenie, mare, foaled 1902, 68 guineas. Mr. E. Gee's (Thorney) Elder Bounce, mare, foaled 1902, 84 guineas. Mr. T. Gee's Ivy Blossom, mare, foaled 1900, 38 guineas; Wrydelands Pink, mare, foaled 1902, 35. Mr. J. W. Sanders's (Lutterworth) bay mare, foaled 1900, 53 guineas. Mr. C. E. Andrew's (Bourne) Bourne Snip, mare, foaled 1895, 34 guineas. Mr. E. P. Proctor's (Gosberton) brown colt foal, s. Barrow Boss, 47 guineas.

Notes and Jottings.

A remark that one often hears at Smithfield Club Shows made by foreign visitors in reference to sheep is, "You are as near as possible perfection in respect to your sheep so far as regards their mutton, but in respect to the fleece a vast improvement can yet be made with advantage."

This remark has been strikingly brought to the mind of the writer during the past month or two, during which he has spent a considerable amount of time in visiting flocks accompanied by breeders from abroad, mostly from South America.

It has been easy enough to find sheep, so far as conformation, type, and symmetry were concerned, suitable for their requirements, but the difficulty to find sheep with uniformity of fleece was a very great one.

The owners of flocks that are held in high repute were astonished at the care and trouble taken by the purchasers in examining the fleeces. It is therefore evident, from the actual experience of the writer, that there is room for considerable improvement in most of our breeds of sheep.

Wool prices have risen, and wool itself is no longer a drug in the market. Consequently it must be to the advantage of the flock-owner to purchase fleeces of the highest value. Such fleeces must be even and uniform.

The export buyer also requires sheep that produce such fleeces, and hence it is very apparent that one of the most important matters to be considered by a very large proportion of our flock-owners is the necessity of improvement in the evenness of their fleeces.

It is more than likely that many will say, "We have always been able to sell our wool, and also our sheep, with the fleeces that have usually grown." This is a fact which no one disputes. Experience, however, and practical knowledge prove conclusively that a better price would certainly be obtained for even and uniform fleeces than for those otherwise, and it is also certain, from the information that has been obtained from buyers of nearly every breed of sheep, that they would be able when selecting for export to pay higher prices than they do were the fleeces more even and more uniform. How should one set about making this desirable improvement is a question that naturally arises. The improvement certainly cannot be all accomplished at once. It must be gradual, and it will take in some cases a considerable time, in others not so long. The course of procedure, however, is the same i.e., strict and careful examination of all the fleeces of stud sheep, male and female, and the rigorous drafting out from all breeding flocks of all sheep whose fleeces do not come up to the required standard.

To commence, take out from 5 to 10 per cent. of the most even fleeces in the ewe flock, and be careful to mate them with a sire whose breeding and pedigree indicates at any rate a tendency to the production of an even fleece.

If this process were continued for a few years the improvement would be a marked one, and would assuredly be most profitable.

Unfortunately, many of the live stock breeders of this country are so wedded to old notions and old ideas that they will scarcely give a thought to fresh ones, or agree to adopt, or even test, the suggestions made by keen observers of other methods.

One object we have in view is to render to the flock-masters every information we can procure that may be of interest or of service to them. It is with this desire that the above-mentioned remarks have been made.

No one recognises more clearly than the writer the very close attention that many of our flock-masters pay to most minute details in connection with the management of their flock, but there are some who are not so careful. These notes, therefore, it is hoped, may cause them to take just a little more care in their selection of breeding sheep, and in the management of their flock in other important, although perhaps minor points in their estimation.

Last week mention was made of that disease so prevalent in some seasons, i.e., foot-rot, and the information received from many sources during the past week rather tends to emphasise the necessity of greater care being exercised by all who purchase sheep.

The trend of the information that has been received since our last notes were penned shows that there is more of this disease about than is generally supposed.

It is, however, very satisfactory to find that the efforts of the Board of Agriculture made during last autumn and spring in calling the attention of flock-masters to the method of prevention and curing these sheep by means of the foot-bath have borne fruit. The evidence of this is that we have found on many farms that we have visited foot-rot troughs, made upon a pattern similar to that which the Board of Agriculture supplied to certain flock-masters throughout the country, and that the dressing used in most cases was of the same character as that recommended by the Board of Agriculture.

Whether or not the Board received detailed reports from those to whom the foot-rot baths were sent we have not been informed, but whenever this information has been secured and summarised it must, we consider, be of considerable value to all those who are interested in the sheep industry; and when it comes to be published we trust that the conclusions arrived at will be of value, for there is no disease known among sheepmen that is more difficult to eradicate and control than is this particular disease.

The last mail from the Argentine brings us over some very interesting information in respect to the importations of sheep into that country during the month of August. Of the Lincoln breed four hundred and forty-four head were received, three hundred and twelve of these were Lincoln rams, and one hundred and thirty-two Lincoln ewes.

The second place, so far as numbers imported are concerned, is occupied by the Kent and Romney sheep. Of this breed there were forty head imported during that month, the largest number that we have any record of as being imported during that period.

Of the Shropshire breed thirty-seven rams and three ewes were imported.

"RATIONAL PIG-KEEPING."

If you wish to learn all about Pig-Keeping, and have the subject analysed and placed before you in simple language, read this book. You can readily obtain all the information you require. *Beautifully Illustrated.*

Arranged in ten sections, each with many sub-sections.

"FARM FIELD & FIRESIDE" OFFICE,
1, Essex Street, Strand, W.C.

PRICE ONE SHILLING.
BY POST, 1/3.
Bound in cloth and gold lettering, 2/-; by post, 2/3.

The Hampshire Down importation numbered twenty-seven ram lambs, and there were also imported during that month five Oxford Down yearling rams.

These large imports into the Argentine of British stud sheep are fully confirmed by the numerous sales and purchases that have been recorded in our columns from time to time.

Sheep Fairs and Sales.

Wensleydale Long Wool.

The annual show and sale of Wensleydale long-wool sheep, held under the auspices of the Wensleydale Long-Wool Sheep Breeders' Association and Flock Book Society, took place on Tuesday, and despite the inclement weather there was a large attendance, and the event was a successful one. The display was a remarkably fine one, and the competition extremely keen. The judges' awards were:—

Aged Ram: 1, E. Horseman, Richmond, sold to Mr. R. Bainbridge for £12; 2, B. J. Hodgson, Hallwith, sold to Mr. R. Wood, Ellington, for £6. Five Shearling Rams: 1 and Alderman D'Arcy Wyvill's cup: E. Horseman, the best price, £12 15s., being given by Mr. B. King; 2, E. K. Cleasby, Carlton Miniott, £15, paid by Mr. J. B. Stubbs. Shearling Ram: 1, E. K. Cleasby, sold to Colonel I'Anson, Howe Park, £7; 2 and 3, E. Horseman. Ram Lamb: 1, J. W. Greensit, Holme-on-Swale, sold to Mr. Stubbs, Baldersby, £12; 2, E. Horseman, sold to Mr. Bainbridge for £8; 3, E. K. Cleasby, sold to Mr. Sherwin, Caythorpe, £8 7s. 6d. Pen of 5 Shearling Ewes: E. Horseman. Three Ewe Lambs: 1, F. E. O. Dobson, Dromonby House, Stokesley; 2, E. Horseman.

Subsequently 150 lots were offered for sale by Mr. W. Graves, the majority of which changed hands at remunerative prices, amongst them three rams at £7 5s., £6 2s. 6d., and £7 2s. 6d.; while a ram lamb was sold for £8 5s., another at £5 10s., and others at £4 17s. 6d., and £3 10s.

The Late Mr. W. Staples' Suffolks.

One of the oldest established flocks of Suffolk sheep was brought under the hammer in the dispersal of the late Mr. Whiting Staples's farm stock at Moulton Hall, on Monday, Messrs. Biddell and Blencowe conducing the sale. Of seventy-five shearling ewes, one score went up to 60s., another fetched 65s. 6d., one 65s., and the other fifteen realised 64s. per head. Of sixty-six two-shear ewes, one lot made up to 69s. 6d., and others from 66s. 6d. to 60s. 6d. per head. Amongst 105 full-mouthed ewes, one score went up to 64s., another 57s.; others from 55s. 6d. to 50s. 6d., and some 50s. per head. Of 120 picked ewe lambs, the best forty fetched 47s. per head, and others from 42s. to 37s. per head. One lot of thirty-one mixed (seventeen ewes and fourteen wethers), sold at 30s. 6d. per head. ve ram lambs included one which fetched £3 10s., another £3 7s. 6d., one £3 5s., another £3, and one £2 17s. 6d.; whilst a shearling ram fetched £5 5s., and another £3.

Ripon.

Ripon October sheep fair was held on Thursday, when there was a good show of sheep of all classes, but only a slow trade. Twice-crossed lambs made 25s. to 30s., half-bred ewes, 34s. to 35s.; half-bred shearlings, 42s. to 45s.; sheep for breeding purposes, 46s.; half-bred lambs, 20s. to 24s. Small show of rams. Wensleydale, etc., averaging £3 to £5 per head.

Strood.

Messrs Cobb's annual ram and sheep sale at Strood, Kent, took place on Friday last, when the entry was smaller than usual, but about three thousand four hundred were penned, being consigned by the principal flock-owners of the neighbourhood.

The demand for feeding sheep was hardly so keen as it has been earlier in the season, but a clearance was effected. The demand for breeding ewes of the best class was a good one, and prices were satisfactory, and so far as this section of the sale was concerned, it was fully an average one. The demand for the registered Kent or Romney Marsh sheep was a notable one. Forty from Mr. F. Baker's well-known flock were first offered, and the competition for them was keen at satisfactory prices, the best being £18, £13, £12 10s., £11 10s., £11, and £10 10s. The average was £10 12s. 9d., as against £9 4s. 11d. for fifteen last year. Mr. C. J. G. Hulkes sent twenty yearling rams, which sold up to £13 10s., the average for twenty being £7 4s. 6d.

A stud ram bred by Mr. F. Neame was sold for £8 10s., and Messrs. Tuff and Miskin sold seven two and three-year-old rams, which made from £11, and averaged £6 18s. The Hampshire Down ram lambs from Mr. Hohler's flock made £5 15s., £5 5s., and £4 10s. (twice).

THE DAIRY SHOW.

Once more the annual show of the British Dairy Farmers' Association has brought together its collection of various breeds and crosses devoted to milk and butter production, as apart from beef. To compare the present show with some of the earlier exhibitions of the Society, there is certainly a vast difference in many of the cattle shown, and there is no doubt that some of the breeds compare very indifferently with their representatives of the past. How the results of the milk weighing and butter produced would compare cannot be known without considerable back reference. The Shorthorns, that worthily take precedence of all other breeds, it cannot be said have improved much as regards appearance during the twenty years the shows have been going on. In the beginning of the series there were many high-class cattle of this breed shown, high-class both as respects their abilities to produce meat and the appearance of their udders for milk-giving. To-day the tendency, it must be admitted, is rather to depreciate the beef-making propensities, and with more plainness of symmetry than was formerly the case. It may, however, be mentioned that there have been many cows exhibited at local shows in the north that would compare very favourably with the bulk of the representatives of this breed at the Agricultural Hall, and there is no question that the Lincoln Red portion of the Shorthorn were much better comparatively than the red, white, and roans, though the highest honours were accorded to the latter class in several cases. The Lincoln Red heifers were especially good

The next most important dairy breed at Islington were that of the Jerseys, home-bred and from their native island. The show of these were again fairly good, but many breeders do not class them as at all superior, if equal, to many former displays. Faults in the majority of them were far too prominently visible —with one good animal you saw an udder with teats far too small to be at all satisfactory either for those who have to milk them or for the animal or for the owner, for such failings or weaknesses invariably end in either drying up of the milk, often in the loss of one or more quarters at an early age, besides taking considerably more time to draw the milk from them. With another cow we found a large udder that is unfortunately nearly as large after milking as before; this, too, is a fault that is not without bad results at times. Then as regards the cows themselves, several of the leading animals were very bulky and coarse about their heads and throats, showing a lack of fine breeding; others were high at tail and low in the back, which did not give a pleasing outline. Notwithstanding these complaints, there were several cows that look like giving very good results at the pail, that show quite sufficient quality, and with good shape both in their bodies and udders.

Guernseys were not a large show, and several of them were rather badly done by as regards condition. The breed generally does not do itself justice in the milk and butter tests at our shows. And it is probably on this account that fewer of this breed are shown. The prize winners, both in the cow and heifer class were very rich in coulouring, and had the appearance of doing well at home, whatever the weighing machine and separators at the Agricultural Hall may have to say to them.

Red Polls were certainly in the ascendant as regards their quality and milking appearance, when compared with, perhaps it may be said, any previous show, and in numbers they were well represented, considering the few herds there are of the breed, from which exhibits are generally made.

Ayrshires are a breed that is very difficult to understand, and one of the breeds that, so far as the Dairy Show is concerned, have deteriorated to an incredible extent. At the earlier Shows of the Society this breed contributed some, indeed many, magnificent specimens, both in breeding and udders, as well as with the reckoning of the pail and the churn. This year only two animals were exhibited, and though very useful ones apparently, were not of the surpassing excellence that characterised their predecessors at these shows by a long way.

Kerries were a good show, several very typical animals of the breed being shown, and they gave a very fair record at the pail and the churn, all things considered. Their quality was generally good and their milk appearance, too. Dexters, the sister breed were conspicuous by an entire blank. Why this should be is also difficult to understand, as during the summer shows the display of milk in the Dexter classes was quite astonishing.

The other breed section brought to view a number of quite extraordinary animals. The large South Devon Cattle had three or four very able representatives. Grand cows both for size and milk appearance; how they are as consumers is not told. Alongside these grand cows were three or four very much of Shorthorn blood that were also quite of the very best standard.

Shorthorns.

Probably for the first time, the pedigree class of cows of this breed gave results fully equal to the herd pedigree as regards the milking trials. The same pedigree has for some time past been quite at the front in these records. This year, however, the registered stock have come out very creditably all round. By inspection Lord Rothschild's Broadhooks 3rd, by Invaluable, was placed first, and was also second in the milking competition, her yield of that product being 60.9 lb., on Wednesday, and 59.4 on Thursday. This cow carries a fair amount of flesh, and is in good shape and quality. Mr. George Taylor's Melody, by Horsted Duke 6th, was placed second by inspection, and came first in the milking trials, and also won the Spencer Challenge Cup; her yield of milk was 58.5 on Wednesday and 53.7 on Thursday. In non-pedigree cows Mr. F. J. Stanhope's Ruth, a very fine style of cow was first by inspection; in milk, however, she was beaten by Mr. Sheppy's Model Lily, by an unknown sire, who gave 56.9 lb. of milk on Wednesday and 59.7 lb. on Thursday, from which she also made sufficient butter to win first prize in that test and, her yield of this laatr product being 2 lb. 13 oz., giving a butter ratio of 20.22. These good results in point of quality gave her the greatest number of points, securing to her the Barham Challenge Cup. This cow was very fresh, having calved as recently as September 12; her quality is very good as well as symmetry, showing good breeding as well—quite what a good Shorthorn should be. Mr. John Evens's Burton Cross 2nd, a Lincoln Red, was awarded second by inspection, and also second in the milking trials, her yield being 56.3 on Wednesday and 58.1 on Thursday; she is a remarkably fine cow of her breed, and a capital user all round. In Shorthorn heifers Mr. George Taylor's Strawberry Leaf, who did rather badly by inspection, was first for milk with a record of 33.9 the first day and 34.4 the second. For inspection judging, this class could not be looked upon as at all a really first-class one, but Shorthorn heifers not eligible for the herd-book were a very good lot, as Mr. John Evens had entered three Lincoln Reds, two of which were extraordinarily good heifers; one of these was h.c. by inspection and first in the milking trials, giving the capital yield of 31.3 the first day and 30.3 on the second day, after being in milk since July 10. The remaining two heifers were first and second in the class by inspection. Shorthorn bulls were not by any means a big or extra good show; three only were competing, of which Mr. H. J. S. Tory's Damory Matchmaker, a short-legged roan of the Gloucestershire Hobbs blood, was first. Lord Rothschild also exhibited the good old stock bull from Tring Magna Charta, who was second—quite a dairy stamp of bull.

Jerseys.

As already mentioned, these did not give cause for universal satisfaction so far as inspection was concerned, and the butter test must be somewhat similarly spoken of, half the eighteen cows tested for butter requiring a ratio of over 20 lb milk to make a pound of butter, and several very small yields were recorded. Dr. Watney's famous cow Red Maple won the gold medal with a butter yield of 2 lb. 5¾ oz., having been in milk since April 21. Admiral Brand's Rosina came second with 2 lb. 7¼ oz. of butter, losing a few points, however, in other respects, and the Bishop of Ipswich's Oxford Dewdrop was third with 2 lb. 2¼ oz. Red Maple also carried off the first milking prize to Pangbourne, giving 43.3 the first day, and 44.9 the second. Admiral Brand's Rosina was second, as she was in the butter test, with 40.1 and 41 lb. of milk in the two days. By inspection, Lord Rothschild, Mr. J. H. Smith Barry, and Lady de Rothschild won the prizes with very nice cows that have been winning at many of the summer shows, and were still looking very fit. Earl Cadogan and the Bishop of Ipswich were well representated in the English-bred heifers class, the former winning the Blythwood Bowl for best English-bred animal in milk. Island-bred heifers were not heifers placed first and second. Mrs. S. de Vincq had a couple of highly bred and good-bagged heifers placed first and second: Mrs. S. de Vicq had also three or four very good heifers which gave little interest to the class.

Guernseys.

Mr. E. A. Hambro had the best of these, both in the cow and heifer classes, by inspection Mr. Ozanne winning the first milking prize with the rich and milky old cow Lady Roberts, who gave 37.3 and 34.7 lb. of milk for the two days respectively. Mr. Hambro's heifers were pretty easily first for inspection and for butter. Mr. Ozanne's Lady Roberts was also first with a yield of 1.12¼ lb.

Red Polls.

These came out pretty well in the milking trials, and also for butter. By inspection Sir Walter Corbett was second, following Lord Rothschild, and in the milking trials Sir Walter Corbett was first with Desired of Johnston, who gave 50 and 46.2 of milk on the Wednesday and Thursday. Mr. Martin Sutton's second prize in the milk competition, Plessy, also turned out extremely well, giving over 52 lb. each day. Mr. Baxendale's Red Polled heifer also yielded 1.14¾ lb. butter, which was very satisfactory.

Other Breeds.

Ayrshires did not appear to obtain any milking prizes, and in Kerries the Countess De la Warr was first with Buckhurst Peaceful, her yield being 38.7 and 39.6 lb. for the two days. In butter Lady Greenall's Walton Joyous, after being in milk 149 days, yielded 1 lb. 1¼ oz. In the cross-bred class Mr. Nisbet's Polly gave a very good account of herself in milk with 51.7 and 57.2 lb., and took second prize, being beaten for the first place by that extraordinary old cow of Captain Smith Neill's, Doctor, who at twenty-four years old gave no less than 52.1 and 49.6 of milk on the two days, her butter yield for one day being 2 lb. 4½ oz., a ratio of 22.82, and after being in milk since May 20. These conclude the chief winners of each section.

DAIRY PRODUCE.

Cheese—Cheddar.

What a gathering there is brought together under the clock as each year the Dairy Show comes round to witness the good old battle of the English and Scotch Cheddars fought out with the greatest good will on the friendly ground of rivalry. Year by year there is a see-saw business, one is up the other down, seldom an even balance being maintained with such. Much, of course, depends on the judge which side possesses the stongest has, of course, the best chance, but this year the two finest Cheddar cheese judges possible were pitted against each other. One was the noted Professor Drummond from Scotland, the other Mr. C. H. White, Frome, and, under such circumstances, the judging was bound to be of the best. It was very certain by dinner-time that the English judge was ill at ease. He was making a gallant fight on poor material. Whereas the Scotchman had something specially prepared for the occasion.

The West of England cheesemakers have experienced a good year, and with prices up there has not been the desire to hold for the London market. With numerous shows the makes have diminished by five cwt. and half-ton lots until many makers had only the August draft from which to make their selections. This at once placed them at a great disadvantage, and their judge had to acknowledge the excellence of the Scotch makers in all but one class, and that was where he hung out for the Frome champion. Here he would not yield an inch to his adversary, and at a rather late hour the umpire, Mr. Masters, was called in and upheld the Somerset cheese's dignity from being lowered at coming up to London.

Taking the class for four Cheddars, there were seventy entries, and scarcely a really weak cheese was found amongst them. On the other hand, the highest excellence was in a narrow compass at the top. The first prize went to Mr. Henry White, Mappowder, Blandford, Dorset, with a very clean, rather open-textured cheese, sweet as a nut, and likely to improve week by week until the year is out. It showed quality everywhere. Mr. Robert Stevenson sent a very fine cheese down from Scotland to meet it. The texture was firmer, but it had not quite that bright appearance that Southern epicures require. It was a very kindly cheese, showing more mellowness than is usually characteristic of the Scotch exhibits in general. Mr. Stevenson was closely rubbed by Mr. Alexander Cross, Knockdon Farm, Ayrshire. Then the barren honours came in to console the West Countrymen. Mr. T. C. Candy, of Dorset fame, was given fifth and reserve with his slow ripening cheese that needed age; and his former pupil, Mr. F. W. J. Crocket, from the same county, got a commended card for the same principle of making a bit firm with quality. Mr. H. Travers, who was well in the prize-list at Frome, could not get higher than highly commended, Messrs. James and Thomas Wither sharing this honour with him with cheese made in the North Country. Mr. Walter Keel,

Somerset, whose name is generally intimately associated with old Cheddars, was now highly commended with four that were scarcely five weeks old. The commended cards all went to Somerset. At one time the Cheddar truckle class was considered to be a monopoly for the Somerset and Wilts makers, but now the canny makers from the North have so well mastered the mystery of their make that they came down this year with such force as to upset the equanimity of that well-known maker, Mrs. Candy, Shepton Mallet. Instead of leading the class with her cheese rich and silky, she found herself led by Mr. Robert Stevenson's exhibit, that was a trifle hard, more of the export than the immediate consumption type. Mr. Alexander Cross was third with another sound cheese, and mainly because of their firmness the reserve and highly commended card also went North, with Mr. William Hunter, an unique experience for Scotland in this class, but there was the satisfaction that the cheese won on their merits. But it was rather a question whether this would have been so had not Mr. Walter Keels', Somerset, exhibit showed such evident traces of being forced; being naturally rich, this had loosened their texture very much.

Other Makes.

The Stilton class showed up better than for many years past as regards moulding, though in several instances the flavours were not what they should be. It was a very fine Stilton indeed sent by Mr. William Miller, Plungar, Notts. It was clean in the white, was nicely moulded, and had a rich, most agreeable flavour, though he was run very close by Mr. Henry Morris's exhibit, one of whose cheeses was not quite even with the others; but a class of 25 entries was very representative of a local make that should be more widely distributed. The Wensleydales made a small class, not of the highest average of merit. Mr. A. Harker sent a very pleasant cheese from Carperby that was very rich, and yet not too soft to stand travel.

If there was general merit anywhere it was in the Cheshire class. The soft buttery short curd of good flavour is in increasing request. Mr. Frank Heath, Tarporley, sent one of very clean flavour, and likely to make an ideal old Cheshire. A very close runner was Mr. Samuel Lea, Oswestry, but some critics thought there was a trifle brackish taste to one of his cheeses, but in other respects they were nearly on a par with the first, and then came a very even run of merit right down to the commended, there being three very highly commended, practically half of the class being noticed.

The Double Gloster has in recent years become to be considered as one of the decadent makes, whose appearance in the prize schedule is steadily working onwards to oblivion. But by a singular coincidence, and nearly by unanimous general consent, the Double Glosters furnished one of the best cheese in the show, this being sent up by Messrs. C. Harris and Son, Slimbridge, Glos.; it ironed as though it was a rich old Cheddar as to quality, and was of a particularly fine flavour. The second prize lot was considerably lacking in this respect. The reserve went to more of a Cheshire character. The Single Gloster class was small in numbers, and decidedly deficient in quality. Messrs. Harris was again to the fore, but it could have been all the better for the use of a little sour whey. The second prize went to cheese that were very irregular in appearance.

Leicesters, year by year, are just able to keep themselves in the schedule, though it is very significant this year that none of the exhibitors were from the county that gave this make a name, and it was therefore an encouragement to find the first prize going to the Warwickshire County Council Dairy School, Nuneaton. Caerphillies were disappointing after all the headway that this make has been supposed to make, and the specimens as shown were a considerable departure from the original colliers' cheese. After getting away from the sourish, porous curd and tough skins of the real Welsh make they became miniature Cheddars, and now the desire is to make them an enlarged semi-cream cheese, and were pleased to note that the judge did afford much encouragement to this comparative recent introduction of creaming. The first and second prizes went to a rather close curd, but which was alike rich and clean in flavour, and in all probability Mr. Geo. Hawking would have been higher up with his more open, nice curd, but had an indifferent outside appearance, being badly cracked. The reserve exhibit had a rather harsh flavour. In this class was one exhibit that had been kept too long, as it had become quite hard in the skin. A class that does not make much headway at the Dairy Show, especially as regards quality, is that for cream cheese. There is seemingly no exact rule by which the period of ripeness can be properly estimated, thus we have a class of about equal proportion over and under ripes. The first prize lots were very even, and just fit for consumption.

The Gervais class is looked upon as the thin edge of the Continental wedge of soft makes, but it does not drive very fast apart from one or two real cheese, the others were practically curd paste. It would be hard which to describe as the greatest failure, the unripened or the ripened soft cheese classes. Both of this can only be written by courtesy as indifferent. It would appear that better results might be obtained in the improvement of recognised makes than by venturing on the introduction of makes the general public knows nothing at all about.

The cheese fair for Cheddars and Stiltons is always a popular feature of the Dairy Show, and it was here, in the Cheddar section, that the Scotchmen brought down their weight and scored, as they only left fifth for Mr. T. C. Candy and reserve for Mr. H. Travers. This class contained a very considerable quantity of young, unmatured cheese. The Stilton fair class was a very small one, but it here gave Mr. Henry Morris to be placed first and second with some excellent specimens.

Butter.

Year by year the butter competitions attain more and more importance, but, being divided up into sections, the visitor has not been properly impressed as to their importance this year, however; and endeavour was made to bring all the butters together in St. Mary's Hall, and it was well that such was done, though it was rather to be regretted that the show of fancy butter was dispossessed of its former position in the Central Hall, where it most decidedly showed to advantage. The butter section this year was greatly strengthened by the Colonial exhibits, which were of such uniformity as could not fail to impress the English exhibitors where classes were singularly deficient in this essential requirement of the modern butter market. The Irish exhibits also showed that the instruction so freely offered in that country is being appreciated. The fresh butter classes were remarkable for the success that attended the four Devonshire lady exhibitors. It was also noticeable that very little was done by the judges, either as to cutting the butters or tasting them; some were only just touched on the corner, and this may account for the fact that one of the chief honours was bestowed on decidedly sour butter, and which should render a tasting stall for the butter quite as much as in the cheese section. The class for butter made from Channel Island cattle and their crosses, without salt, meant a rather extended trio of firsts, the first going to Miss M. K. Harris, Dorset, with a butter better in the flavour than the grain. Mr. Arthur Franklin, Chesham, Bucks, had butter that cut as solid as wax, but the flavour was not there. Mr. Frank Ward was also to the fore with a very fine Devonshire butter beautifully worked.

The winners of the other prizes included some of the best names in the butter world. The class for butter made from the same breeds of cattle with the addition of salt brought out a much better class, especially as regards flavour. Mrs. Mildon was twice first with fine flavoured butter, slightly loose as regards texture. Mrs. Ward's was again very rich and beautifully made. Mr. Roland Wood sent up an extremely nice butter for the secondary set of honours; Mr. Franklin being also amongst them, as was also Mrs Irving, Carlisle. It was noticeable that there was a very considerable number of dark-coloured butters in this class, and some of it showed signs of being overworked. The class for butter made from Shorthorn cattle without salt produced a number of very sweet butters, a number of which were pale. The general texture was good, though some of the rolls cut hollow. The prizes in this class were not so widely distributed, two of the firsts going to Devon with Mrs. Mildon and Mrs. Bere; Mrs. Alfred Loder, Harpenden, taking the other with a nice, bright, clear butter. The connection between firsts and seconds were very close, but afterwards the award list was more widely spread out. As with the Channel Island class, the addition of salt brought forth a very great improvement, the flavour being more sharply defined. Mr. Underwood continued to maintain his superiority; Mrs. George Adlam, Somerset, getting into the higher grade in the good company of Mrs. Ward. The class for butter made from scalded cream gave Devon a chance to utilise the cream, which it did, Mrs. Frank Ward taking the lead, with Mrs. Bere and Mrs. Mildon second and third. These were three of the best butters in the show. This class contained the rather unique feature of a sanitorium making an exhibit, and which secured a highly commended mention. The essentially Irish class for boxes of rolls, packages to be taken into consideration, found two English exhibitors in front, these being Mr. Robert Sandford, of Devon, and Mr. Prideaux, Dorset. It was a good class, more of a general even quality rather than an excess of merit. In the class for mild cured butter Devon won again with its rich sweet butter, then the Irish co-operative societies held their own, but here there were exhibits that were decidedly off flavour. As there was in the next class for cured butter, here the first prize was secured for the Isle of Wight by Sir Charles Seely, Bart. Here again, apart from the prize winners, were a number of exhibits that were evidently more intended for market than for show. There was a big entry in the other cured class. The most noticeable feature in connection with these Irish classes was the general improvement as regards packing.

The fancy butter classes were not large, and there was not much departure from the old time-honoured registered designs. Surely the time has arrived when something alike novel and effective might be introduced without the inevitable pointed butter pat joined to a rose leaf; bearded wheat looks very nice, because the awn is on the top of a small grain that shows somewhat loosely in the ear, whereas that same awn stuck into a moulded bit of butter is not so effective. There were only two exhibits with extraneous foliage, that well-known winner, Miss Trenchard, of Devon, whose prize cards exceed a hundred, being the winner. There was a rather larger entry in the class without extraneous decoration, and here nearly childlike efforts were visible. Miss Trenchard won with some exquisite dahlias.

The class for Colonial butters most certainly furnished an eye-opener to the English farmers by reason of the evenness of the grade, though made by rival factories, the prize-winning exhibit of the Grasmere Butter Factory Company being very fine—the butter was well made and of delicious flavour. The average English exhibitor has not hitherto had the chance to become intimate with the quality of these makes of our cousins beyond the seas. But where was Canada? Surely, progressive as she is, should have been represented. The cream classes, as usual, showed this, welcome addition to any tea table in the most absurd utensils both for carriage and use imaginable. An ornamental dish may be all right at home, but for transit by parcel post or rail, frailties are not required.

Cream.

The clotted cream contained some splendid exhibits that cut nearly as solid as butter, and yet withal were cream. To look at these reminded one of the blackberry bush and the junket. Devonshire was an easy winner here. The class for cream other than clotted was not so good, some of the exhibits being thin and some even bitter, and there is evidently considerable doubt in the minds of the exhibitors as to whether the cream should be compressed or pourable. Some of the creams were very weak indeed.

Bacon and Hams.

There was a fairly large show of bacon and hams, but most of the prizes were awarded to well-known curers in various parts of the country. The awards do not call for special mention, a full list being printed on another page.

Judges.

MILKING TRIALS: Wm. Ashcroft, 13, The Waldrons, Croydon; Samuel R. Whitley, Little Westlands, Lingfield, Surrey; and F. J. Lloyd, Muscovy House, 6, Trinity Square, E.C.

BUTTER TESTS: Charles Marshall, Broomhaugh, Riding-Mill-on-Tyne; and Joseph Carson, Crystalbrook, Theydon Bois, Essex (representing the English Jersey Cattle Society).

CATTLE.—Shorthorns: C. E. Wodehouse, Woolmers Park, Hertford. Jerseys: John A. Perree, 8, Church Street, Jersey. Guernseys: J. C. Forster, Clatford Mills, Andover. Kerries and Dexters: H. D. Betteridge, Drayton, Woodstock Road, Summertown, Oxford. Ayrshires, Red Polls, and Crossed or Mixed Breeds: Garrett Taylor, Trowse House, Norwich.

GOATS: W. K. Taunton, 86, Hatton Garden, London, E.C.

CHEESE.—Cheddar: C. H. White (Messrs. White Bros.), Frome; and Professor R. J. Drummond, Dairy School, Kilmarnock. Cheshire and Leicester: H. J. Fish, Whitchurch, Salop. Stilton and Wensleydale: J. M. Oubridge, 18, Pudding Chase, Newcastle-on-Tyne. Gloucester and Caerphilly: W. G. Oakey (Messrs. Spear Bros. and Clark, Ltd.); Bristol. Soft Cheese: Miss Martha Brown, Lancashire County Council Farm, Hutton, near Preston.

COLLECTIONS OF DAIRY PRODUCE: Professor James Long, Chdworth Manor, Newdigate, Surrey.

BACON AND HAMS: J. M. Oubridge, 18, Pudding Chase, Newcastle-on-Tyne.

BUTTER: H. Griffiths, 65, Eardley Crescent, Earl's Court, S.W.; A. T. Loram, The Creamery, Rosamondford, Aylesbeare, near Exeter; Henry Masters, 11, South Hill, Park Gardens, Hampstead, N.W.; and George A. Scott Messrs. Burton, Son, and Sanders, Ltd.), College Street, Ipswich.

ORNAMENTAL BUTTER AND CREAM: Miss Martha Brown, Lancashire County Council Farm, Hutton, near Preston.

PRIZE LIST.

COWS AND HEIFERS IN MILK

Class 1.-Shorthorn cows, entered in or eligible for the Herd Book: 1, Lord Rothschild (Broadhooks 3rd); 2, G. Taylor (Melody); 3, Lord Rothschild (Snowdrop 29th); r., William Nisbet, Bendysh Hall, Radwinter, Essex (Maggie Millicent); h.c., Lord Rothschild (Primrose); c., A. B. and W. G. Little, Paxcroft Farm, Trowbridge (Cira's Daisy).

Class 2.-Shorthorn cows, not eligible for Class 1: 1, F. J. Stanhope (Ruth); 2, John Evens, Burton, near Lincoln (Burton Cross II.); 3, J. F. Spencer, Hornsey Lane Farm, Highgate (Morning Maid); r., John Evens (Burton Fleet II.); h.c., J. F. Spencer (Sweet Marie); Robert W. Hobbs, Kelmscott, Lechlade (Snowdrop 20th); John Littleton (Rose); F. J. Stanhope (Rose); c., Robert W. Hobbs (Rose 26th).

Class 3.-Shorthorn heifer, not exceeding three years,

entered in or eligible for the Herd Book: 1, Robert W. Hobbs (Lovely 37th); 2, J. P. Cross, Catthorpe Towers, Rugby (Catthorpe Princess 2nd); r., J. P. Cross (Catthorpe Star 3rd); h.c., Lord Rothschild (Opal); c., C. R. W. Adeane, Babraham Hall, Cambridge (Lady Evelyn Bates); George Taylor (Strawberry Leaf).

Class 4.—Shorthorn heifer, not exceeding three years, not eligible for Class 3: 1 and 2, John Evens (Burton Rose V. and Violet II.); h.c., John Evens (Burton Dolly III.); F. J. Stanhope (Rhoda).

The "Blythwood" Challenge Bowl, for the best Jersey cow or heifer, in milk, in any of the Jersey classes, bred in Great Britain or Ireland; to be awarded by inspection; Earl Cadogan (Garantir 15th); r., Bishop of Ipswich (Lady Teasel).

Class 5.—Jersey cows, entered in or eligible for the Herd Book: 1, Lord Rothschild (Syren 3rd); 2, J. H. Smith-Barry, Stowell Park, Pewsey, Wilts (Nellie Beresford); 3, Lady de Rothschild (Whitewood V.); r. and v.h.c., Bishop of Ipswich (Lady Teasel); h.c., T. Butt Miller (Hamley's Dawish); Mrs. Watson-Kennedy (Majorca); Earl Cadogan, K.G. (Reindeer's Bessie).

Class 6.—Jersey heifer, not exceeding three years, bred in Great Britain or Ireland: 1, Earl Cadogan, K.G. (Garantir 15th); 2, Bishop of Ipswich (Pearl Maiden); 3, Lady de Rothschild (Pearl II.); r. and v.h.c., C. A. Smith-Ryland (Havering Gloriesa 4th); h.c., Joseph Brutton (Our Lassie); Admiral the Hon. T. S. Brand (Lottie).

Class 7.—Jersey heifer, not exceeding three years, bred in the Channel Islands, entered in or eligible for the Jersey or English Jersey Herd Book: 1 and 2, William Alexander (Farceuse 4th and Emma May 2nd); 3 and r., Mrs. S. de Vicq (Feronia and Eupidee's Lady); h.c., Captain L. G. Gisborne (Pearl 5th); Philip Le Brocq (Villeau Basbelle II.).

Class 8.—Guernsey cows, entered in or eligible for the Herd Book: 1, E. A. Hambro (Queen of the Roses); 2 and r., H. M. Ozanne (Lady Rosedale and Lady Roberts); v.h.c., E. A. Hambro (Daisy Des Jaonnets); h.c., H. Fitzwalter Plumptre (Rosey 4th).

Class 9.—Guernsey heifer, not exceeding three years, entered in or eligible for the Herd Book: 1 and 2, E. A. Hambro (Hayes Olive and Hayes Golden Cherry); r., E. A. Hambro (Hayes Express); v.h.c., H. M. Ozanne (Second of May); h.c., H. Fitzwalter Plumptre (Antona 12th); c., Frank Hargreaves (Merton Vespasia 2nd).

Class 10.—Red Polled cows, entered in or eligible for the Herd Book: 1, Lord Rothschild (Janet); 2, Sir Walter Corbet, Bart. (Shamrock); 3, Kenneth M. Clark (Sudbourne Comely Belle); r. and h.c., Sir Walter Corbet, Bart. (Desiree of Johnston); h.c., Lord Rothschild (Clarissa and Atalanta); Martin J. Sutton (Plessy); c., Kenneth M. Clark (Sudbourne Lute); Francis H. Baxendale, J.P. (Rapid).

Class 11.—Red Polled heifer, not exceeding three years, entered in or eligible for the Herd Book: 1 and 2, Kenneth M. Clark (Rendlesham Flit and Sudbourne Brisk); r. and h.c., Lord Rothschild (Troston Davy 5th); h.c., Kenneth M. Clark (Sudbourne Lady).

Class 12.—Ayrshire cows, entered in or eligible for the Herd Book: 1, William Nisbet (White Fraser of Dalfibble); r., William Nisbet (Dalfibble Daisy Bell).

Class 13.—Kerry cows, entered in or eligible for the Herd Book: 1, Geo. Llewellen Palmer (Molly Dhubh); 2, Duchess of Newcastle (Hardwick Flora); 3, Countess De La Warr, (Buckhurst Gem); r. and v.h.c., T. Waite (La Mancha Queen); h.c., Countess De La Warr (Buckhurst Peaceful); Lady Greenall (Walton Joyous).

Class 14.—Dexter cows: No award.

Class 15.—Cows not eligible to compete in the preceding classes: Equal firsts, T. Cundy (Primrose) and W. Nisbet (Polly); equal seconds, W. P. Vosper (Sally 2nd) and F. J. Stanhope (Polly); equal reserves, T. Cundy (Sweet Briar) and D. Kelly (Yellow Girl); h.c., W. P. Vosper (Tulip 2nd) and W. Nisbet (Beauty); c., J. Littleton (Norah) and J. Sheppey (Blue Bell).

Class 16.—Heifers, not exceeding three years, not eligible to compete in previous classes: 1, John Evens (Darkie); r., William Nisbet (Nancy).

BULLS.

Class 17.—Shorthorn bull, twelve months old or over, entered in or eligible for the Herd Book: 1, Henry J. S. Tory, Damory Court, Blandford (Damory Matchmaker); 2, Lord Rothschild (Magna Charta); r., A. B. and W. G. Little (Red Rover 3rd).

Class 18.—Jersey bull, above one year and not exceeding three years, entered in or eligible for the Herd Book: 1, Captain L. G. Gisborne (Theresa's King); 2, Bishop of Ipswich (Violet's Lad); 3, L. Currie (Twylish King); r., Admiral the Hon. T. S. Brand (Yeoman); h.c., W. J. Alexander, Hertford (King Henry).

Class 19.—Bull of any other pure breed, twelve months old or over: 1 and silver medal, Frank Hargreaves, Merton Grange, Gamlingay, Cambs. (Merton Dairyman); r., E. A. Hambro (Hayes Royal).

GOATS.

Class 21.—Goats of any variety that have won three or more first prizes in classes other than kids or goatlings, on or before September 3, 1905: 1, B. Ravenscroft (Woodruffe); r., Baroness Burdett-Coutts (Sparaxie).

Class 22.—Pure Toggenburg or other Swiss or Alpine breeds, not eligible for class 21, over two years on October 1, 1905: 1, Sam Woodiwiss (Sedgemere Faith); 2, Sam Woodiwiss (Sedgemere Melba); 3, A. E. Woodiwiss (Sedgemere Kimberley); r., Sam Woodiwiss (Sedgemere Capella); h.c., Herbert E. Hughes (Cream Queen).

Annual Meeting of Members.

The annual meeting of the members of the British Dairy Farmers' Association was held at the Hall on Wednesday, when Lord Northbourne, the President, who occupied the chair, moved the adoption of a report which, he said, showed the position of the society to be one on which members could justly congratulate themselves, while the number of entries for the present show and the record of attendance were very satisfactory. He believed that before he put the motion for the adoption of the report Sir Edward Strachey would like to move an addition to it.

Sir Edward Strachey, M.P., said he desired to draw attention to a matter the importance of which needed no demonstration to those whom he addressed that afternoon—he referred to the fact that notwithstanding all the efforts which had been made, the Sale of Butter Bill was not yet on the Statute Book. He wished to add to the report a paragraph expressing the regret of the British Dairy Farmers' Association that this was the case, and that for the fourth time their reasonable expectations in this respect had been disappointed, arousing a feeling not merely of regret, but of indignation among all who were interested in the question. (Cheers.) This lack of achievement on the part of the Government occurred in spite of the declaration of the President of the Board of Agriculture at Norwich this year that the industry was seriously handicapped by the process of water-logging butter. "A few years ago," Mr. Fellowes said in his speech, "there were only two firms practising it, but now there were more than one hundred, and the amount of added water ranged from 20 to as much as 50 per cent. That was an absolute fraud on the farmer and on the public. It was a serious matter for the colonial farmers, who justly prided themselves on sending out one of the driest butters, containing no more than 10 per cent. of water. Yet when it arrived here it was so manipulated that there was a large percentage of water in it when it was sold." Yet the Government would not give the necessary facilities to pass a Bill to stop a practice thus declared to be a fraud on the farmer and on the public? There might soon be a change of Government, and being most anxious that their views as to the pressing need for the Bill should be registered, he moved to add to the report: "It is to be deeply regretted that for the fourth year the Government failed to pass the Sale of Butter Bill, thereby neglecting to prevent the trade in waterlogged butter, the sale of which has been declared by the President of the Board of Agriculture to be an absolute fraud on the farmer and on the public." (Cheers.)

Professor Long, who seconded, said he agreed with Sir Edward Strachey's observations. The dairy farmers had been played with by some members of the Government long enough. The Government, or at least some members of it, cared as little about the success of the English dairy farmer as he (the Speaker) did about the success of Socialism in this or in any other country. Referring to the good work of the late Mr. Hanbury during the time he was President of the Board of Agriculture, Professor Long said they had never before or since received such support as they did from the late President. They all recognised what a great man Mr. Balfour was; but it was very regrettable that he should not care a snap of a finger for agriculture. It was the policy of the Government which desired to hold office to cater for the trading classes, while they overlooked the just claims of those classes which were the backbone of the country, namely, those who were engaged in agricultural pursuits. He had ascertained that there were one hundred establishments in England where blended butter was being produced; this had led to the public being sold blended butter, to the exclusion of the honest article. The time had arrived when they must do as the Labour party were doing—get their grievances brought to the notice of the public. They were warranted, he contended, in rebelling against their own party at the iniquitous way they were being treated.

The report having been adopted, the Marquis of Winchester was elected president for the ensuing year, and the following were elected vice-presidents:—The Marquis of Bristol, the Earl of Crewe, the Earl of Derby, the Earl of Warwick, Lord Tredegar, Lord Wenlock, Sir James Blyth, Sir Edward Strachey, M.P., Sir George Barham, Mr. Jesse Collings, M.P., Mr. G. F. Roumieu, and Lord Northbourne.

The President said circulars had been issued by the Board of Agriculture during the last four years, stating where it was clearly shown milk which came direct from the cow was not up to the standard, then no conviction should take place.

The President, replying to a questioner, said there was no desire to abandon the standard. The Council were now in communication with the Board of Agriculture with a view to getting greater facilities for the sale of milk just as it came from the cow.

Another member said they did not want their milk watered down any further. Instead of asking the Government to lower the standard they should rather ask them to raise it. (Laughter.) It seemed the desire of a previous speaker to get the standard lowered; he hoped that view would not be put before the Board of Agriculture.

The first speaker said he did not want to lower the standard: nor did he wish to appeal for security for those who desired to carry on their business by fraud. Some milk was unavoidably below the standard, and farmers in consequence encountered, unawares, great perils by being liable to penalties and punishment for offences of which they were absolutely innocent. The standard fixed at the present time was not always attainable. That Association would always strive to maintain a high standard, but they could not help it when nature failed them.

The President said it was an erroneous idea that the Council wished to lower the standard of milk.

A vote of thanks closed the proceedings.

"FODDER CROPS; Their Growth, Cultivation and Uses" By C. G. Freer Thonger, M.R.A.C., F.C.S., Professor of Agriculture, The Colonial College, Hollesley Bay. Price One Shilling. Post free 1s. 1½d.—W. A. MAY, "THE MARK LANE EXPRESS," 1, Essex Street, Strand, W.C.

SEEDS, PLANTS, &c.

500,000 FRUITING TREES (garden or wall training), 12, 10s. 6d.; 7, 6s. 6d.; 3, 3s. 6d. Splendid Rose-trees, 12, 5s. 6d.; 6, 3s. Gooseberry and Currants, 2s. 6d. doz. Strawberry plants, 100, 3s.; 50, 2s. Rasp. canes, 25, 1s. 6d.; 50, 2s. 6d. Wallflowers, 100, 2s. 6d.; 50, 1s. 6d. Carr. paid. Catalogues free.—EAST KENT FRUIT CO. (M.L.), Sittingbourne, Kent.

SEED POTATOES.—Off bright silt. Lincolnshire grown. Also reliable stocks of Scotch grown. For prices apply, W. J. ATKINSON, Weston St. Mary, Spalding.

SEED WHEAT, Essex Conqueror, from King & Sons, 1904, stiff straw, heavy cropper, 33s. per qr. on rail, Thurlby, G.N. Sacks. Cash with order.—B. NICHOLSON, Burton, Market Deeping.

200,000 FIDLER'S ECLIPSE Cabbage Plants, 3s. 1,000. W. HORNE & SONS, Cliffe, nr. Rochester, Kent.

SAINSBURY'S NEW WINTER KING BARLEY. Two rowed. The earliest Barley in cultivation. Re-selected every year. Favourite with brewers for its high quality. Strong straw. Not liable to be laid. Stand any winter. Commenced cutting July 12th (very ripe); all housed by 22nd. A customer writes: "Your winter barley gave me every satisfaction; we cut in June and housed first week in July." Another, farming 600 acres, writes me: "The winter barley you supplied me with was the heaviest-looking crop I ever saw—was a sight for gods and men. I have ricked five big stacks, with over 20 waggon loads in each, off 28 acres." Price free on rail Ross. On account of slump in malting barley, will meet my customers by a reduction to 64s. per qr. Sacks 1s. Cash. —J. B. SAINSBURY, Whiteross, Ross, Herefordshire.

CABBAGE AND LETTUCE PLANTS.—Autumn-sown Early Rainham, Enfield Market, Wheeler's Imperial, Red Pickling, Early and Late Drumhead, Brown and White Cos Lettuce.—T. DAVIES, Great Tangley, Guildford.

SEED WHEAT.—Scholey's Squarehead, seed direct 1904; Squarehead's Master, Webb's Standard Red, Blue Cone, strong strawed good-yielding varieties; Sainsbury's Winter King Barley; all grown on strong red land for seed.—Samples, apply GEORGE DAY, Bishampton, Pershore, Worcestershire.

SEED WHEAT, Blue Cone, Specially Selected for Seed, clean and true, at 3½s. per quarter. H. S., Esq., writes: "The Blue Cone I had from you last year, turned out a remarkably fine crop, quite the best about here. I have not threshed it yet, but it will run very nearly, if not quite, 8 qrs. per acre. I had to cut the crop by hand as it was far too heavy for the binder, and even a self-delivering machine I tried, could not part it. Send 4 qrs. at once to Kineton." —B. ASHWIN, Littleton Pastures, Evesham.

BLACK Winter Oats for sale, Toogood's Pedigree, good croppers, excellent quality, 21s. per quarter.—"Bailiff," Langden Abbey, Dover.

FARMS, BUSINESSES, &c.

FARMS.—Rents from 10s. Acre; prices £7 Acre. Monthly List 2 stamps. RUTTER, 10, Norfolk Street, Strand, London.

MESSRS. CRONK'S LIST of FARMS, containing particulars of numerous Farms in Kent, Surrey, Sussex, and elsewhere, to be obtained gratis at their office, or will be sent by post on receipt of a stamp Properties inserted free. 12, Pall Mall, London, S.W., and Sevenoaks, Kent.

FARMS TO LET of various sizes in Kent, Sussex, Surrey, &c.—LANGRIDGE & FREEMAN, Agricultural Valuer, and Auctioneers, Tunbridge Wells, Kent, and 28, Queen Street, London, E.C.

FARMS to be LET in Sussex and numerous other counties. Dairy, Flock and Poultry Farms. 2 to 900 acres. Send 2d. stamps for list, and state requirements to GLADDING & CO., Farm Specialists and Valuers, Hove, Sussex.

LLOYD'S AVENUE, Fenchurch Street and Trinity Square, Great Tower Street. To be LET, several excellent suites of offices on the ground, first, and second floors, suitable for shipping firms, or tea, wine, and colonial merchants.—Apply to S. WALKER & SON, 22, Moorgate Street, E.C.

A HOME IN AMERICA.—A great section of the United States which has been overlooked and passed by the millions of emigrants who have been going to that country is the South, which the great Southern Railway system is now engaged in developing. There fine farming, fruit and gardening lands, close to good markets, are being offered at more reasonable prices than elsewhere in the country. Descriptive pamphlets and maps sent free.—Address, M. V. RICHARDS, Land and Industrial Agent, Southern Railway, Washington, D.C., U.S.A

CITY, E.C.—To be LET, capital light offices, 2nd floor, 103-4, Fenchurch Street, E.C. Rent £60 per annum, inclusive of rates and taxes and use of crane. Keys with hall porter, 10, Mark Lane, E.C.—For further particulars, apply to H. JOHNSTONE, 25, Moorgate Street, E.C.

RAILWAY ANNOUNCEMENTS.

GREAT NORTHERN RAILWAY.

SCOTTISH KENNEL CLUB'S 27TH SHOW OF SPORTING AND OTHER DOGS, IN THE WAVERLEY MARKET, EDINBURGH, OCTOBER 25TH, 26TH, AND 27TH, 1905.

The Great Northern Railway Company will convey exhibits for the above Show from Keighley, Halifax, Bradford, Doncaster, Worksop, Retford, Newark, Burton, Derby, Ilkeston, Nottingham, Grantham, Grimsby, Gainsborough, Lincoln, Horncastle, Louth, Alford, Sleaford, Boston, Spalding, Yarmouth, Cromer, Norwich, Sutton Bridge, Wisbech, Peterborough, Huntingdon, Sandy, Cambridge, Hitchin, Dunstable, Luton, Hertford, St. Albans, and other towns on and in connection with their system.

Through vans will be run wherever necessary for the conveyance of exhibits.

Rates for the conveyance of traffic may be obtained on application to any Great Northern Station Master or Agent, and they will be found in no case to exceed the rates in force by any other route.

Special arrangements will be made for the return of exhibits at the close of the Show.

A representative will be in attendance to give all information as to train service, cartage facilities, &c.

To ensure prompt attention, exhibitors should be careful to mark the address labels "Per Great Northern Railway."

OLIVER BURY,
General Manager.

GREAT NORTHERN RAILWAY.

GREAT NATIONAL POULTRY AND PIGEON SHOW, at the CRYSTAL PALACE, SYDENHAM, NOVEMBER 7th, 8th, 9th, and 10th, 1905.

Intending Exhibitors at this Show are informed that the Great Northern Railway Company make every arrangement for the careful and expeditious transit of exhibits to and from the Crystal Palace.

For the convenience of exhibitors, through vans will be run to the Crystal Palace on Monday, November 6th.

Consignments from branch lines and intermediate stations at which these trains do not stop will be placed in the through vans at the various junctions, thus ensuring direct transit to the Crystal Palace.

Rates for the conveyance of exhibits, which will in no case exceed those charged by any other route, can be obtained at the various stations on the line.

Return Traffic.—Arrangements will be made for the return of the traffic at the close of the Show in through vans. Exhibitors wishing to avail themselves of these facilities should consign and direct their exhibits "per Great Northern Railway," and be careful to insert the route on the return, as well as the outward, portion of the address label.

A Great Northern representative will be in attendance at the Show, prepared to give every information to exhibitors, and to facilitate removal at the close of the Show. The removal order should be sent to the Chief Passenger Agent, King's Cross Station, at the commencement of the Show.

Any information as to arrangements for the forward or return journey, &c., may be had on application to the Chief Passenger Agent, Great Northern Railway, King's Cross, London.

OLIVER BURY, General Manager.
London, October, 1905.

MIDLAND RAILWAY.

THE SCOTTISH KENNEL CLUB'S SHOW, EDINBURGH.
OCTOBER 25th to 27th, 1905.

In connection with the Scottish Kennel Club's Show, to be held at Edinburgh on October 25th, 26th and 27th, the Midland Railway Company will run a 3rd Class Saloon to Edinburgh by the 12.30 p.m. train from Manchester (Victoria) on October 24th, for the convenience of exhibitors from the Lancashire District.

Reprinting. Ready shortly.

COLQUHOUN'S

Scotch Tweeds & Knitting Yarns.

To the Public.

Scotch Tweeds mean value, and Colquhoun's Ladies and Gentlemen's Scotch Tweeds, Knitting Yarns, Blankets, &c., mean perfection of value. Their wear is magnificent. All goods are made in my own Mills under my own supervision, and nothing is sold as wool that is not pure wool. Any length at Mill price and carriage paid. Self-measurement forms sent, and Suits made up if desired. 400 Patterns, post free. Write for them.

To Wool Growers.

What do you do with your wool? Do you make the most of it? One thing is quite certain. You cannot do better than send it to my Mills and have it made into woollen cloth, blankets, or other goods. I have 400 patterns to select from, and pay carriage on wool sent to me for manufacture. Write for booklet, which tells you all you want to know, and receive patterns, so that you may say what you want made and the patterns you prefer.

THE
"BIBBY" CAKE
V.
LINSEED CAKE.

In out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the "BIBBY" CAKE to a competitive test.

Consider the saving! At the relative prices the cost of "BIBBY" is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on "BIBBY" CAKE, which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous DAIRY CAKE in Cakettes, Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in out well-known DAIRY CAKE, CAKETTES, and MEAL.

Bibby's Quarterly.

The new number of BIBBY'S QUARTERLY, edited by our Mr. JOSEPH BIBBY, is now out, and can be had during this month at all Smith's Bookstalls, price 1/-.

There be those who say that BIBBY'S QUARTERLY is the best periodical which comes into the farmhouse, but there be also gainsayers who affirm that if it dealt more with live stock, and less with high ethics, it would be more acceptable to the average farmer; and we are rather of that opinion ourselves, but the Editor tells us that he edits BIBBY'S QUARTERLY to please himself, and we have to leave it at that; should, however, any reader of BIBBY'S QUARTERLY make a purchase at Smith's Bookstall, and is afterwards doubtful that he has got his shilling's worth, we undertake to make matters straight with him if he apprise us of his dissatisfaction within the present month.

MALTING BARLEY.

In old-time records the present month was invariably associated with the utilisation of malt and hops for brewing purposes. The farmer tapped his strongest October-brewed at Christmas-tide, and there was usually a special compartment adjoining the farm-house kitchen for furnace, mash-tub, vats, etc. Home-brewing has long since gone out of fashion, like many other things, but October is still esteemed the best period for professional brewers to commence operations for the season, simply because the mild temperature of the month is best adapted to favour fermentation and successful manufacture.

Naturally farmers get their choicest malting barley crops thrashed, screened, and winnowed in time to be marketed and utilised for October brewings, and modern times have brought a corollary in the malting-barley show, which has extended itself from the Brewers' Exhibition to the different market towns throughout the country. Here the primest hordium-grain from well-managed farms is usually bought and sold. In the MARK LANE EXPRESS of last week appeared a report of the eighth annual barley show of the Dorset Farmers' Clubs, which took place at Dorchester on the 7th inst., and it will also be seen by that same issue that the Germans have imitated our example in this particular, and that a show of barley and hops was held in Berlin last week.

The chief utility of these expositions is of course the same as that of live-stock and other agricultural and horticultural exhibitions—that of imparting knowledge of how the best of the best is to be produced, and by promoting generally the effort to excel in the arts of cultivation without close application of which they cannot be obtained. Thus thirty or forty years ago the need of being scrupulously particular about the sort of barley to sow was by no means generally known or cared for. But after the Brewers' Exhibition had thoroughly demonstrated that the prizes were never obtained by ordinary barley, but invariably by one or other of the pedigree or highly selected kinds experts had improved the quality of, popular opinion underwent a great change. Now only the non-readers, ignorant or heedless of the farming community, would seed their lands with any grain except the varieties which had established for themselves by prize-winning a well-deserved reputation.

There is another useful purpose a barley exhibition is calculated to serve. At the Dorchester show the choicest sample had been very much damaged by bad thrashing, and the same feature has occasionally met the eye at the Brewers' Exhibition. This is usually caused by the drum of the thrashing-machine having been set too close, the result being that of breaking the grain. Brewers have complained much of this recently, and the Board of Agriculture has distributed a leaflet on the subject, pointing out that it would be worth while to take the trouble and labour of thrashing the straw twice rather than render a good sample unsaleable for malting purposes. The barley show offers to view an object-lesson as to this. After good cultivation to obtain high-quality grain, it is absolutely needful to take pains to thrash, dress, and screen them properly to make samples of utmost value to brewers.

The twenty-seventh annual Brewers' Exhibition which opened in the Royal Agricultural Hall, Islington, on Saturday last, and which will be held through the present week until Friday night, is not less valuable than its predecessors in demonstrating the utility and profit of growing the best of the best; of showing that early-sown crops usually yield better malting samples than late ones; that high manuring and drastic soil fertility defeat rather than promote the production of good malting barley; and that some previous systems of cropping are more favourable thereto than others. These are the main lessons, together with the utility of skilled management in harvesting, thrashing, and screening, which the present exhibition is calculated to inculcate.

THE DAIRY.

Lancaster Cheese Fair.

The October cheese fair is the principal one of the year at Lancaster, and there was an exceptionally large attendance of buyers and dealers at that held on Tuesday. The pitch comprised 78 dairies, 1,518 cheese, as compared with 88 dairies, 1,695 cheese, at the corresponding fair a year ago. The quality almost throughout was excellent, and a brisk trade resulted, a clearance being effected in little over half an hour. Prices ranged from 55s. to 65s. per cwt., but as much as 68s. 6d. was realised by one choice dairy.

Nantwich Cheese Fair.

Mr. Challinor reports as follows:—Pitch about 40 tons; good attendance of buyers. The tone from the opening to finish was good; best lots made from 60s. to 65s.; medium 54s. to 58s.; lower grades down to 50s.

Leicester Cheese Fair.

The half-yearly cheese fair at Leicester took place on Thursday, and was one of the poorest that can be remembered, both as regards the quantity and the quality of the pitch. This was due to the fact that the custom adopted in recent years by factors of buying up the best dairies is extending, and does not imply that Leicestershire cheese is in any way deteriorating. The best price for Leicesters was 85s. per 120 lb., this being realised by only one dairy. The other prices were not fairly quotable. Stiltons were shown in greater bulk, but the quality was indifferent. The best price obtained was 10d., other qualities varying from 7½d. to 9d. per lb.

Bath and West Cheese School.

The third draft (nearly 38 cwt.) of this year's cheese made during the month of June at the Cheese School carried on at Glendale Farm, Wedmore, by the Bath and West and Southern Counties Society for the Somerset County Council has just been sold to Messrs. Hill Brothers, of Evercreech, at 64s. per cwt. of 112 lb. The 4,924 gallons of milk made 4,734 lb. of green cheese, which when sold weighed 4,440 lb., showing a shrinkage of about 6¼ per cent. The following particulars with regard to its manufacture will probably be of interest to cheese-makers:—Temperature at which milk was renneted, 84 deg. Temperature of first and second scalds, 88 deg. and 93 deg. Acidity of milk when renneted, .18. Acidity of whey at close of second scald, .14. Acidity of whey,, when cheese was vatted, .80. Average time when cheese was put in the press, 3.20 p.m. The school, which has been well attended by students, will close for instruction in Cheddar cheesemaking on October 31, but will remain open for the teaching of Caerphilly cheesemaking till the end of November.

A Dairy Expert on a Pure Milk Supply.

At the provincial sessional meeting of the Royal Sanitary Institute, held in York Guildhall on the 7th inst., a practical paper on the problem of pure milk supplies was read by Mr. C. W. Sorensen, formerly chief dairy expert to the New Zealand

Government, who treated the problem "from within," with a desire to point out some of the obstacles which stood in the way of general progress to the ideal of a pure milk supply. He assumed that general agreement had been reached that the ideals of a pure milk supply were, to put it negatively, milk uncooked, free from disease-germs and dirt, and undrugged with chemical preservatives. These conditions involved clean, healthy cows, grass fed in summer and properly fed in winter; sanitary buildings; a pure water supply; clean milking; prompt and thorough cooling; and distribution in sealed bottles or cans.

Pasteurisation was not the ideal. The medical evidence against sterilisation had grown rapidly of late, and appeared irrefutable and overwhelming. Pasteurisation was resorted to in many cases as a necessary evil under existing circumstances, and as nothing more. The first essential to pure milk, healthy cows, led one to consider whether in this connection the tuberculin test was a sine qua non. Medical opinion doubtless leaned towards the application of this test. But he confessed to a decided reluctance to fall down and worship the tuberculin test. He submitted that frequent (i.e., fortnightly, or, at any rate, monthly) clinical examination of the cows by a competent veterinary surgeon provided sufficient safeguard to consumers on the point of the cows' health.

Pure milk could, he believed, be more easily secured where the whole work of production and distribution was under one management than otherwise. In the case of very large towns it would be difficult, even in these days of motor-vehicles, to supply the whole of the milk required from farms in the immediate neighbourhood. For all but the very large towns, however, the easiest and quickest way to secure reform would be for progressive farmers within easy access of the towns to take up the production and distribution of pure milk, beginning on a small scale and extending operations as the demand grew.

Discussing the question of whether better milk must cost more, Mr. Sorensen said that better milk for the same or even less money than is paid now might be secured by adopting economies in the system of distribution.

East of Scotland College of Agriculture.

At a meeting of the Board of Directors of the East of Scotland College of Agriculture, held at Edinburgh on Wednesday, Dr. J. J. Dobbie, chairman of the Central Studies Committee, reported that 58 students had received benefit from the central classes last session, as against 60 in the previous year. There was a large increase, it was necessary to note, in the number of students attending the evening classes, there being 170, as against 43.

Mr. J. Budge, reporting for the County Work Committee, said the Committee had closed the year with a deficit. The Government had been approached, but had refused to give any extra grant. During last year there were 12,917 students in attendance. In the systematic classes there were 645 students—341 in dairying, 272 in forestry, and 32 in farming. He thought the experiments carried out had been beneficial. It was agreed to increase the salary of Mr. Bruce, lecturer on agriculture, by £50 per annum. It was agreed to make application to the Committee of Council on Education in Scotland for a grant to the College from the funds the Committee had to set aside for distribution.

The annual general meeting of the members of the College was then held, when the annual report of the governors was submitted and approved, the chairman remarking that it was very satisfactory.

Wisbech Mustard Market.—The first mustard seed market for the sale of this season's seed grown in Lincolnshire, Cambridgeshire, and Norfolk took place at Wisbech on the 7th inst. There was a good attendance of growers, but only a moderate show of seed. The average price of brown seed bought by the manufacturing firms was 10s. per bushel, but a few parcels sold to London seed merchants made 10s. 6d. These prices are about 1s. per bushel better than last year. White seed of good quality realised 8s. 6d.

Building Bye-Laws. A return dealing with building bye-laws in rural districts recently issued shows that in 246 rural districts in England and Wales (out of a total of 668) there are no bye-laws for the regulation of new buildings, and that throughout 169 districts and in parts of 114 there are bye-laws based on the urban model. Further, that throughout 106 districts and in parts of 32 there are bye-laws in force based on the rural model, and that in some districts the bye-laws which are in force were mostly made before the first issue of the model in 1877. In certain instances series of diverse character are in force in different parts of the same district.

Seasonable Topics.

It seems to be taken for granted that there will be no show at Park Royal next year, and the respective claims of Derby and Blackpool as the place of the event are being freely discussed. One thing is obvious—namely, that if the show is to go into the provinces again, it is eminently desirable to make a start in a place where it is likely to show a profit. The Royal Agricultural Society has developed an unfortunate capacity for losing money, and, of course, this kind of thing cannot go on indefinitely. At which place would the show be likely to get the most support? The question is open, but the writer's first acquaintanceship with an agricultural show was made many years ago in Osmaston Park, Derby, and the occasion was a visit of the Royal. The weather was perfect, thousands of people flocked into the Midland railway town, and the show was a financial success. Of course, that was in the days when agricultural shows were in the habit of paying better than they do now, but still Derby is a go-ahead town and well in touch with both agricultural, mining, and manufacturing industries. Blackpool, on the other hand, has just claims to be considered, as its people are unsurpassed for enthusiasm and activity. Only those who have observed the changes that have taken place in the Brighton of Lancashire during the past twenty years can realise what Blackpool is capable of doing, and it would not be the fault of the town authorities if a Royal Show held there was not a success.

Blackpool or Derby for the Royal Show.

A well-known figure at country markets, fairs, and sales is the cattle drover, whose business it is to drive the animals that are bought and sold to their various destinations. Now that so much cattle is transferred from place to place by rail, the drover is perhaps not such an indispensable person as he used to be, but it would still be difficult to get on without him. Apparently some men take to droving on account of some impediment which prevents them earning a living in other ways, as it is quite a common thing to see a drover with one leg a bit shorter than its neighbour or one arm missing. Judging from the attire of the general run of drovers, the business is not particularly lucrative, but it is by no means easy, for the drover works hard, lives hard, sleeps but little, and is exposed to all sorts of weather when on his journeys. As a rule he is an honest fellow, even if his language is a little at fault, and he knows every inch of the country through which he travels. Forty miles a day is a distance that many of us would not like to have to tramp, but this is not an exceptional journey for a cattle drover, and at the end of it he may have to be satisfied with a shake-down in a hayloft. Still the life must have some fascination for these men, as we are acquainted with drovers who have been on the roads almost as long as we remember, and they are still to be met with at any local market or sale ready to stand off with a herd of cattle, distance being no object.

Cattle Drovers.

Last year there was a tremendous crop of apples, and the great difficulty experienced by cider-makers was to find casks enough to put the liquor in. This year there are not so many apples, but, on the other hand, there is not such a dearth of cider as there was before grinding commenced in 1904. It is the western counties that comprise cider-land, and almost every farm homestead has an orchard of some sort in which the fruit is grown for the annual grind up, and in many buildings there is an old stone mill that has served for generations to extract the juice from the fruit. For his orchard trees the farmer is indebted to some member of a departed generation, for most of them are old, gnarled specimens; and, as comparatively little planting is being done, one is disposed to wonder where the fruit will come from to feed the mills when the old veteran trees succumb, as they must eventually do. Red-cheeked, but deceptive to those who are tempted by appearances, are some of the best cider apples, and when they get ripe a farm waggon is drawn into the orchard, and the fruits as they fall are picked up and placed therein, ready for the grinding. At many farmhouses in the western counties cider-making is carried out in a somewhat crude and primitive way, and one needs to be educated to drink some of the liquor that is turned out. Of late, however, science has been brought to bear upon the industry of cider making, and at the Fruit and Cider Institute near to Bristol experiments are carried out and information is given on the most economical and profitable systems of cider-making. It is hoped that this institution will be the means of arousing increased interest in the industry, which is not what it ought to be, considering the facilities of the western counties for growing suitable fruit.

In Cider Land.

In the way of scenery, the county of Gloucester presents many phases, and as one climbs from the flat and fertile vale of the Severn up to the heights of the well-known Cotswold country, scenes seem to change at almost every turn of the road. Behind you is a broad expanse of green pasture country, studded with orchards and bisected by the winding Severn, above you is a vast range of undulating landscape, where grey stone farmhouses are dotted about on the hillsides, and churches, surrounded by clusters of cottages, look for all the world as if they had grown there. Here is a mixture of pasture and arable land, and the big fields are divided by loose stone walls that seem to follow lines of their own, judging by the winding turns they take. The Cotswold country is a land of big farms, some of them reaching nearly a thousand acres, for which a rent of 10s. an acre is not considered low. The glory of agriculture on the Cotswolds seems to belong rather to the past than the present, when the wool from Cotswold sheep fetched half-a-crown a pound, and the corn grown on the hillsides was sold at an equally remunerative price. The hill people are proud of their Cotswolds, which abound in folklore and romance, and one cannot help thinking what a pity it is that such a vast expanse of not unfertile land should be so sparsely populated, while in town centres human beings are as thick on the ground as bees in a hive. The district does not develop, but, on the other hand, it seems to decline, and has steadily declined since wool went down and corn-growing ceased to pay. Of Cotswold farmers, one may say that they are a strong, sturdy race, who understand the peculiarities of their native hills better than anyone could teach them, and are contented to make livings because fortunes are not easily made by farmers in the Cotswold country. We are convinced, however, that it is a district with possibilities, and it seems odd to us to talk about over-sea colonies for our surplus population when there are miles and miles of land in this country, in some places more fertile than that of the Cotswold Hills.

Life on the Cotswold Hills.

A glance at the reports of hiring fairs held this Michaelmas in different parts of the country leads one to conclude that this system of engaging male and female servants is quickly dying out. More often the advertisement columns of the local papers are the means of bringing masters and servants in touch with each other, and there can be no doubt that the modern registry office has done something towards killing the hiring fair. An old lady of some sixty years' experience as a farmer's wife recently informed us that maid servants are not nearly so reliable as they were in the palmy days of the hiring fair, and she attributes it to the increase of registry offices. It is perhaps fortunate for farmers' wives that changes in agricultural methods have done away with the need of so much female labour, which in these days is none too plentiful, so far as service is concerned; but in the old days maids certainly realised their own responsibility more, because they had not got the registry office to fall back on. It is quite obvious that if these institutions are to thrive, as most of them appear to do, servants must be continually changing places and mistresses must be always seeking for servants. Every time a registry office supplies a mistress with a servant the latter has to pay a fee, and the more frequent the changes the more numerous the fees. When servants were engaged not only by farmers', but other housewives, at the annual hiring fair, one year's service could, at any rate, be relied on, and the only expense to the employer was the passing of the time-honoured shilling which sealed the engagement.

Hiring Fairs.

Protecting Wheat from Smut, etc.—A wheat protector that has been used with most beneficial results in all parts of the kingdom from as far back as 1827 is Clarke's Carbolised Wheat Protector, which is not only a preventive of smut in wheat, but, being strongly carbolised, it is extensively used for barley and oats, for birds and other farm pests will not touch the dressed seed. Numerous testimonials are to hand, from the perusal of which it is quite certain the "Protector" is effective; and it is also cheap, for 9d. buys a packet sufficient to dress 8 bushels of seed corn.

Agricultural Politics.

BY A LOBBYIST.

Whether the colonisation-mania of the religious philanthropists has been killed is a debatable matter. General Booth has abandoned his Australian purpose; but Mr. Wilson Carlile, of the Church Army, is as full of virile confidence as ever, and is still persuaded that he will have the aid of the State in sending his five thousand lusty-limbed, healthy-hearted men across the seas. Debatable or not, however, as to its own fate, there is no doubt that the colonisation-mania has impelled a keen attention to the tragedy of this continuous impoverishment of the country-side of muscle and sinew. At present, of course, we have not passed beyond the region in which generous philanthropists dwell; but these philanthropists should be the precursors of the politician. Mr. Rider Haggard's mission was the sequel to the anxiety of philanthropy to do something for the men compelled to lead a life of unhappy idleness; and the present suggestion that philanthropy should establish colonies at home may be followed by a similar disciplined effort on behalf of the State. Why should not, indeed, the State associate itself with an effort to colonise England as much as it should with an effort to colonise the colonies? If the State is willing to associate itself with an effort to train men for farm-life in the colonies—and Mr. Wilson Carlile assures us that he is convinced that it is—why should not the State associate itself with an effort to train men for farm-life in English villages? The fact that within the last fifty years the number of men employed on the land has diminished by a million and a quarter constitutes as grave a duty for the State as does the wisdom of cultivating the fertile soil of the colonies.

• • •

Of course, already the politicians of the vivid type are demanding, as a second sequel to this newly-born sympathy with the denuded villages, that we should at once launch out upon a bold, emphatic, far-reaching, and even revolutionary scheme of agrarian reform. "The land goes out of cultivation," shout they, "for the simple reason that the land system is opposed to cultivation; the land is made over to game-preserving and the pursuit of pleasure." This is an excellent oratorical tag; but it is not quite true. It sounds well in the columns of the Radical *Daily News*—its ringing emphasis tickles the ear; but I am afraid it does not much help us and that we don't get any forrarder. Revolutions, even far-reaching reforms, are a matter of slow growth. The vehement temper which in the end upsets systems is the child of long, laborious culture. Infinitely better would it be to induce the State to come to the aid of philanthropists like Mr. Fels and Mr. Cadbury—the former of whom has deliberately undertaken the establishment of a certain number of English families on English soil—in cultivating the millions of acres of waste land. It may be wise to, in the end, assail the mediæval fabric of our land system; but that mediæval fabric has inalienably associated with it a tense sympathy, deep sentiments, and stern, inherited prejudices—in itself an assurance that it cannot be modernised by the wave of a magician's wand. There is a sufficient area to proceed upon without making any State action the result of a Titanic, of possibly an impossible, legislative ambition.

• • •

To these Radicals I would say, "Don't let your sympathy for the villages and for the labour-parched land be only an offshoot of a desire to humiliate the squire, or to humble that land-buying gold-bug whom you have recently admitted is a worse enemy to the land than the old race of landlords." Let the State do for England what apparently it was willing to do for the colonies. It is convinced that afforestation is a wise policy; it has uncultivated land; it has physical tissue going to waste in the towns. Cultivate the fallow-land, under healthy conditions, and from them might proceed a stream of desirable labour to the villages. Above all let us eschew feather-headism. This is not the hour for resolutions; 'tis the hour rather for sanity.

• • •

Mr. Fels has certainly every justification in his appeal to the Government. If the Government is ready to advance the sum of £300,000 for the purpose of emigrating 1,500 families and establishing them on the land in the colonies—and this is a fair deduction from recent events—the Government should be prepared to provide a similar sum in order to deal with those families under advantageous conditions in this country. Nay, the latter purpose has an advantage in that it would permit of an immediate and sympathetic vigilance being exercised over this purpose by the executive. Of course, the reply is that the colonies are willing to provide the land; and that thus the £300,000 could not possibly achieve as much at home as would be accomplished overseas. This contention, however, is deprived of all force if British philanthropy—and it is to British philanthropy that Mr. Fels directly appeals—performs the generous part which Canada is anxious to perform. "I should," says Mr. Fels, with excellent clearness, "settle the families on small holdings, and the Government money would be used for the erection of the houses and the necessary buildings and for the provision of other immediate necessaries." Of course, with this project he would establish farm-labour colonies. It would not be a mere adventure in pauperising charity. As a fact, Mr. Fels would let his holdings on a basis of a return of four or five per cent. In whom the title should be vested is for the moment no immediate matter; but that it should be vested in somebody is necessary in order that the cultivator might be saved from the too-insinuating attentions of an English edition of the gombeen-man.

• • •

Here, then, is a practical scheme—if the Government will advance the £300,000, philanthropy will probably establish 1,500 families on 1,500 small holdings. True, it would be an experiment, and an experiment for which an assured success could not be promised; but the lives of these families would be just as experimntal in the colonies and have associated with them the same possibility of failure. At all events, here is a chance of cultivating the waste land, of pursuing a system of afforestation under disciplined conditions, of carrying a promise and a hope to deserving human derelicts, of retaining in the motherland the physical material she so much needs, of rebuking the emigration-mania which would drain us of our best muscle and brawn, and of establishing what might prove training-colonies for a future race of rural labourers. Now, the next word is with the Government. Will Ministers provide the initial £300,000? This is, after all, not even a tithe of what an abortive military adventure in Somaliland would cost.

• • •

Yes, the world moves—as Sir William Grantham must himself be now convinced. We have an authoritative declaration from a politician of the front rank that the building by-laws of rural areas ought to be simplified. "We ought," said Mr. Asquith in an address to his constituents, "to get rid of foolish restrictions in by-laws which impede the building of small houses in rural districts." I hope that, because Mr. Asquith is the first man of statesman-rank to give utterance to this sentiment, it will not be assumed this purpose will have a partisan character. That assuredly it will not possess. Men of all faiths and creeds are united in the conviction that one of the first duties of a new Parliament—frankly, I assume that it is hopeless to expect much of this Parliament, even if its life be prolonged, in view of the seriousness of its preoccupations and the inevitability of the redistribution proposals occupying a tense attention—will be to make cheap, sanitary cottages a possibility. I see that Sir William Grantham in his impetuous enthusiasm apparently thinks that a labourer would be willing to pay as much as five shillings a week for his cottage. This is a strange misconception for so sagacious and observant a man. If the exactions of the building laws render it impossible to remuneratively let a decent cottage at a less rent than this, we have in them one of the most fecund parents of the tide of emigration to the towns. Every experiment and every experience has shown that it is possible to remuneratively let a decent cottage at a less rent, and the building laws must be so simplified with this object in view. But in order that better housing may be secured in the villages we must have more than an alteration in the building laws. We must give local authorities building powers and borrowing powers; and we must vest in the ratepayers themselves power to compel any laggard authority to act.

• • •

The letter which Earl Carrington despatched to the *Times* on this subject came to my attention only after I had written the above paragraph. It is significant, however, of the ability to erect cottages at a sum for which it would be possible to secure a remunerative rent. If Lord Carrington can erect sanitary and desirable cottages for £156—cottages which satisfy the requirements of the existing by-laws—then other landowners can do the same. All the same, the agitation in favour of the simplification of the building laws must not be relaxed or relinquished. Lord Carrington was fortunate in having to deal with a sympathetic authority. The matter, however, should be placed beyond the caprice of our modernised Bumbles and of a too-exacting officiousness. Of course, some regulation is necessary. Else the position would lead to a parsimonious spirit or building cottages of an undesirable character. It should, however, be possible to prevent this, and at the same time to remove the present causes of irritation and discouragement.

• • •

The Barkston Ash by-election was potent of much. Perhaps, the most luminous incident in connection with it was the indisposition of the Conservative candidate, once an avowed Chamberlainite, to lisp the Chamberlain evangel, and his comprehension that the encouragement of an overwhelming preferentialised competition from Canada might mean as grim a disaster for the British farmers as an overwhelming competition from the United States or the Continent. To me, however, a portent of more value was the declaration of the Liberal candidate that he would consent to the continuance of the policy expressed in the Agricultural Rating Act until the whole question of local taxation is dealt with. It may be that this declaration was in the nature of a bribe to the rural vote. Let it be so. Do not forget, however, that a large body of the Barkston Ash electors are ratepayers of Leeds, and that Leeds was one of the centres which was held to be most unfairly penalised by the Act. Leeds, in fact, was during the active agitation against the principle of the Act, held up as a striking example of the unjust burdens imposed on the towns. What does this mean? That the Liberals are willing to dare the disapproval of the towns in order to conciliate the rural electors? This is the first-fruit of the fact that the rural electors revealed with unusual firmness that they meant to have the original Rating Act continued. If a similar spirit were exhibited in connection with other anxieties, they might possibly be also yielded. There was a little clamour associated with the defence of the Rating Act; and, behold, the assailants of it have not only abandoned their attack, but have accepted the measure.

The South-Eastern Agricultural College, Wye, Kent, commenced the 1905-6 session on Tuesday, October 3, with 100 students entered for the session. The inaugural address on botany and agriculture was delivered by Professor H. Marshall Ward, Sc.D., F.R.S.

NORTHERN NOTES.

Michaelmas is one of the most important periods of the farming year; in districts, farming tenancies run from Michaelmas, and it is at this time that outgoers quit and incomers enter. In some places the year of tenancy begins and ends at New Michaelmas—September 29—in other places Old Michaelmas is customary—October 11. Here, in the north, Lady-day tenancies are more common, and here, too, is the same dual character noticeable; in some localities New Lady-day (March 24) is the customary date, in other places Old Lady-day (April 6) is universal. And where agreements provide that half a year's notice shall be sufficient to determine a Lady-day tenancy, that notice must be given at Michaelmas.

So far, little has been heard of prospective changes of tenancy. Usually neither the giver nor the receiver of the notice make the matter public as soon as the notice is actually given, but the fact soon leaks out. It often happens that by this date there is common knowledge of many forthcoming changes, but this year surprisingly little is known of any such things. No doubt there have been a good many notices given, but it is probable that the number is less than usual. The commercial classes often express wonder that if a tenant farmer finds that his farm is too highly rented he does not give notice to leave it, and actually leave it, if the landlord declines to reduce his rent. But the townsman does not know how much of the farmer's capital is locked up in the land, if the farmer has been doing his land well, and how difficult—aye, how impossible it is—for him to give up the farm and take with him all the capital he has laid out.

It is often remarked that a landlord parts with a tenant with much less reluctance than that tenant parts with his farm. But there are several reasons why a tenant parts hardly with a farm. He has, perhaps, been born upon it, and there his parents lived and died, or he may have spent his best years upon it, brought his wife home to it on marriage, and his children have been born there and brought up there until they have gone to homes of their own. He knows every foot of the land, and has studied its idiosyncrasies, and can gauge its capacity as no stranger can, and he honestly loves the place. And, when advanced in years, he finds it necessary to remove from his farm and seek a new one, he has often to move to a distance and leave behind him all his friends and to break the associations he has formed. Few men can do this without feeling the change deeply, although many do it without giving any outward sign of what they do feel. As a rule, the tenant's regret is that he is leaving the farm, not that he is breaking off relations with his landlord.

Many landlords know little or nothing of their tenants, and do not even know them when they meet. They commit their farms completely to the care of an agent, and they have but little personal interest in their tenants or concern in their affairs. Of course, this is not true of all landlords, for there are some who take the deepest interest in the welfare of their tenants and of all that concerns them; and, unfortunately, it often happens that such men are not blessed with too much spare capital, and so cannot improve their estates as they would like to do. Some of the largest landowners are the best landlords, and some can be instanced who never give a tenant notice to quit—not even if for years he fails to pay the whole of his rent. But they often fail to distinguish between the farm and the farmer, and they pay greater attention to the representations of the heedless, unskilful cultivator, who gets into difficulties and whose farm is an evident testimony to his negligence, than they do to the representations of the man who farms well but finds that he cannot pay the rent originally agreed upon. The landlord and his agent look at the two farms, and they say of the one that the farm is a first-class farm and that if the present tenant will not pay the rent another man can easily be found who will, and they consider the other farm of less value, and they lower the tenant's rent. In one sense the landlord acts wisely, because there is no difficulty in letting at a good rent a farm that is in high condition, but a farm in bad order is not so readily disposed of.

But what about the future? The man who will give a high rent for a farm in first-class condition is often one who will commence to "run" the place as soon as he enters, and in a few years there will be nothing to choose between it and the farm the landlord thought a poor one.

The writer is a tenant farmer, and is no advocate for land courts, nor for fixed rents, nor for peasant proprietorship, nor for any similar nostrums, but he does say that the curse of the present system of estate management in England is the incapacity of the landlord and of the agent to *distinguish between the farm and the farmer*, the incapacity to discern whether the farm is making the farmer or whether the farmer is making the farm.

Michaelmas is also the time when many large stock fairs and markets are held in various parts of the country. Half a century ago these country fairs were much more common than at present, and large quantities of stock were brought to such places and changed hands there. The development of the railway system has changed all this, and old country fairs are falling into desuetude. All parties, vendors, and purchasers alike seek places where the railway facilities are abundant, and so it is found that only those stock fairs survive that are fairly conveniently situated. Where old-established fairs were held in places which have since become railway and industrial centres, those fairs have developed to a surprising extent. The last of what are known as the great Michaelmas fairs at York was held on the 12th inst., and at the middle fair (on September 27) not less than 25,000 sheep and lambs were exhibited. At these "fairs" a very large proportion of the sheep shown consists of breeding gimmers and ewes from Northumberland and from Scotland—principally, of course, from over the Border. Border Leicesters, Cheviots, and all the crosses between those breeds, are shown in large numbers. Only a few years ago 70,000 sheep and lambs were penned at the middle (there are three) of these great Michaelmas fairs, and one north country dealer—since gone over to the majority—showed 4,000 ewes and gimmers and 800 store cattle, and sold nearly the whole. But Jonas Wallbank—a name no doubt familiar to many readers of the MARK LANE EXPRESS—considered his supply of stock on this particular day nothing out of the common, and it is believed that he once showed just about 10,000 sheep at one of these York Michaelmas fairs. To walk round the York Market, and along the cattle pens under the Castle walls—usually devoted to Irish cattle, but at these fairs always occupied by breeding sheep from the north—is well worth a journey from a long distance. These Border Leicester and Cheviot crosses are not now in such great demand as they were a few years ago, when many thousands of breeding animals were purchased for the South and Midlands from the dealers at these York fairs.

The old-established fair held at Malton on October 11 and 12 always concludes the northern ram sales. Here are shown Leicester, Lincoln, Wensleydale, Hampshire, Oxford, and Shropshire rams and ram lambs; the Leicesters and Lincolns, of course, predominating over the shorter-woolled breeds. This year the various Down breeds of rams have been in smaller demand—in fact, the demand for them was very limited—the higher prices obtained for wool during the past summer having caused farmers to turn their attention more closely to the long-woolled races of sheep. On the whole, the demand for both Lincolns and Leicesters has been fairly maintained, and the breeders represented cleared out their exhibits at the Malton Fair, and the ram sales of the season came to an end.

M. Y.

October 13, 1905.

The President of the Board of Agriculture (the Hon. Ailwyn Fellowes, M.P.) has promised to attend the annual competitive festival of the Monmouthshire Dairy School on December 8.

At a meeting of local farmers held at Ulverston on Thursday, it was unanimously agreed to form a Farmers' Association, open to landowners, tenant farmers, and others interested in farming resident in Lonsdale north of the Sands, and Cumberland south of the River Esk.

Mr. Elmer Speed's Farm Stock. — Messrs. Stride and Son, of Chichester, in conjunction with Messrs. Honeyball and Finn, of Deal, conducted the sale of the live and dead farm stock belonging to Mr. Elmer Speed, Home Farm, Knowlton Court, near Dover, on Wednesday, October 4. The sale commenced at 11 o'clock with the dead stock. The best implements made good prices, but old and out-of-date machinery is very difficult to dispose of. A portion of the Southdown flock was included in the sale, it comprising the whole of the shearling ewes, but only a portion of the other ages, the remainder being retained for other land still in hand. The shearling ewes made up to 66s. per head, Mr. Bird, of Eartham, Sussex, taking a nice quality pen at this price; four-teeth ewes made up to 61s., six-teeth to 60s., full-mouth to 54s.; the ewe lambs made from 48s. to 40s., wether lambs 38s., two-teeth wethers 48s.; shearling rams 15 gs. and 13 gs. (twice). Angus cows were also sold, making up to 24 gs., Sussex cows to 26 gs.; an Angus bull 26 gs., and Highland heifers, with calves at foot, £15. Messrs. Honeyball and Finn conducted the sale of the horses and pigs, for which satisfactory prices were obtained.

Midland Notes.

At this period of change in the stately procession of the seasons, is there any county more beautiful than "leafy Warwickshire?" If so, we do not know it. The variety, as well as the abundance of the foliage, is never more striking than at this time when autumn, "spent with fulfilment," is passing quietly into winter. There are all shades and tints now visible, from vermilion, through claret, on to golden browns, and palest sulphur yellows. It is a pleasant season also for the former this year, for the land is working capitally, and since we have had a full share of dry days and sunny hours the mangels are maturing nicely. Everywhere mangels seem to have done better than other roots, and the complaints of finger and toe among common turnips and symptoms of mildew among early swedes, which come from a Nottingham correspondent, are echoed in other quarters too. The few lots of kohl rabis which one sees also bear marks of the dry summer.

The dearness of sheep, which have paid well for grazing this year, is a subject of general remark. At Kidderminster fat wethers have been making up to 58s. 6d., and lambs 47s., and the Market Harborough quotation for mutton is 7d. to 8½d. per lb. One hears of good store lambs making 40s. and more, and there is every indication that both wool and mutton will keep up in price for some time to come—the result, no doubt, of a genuine scarcity of sheep in the country. In comparison, the trade in cattle is markedly poor, and, considering that stores were bought by no means cheaply early in the year, Midland graziers may fairly consider they have had a depressing season.

In this season of ploughing and thatching contests, one is again unpleasantly reminded of the fewness of young men with any skill in farm work. There were thirty teams on the ground at the North Cotswold ploughing competitions, and there were plenty of entries for the Staffordshire contests, open to labourers in the Walsall, Lichfield, and Tamworth districts; but in both cases young competitors were scarce. In the latter, a class for ploughmen under twenty drew but five, and one for lads under sixteen only two entries. One hears now and again of young "back-to-the-landers," tired of the towns, presenting themselves at the hiring fairs. There were some, for instance, at Burton the other day, but they are of little use compared with the skilful and sturdy lads brought up to farm work and the care of animals, whose growing scarcity threatens even greater labour difficulties in the future than the agriculturist has already to put up with.

The Black Country hop-pickers have returned to find themselves in the educational authorities' black books, for the schools have been losing grants by the children's country holidays. To-day there are wholesale summonings. A "first batch" of nearly 100 cases was heard the other day at one court alone, and the profits of the ironworkers' and miners' annual outing are being rapidly dissipated in fines. It is not to be wondered at that the Staffordshire County Council is being asked to fix the school holidays for the future later in the year.

According to the Board of Agriculture, Worcestershire has produced nearly 52,000 cwt. of hops this year, and Hereford nearly 89,000 cwt. As this is crediting the two counties with something over 13½ cwt. and something under 13 cwt. per acre respectively, it is no doubt very near the truth. But how much of this great yield will be marketed? The hops left to blow away amount to a large quantity this year—in some districts the estimate is one-third of the growth—and, considering the present ruinously low prices, we may expect to see not a little grubbing by disappointed growers. Good year or bad, there are more blanks than prizes in the great agricultural gamble.

Under the supervision of Mr. A. Wilcox, the venerable Lord Leigh's fine park was made the scene this season of a small experiment in the manuring of grass land. To a measured acre was applied 3 cwt. superphosphate, 3 cwt. kainit, and 1 cwt. nitrate, at a total cost of 30s. It is announced now that there was a gain of some 13 cwt. in the yield, which (reckoning the hay at 70s. per ton) means a profit of about 18s. But better results would have been obtained if the manures had been differently applied. To supply the whole dressing at once in March is not the most profitable or economic method conceivable.

October 13, 1905.

A Remarkable Crop of Mangolds

Last week we had the opportunity of inspecting a remarkable crop of mangolds, portions of which it is expected will yield at the rate of from 90 to 100 tons per acre. The crop has been grown on Mrs. McIntosh's home farm at Havering Park, Essex, the soil of which is firm London clay. The farm, we may mention in passing, is a pleasant drive of about four miles from the old Essex market town of Romford, which, however, in the hands of the ubiquitous and speculative builder is fast losing its old-fashioned appearance and becoming the latest adjunct to the ever-extending metropolis.

It is difficult to believe that Havering Park, with its four-mile drive to the nearest railway station, is twelve miles as the crow flies from the Bank. The peacefulness of the countryside is greatly in evidence, and we were told that the only means by which the vicinity of London could be detected was by the smell of smoke when the wind was in a certain direction, while in the winter time the white country fogs tended to assume that black and acrid character associated with a "London particular." Not that we could detect, however, any trace of injury to vegetation in consequence.

Now, to return to the crop of mangolds which was responsible for a very pleasant afternoon spent in the company of Mr. Beckett, the manager for Mrs. McIntosh, who met us at Romford station. The farm, we gathered, ran to about 1,100 acres, all of which consists of the tenacious London clay. Part of it in the past consisted of the old Royal Forest of Hainault, and, strange as it may seem to the county of Essex, some of the land has not yet been under the plough, and has been grass land from times immemorial, or, as the legal documents put it, "since the memory of man runneth not to the contrary." On this what we might practically call virgin soil, some enormous crops of mangolds have been grown, but it is not this which excited our admiration last week, but rather the system which, under the able management of Mr. Beckett, is able to extract from the soil what may be called enormous crops.

We reproduce on this page a couple of illustrations which will give some idea of the yield per acre, and in our estimate given above we have with us the opinion of a man whose word is a very weighty one amongst growers.

Perhaps it may have occurred to the reader that this enormous yield is due to the liberal application of artificial manure. Such, however, is not the case, neither nitrate of soda nor superphosphate being given in the smallest quantity, the only dressing being one of gas lime, and it would seem from Mr. Beckett's experience the heavier the dressing the better the result. It appears that the remarkable effect of gas lime upon the London clay was only discovered by accident, owing to the fact that one of the farm hands misunderstood his instructions and spread the gas lime on land intended for roots at the rate of from 8 to 10 tons per acre. The damage was, of course, done, and it was fully expected that the crop would be a small one, if any; but, strange to say, the yield was exceptionally large.

This result, obtained by accident, rather opened the eyes of Mr. Beckett, and the next year a certain portion was set aside and dressed with the same amount of gas lime, and again the result was satisfactory. This year a small portion was dressed at the rate of from 12 to 15 tons per acre, and the result seems to be proportionately more successful.

It is quite possible, of course, that a limit will be reached in a year or two beyond which it will be inadvisable to go, and that when once the land has had a certain quantity of gas lime applied to it, smaller dressings annually will serve the purpose; but this is a point which further experience will elucidate.

The roots were of large size, and peculiarly clean and free from insect attacks, due, of course, to the action of the gas lime; but what was most noticeable was the way in which the root fibres fed upon the lumps of gas lime which were to be found. And it is to this fact that the large yields are due. No doubt something is due to good seed, but generally the large crop is due to the gas lime, for the seed supplied by Messrs. Carter and Co., and Messrs. J. K. King and Sons, of Coggleshall, appears to give about the same results.

It is an extraordinary thing that the gas lime has produced such wonderful results on the London clay, and neighbouring farmers have been much surprised at the large crops obtained from land so treated. There must of course, be some chemical as well as mechanical effect; the latter, it is true, is very evident, and where wheat had already been sown the tilth was exceptionally fine, and the seed-bed more favourable than it would be under ordinary circumstances. As regards the chemical effect, we are not in a position to make any suggestions, but surely it would be worth while for some of our agricultural chemists to inquire into the matter.

A Remarkable Crop of Mangolds: This particular portion yields at the rate of Ninety Tons per Acre.

Some Fine Roots: The Foot Rule will give some Idea of their Size.

A Scotch Potato Inspection.

By the special invitation of Mr. T. A. Scarlett, the well-known potato-seed grower, Edinburgh, a large number of the most prominent potato growers, potato merchants, and market gardeners in the country met on the 30th ult. at the Chancelot seed-testing grounds to witness the results of his seed tests for the season. Mr. Scarlett has for years been one of the most extensive potato-seed growers in the kingdom, as he annually grows over 400 acres of specially selected varieties for seed uses. He has also made a specialty of growing in greater or less quantity all the most up-to-date new varieties, and on his seed-testing grounds at Chancelot he had this year no fewer than 60 different varieties growing side by side, all the standard varieties, together with all the best of the newer varieties, being there grown under precisely similar conditions in order to demonstrate their relative cropping and disease-resisting qualities. By way of making his cropping tests as educative as possible he has also each different variety shown growing from whole seed, from cut seed, and from "seconds," so as to show in the clearest way the most profitable system of seeding this important crop. It is not to be wondered at, therefore, that Mr. Scarlett's annual "field day" draws an immense gathering of potato growers from all parts of the country, and the large company that made the inspection this year saw much to interest and instruct them.

Measured lengths of each drill of each variety had been dug, and the produce all set out in different boxes to show the variety. As the digging of the measured lengths had only been done just before inspection commenced the weights were not available at the time, but as the boxes were all of uniform size the party were able to form a very accurate estimate of the relative yield of each variety. Attention was first directed to the early varieties. All the best-known early varieties—Epicures, May Queens, Dalmeny Earlies, Sir John Llewelyn, etc.—were on trial, but it was easily seen that among them all the Mid-Lothian Early was a very easy first, alike as

regards yield of crop and attractiveness of appearance. Some of the visitors on surveying the produce of this variety as set out in the boxes hinted a wish to see another length dug under their eyes, and, on this being done, they found that the weight was to the full as great as had been represented.

In regard to the maincrop varieties there was no little discussion among the company as to whether a considerable number of varieties did not differ from each other only in name, and there was a general agreement that the multiplicity of varieties was not only a nuisance but was very confusing to growers. Mr. Scarlett called special attention to what he regarded as the standard varieties, namely, the Dalmeny Hero, the Factor, Pink Blossom, Duchess of Cornwall, Warrior, Table Talk, Langworthy, and Peacemaker. These could be all safely relied on.

The Northern Star, which was in great demand in the spring of last year, made a fair show, but the Eldorado variety, which in the spring of last year was selling at £160 per lb. made a very poor appearance. Mr. Scarlett, however, explained that the Eldorados growing there, like so many others on the market, had been grown from roots that had been propagated from shoots, which was by far the quickest way to raise any variety that was in great demand, but at the same time it was, as he had now learned, the surest way to ruin any variety.

The Money-makers, which were introduced last year, made a grand appearance in point of yield. But the climax of interest in the day's proceedings was reached when Mr. Scarlett called upon the company to inspect a new variety called the Heather Blossom, which had been originally raised by Mr. Chapman, Belfast. The Heather Blossom showed a quite phenomenal yield of beautifully-formed tubers, and the company unanimously agreed that it was the most prolific and most promising of all the varieties they had seen that day.

The inspection concluded with a demonstration of the working capacities of two recently brought out appliances for digging potato crops. One of these—the "Shores" plough, which is fitted with "shakers" at the rear—did very good work, which was highly commended by all the practical men on the ground. The other was the Hoosey, which lifts the drill bodily and sends it up a kind of elevator, in which all the soil is shaken out and the tubers are deposited in a row behind. This machine, however, is rather complicated, and it was continually choking. It was tried last year, but not with any great success, on the farm of Barney Hill, Dunbar. Several of the East Lothian growers present, however, declared that an inventor in that county was about to place on the market a machine which would lift the whole drill and its contents on to an elevator riddle, from which the potatoes would be deposited on a receptacle placed on the rear part of the machine.

Seed Potatoes in Strathmore.

The other day (writes a Dundee correspondent) we visited Strathmore, where potatoes are grown on an extensive scale, and were much struck by the splendid appearance of the crops in this district. Around Coupar-Angus was this especially evident, where Messrs. C. E. Anderson and Son, Limited, are the principal seed growers, and cultivate most of the newer varieties, together with several acres of the older sorts, both for seed and table purposes. An interesting field was that in the vicinity of the town, where the firm are growing some of the newer kinds. Sir John Llewellyn, which we saw being lifted, took up a beautiful crop. The others were free from blight, and of a nice uniform shape and colour. Here, also, were Ninetyfold, Epicures, Evergood, The Factor, Eureka, Diamond, Eldorado, etc., all of which were in the pink of condition. A field of British Queens produced a crop of particularly fine tubers. At another farm, several acres of 20th Century showed by the fine exuberant growth and tubers at the roots to be a potato which will yet be largely grown. It is of excellent quality.

The other part of this field was Northern Stars, which were of outstanding merit. It is no exaggeration to say that, as an all-round potato, in numbers, size, shape, and quality, the "Star" at the present time has no equal here. From samples which we tested we found this potato to be a splendid cooker, and entirely free from disease.

Other varieties which were seen were Sutton's Regents, Ninetyfold, Royal Kidneys, Monarch, Dalmeny Hero, Warrior, etc.

A field respectively of Recorder and King Edward VII. showed good crops, the tubers being of fine size, and, when tested, of excellent quality. We also saw several other fields of Northern Stars, and found these equal in every respect to the first lot visited. The Messrs. Anderson inform us that they will be lifting their crops from now onwards, and heartily invite anyone interested to pay them a visit, and, more especially, to see the crops of "Stars" being lifted.

By Lupulin.

The 1905 Crop.

Whatever may be the disadvantages of a too bounteous yield of hops, and it must be admitted that they are not few, there may be some glory to be associated with the present year's crop, as, according to the official figures, it has established a record in the history of our industry. It is true that in 1886 a heavier total weight (776,144 cwt.) was harvested, but the area on which that great quantity was grown stood at 70,127 acres, giving an average of only a little over 11 cwt. per acre. Again in 1855 we had 743,047 cwt. from 57,567 acres, the average per acre being nearly 13 cwt. But this year from only 48,967 acres our production is 695,943 cwt., our average running up to the unprecedented figure of 14.21 cwt. In order to fully estimate the importance of this figure, some reference to the returns of the past 10 years is desirable. From 1896 to 1905 inclusive our English growers have produced 4,579,908 cwt. of hops, giving an average of 457,990 cwt. per annum. Although the period named includes the heavy cropping years of 1899 and 1901, it will be seen that our total yield this year is nearly 50 per cent. above the average. The production per acre is even still more remarkable. Taking the averages of the 10 years referred to, we find that the actual average of the whole is 9.12 cwt., whereas this figure is now exceeded by 5.09, the excess representing nearly 55 per cent. We are, therefore, justified in claiming that by our improved methods of cultivation and treatment, aided by the climatic conditions of the season, we have attained to a point that has never been previously reached in English plantations. If we could properly calculate the proportion of the crop that has been allowed, for several reasons, to be left unpicked, we should doubtless be faced by still more startling results, and we may therefore conclude that it is probable that the present year will be prominent for a long time to come as our record season.

An examination of the details of the present returns shows that the county of Kent has rather more than doubled her output on the whole, the increase being smallest in the East, and largest in the Weald, the latter showing an increase from last year of over 96,000 cwt., and giving the highest average of any English district—viz., 15.91 cwt. per acre. The Hereford figures are very remarkable, as they give no less an expansion both in total and average of over six times. Worcester hardly comes up to her neighbour, but provides evidence of very pronounced increase, the average having advanced from 3.13 to 13.65 cwts. Surrey has increased her total by over four times, and her average is in about same proportion. Sussex, on the other hand, does not make so pronounced a mark, the average of this county having been raised from 6.20 to 14.86 cwt., and the total from 27,726 to 69,059 cwt.; but Hampshire, from the small area of 1,978 acres, shows an average of 15.27 cwt., and a total raised from 9,137 to 30,207 cwt.

The grand total of the crop (695,943 cwt.) is 413,613 cwt. in excess of last year, and will sufficiently meet the requirements of British brewers during the current year. Our growers may congratulate themselves that there is not much room for foreign intrusion. Unfortunately, foreign crops are also very large, and can only be kept out of our market by the low prices of our produce. The cost of exclusion will therefore be considerable, and I much regret that I cannot see any opening for profit accruing to the English section of the industry this season. An excessive crop can only benefit one class. While the grower laments the brewer rejoices, and, unfortunately, the general public is in no sense benefited. We can only hope that by the more lavish use of hops in this year of cheapness the burden of the big crop will be lessened, and a better experience will await growers in the seasons yet in front of them.

Produce of Hops.

Preliminary Statement showing the Estimated Total Production of Hops in the years 1905 and 1904, with the Acreage and Estimated Average yield per Statute Acre in each County of England in which Hops were grown.

* Gloucester and Suffolk.

Home Notes.

Imports and Exports.

The first month of our new year demonstrates that the opening for foreign hops is as yet very limited. Our imports during September only gave us 264 cwt. from U.S.A. and 4,342 cwt. from other countries. The total 4,606 cwt. contrasts remarkably with last year's returns, as in September 1904 we received 28,117 cwt. Our exports for last month were 1,224 cwt., so that the balance against us is reduced to the insignificant figure of 3,382 cwt.

The Borough.

The total of the business done since the opening of the season has been exceptionally large. Bright, healthy qualities are almost entirely cleared, and the values of such have consequently advanced. We are now waiting the arrival of some of the more important growths, and there are indications in the slackening off of business during the past few days, that buyers may possibly adopt a waiting policy in order to test the ideas of the planters as to future values. It is unhappily too evident that a very large proportion of our hops is lacking in colour and condition, and I hear of sales of some lots at prices that are absurdly low, when we are aware that even these are not wholly deficient in the constituents required by brewers. It is difficult to attempt to forecast the ultimate issue of this season's business, but I am compelled to admit that, at present, I cannot look forward hopefully, and earnestly trust that further developments may bring light into a situation which is now almost entirely in the shade.

Major Thomas Neve, J.P.

With extreme regret I briefly refer to the passing away of this true gentleman, who died suddenly from heart failure a few days ago during a visit to Italy. The sorrow of his numerous friends is most sincere, as he was respected and beloved by all who knew him, and universal sympathy is extended to his family, and especially to his aged father, Mr. George Neve, who remains as the doyen of all English hop-planters.

Foreign Notes.

Burgundy.

The conclusion of the harvest more than confirms previous estimates of the quantity, with an excellent average of quality, the majority of the growths being very attractive as to colour. I have seen samples of very pretty hops from this district. The offers of 50 to 60 francs now current are by no means satisfactory to planters, who declare that such prices do not cover the cost of production.

Borough, Monday.—The tone of the Belgian hop market has improved during the last few days. More active demand has developed, and values have advanced by about 5s. per cwt.

British Possessions
beyond the Seas
AND THEIR
London Representatives.
NOVA SCOTIA.
Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.

Difficulty with Oil Engine.

SIR,—I bought a petrol engine (3 b.h.p.) from Glover's, of Warwick, a month or two ago, and I am glad to find they got a silver medal for it at the Dairy Show.

Will you kindly explain to me through the MARK LANE EXPRESS the action of the magneto ignition, which I have on it.

Also, how to tell the b.h.p., by putting a brake on the flywheel—that is, the formula?

The engine runs 340 revolutions per minute, and the diameter of flywheel is 2 ft. 3 in.—Very truly yours, NORTH LINDSEY.

October 12, 1905.

Smithfield Judges of our Cross-Bred Sheep.

SIR,—If it is correct that the selection of judges made by the council of the Smithfield Club for the cross-bred sheep classes are both breeders of pure "Oxfords" or the "Oxford cross," I consider it to be most unfair to those who intend to exhibit other cross-breds—in fact, from past experience, it is almost useless for them to send.

If it is the desire of the council to increase the number of exhibits, this could be done by appointing a Hampshire breeder (90 per cent. of the exhibits in these classes are bred from Hampshire ewes) and a butcher, or two cross-breeders, one of large and the other small breeds.

October 10, 1905. EXHIBITOR.

Crop Disease—Affected Swedes and Potatoes.

SIR,—We send you a portion of the bulb of a swede taken from a field of ten acres in Norfolk; the whole crop is similarly affected, and so also are two different kinds of swedes grown upon a farm a few miles distant. The seedmen who supplied the seed have examined their trials of the same stock, and find their plants perfectly healthy. The affected crops had been badly mildewed. We also send a diseased potato, which is similarly affected, it is supposed. Will you kindly advise on the matter? W. B.

[*** The potato is affected by wet rot, and all tubers so affected are valueless and should be burned, as otherwise the disease will be communicated to sound tubers. The land should be limed, and no potatoes should be grown upon it for a few years. None of the potato sets should be used for seed. The swede sent is not affected by a similar organism, indeed, it is very doubtful whether the peculiar appearance of the portion of the swede sent is really due to disease. It may possibly prove that the swedes will be sound and usable for stock in the ordinary way, although, possibly, the keeping properties of the bulbs may be somewhat impaired. The swede was submitted to one of the leading experts in this country, and he is unable at present to say whether there is any real disease or not. If any change is noted in the swedes, perhaps you will send another specimen for examination, and, in any event, it would be well to send one to the Editor sometime in December, provided that no change is previously apparent.—M. Y.]

Rural Depopulation and the Church Army.

SIR,—I should be grateful if you would suffer me to offer you a few words of explanation in reference to the notes under the heading "Agricultural Politics" in your issue of the 2nd inst.

I cannot but think that the author of these notes has somewhat misunderstood the object and scope of the Church Army's proposals as to emigration. Nothing is further from our desire or intention than to deplete the country districts further, and it is a part of our plans to do something towards repopulating rural neighbourhoods by a system of planting carefully chosen families upon small holdings of their own. It seems almost needless to point out what difficulties stand between us and the realisation of these plans. Land within reasonable reach of a fair market, an absolute necessity in the case of small holdings, is difficult to be obtained, save at a prohibitive price; housing constitutes a serious difficulty; questions of rent, tithe, rates, and taxes must be faced; and possibly there may be prejudices to be overcome on the part of neighbourhoods chosen for colonisation. None of these are, we believe insurmountable, but they cannot be surmounted in a moment and without considerable expenditure.

Meanwhile we stand face to face with the need of immediate action to meet the problem of unemployment, and men, women, and children are starving, or approaching starvation, by thousands. Emigration to Canada affords immediate relief at a moderate expense, and, in default of a better remedy, the absolute need of prompt action at a cost which shall be within our resources compels us to take what is perhaps a less perfect way, but a practicable and speedy one.

You will have noticed that our proposals are limited to 5,000 men. Surely the country can afford to watch the transfer of this number, out of her many millions, from one part of the King's dominions to another—not to a foreign land—without raising the cry of "draining the life-blood from the country," and so on.

If, Sir, any of your readers can show us a way as immediately practicable as that which we propose, and not more costly, we are quite willing, indeed eager, to be taught.—I am, etc.,

W. CARLILE,
Hon. Chief Secretary.

The Church Army Headquarters,
55, Bryanston Street, Marble Arch,
London, W.,
October 12, 1905.

A Fine Autumn in Gloucestershire.

SIR,—The autumn this year is one of exceptional weather, enabling the stubbles to be thoroughly cleaned. The work generally is in a forward condition. Very little seeding is done, the land being too dry. Mangolds are showing signs of being ready for drawing—in fact, this work has been commenced. Grass is plentiful, and, with continued mild weather, will go far towards saving the hayricks.

Cattle are generally healthy and in good condition. Shortage of water is a general outcry, ponds and ditches have been dry for some weeks past, and the water-cart is in evidence.

Where corn has been threshed the yield seems to be satisfactory and the condition good, the fall in price being the disappointing element, and why this has happened it is not easy to understand, as the imports are no larger than at this date last year, and the quality of home-grown wheats is certainly better. Notwithstanding the drop in wheat, offals are not correspondingly easy to buy, and the quality yearly becomes inferior and of less feeding value.

Barleys are coming to hand better than anticipated, and a fair amount of business in this cereal is doing just now. Fruit is very scarce, and many casks will have to remain unfilled this season. B. R.

October 12, 1905.

Bucks (Central).

SIR,—As threshing proceeds, I hear that the yield of wheat is disappointing, but of good quality. The barley turns out a good yield, but the sample is not generally so good as was expected. Oats are a poor crop generally, but some few good prices. Winter beans turn out well; roots have amazingly improved since the rains, and will turn out a fair crop.

Mangolds will now be got up, as the weather is so good to cart them off. Early-sown rye and vetches are up, winter beans are planted, but the land intended for wheat is too dry, although a little is being put in.

Cattle are doing well in the fields, especially if they have some cake, but the price of beef is ruinous, and the trade for store cattle has to be found, and if Canadian stores were to come in, the breeder would be ruined, and much poor grass land would have to be given up. The risk of disease may not be great at the present time, but we know not when it might be introduced — the frontier between Canada and the States is so open for such a length that it is practically sure to send States cattle as well as Canadian. J. T.

October 12, 1905.

A Good Season in Mid-Essex.

SIR,—The weather has been very good for cleaning the land and burning weeds, and a little wheat is sown, but some are waiting for a rain before sowing. Winter beans and winter oats are mostly sown, and have gone in well.

Young clovers are looking well, also trifolium, but turnips for sheep feed are almost a failure, some having sown two or three times and still having no plant, making the prospect for sheep feed short. Ewes have been and still are rather dear, also store lambs, store beast a fair price, and store pigs and jointers very dear, large hogs not being quite so dear.

Beef a good trade, mutton dear. There are several pieces of red clover seed got very well, but they do not look like a heavy yield, and several pieces are grown from Russian and other foreign seeds, which this year have proved to be nothing so good as our own English stocks.

Nearly everyone round here had finished harvest just before the wet weather set in, so that the corn is in good condition, the barleys being very dry, and some steely, on account of ripening too fast, and where the corn, both wheat and barley, have been threshed, the yield has been in most cases disappointing, as well as the size being small, and all round the harvest, coming on too fast, has very much reduced the average in quantity and quality. The price of both wheat and barley is very low.

There are a great number of Michaelmas sales this year, the big sales making fairly good prices, but the little sales bad. The cry of "back to the land" is sarcastically amusing when you read in the same paragraph that "nothing must be done to make the produce we farmers grow dearer," and still Essex will have to pay its tithe tax for growing corn of nearly £200,000 this year. An article by Alfred Blomfield in the magazine "The World's Work and Play" for August is well worth reading by everyone interested in the rating and charges on land.

October 11, 1905. C. I. B.

Outlook in Warwick.

SIR,—A beautiful autumn for farm work. Roots have done well lately, but many turnip crops are only poor. Wheat is now being rapidly planted, but the acreage under this crop will not be nearly so large as last season.

Sheep have been the most profitable of live stock, and the prices recently made have been a great boon to breeders who had them to sell. Beef and milk are both of them making wretched prices for the producers. W. H. S.

October 12, 1905.

Corn Sowing in South Hunts.

SIR,—Many of the up-to-date farmers in this district are putting into practice the advice of one of the most successful of our heavy land farmers to plant as much wheat as possible during the week prior to and the week subsequent to Michaelmas.

The land works well, the seed finding a splendid bed, which, on clay lands, is more necessary than on the lighter lands, which need a considerable amount of solidifying. It appears to be probable that well-nigh as large an area of land will be drilled to wheat this as last season. For this there are several reasons, the comparatively small amount of work entailed now that all kinds of farm operations are well forward, the fair out-turn of the 1905 crop, a higher price being realised for wheat than the average of the last ten years, the wretched returns from the oat crop of the recent harvest, and the terribly slow demand at a low price for the barley which we would like to turn into money, but cannot with any pleasure and, may-hap, profit.

Winter beans are also likely to be planted more generally, since this was one of the cereals with which farmers were satisfied; it is true that the price of beans is very low—30s. per qr. of 38 stones—compared with cake, but the return from a forty bushels' crop is as good as that from any crop grown in the district, whilst a crop of other corn is ensured the year following a crop of beans.

The yields of both wheat and barley are also up to an average. Oats are decidedly bad; the season proved unfavourable from beginning to end for this cereal which delights in warmth and moisture.

The hay crop was generally deficient. Still the price has not moved up to the extent anticipated or as much as its shortage in bulk and its high quality would warrant. Should we have a severe or even an ordinarily cold winter, the probability is that the price will improve. Few farmers will get a sufficient return from the grass land mown to recoup them for expenses, rent, etc., although the labour required to make good hay was not as much as is frequently expended in the securing of inferior or damaged hay in wet seasons.

Store cattle are a wretched trade, many are now being sold at little, if any, more than they cost in last April; the eddishes have been very short and thin, furnishing not more than a third as much feed as they do some seasons, when we have had an early haytime and a warm and moist September. Roots have grown considerably during the last fortnight, and may now prove to be an average crop. They are not yet ready to be taken up.

SANDERS SPENCER.

October 13, 1905.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—The attendance was on a mid weekly average, but trading was unimportant in all branches. English wheats maintain a steady tone at 28s to 31s for red, and 28s 6d to 32s for white. Foreign grades were firmly held but in poor request; No. 2 Club Calcutta quoted at 32s; No. 1 Northern Manitoba, ex ship, at 34s; Australian, at 33s to 33s 6d; New Zealand (long berried), at 29s 6d to 30s; and short berried, at 29s to 29s 6d. Maize has a firm market, with quotations on a higher level, but buyers are scarce; mixed American ex ship is quoted at 24s, landed at 24s 6d. La Plata ex ship at 23s 6d, and ex quay at 24s. Flour quiet and unchanged. Barley continues firm; Odessa-Nicolaieff Kherson offered at 18s 4½d ex ship and 18s 9d ex quay. Oats quietly steady; common Russians offered at 15s 6d to 15s 9d; for white clipped 16s 9d is wanted, and 16s for mixed American landed.

Mark Lane, Friday.—The attendance was small, and business was far from brisk. Meanwhile a firm tone prevails. English wheats are steadily held for last prices. Foreign grades are firm at 34s for No. 1 Northern Manitoba ex ship and 32s for No. 2 club Calcutta; for Australian 33s 3d to 33s 6d is wanted. Maize firm, with an upward tendency; mixed American ex ship is held for 24s and La Plata landed for 24s 3d. Flour steady but quiet. Barley firm; Odessa-Nicolaieff ex quay is obtainable at 18s 10½d. Oats rule firm, with 15s 9d asked for common Russian and 16s for mixed American landed.

COUNTRY.

Ashford, Tuesday.—Wheat trade very dull, though without reduction in prices. Best heavy samples made up to 30s, and others 27s to 29s. Barley, still in poor malting condition, and in little demand, sold at 26s to 28s. Oats unchanged on the week, at 16s to 20s. Grey peas, 29s to 30s; tick beans, 31s to 33s; Mazagan beans, 28s to 29s. Foreign barley, 21s to 22s. Maize, 25s to 27s per qr. Tares cheaper, 5s 9d to 6s 6d per bushel.

Banbury, Thursday.—Wheat, red (new), 27s to 28s; barley, 24s to 30s; beans (new), 29s to 30s 6d; oats, 17s to 20s; peas, 28s to 31s per quarter.

Berwick, Saturday.—Good attendance, with smaller supplies of grain. Fine barley unchanged; secondary quality dull. Oats and wheat scarce. Wheat, 27s to 30s; barley, 23s to 28s 6d; oats, 17s 6d to 20s 6d.

Birmingham, Thursday.—There was a large attendance, but sellers reported a slow trade. Foreign wheats were 3d to 6d per quarter dearer on the week. Quotations: River Plate 32s to 33s, Russians 32s 3d to 34s, Indians 30s 9d to 32s per quarter (496 lb.), all at Sharpness. There was a good supply of English wheat, which made from 10s 6d to 11s per bag (186 lb). Both Plate and flat maize were 3d dearer and grinding barley 6d. English oats (white) remained at 18s per 312 lb., and beans made from 12s 3d to 12s 6d per bag (196 lb.) delivered in Birmingham.

Brighton, Thursday.—Quiet trade and prices as last week. Small attendance. New white wheat, 28s to 30s; new red ditto, 26s to 30s; barley, 28s to 33s; grinding ditto, 21s to 22s; oats, English, 16s to 18s; peas, 28s to 30s; beans, 30s to 31s.

Bristol, Thursday.—There was a large attendance on our market to-day, and a considerable amount of business passing. English wheat, in plentiful supply, found a ready sale at 3d to 6d advance on last week's prices foreign wheat, 3d to 6d dearer; maize and oats also 3d to 6d dearer; barley, 3d higher; flour very firm at late rates.—GRACE BROTHERS.

Bury St. Edmunds Wednesday.—Wheat: Supply was shorter, and with a steady demand, prices were the turn etter at 28s to 29s per qr. Barley was in good average supply, and a considerable business was done, some buyers operating very freely. Prices for all sorts were firm on the week; medium at 26s 6d to 31s; fine malting descriptions, 32s to 35s 6d per qr. Feeding corns, oil cakes, and milling stuffs all firm.

Cambridge, Saturday.—During the week the wheat trade has been quiet, with smaller supplies, farmers being busy autumn sowing. There was a small attendance, and not a large supply. Wheat was very firm, clean lots making rather more money for seed purposes. Red wheat, 27s to 29s, and white up to 30s per 504lbs. Barley firm in value, with a good demand for good lots. Barley, ordinary, 24s to 27s; fine, up to 32s. Oats 6d dearer. Beans unchanged.

Canterbury, Saturday.—Maltsters have been operating during the past week, and best Thanet barleys are making up to 34s; average samples, 26s to 30s. Wheat rather dearer; best reds up to 31s, and white to 32s. Spring oats, 17s to 19s per quarter. Grey peas, 29s to 31s.

Carlisle, Saturday.—Very small supply of oats in our market to-day; quick sale; full prices, 18s to 18s 9l per 336lbs.—THOMAS ROBINSON.

Chester, Saturday.—The attendance was good, supplies on an average, and last week's prices ruling for English grain. Indian corn has advanced 6d per sack. Business generally showed an improvement. Quotations: New white wheat, 4s 3d to 4s 5d; ditto red, 4s 2d to 4s 6d per 75lb.; new grinding barley, 3s to 3s 2d per 64lb.; old beans, 5s 9d to 6s per 80lb.; old oats, 3s 2d to 3s 4d; new ditto, 2s 2d to 2s 5d per 46lb.; new Indian corn, 13s 3d to 13s 9d per 240lb.

Chichester, Wednesday.—A good attendance and very fair trade. New white wheat, 29s to 30s; new red ditto, 29s to 29s 6d; barley, 26s to 33s; grinding ditto, 24s 6d to 25s; oats, English, 15s 6d to 20s; rye, 21s to 23s; peas 28s to 30s; beans, 32s to 33s; tares, 6s to 7s 6d; maize, 24s 6d to 25s; flour, 27s.

Colchester, Saturday.—Wheat was in small supply to-day, and sold at prices favourable to sellers. Barley was freely offered and all descriptions sold readily at the full prices of last week. Beans and peas scarce, and fully as dear. Oats must be quoted fully 6d to 1s per quarter dearer.—JOSEPH WILES AND SON, LTD.

Coventry, Friday. — A moderate attendance, quiet trade and prices practically remained unchanged, as follows: Wheat, old, 11s 6d to 12s per 186lb.; new, 26s 6d to 11s 3d per 186lb; barley, 29s to 33s per 448lb; oats, old, 25s to 26s per 352lb; new, 18s 6d to 20s per 352lb; beans, old, 12s 6d to 13s per 196lb.; new, 11s 6d to 12s per 196lb; peas, 11s 6d to 14s per 196lb.

Derby, Friday. Wheat quiet and firm at extreme rates. Spring corn unchanged. Quotations: Wheat, new white, 28s to 29s; red, 27s to 28s; malting barley, 26s to 30s; beans, old, 33s to 34s; new, 30s to 31s; oats, old, 24s to 24s; new, 17s to 18s.

Devizes, Thursday.—Quotations: Best old wheat, 10s to 17s 6d; secondary ditto, 13s to 14s; new wheat, 13s 6d to 15s 6d; best barley, 26s to 32s; secondary, 20s to 24s; new, 23s to 24s; old black oats, 21s to 23s; white ditto, 23s to 25s; malting barley, 26s to 32s; beans, 16s to 17s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday. — Rather small supply of English wheat for the time of the year, but a very firm trade, and prices up to 11s per load. Foreign wheat was also firm, with an upward tendency, 6d per qr. advance on the week being registered. Barley made 28s 3d per qr., and sold freely, common sorts being neglected. Beans and oats were slightly dearer, and maize was 6d to 9d per qr. dearer. Other things unchanged.

Dorchester, Saturday.—The fine weather of the past week led to excessively heavy offers at the market to-day, especially of barley, with which the market was glutted. Farmers asked outside values for wheat, and foreign was equally firmly held; but transactions were not very excessive on these terms. There was so much barley to select from for malting purposes, that maltsters proved very indifferent buyers even where offered at tempting values; grinding, on the other hand, was very firmly held, and outside values were made. Oats realised fully late rates. Feeding stuffs, in the absence of any great demand, ruled inactive.

Dublin, Friday.—Wheat, 16s to 17s; malting barley, 14s 6d to 15s; grinding ditto, 13s to 14s; malt, 18s 6d to 20s; oats, 10s to 13s 3d; oatmeal, extra pinhead, 12s 6d to 14s 6d; flour, 10s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter, Friday. — Trade somewhat dull. English wheat fully as dear as last week; foreign firm. English barley unchanged; grinding barley, 3d dearer; maize, 6d; and oats, 6d to 9d dearer. Flour rather firmer. Wheat, 3s 6d to 3s 9d; English barley, 3s 3d to 3s 9d; superfine flour 25s to 28s; fine, 23s to 25s.

Glasgow, Wednesday.—There was the usual attendance at our corn exchange to-day. Wheat firmer, but demand still limited. Flour easier, owing to large stocks on hand. Maize 1½d per boll and corn 4½d per boll dearer on the week. Barley a shade easier on spot, owing to arrivals. Oats (home and foreign) practically unchanged. Beans unchanged, with fair trade. Pease unaltered. Bran and thirds quiet in tone, but values not quotably changed. Oatmeal 6d per sack dearer on the week.—GIBSON AND CLARK.

Glasgow, Friday.—Wheat firm, but in quiet demand. Flour steady, with a moderate business passing. Mixed American maize 3d dearer at 14s 3d; Plate also firm at 13s 10½d to 14s per 280lb. All feeding stuffs quiet and unaltered.

Gloucester, Saturday.—English wheat in moderate supply, with prices 1d per bushel dearer on the fortnight, reds making 3s 7d to 3s 8d, and whites 3s 9d to 3s 10d. Foreign in moderate demand at 6d advance. Feeders strong, with maize and grinding barley 6d and oats 3d dearer.—WAIT, JAMES AND CO.

Grantham, Saturday.—There was a large attendance of farmers and dealers, and, in some departments, a brisk trade was done. Wheat was in small supply, and sold at 28s to 29s per qr. Barley was extensively offered, and for the best quality for malting there was a good demand, prices ranging from 28s to 34s; common barley, 23s to 26s per qr. Oats were in short supply, and realised 17s to 19s; beans, 30s to 32s; blue peas, 38s to 48s per qr.

Hereford, Wednesday.—Rather better attendance, and a considerable volume of English grain on offer. English wheats were tardily bought at last week's figures. Barleys moved off quietly, without quotable change in value. Oats remained very firm. Beans also steady, at last week's prices. Wholesale quotations:—Wheat, 3s 4d to 3s 6d per 62lb.; barley, 2s 9d to 3s 9d per 56lb.; oats, old, 2s 6d to 3s per 40lb.; new, 2s to 2s 6d per 40lb.; beans, old, 4s to 4s 6d per 65½lb.; new, 3s 6d to 3s 10d per 65½lb.; vetches 5s 6d to 6s 6d per 65½lb.

Ipswich, Tuesday.—Wheat was in shorter supply, and very firm at last week's prices; good reds or whites, 28s 6d to 29s 6d per qr. Barley in fair average supply. The buying was more general, as several maltsters were operating who had not done much before, but the main support of the trade comes from one or two firms only, who are moving good quantities off the market weekly. Fair medium malting runs were steady at 27s to 31s per qr.; finer descriptions were not quite so brisk as last week, at 32s to 34s per qr. Oats in small supply, and firm, at 18s to 19s 6d per qr. Beans very firm at 32s to 32s 6d per 38 stones; old at 34s. All other feeding corns in steady demand, and firm on the week, as also oil cakes and milling stuffs.

Leeds, Friday.—English and foreign wheats firmly held, at Tuesday's prices, with an upward tendency for finest descriptions. Foreign malting barley was without change, but feeding barley was the turn dearer. There was no change in beans, peas, oats, maize, or flour.

Leicester, Saturday.—Good attendance of buyers and dealers, with full supplies of home-grown wheats, which met a better sale at firm rates. Red wheats, 28s to 29s; white wheats, 29s to 30s per 36 stones; malting barley scarce, and steady at 24s to 28s per 32 stones; beans, 30s to 33s per 36 stones; oats, 18s to 20s per 26 stones.

Lincoln, Friday.—Small show of English wheat, with a good demand, holders realising an advance of 6d per quarter. Large supply of barley, prices showing a decline of 1s. per quarter on the week. Oats and beans in small supply, and making late rates.

Liverpool, Friday.—There has been a fair attendance at the market and wheat is in moderate request, prices being generally ½d. over last Tuesday. Flour in better demand for both foreign and home-made brands. No official change is made in limits, but in some instances some advance is demanded for the latter. Maize.—Mixed is firm, with a modrate trade passing at ¾d advance from last market day. Plate is firm, with a fair trade at ½d. advance. European sorts steady, but quiet and unchanged. Barley.—Malting is steady, with a quiet trade passing. Feeding steady, but American sorts are ½d. lower. Beans steady, but most sorts are 3d. lower than last Tuesday; there is a moderate inquiry. Peas very steady at an occasional advance on limited offerings; demand moderate. Oats firm, with a moderate demand at late rates to some advance for foreign. English sparingly offered and firmly held at last Tuesday's prices. Oat mealfirm but inactive. Oilcake in better demand all round at fully last market day's prices.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday.—Attendance at market to-day fairly good. The trade in wheat was of a firm tone, and a slight increase in cost of it from last Thursday. The barley business was also with a tendency to improved value, and a like remark might be applied to oats. Beans and peas participate in the inclination to a rise, and other grain quite up to previous quotations.

Manchester, Thursday.—In wheat both English and foreign show no change on the week, and are steady. Flour is unchanged. Indian corn, mixed American is 2d, and Plate 1d per cental dearer. In foreign barley American is rather easier. English oats dearer. Beans and peas unchanged. Feeding stuffs firm.

Newark, Wednesday. A small show of wheat, which made an advance of 6d per qr.. Barley steady at full prices. Oats and beans firm. Quotations:—Wheat, 27s to 29s; barley, 23s to 3 s; oats, 16s to 18s; beans, 29s to 33s per qr.

Newcastle-on-Tyne, Saturday. — A fair demand for wheat at fully last week's prices prevailed at our to-day's market. Maize firm and slightly dearer. Oats steady demand at fully late rates for all classes. Barley a rfal demand at last week's quotation. Beans and peas were little inquired after. Prices, however, remain unchanged.—JOSEPH POLLARD AND CO.

Northampton, Saturday.—Moderate attendance, but smaller supply on offer. Prices firm; new wheat, 27s to 28s; malting barley, 25s to 32s; barley, 26s to 30s; new white oats, 17s to 18s 6d; new black oats, 16s to 18s; new beans, 28s to 30s; peas, 27s to 28s; flour, 23s 6d to 28s 6d.

Norwich, Saturday.—There was no alteration in the wheat trade at our market to-day, prices being about the same as last week. Barley was in fair supply, with a fair trade, and all useful parcels met a ready sale. Continued wet weather has prevailed during the past week. Wheat, red, 28s to 28s per quarter, weight 63lbs. per bushel imperial. Corn inspector's return for the week ending October 2, 1905: Wheat, 2,431—27s. 1½d.; barley, 17,436—24s 4d.—J. A. MILLS.

Nottingham, Saturday.—There was less wheat offering to-day, and an advance of 6d per quarter was established. Barley in larger supply, and, with an increased demand, values well maintained. Oats scarce and 6d dearer. Beans firm.—ROBERT HUBBLE.

Oxford, Saturday.—There was a fair attendance, and trade showed some improvement at about the recent currencies. Heavy supplies of English wheats came to hand, and a fairly brisk demand was experienced at late rates. Barley was freely offered, but holders adhered to former values.

Peterborough, Saturday.—A small supply of wheat, which met a good demand at 6d more money. Barley slow at last week's prices. Oats firm at the recent advance. THOMAS HILL AND SON.

Plymouth, Thursday.—There was a very good attendance on our market to-day. Prices were higher all round. Wheat, 3d to 6d; oats and barley, 3d; maize 1½d dearer.—ORLANDO DAVIS AND CO.

Preston, Saturday.—The market closed with a firm undertone for wheat at an advance of 1d to 2d per cental. English wheat is in rather better demand for seed. Flat maize advanced fully 2d per cental, round corn being rather dearer in sympathy. Flour firm and in better demand. Quotations:—Wheat, white new, per windle of 220lb., 12s 6d to 13s; ditto red, 12s to 12s 6d; oats, old, per bushel, 3s to 3s 2d; ditto new white, 2s 6d to 2s 7d; ditto yellow, 2s 3d to 2s 4d; beans, per windle of 220lb., 16s to 16s 6d.

Reading, Saturday.—Improved attendance; trade about up to average. Wheat firm, at 30s to 33s; barley, 25s to 35s; oats, 16s 6d to 24s 6d; beans, 32s 6d to 37s; bran, 92s 6d to 100s; mangels, 17s to 20s free delivery; tares, 5s 9d to 7s; hay, 45s to 70s; straw, 37s to 50s.

Retford, Saturday.—Wheat firm, and sold without any difficulty at the full rates of the previous week, especially the best samples, which made 28s 6d to 29s, and suitable lots for seed up to 30s per qr. Really first-class malting barley was scarce, and worth 30s, but the general run here was 26s to 28s, and grinding 23s 6d to 24s 6d per qr. Small parcels for immediate consumption of maize realised 26s; English beans, 30s; black and white oats, 16s to 18s per qr.

Ripon, Thursday.—A good attendance of buyers, but little business being done. Malting barley, of which there is a good supply, is the chief feature, but prices show a downward tendency. New wheat 27s to 29s, foreign wheat 32s to 35s, grinding barley 22s to 23s, malting barley 24s to 28s, new oats 17s to 18s, round maize 25s to 26s, flat maize 25s 6d to 26s 6d per quarter.

Stamford, Friday.—Good attendance, and fairly good trade. Wheat firm, best making up to 28s 6d. Oats, 17s to 18s; beans, 30s to 32s. A fall in barley prices on the week, prices varying according to quality. A few extra fine samples fetched 34s for malting purposes; grining barley, 22s to 23s 6d. Short supply of peas.

Shrewsbury, Saturday.—Wheat, 12s to 12s 6d per 225lb.; oats, old white, 15s to 16s; new, 11s 6d to 12s 6d; peas, 11s 6d to 12s 6d; beans, 13s 6d to 14s per 240lb.; barley, 14s to 20s per 280lb

Sunderland, Saturday. — Grain in better supply. Wheat in sellers' favour. Barley and oats steady. Arrivals coastwise: Wheat, 1,100 quarters; oats, 101 quarters; foreign nil.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 28s 6d to 29s; new red ditto, 28s to 28s 6d; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 16s to 19s; rye, 23s to 24s; peas, 31s to 36s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 28s

Warwick, Saturday.—Very small supply of wheat; best samples make an advance of 3d per bag. Fair supply of barley; prices variable, best samples in demand. Very few oats and beans on offer; prices very firm. Feeding stuffs rather dearer.

Winchester, Saturday.—English wheat a good supply; very quiet trade at last week's prices. Foreign firm, unaltered. Barley and oats unchanged. Maize 6d advance on the week. Flour a steady demand at late rates. —FEAR, COLEBROOK AND CO., LTD.

Wisbech, Saturday.—Very little grain offering. Wheat advanced 6d to 1s per quarter; prices 29s to 29s 6d. Oats dearer, 17s 6d to 18s 6d. Barley, 24s to 27s.—JAMES FLETCHER.

Wolverhampton, Wednesday.—A good attendance, and a fair amount of business transacted. Quotations:—New wheat, 11s to 12s per 216lb.; flat corn, 24s to 24s 9d per 480lb.; English beans, old, 13s 6d to 13s 9d; new, 12s 3d to 12s 6d; oats, new, 10s 6d to 11s; old, 14s to 15s per 196lb.

Worksop, Wednesday.—Good attendance. Moderate show of wheat. Best samples for seed purposes sold at last week's full prices, others at ordinary rates. White wheat, 27s 6d to 28s 6d; red wheat, 26s to 27s 6d; best malting barley, 28s to 30s; secondary 25s 6d to 27s 6d; grinding barley, 22s to 24s; white oats, 17s to 18s; black oats, 16s to 17s; maize, 25s 6d to 26s 6d per qr.

Yeovil, Friday.—Wheat and barley sold at from 3d to 6d advance. Oats firm and held for more money. Maize up to 3d per quarter. English wheat of good quality sold at from 31s to 32s per quarter; secondary, 28s 6d to 30s; foreign wheat, 32s 9d to 35s 3d; malting barley, 30s to 35s; feeding, 20s 6d to 22s 6d; foreign, 19s 6d to 19s 9d; oats, white, 16s 3d to 19s 6d; black, 17s to 20s; Irish black, 16s 6d to 17s 6d; maize, 23s 6d to 25s; beans, 32s 6d to 37s 6d; rye, 20s 6d to 22s 6d; vetches, 6s to 7s per bushel. A free market in flour at values favouring sellers, fine making about 25s, and extra fine, 27s 6d. Bran and feeding stuffs firmly held, and in some cases making more money.

York, Saturday.—A limited supply of wheat, which sold at last week's rates, 28s 6d to 30s per qr. of 36 stones. A slow trade for barley at late rates, 25s 6d to 28s 6d per qr. of 32 stones; new oats scarce and firm, at 18s to 19s, and old sorts, 20s to 21s 6d per qr. of 24 stones. Peas, beans, and maize unaltered.

FOREIGN

Hamburg, Saturday. We have had rainy and boisterous weather; some nights were frosty. There is a brisk demand for all descriptions of grain, based on actual immediate requirements, and a considerable amount of busi-

ness was done at prices the turn in sellers' favour. Offers are scarce. The imports from October 1 till October 11 amounted to 24,900 tons wheat, 8,552 tons rye, 14,048 tons barley, 1,203 tons maize, and 10,300 tons bran. Fine Holstein and Mecklenburg wheat is very scarce, and is selling at 31s 6d to 32s per 504lb f.o.b. American hard winter No. 2 is held at 31s 3d; 79-80 ko. Danubian, at 29s 9d; 80 ko. River Plate, at 31s 3d per 480lb c.i.f. Hamburg. Rye in good demand at rising prices, and few sellers. 9 15-20 South Russian is held at 26s to 26s 3d, 72 73 ko. Danubian at 26s 3d per 480lb c.i.f. The demand for malting barley is increasing, and prices, particularly of Austrian and Hungarian, are the turn higher, as stocks in these countries are fast decreasing. Good Bohemian and Hungarian is selling at 32s 6d to 35s, fine Slovakian is held dat 36s to 38s. East Russian at 28s 6d to 32s 6d, Danish at 28s to 30s per 448lb. Grinding barley meets with a brisk demand, 60-61 ko. South Russian selling at 18s. December shipment at 18s 6d, American feeding at 18s per 400lb c.i.f. Hamburg. For American white clipped oats 16s 3d per 320lb is wanted. Russian are selling at 16s 6d to 17s 9d per 320lb; there is a brisk demand. Maize also inquired after; mixed American afloat 24s 9d, December 21s 6d, River Plate afloat 23s 3d per 480lb c.i.f. Hamburg.—JOHN TATLOCK.

Hamburg, Saturday.—Trade rules firm, and prices for best quality must be quoted higher. Our local brewers and maltsters have bought pretty freely, but principally Danish and Bohemian Chevalier, whilst from Hungary large quantities have been sent to the South of Germany and the Rhine, as the export of English barley to the Continent reported some time ago. This seems to be false, as so far not a single lot has arrived, nor are there any parcels in sight.—FRANCIS M. TH. DUHNE.

Paris, Wednesday.—Stocks at the provincial markets continue small, and the tendency is firm in all directions, with even a slight advance in prices, in some directions; a change, however, will probably supervene as soon as farmers have recommenced their threshings. Things have again been very quiet at the Bourse de Commerce; the day opened steady with a fairly good demand from "shorts," but closed heavy and dull at practically late prices. At the weekly free market an improvement has at last occurred in home-grown wheat, as the cold weather is causing a larger consumption of bread. Offers, though restricted, are in excess of requirements, but there is still a difficulty in getting perfectly dry wheat. Foreign wheat is firm, with tendency in favour of sellers. The trade in offals is quiet, and the fall which set in eight days ago has become accentuated. Business in rye still continues unimportant. Oats continue firm, and there has been a rise within the past eight days, offers continuing small. Maize is very firm; as the cold weather approaches the consumption will probably become larger, due to the high prices asked for oats.—*Dornbusch.*

THE BALTIC.

Wheat cargoes have been a quiet trade. American red winter has been in fair demand at 33s. 6d. per 480 lb. for December shipment, 33s. for January shipment, and 32s. 9d. for March shipment. No. 1 Manitoba has similarly sold at 32s. 6d. for November shipment, 32s. for January. Bahia Blanca has made 31s. 9d. per 504 lb., Blue Stem 33s. 3d. per 500 lb., both for prompt shipment. Walla Walla has made 32s. 6d., and Red Walla 31s. 6d., both per 500 lb. Fine Russian winter wheat is offered at 33s. per 492 lb.

Barley cargoes have firmly maintained the values of the 9th, but sales have scarcely been brisk. Theodosia, a favourite port, asks 19s. 4½d. per 400 lb., or 3d. more than the Azoff ports. The supply of Californian seems smaller than anticipated; 25s. 6d. per 448 lb. is about the price for cargoes.

Oats are rather dearer on the week, 15s. 9d. per 320 lb. has been paid for American mixed, and 16s. per 304 lb. for free white clipped. Russia asks 14s. 9d. to 15s. 3d. for 304 lb. cargoes, 16s. to 18s. for 320 lb. sorts, which seem more numerous than usual this autumn.

Maize cargoes are firm. For American, 24s. per 480 lb. has been paid on passage, and 21s. for January shipment.

The arrivals of grain and seed-laden vessels at ports-of-call for the week were 2 wheat (1 Adelaide, 1 Brisbane), 2 maize (Rosario).—Total 4.

The sailings of grain and seed-laden vessels from ports-of-call for the week were 5 wheat (1 Antwerp 1 Cardiff, 1 Leith, 1 Limerick, 1 Londonderry), 2 maize (1 Antwerp, 1 Leith).—Total 7.

Since January 1, 1905, the total arrivals have been 290 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 8 maize, 1 beans, 4 locust beans, and 49 linseed.—Total 381.

Last year, during the same time, the arrivals were 248 wheat, 1 wheat and maize, 35 barley and wheat, 17 barley, 6 maize, 5 beans, 4 locust beans, 1 rye, 35 linseed, and 1 canaryseed.—Total 353.

CHEESE.

Glasgow, Wednesday. — As grocers and provision dealers now well stocked with cheese, the demand has become quieter. The arrivals this week were moderate. Cheddars varied from 50s to 61s per cwt., and Dunlops from 52s to 58s.

HOPS.

Worcester, Saturday.—Hop picking being finished, the crop turns out satisfactorily in quantity, but with a much smaller proportion of really choice samples than expected, and fewer low samples are offered than usual. The bulk of the crop consists of very good medium hops, and these offer the best value. Our market is not quite so active, as the first rush is over. Choicest lots are most wanted; there is also an inquiry for good copper hops at low prices. Some growers, being dissatisfied with current prices, prefer to wait while business here was as late rates. 2,087 pockets have been weighed this week, making the total 16,788 pockets to date.—CHARLES FARAM AND CO.

Canterbury, Saturday.—Large trade in best hops. Really choice colour samples being scarce, prices again advanced for first-class quality: East and Mid-Kents quoted up to 80s, and medium lots 50s to 60s per cwt.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

There is steady progress being made with ploughing and some with sowing. The inquiry for the new wheat at the local markets is unabated, and with farmers accepting such low prices as prevail, millers do well to buy freely. Seed wheat is in increased request, and 33s. to 35s. per 504 lb. is paid. Farmers would, we believe, be glad of better facilities for buying small seed parcels of fine foreign wheat, such as is grown in the best winter wheat districts of Southern Russia, the Central United States and Argentina. The R.A.S.E., if forced to restrict its energies in certain other directions, might well extend them in that of keeping their members to good seed corn. The growers of pedigree wheat are worthy of their hire, but farmers cannot pay their prices except in a small minority of cases, and it is the bulk of the wheat acreage and not the special farms that we have to consider under the heading of the corn trade as a whole. Might not a fund be formed to meet the seller and the farmer half-way to bridge the difference between them? We see, to speak frankly, little practical use in counselling farmers to pay sixty, seventy, or eighty shillings per quarter for seed wheat, because we know that in less than one per cent. of the cases will such advice be taken. But we note with pleasure that such good strains as "Pilgrim's Prolific" and "Scholey's Squarehead" are obtainable for 36s. per qr. and "Essex Conqueror" for 38s. Farmers would do well to see if they cannot "stretch" to, say, the latter figure for their wheat. It is at most 6s. above what they are prepared to pay; little more than an extra shilling an acre. Opinion seems to be divided as to the probable area which will be sown with wheat, but for ourselves we expect to see a decline. We hear, however, of some increase in the sowings of winter barley, and also of the ordinary autumn rye.

It has recently been colder in France than here, and the demand for feeding stuffs has perceptibly freshened. Wheat is amongst the markets in very poor condition, the greater part of France secured the crop through a succession of thunderstorms, and the corn includes a disastrous proportion of damp and ear-sprouted grain. French millers, therefore, are already revising their earlier estimates, according to which they would only require 700,000 qr. of imported corn. If any material proportion of the French wheat crop is fed to poultry, the French purchasers of foreign wheat may become a sensible item in the trade equation of the present cereal year.

The Hungarian mills are very busy, and a large purchase of wheat from Servia has been made, further large purchases and grindings are expected, and the mills are likely to run full time till December 31, when the new protective tariff between Servia and Hungary comes into force, and the Servian wheat—hard, small, red corn, rich in gluten—is rendered too dear for the Hungarian miller. We anticipate that in the first three months of 1906 the Hungarian mills will have a big export surplus of their fine flour, always much appreciated by British confectioners and West-End bakers.

The American wheat crop of 1905 is the subject of a very "conservative" estimate in *Beerbohm's List* for October 13, wherein appear figures which may be thus summarised:—

Total wheat crop, 650,000,000 bushels.
Total wheat area, 47,336,000 acres.
Yield per acre, 14½ bushels (nearly).
American figures:—

Spring wheat	87.3
Winter wheat	82.7

The American figures are percentages of an ideal yield under uniformly favourable conditions.

Prices are little changed in Great Britain from a week ago; in Ireland the large supply of potatoes has told on the demand for wheat and maize. Wheat in Great Britain is lower for Manitoba, Russian, and U.S.A. sorts, of which supplies are increasing, but is firmer for Argentine, Australian, and India, of which a reduced supply is on passage. It is difficult to work therefore on any given wheat market as "dearer" or "cheaper" and market circulars, so writing of markets must mostly be taken to refer to the type of wheat chiefly dealt in by the firm issuing the circular. Maize at Mark Lane is very firm on spot, and oats are a little dearer for the most part. A good retail trade is being done in barley, but prices are low. The market for linseed is better on the week, but linseed cake has been a rather poor trade. The market for seed oils is stronger on the week.

The American visible supply of wheat on 14th inst. was cabled at the following figures:—

	Quarters.
1905	4,443,000
1904	4,223,000
1903	4,399,000

The visible supply of maize is very small, the new crop being in the process of drying, and the old being nearly used up Figures are as follows:—

	Quarters.
1905	590,000
1904	532,000
1903	980,000

The price of maize at New York is 20s. 9d. per qr., against 19s. 6d. a year ago, and 18s. in 1903. The small reserves appear to have been cornered. Total American maize shipments January 1 to October 14 are cabled at 9,500,000 qr.

The sales of British wheat at the statute markets since the beginning of the cereal year have been a good deal larger than usual, and the price has been a good deal lower than usual. Pressure of the new corn on sale has had its customary and bad result. Actual recorded sales and prices have been as follows:—

	Per Qr.
This season, 545,000 quarters, at	26s. 10d.
Last season, 296,000 quarters, at	29s. 11d.

The sales of barley have been rather less than last year, but the finer qualities are apparently being held back, and thus far the average price made has been less than in 1904.

	Per Qr.
This season, 411,000 quarters, at	23s. 11d.
Last season, 444,000 quarters, at	25s. 0d.

The sales of oats have been decidedly less than in the previous campaign.

	Per Qr.
This season, 173,000 quarters, at	16s. 0d.
Last season, 232,000 quarters, at	15s. 11d.

The imports of the United Kingdom last week were:—

Wheat, 215,000 quarters; less than usual.
Flour, 124,000 sacks; a moderate supply.
Barley, 155,000 quarters; a liberal arrival.
Oats, 59,000 quarters; a very short supply.
Maize, 240,000 quarters; over an average arrival.

There were good arrivals of foreign oilseeds.

The supply of wheat on passage has further diminished during the past week, and on the 14th inst. was smaller than it had been for many months.

	Quarters.
Californian	30,000
American	125,000
Russian	400,000
Indian	171,000
Australasian	160,000
Argentine	180,000
Various	30,000
Total	1,096,000
A week ago	1,221,000

The quantity of flour on passage is 252,000 sacks, which is a good deal less than usual.

Of barley expectations are 590,000 qr., of oats 440,000 qr., of maize 905,000 qr., of linseed 169,000 qr., and of rice 24,000 tons.

The shipments from America last week were fair, but in no respect heavy. Totals were:—Wheat 122,000 qr., barley 23,000 qr., oats 140,000 qr., maize 128,000 qr., and flour 126,000 sacks. Argentine shipped 60,000 qr. of wheat, 101,000 qr. of maize, and 37,000 qr. of linseed. Russia shipped with what for a couple of years past has been her usual freedom. She sent off 590,000 qr. of wheat, 386,000 qr. of barley, 326,000 qr. of oats, and 4,000 qr. of maize. Roumania exported 328,000 qr. of wheat and 59,000 qr. of barley. Indian shipments were limited to 12,000 qr. of wheat, those of New Zealand to 4,000 qr. of wheat. Non-shippers included Australia, Chile, Scandinavia, and Persia, but Egypt sent off a moderate quantity of cottonseed and beans.

OIL SEEDS.

MARK LANE, MONDAY.
October, 13.

LINSEED.	per 416 lb. s. s.

GAME AND POULTRY.

Smithfield. Saturday.—Good supplies. Fairly good demand. Prices:—Geese, 5s to 6s; ducks, 2s to 2s 9d; Surrey fowls, 2s 6d to 3s 6d; Essex fowls, 2s 3d to 2s 9d; Lincolnshire fowls, 2s to 2s 6d; Irish fowls, 1s 6d to 2s; Russian fowls, 1s 3d to 1s 8d; black game, 1s 5d; wild ducks, 1s 3d; snipe, 6d to 10d; quails, 9d to 1s 3d; hen hens, 1s 4d to 1s 9d each; pheasants, 4s 6d to 5s 6d; young grouse, 5s to 6s; old, 3s 6d; young partridges, 2s 6d to 2s 9d; old, 1s 4d to 1s 6d per brace.

TO-DAY'S MARKETS.

MARK LANE, MONDAY,
October 16.

[FIRST REPORT.]

There was an excellent sale for English wheat and fully Friday's prices were made. Foreign wheat was 6d. dearer for Indian, Australian, and for fine La Plata. Other sorts were, for the most part, firm, but Manitoba, being in increased supply on passage and for November shipment, was a little cheaper. Maize was 3d. dearer from Friday for all sorts. Barley was a ding-dong, much-bargaining trade in English new crop 448 lb. samples. A top price of about 37s. was quotable, with 33s. not very often in practice exceeded. Common feeding barley was 3d. dearer on the week. Oats advanced 3d. for Russian sorts, American and English tending in the same direction. Beans were genuinely scarce, and their dearness was the legitimate consequence. Peas were firm and steady. Lentils, at 10s. per cental for fine split pulse, were in improved demand, and, with colder weather, deserve attention.

CLOSE OF THE MARKET.

THERE WAS A GOOD ATTENDANCE, AND TRADE WAS FIRM, BUT, FOR FOREIGN STAPLES, HARDLY BRISK.

THE FLOUR TRADE.

MARK LANE, MONDAY, October 16.

A fall of threepence in the Flour Millers' Association prices was welcomed by the average baker, who needs credit and delivery terms. Prices for cash have been low ever since mid-September, no change was called for or made to-day. America called offers to ship fine North-Western Spring Patents on or before November 30 at 26s. cost, freight, and insurance; a price which led to increased business. Spot value is too high for most bakers, but the above quotations mean supply before Christmas. A firm market was reportable for Australian and Hungarian flour. Bran middlings, Pollard white meal, and rice meal were unaltered as a rule, but maize meal and corn meal advanced 2s. 6d. per ton.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	6s. 10d.	Nov. delivery.
,, ,,	6s. 10d.	Dec. ,,
,, ,,	6s. 9d.	Jan. ,,
,, ,,	6s. 8d.	Mar. ,,

MAIZE (per cental).

American	5s. 0d.	Oct. delivery.
,,	5s. 0d.	Nov. ,,
,,	4s. 11d.	Dec. ,,
,,	4s. 8d.	Jan. ,,
,,	4s. 4d.	Mar. ,,

American red winter wheat futures to-day are being dealt in at 6s. 10d. per cental, or 32s. 9d. per 480 lb. There is not much difference as to dates, the above price being for any required month, December to March inclusive. Maize futures are firm and unchanged.

POTATOES.

Borough, Saturday.—Good supplies were received, and experienced a generally steady demand. Best Silts, 60s to 65s; Blacklands, 50s to 55s per ton.

Spitalfields, Saturday. Heavier supplies this morning, and a slow demand prevailed. Puritan, 60s to 65s; Royal Kidney, 60s to 65s; Beauty of Hebron, 60s; British Queen, 60s to 70s; Blackland, 55s to 60s; Up to Date, 60s to 75s; Scottish, British Queen, 60s; Up-to Date, 60s to 65s per ton.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—There is no change in price. Grain.—Indian corn, in small supply, brings 4½d. to 6d. per boll advance. Plate maize is also in sellers' favour at 13s. 10½d. per 280 lb. The higher prices asked for oats checks the demand. Barley, being pressed for sale, is 1½d. to 3d. cheaper. Indian grains are very plentiful and sell on spot at low prices only. Oatmeal 6d. per sack dearer. Mill stuffs quiet, but unchanced in price.—MCKINNON AND MCDONALD (Glasgow).

Flour.—There is no new feature to report. The advanced quotations from America are not, so far, affecting quotations of home millers and leading merchants.—GREENHILL BROTHERS (Belfast).

Offals. The demand for bran continues steady, and prices generally are firmer.—GREENHILL BROTHERS (Belfast).

Flour.—Trade to-day has been quiet but firm, and prices show no change since this day week.—T. S. MEDILL AND SONS, LTD.

Milling Offals.—A steady trade with no alteration in prices. Millers still keep clear.—JOHN BAWCOMB AND CO.

We have liberal supplies of wheat, principally Russian. Prices of last week are maintained. Flour firm. Maize 3d. and 6d. dearer. Barley steady. Oats 3d. per qr. dearer.—COVENTRY AND CO.

FEEDING STUFFS.

London, Monday.—Linseed cake: Demand is rather quiet, with no change to report in prices. Cotton cake: A dull trade, and values the same as last week. Linseed: The demand is very good, and prices are advancing.

English Linseed Cake	ex mill	7 17 6	to 8 0 0

ROBERT AND JOHN HEWETSON.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Wheat cargoes are firmer from Saturday. Maize is 3d. dearer, and both barley and oats tend in the same direction. Cottonseed cargoes have advanced 1s. 3d. per ton.

BUSINESS DONE.

WHEAT.—Rosario, 30s 9d. per 480lb., prompt shipment; Red Walla, 31s 6d per 500lb., prompt shipment; Blue Stem, 33s 3d per 500lb., prompt shipment; Roumanian 31s per 492lb., prompt shipment; No. 1 Manitoba, 32s 9d per 480lb., prompt shipment; No. 2 Manitoba, 31s 6d per 480lb., prompt shipment; White Kurrachee, 6s 5d per 100lb., on passage; White Calcutta, 32s per 492lb., October shipment.

MAIZE.—Argentine, 23s 3d per 480lb., October shipment; American, 23s 6d per 480lb., October shipment; American, 21s 9d per 480lb., November shipment; American, 20s 9d per 480lb., January shipment.

BARLEY.—Azoff, 12s 6d per 400lb., on passage.

OATS.—Black Irish, 16s per 304lb., prompt shipment; No. 2 White Clipped American, 16s 3d per 304lb., November shipment.

LINSEED.—Calcutta, 37s 6d per 410lb., arrived; Argentine, 37s per 416lb., November shipment.

RAPESEED.—Ferozepore, 37s per 416lb., November shipment.

COTTONSEED.—Egyptian, £5 13s 9d per 2,240lb., October shipment; Egyptian, £5 11s 3d per 2,240lb., November shipment; Bombay, £4 14s 9d per 2,240lb., December shipment.

WOOL

Canterbury, Saturday. — Depression continues, and recent prices can only be made for finest quality. Kent fleeces, 12½d; lamb wool, 8d; halfbreds, 12½d; Downs, up to 13½d; locks, 4d to 5d.

London, Saturday.—English—per pkge of 240lb.—Fleeces, South Down hoggs, £14 to £14 10s; half-bred hoggs, £13 to £14; half-bred wethers, £12 10s to £13; Kent fleeces, £13 to £13 5s; South Downs ewes and wethers, £13 10s to £14 10s; Leicester ditto, £12 10s to £13 10s; Colonial—per lb.—Vic., fleece super., 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d; N.S.W., secondary average, 1s 8½d to 1s 9d; greasy average, 11½d to 1s; S. Aus., greasy average, 9d to 9½d; N.Z., scoured average, 1s 2½d to 1s 10d; greasy average, 10½d to 11½d; Cape, scoured super., 1s 10d to 1s 11d; fleece average, 10d to 10½d; greasy average, 7½d to 8½d; Natal, scoured, 1s 5d to 1s 6d; greasy average, 8½d to 9½d; crossbreds—grs.—Vic., good to super., 1s 2d to 1s 3½; New Zealand, fine, 1s 2d to 1s 3½d; ditto medium, 1s 0½d to 1s 1½d; ditto coarse, 11d to 1s.

SEEDS

London, Monday.—The demand for seed wheat still continues; prices higher. New spring tares open high, but no business. More inquiry for blue peas. The new clover seeds are coming on the market, but no disposition shown to appropriate them. Prices asked are high.—JOHN PICARD AND CO.

CATTLE.

Metropolitan Market, Islington.

	Monday, Oct. 16, 1905. British.	Total.	Monday, Oct. 15, 1904.
Beasts	1,939	1,939	1,569
Sheep and Lambs	7,350	7,350	6,810
Calves	10	10	5
Milch Cows	50	50	50

Quotations per 8 lb. (sinking the offal):—

ENGLISH

	Inferior.	Second.	First.
Beasts	2s 10d	3s 6d	4s 6d
Sheep	3s 10d	4s 8d	5s 10d

Milch cows, per head, £16 to £22.

British arrivals include as follows: Scotland, nil; Eastern Counties, 54; Devon, 25; Ireland, 28.

We note to-day a decrease of 10 in the number of beasts offered for sale to-day compared with Monday last, the majority of the supply being drawn from the Midland Counties and Ireland. Trade for all classes of cattle was extremely slow, sellers finding difficulty in maintaining late currencies. The Irish arrivals consisted only of 4 Dublins and 24 Waterfords for which there was little enquiry, no decline in value can, however, be noted. Fat butchering cows and bulls shared in the general depression, there being too many middling quality cattle on offer. A clearance is not expected in this part of the market.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.		Monday, Oct. 15, 1904.
Devons	4s 4d to 4s 6d	...	4s 6d to 4s 8d
Herefords	4s 4d to 4s 6d	...	4s 4d to 4s 6d
Runts	4s 0d to 4s 4d	...	4s 0d to 4s 4d
Lincolns	3s 8d to 3s 10d	...	4s 0d to 4s 2d
Irish	3s 10d to 4s 2d	...	4s 0d to 4s 3d
Fat Cows	3s 4d to 3s 6d	...	3s 4d ex 3s 6d

There was an increase of 1,300 in the number of sheep penned compared with Monday last. Trade for both wethers and ewes was of an extremely slow nature, a decline of 2d. per 8 lb., having to be accepted for the former, and from 4d. to 6d. for the latter. Both Scotch and Irish descriptions shared in the generally bad trade experienced, the latter being in very full supply. A further decline is expected to be made before the close of the market.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.		Monday, Oct. 15, 1904.
8 st Scotch	5s 8d to 5s 10d	...	5s 8d to 5s 10d
7½ to 8 st Downs	5s 8d to 5s 10d	...	5s 10d to 6s 0d
9 st Downs	5s 6d to 5s 8d	...	5s 8d to 5s 10d
10 st Half-breds	5s 2d to 5s 4d	...	5s 4d to 5s 6d
10 st Irish	5s 0d to 5s 2d	...	5s 0d to 5s 2d
10 st Down Ewes	3s 10d to 4s 0d	...	4s 4d to 4s 6d
11 st Half-bred ditto	3s 8d to 3s 10d	...	4s 2d to 4s 4d

Calf trade not worth noting.

No pigs on the market.

London (Central), Monday. — Supplies moderate; firm trade. Beef: Scotch, 3s 10d to 4s 6d; English, 3s 6d to 3s 7d; American, 3s to 3s 6d. Mutton: Scotch tegs and wethers, 4s 4d to 5s; ewes, 3s 6d to 3s 8d; English wethers, 4s to 4s 8d; ewes, 3s to 3s 4d. Lamb: New Zealand, 2s 10d to 3s 4d; Dutch, 4s to 4s 2d. Veal, 3s to 4s 6d; pork, 3s 8d to 4s 6d per 8lbs.

St. Ives (Hunts), Monday.—Beasts, 766; sheep, 953; pigs, 379. Beef, 7s to 7s 6d; mutton, 8s 2d to 10s 6d; pork, 6s 6d to 7s 6d. Fat and store cattle fair demand; fat sheep good demand; stores fair; fat and store pigs good demand; milch cows fair show, and trade prices £14 to £23.

FOREIGN.

Deptford, Monday.—Beasts, 927. To-day's supply of beasts, compared with Monday last, showed an increase of 252 head, and consisted of 790 from the United States and 137 from Canada. Trade was of a decidedly firmer nature. Best States beasts on offer were quoted at from 3s 10d to 4s; seconds, 3s 8d to 3s 10d; Canadians, 2s 6d to 3s 8d; seconds, 3s 4d to 3s 6d per 8lbs. (sinking the offal). Ewes numbered 456, and were quoted at from 4s 2d to 4s 4d per 8lbs. On Saturday 2,178 beasts from the United States were offered for sale, and were quoted at from 3s 11d ex 4s.; seconds, 3s 8d. Besides the above 340 more were withheld.

Liverpool, Monday.—Larger supply of stock, demand slow for cattle, and prices, excepting good qualities, lower. Sheep trade slow for all classes, handy weights least affected in price; about 2s lower was accepted to effect sales for strong sorts and clearance was not made even with this concession. Beef, 6d to 4d; mutton, 8½d to 6d per lb. At market, 1,390 cattle and 6,470 sheep.

MANURES.

Liverpool, Friday.—The nitrate of soda market is very strong in all positions at a further advance of 5s per ton, and spot values are £10 15s to £11 5s for ordinary to refined, according to quantity. Kainit and basic slag are in fair request for autumn deliveries at unchanged values. The trade in feeding stuffs is slow, and values of oil cakes remain without change. Feeding treacle, however, is attracting more attention, and prime American meets a demand from consumers at 4s 1½d to 4s 4½d per cwt. Fattening cake, prime Liverpool make, in bags, £6 7s 6d; feeding or dairy cake, prime Liverpool make, in bags, £6; nitrate of soda, best quality, i.e., guaranteed 95 per cent., pure, in bags, £10 15s to £11; East India bone meal, in bags, £5 5s to £5 7s 6d; kainit, prime 23 per cent., sulphate of potash, in bags, £2 1s 3d to £2 2s 6d; palm nut cake, prime, in bags, £5 17s 6d to £6; linseed cake, American thin oblong, prime, in bags, £7 7s 6d to £7 10d; ditto English, prime, in bulk, £8 7s 6d to £8 12s 6d; linseed meal (pure rolled linseed), prime, in bags, £13 10s to £14 10s; cottonseed cake, N.A. decorticated, good to prime, in bags, £6 17s 6d to £7 2s 6d; ditto English decorticated, prime, soft, in bags, £7 2s 6d to £7 7s 6d; ditto English undecorticated, prime, in bulk, £4 10s to £4 17s 6d; ditto (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags, £6 17s 6d to £7; maize germ meal, prime, in bulk, £5 15s to £5 17s 6d; corn oil cake, prime, in bags, £5 18s 9d to £6 1s 3d per ton; Indian meal, coarse to fine grinding, prime, in bulk, 12s 6d to 12s 9d per 240lb; linseed, fine bold feeding, in bags, £2 6s to £2 8s per quarter (416lb); cod liver oil, cattle feeding, prime, in casks, 4s 6d to 4s 9d per gallon; treacle, feeding prime, in barrels, 4s 1½d to 4s 4½d per cwt. D.N.S. brand superphosphate of lime, guaranteed 25 to 27 sol., in bags; ditto, guaranteed 30 to 31 sol., in bags; superphosphate of lime, guaranteed 35 to 39 sol., in bags—nominal; basic slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, £1 11s 6d to £1 13s 6d; ditto, prime quality, guaranteed 38 to 45 per cent. phos., in bags, £1 19s to £2 0s 6d; finest quality, guaranteed 42 to 50 per cent. phos., £2 2s to £2 3s—per ton, at depots inland.—H. JONES LANGAR AND CO.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

The number of beasts offered for sale on the chief market day of the week, namely, Monday, at Islington, was slightly smaller, the majority of the supply being drawn from the Midland counties, Scotland not even being represented. There was a small consignment from Ireland consisting of 39 Dublins, 18 Waterfords, and 10 heifers from Cork. Trade for all grades of cattle was of an extremely slow nature, this being attributed to the over-stocked state of the Dead Meat Market; salesmen, however, notwithstanding this, both asked and obtained late currencies. On Thursday there was no demand for fat beasts. On both market days there was a scarcity of country buyers, consequently fat butchering cows and bulls met with a decline of from 1d. to 2d. per 8 lb. in value.

At the Foreign Market, Deptford, throughout the week trade was of a slow nature, the tendency as the week advanced being a downward one. The total number on offer at both markets was 5,470, as against 4,739 during the previous week, consisting of 1,070 British (decrease 110) and 4,420 foreign (increase 861). The following were the top rates obtained per 8 lb. (sinking the offal): 80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 8d. to 3s. 10d.; 95 stone Irish, 3s. 10d. to 4s.; 90 stone States, 3s. 10d. to 4s. ex 4s. 1d.; 90 stone fat cows, 3s. 4d. to 3s. 6d.

The sheep trade at Islington on Monday opened for wethers briskly at an advance of 2d. per 8 lb. in value; ewes also sold well at an advance, Scotch cleared early at higher rates, whilst, on the other hand, Irish were in excess of the demand, salesmen having to accept 2d. less money to effect sales; the finish of the market was a somewhat disappointing one, trade becoming slower at less money. At Deptford no sheep were offered for sale. Thursday's trade for English sheep was of a slow nature at a decline of 2d. per 8 lb., ewes falling still further. The total number penned was 6,450, as against 8,447 during the previous week, consisting entirely of British sheep. Best pens made per 8 lb. as follows (sinking the offal): 7½ to 8 stone Downs, 5s. 10d. to 6s.; 8 stone Scotch, 5s. 10d. to 6s.; 9 stone Downs, 5s. 8d. to 5s. 10d.; 10 stone Half-breds, 5s. 6d. to 5s. 8d.; 10 stone Down ewes, 4s. 4d. to 4s. 6d.

Calves numbered 20; trade was nominal, best small breeds being quoted at from 5s. 4d. to 5s. 6d. per 8 lb.

Pigs numbered 50, and were quoted at from 4s. 6d. to 4s. 8d.; heavy weights, 4s.; trade slow but all cleared.

Trade in the West.

With much colder weather settling in upon us, there has been a marked absence of speculation as regards store things in general, but as to barreners more particularly, but very few just at present showing any disposition to buy anything except of a really useful stamp, and for these a fairly good price is being paid, though not by several pounds ahead what will be the case a month or six weeks hence, when graziers will be getting in their supplies of beasts for the winter. From £20 to £25 per pair is about the general run just now for the best, and it will require an exceptionally good beast to exceed this figure. Plainer descriptions, of which there is no end offering, are still much neglected at prices against the seller. Milch beasts, on the other hand, are still going very strong, the best quite holding their own, but are not appreciably higher. Plain heifers and cows are making less money, but the decline, so far, is nothing serious, as milk is still wanted. Owners of town milk walks, however, prefer paying a good price for really serviceable animals to having a larger number of indifferent ones whose milking qualities are not to be relied upon. From £17 to £22 is about the range now for anything at all fitted to be drafted into the dairy. The sheep sales are fast drawing to a close, and, except in the case of flocks disposed of through tenants changing, there is nothing very special being offered at any of the fairs now taking place, the supplies consisting largely of animals being weeded out mostly for some defect or other, though occasionally a few good, reliable ewes as well as lambs are to be met with, and for these a fairly good (in fact, slightly better) price is being made, quite up to what they have been selling of late, it being only the indifferent lots that hang on hand. Should the season not prove severe as regards the weather, and roots come up to the promise they now give, the flock-master's prospect is by no means gloomy; but this will depend greatly on the weather, as on many farms there is by no means a superabundance of hay, as in some seasons.

In fat stock the beast trade is characterised by considerable dulness in the face of moderate deliveries of choice bullocks, except for the lighter weights of Devons, which are making 4s. 6d. to 4s. 10d. per stone; but other qualities—anything at all secondary—are a dragging trade at 3s. 4d. to 4s. Mutton keeps firm for all the neater weights at from 5s. 6d. to 6s. for picked quality wethers; mutton lambs selling from 5s. 8d. to 6s. 4d. for the best, and from 5s. 4d. to 5s. 6d. for seconds; ewes are a poor trade at 4s. to 4s. 6d. The calf trade has recovered all its old buoyancy, this being rendered all the more so by the existing scarcity of really prime vealers, which are once more touching 9d. per lb., ranging down to 8d. for those of not quite such good finish. Porkers are meeting a very quick demand up to 10s. 6d. per score; baconers, 9s. to 8s.; and coarse heavy pigs from 7s. to 8s., with a restricted demand.

Trade in Scotland.

The number of fat cattle on offer this week was very similar to that of last week. There is still a marked absence of well-finished home bullocks. The best class met a good demand at satisfactory prices, but secondary cattle are difficult to sell, and the prices exceedingly disappointing. Fat sheep were shown in fair numbers, and the quality greatly improved. Trade was steady, and last week's prices easily maintained. Ewes also just the turn dearer. There was a good show of both calves and pigs, and they maintained previous prices. A fair supply of store sheep, many of a very poor description. Anything in condition met a good market at full prices, but a portion of the inferior sheep were left unsold. A very large supply of store cattle, the best show of the season. There was a fair inquiry, and all the better-class cattle got sold out at as nearly as possible previous prices, but a considerable number of the rougher descriptions were left over. There was a large show of milch cows, and they met a very dull trade. Quotations:—Top price of best cattle per live cwt., 38s. 6d.; current from 35s. to 36s. 6d.; Irish, 29s. to 34s.; Mutton, 7d. to 9d. per lb.—JOHN SWAN AND SONS, LIMITED.

Trade in Ireland.

There was an all-round decrease in the supplies of both cattle and sheep, and a better attendance of buyers at last Thursday's Dublin Market, but though there was a decided improvement in the tone of trade, yet it could not be said that rates were quotably higher. Cattle, as a rule, were of a very ordinary class, and those of superior finish scarce, with the result that there was an active demand for the best bullocks, but heifers did not move off as readily. For other classes of cattle, while business was perhaps less depressed, yet it was far from satisfactory. Fat cows and the rougher descriptions of beef remain at low and uncertain prices. Dead-weight prices were: Prime ox and heifer beef from 50s. to 52s. 6d., and for extra-finished lots up to 54s. and 56s. per cwt.; good second class beef 46s. to 48s., and inferior from 44s. to 45s. per cwt. There were 3,413 beasts offered for sale, a decrease on the week of 436 head.

In the sheep department, in spite of trade as a rule being better in the English markets for mutton, the same improvement was not manifest in Dublin, though it must be said trade was of a healthier and firmer stamp, especially for home trade qualities. Shipping hoggets were also in good demand, but prices were not in accordance with the rise in the principal cross-Channel markets. The inquiry for lambs was unusually brisk for so late in the season, the younger lambs in good condition being particularly sought for. Prime wether mutton made from 7d. to 7½d. per lb.; prime ewe, 6d. to 6½d.; and inferior sheep from 5d. per lb. upwards. Large, heavy hoggets from 44s. to 56s. each; small to medium ditto from 32s. to 42s. Lambs fetched from 24s. for small, up to 40s. for large fat. There was a good demand for choice veal, but no quotable change in price, which was from 7½d. to 8½d. for choice, and from 5d. to 6d. per lb. for inferior calves. Taking into consideration the present unsatisfactory state of the beef market, it must be said that store cattle are now selling at fairly dear rates, but this has been the case for several years past—a matter which many people find hard to understand. The various auction sales taking place in and around Dublin are satisfactorily patronised, and sellers seem well satisfied with results. Milch cows were well represented in Thursday's Dublin Market, so far as quantity went, but quality was deficient. For really choice fresh-calved cows and springers sold at from £18 to £22, and other descriptions of cows from £8 upwards. There was a good supply of pigs, and a fair attendance of buyers. Trade was active, and all pigs on offer met with an early clearance. Values were on the up grade for choice pigs, but there was no quotable change in the rougher sorts. Prime light-weight hogs were worth from 53s. to 55s. per cwt.; coarse and inferior from 36s. per cwt. upwards.

LONDON.

Islington, Thursday.—Beast supply consisted chiefly of fat butchering cows and bulls and a few prime quality cattle; latter, however, met no inquiry, consequently neither trade nor quotations can be recorded. For fat cows and bulls trade also ruled dull, with downward tendency in value. Top prices: Fat cows, 3s 2d to 3s 4d; fat bulls, 2s 10d to 3s 2d. Decrease of 150 in number penned in sheep market, compared with last Thursday's supply, consisting entirely of Downs and half-breds, no Scotch or Irish being shown. Trade for both wethers and ewes was very sluggish, at decline in most cases of fully 2d per 8lb. in value. Best pens made per 8lb. as follows: 8 stone Downs, 5s 10d; 9 stone ditto, 5s 8d; 10 stone ditto, 5s 6d; 10 stone half-breds, 5s 4d to 5s 6d; 10 stone Down ewes, 4s to 4s 2d. Calf trade not worth noting. Pig trade slow, but small breeds quoted 4s 8d per 8lb. Quotations per 8lb., sinking the offal: Beasts, 2s 10d to 3s 4d; sheep, 3s 10d to 5s 10d; calves, 5s 6d; pigs, 3s 8d to 4s 8d. Total supply: Beasts, 30; sheep, 400; calves, 10; pigs, 50; milch cows, 5.

London (Central), Friday.—Good supplies, trade very bad, and prices will probably finish lower. English beef, 3s 4d to 3s 6d; Scotch sides, 3s 10d to 4s; shorts, 4s to 4s 6d; Deptford and Liverpool killed, 2s 10d to 3s 4d; refrigerated hindquarters, best, 3s 4d to 3s 8d; ditto seconds, 2s 8d to 3s 2d; ditto forequarters, 2s to 2s 2d; inferior beef, 2s 4d to 2s 8d; mutton, Scotch wethers, 4s to 5s; ditto ewes, 3s 4d to 3s 6d; English wethers, 4s 2d to 4s 8d; ditto ewes, 3s 4d to 3s 6d; foreign sheep, 3s 6d to 4s 4d; English lamb, 4s 8d to 5s; veal, 3s 4d to 4s 8d; English pork, 3s 8d to 4s 6d; Dutch ditto, 3s 8d to 4s 4d per 8lb.

COUNTRY.

Ashford, Tuesday.—Beef and mutton both sold slowly at late rates, beef going up to 4s 6d and Down mutton to 5s 10d per stone. Kent wethers made up to 6s 4d. Veal fell 2d, selling at 5s to 5s 4d. Pork also fell 2d, and roasters did not exceed 4s 2d. Kent rams sold well.

Basingstoke, Wednesday.—At Raynbird and Sons' sale yard there was a fair attendance of buyers to meet a supply of 26 fat beasts, 51 calves, 384 fat sheep and lambs, 292 pigs, and 110 head of dairy and store cattle, for which the following prices were realised:—Fat Shorthorns made up to £21; choice young ditto heifers up to £16 15s; and a consignment of 8 good two-year old Devons up to £21; Galloway heifers, the pair, £25 10s; fat calves, 65s to £6; small, 15s to 50s. Fat hogs, 60s to 73s; small porkers, 26s to 38s; larger, 45s to 56s; store pigs 10s to 22s. Dairy cows, £9 5s to £22. Best Down wethers and young ewes, 50s to 56s 6d; smaller ditto, 44s to 48s; old ewes, 34s to 40s; nine-months-old Down wethers and ewes, 48s to 53s 6d; small, 38s to 46s; small Southdown lambs, 26s 6d to 31s; Down rams, 52s to 60s; ditto ram lambs, 46s to 52s; three-months-old sucking lambs, 30s to 35s. Prime quality fat beasts met a good inquiry, and were cleared at fully late rates. Rough and half-fed beasts a slow trade, and prices low. Down sheep of moderate weights and of choice quality were cleared at late rates. Heavy coarse sheep were a dull trade, and prices lower to make sales. Dairy cattle of good class found a ready sale. Store cattle were more in demand, and for strong heifers a better sale. Fat calves sold readily at late rates. Fat hogs and porkers met a brisk demand at late quotations. Store pigs are scarce and dear. Ruling values:—Best fat beasts, 6½d to 7d; second ditto, 6d to 6½d; bulls, cows, and inferior beasts, 5d to 5½d per lb. Best fat sheep, 8½d to 9d; second ditto, 7½d to 8d; old ewes, rams, and inferior, 6d to 6½d. Fat calves, 6d to 8½d per lb. Fat porkers, 9s 6d to 11s per score. Hogs up to 10s per score.

Berwick, Saturday.—363 beasts—155 more than the previous week—including some fine stock. Attendance of farmers and buyers small, and trade slow. Calves, £5 to £6; stirks, £8 to £11 10s; two-year-olds, £12 10s to £14 10s; three-year-olds, £13 to £15 10s; black Polled bullocks, £12 10s to £15.

Birmingham, Thursday.—Small supply of beasts, sheep, and pigs. Trade fair for pigs, but slow for beasts and sheep. Prices: Beef, 5½d to 6½d per lb; mutton, 6½d to 8½d per lb; lamb, 8d to 8½d per lb; bacon pigs, 10s per score; cutting pigs, 10s to 10s 3d per score; porkets, 11s to 11s 3d per score; sows, 8s 4d per score.

Bristol, Thursday.—A firm tone, prices being rather in sellers' favour. There was a moderate supply of cattle, and though trade was comparatively quiet, current values were well maintained. Sheep were not in such large numbers as recently, and with a fair demand most qualities advanced ½d per lb. Pigs, as usual, were not numerous, and baconers declined 3d per score.

Carlisle, Saturday.—The supply on the Sands consisted of about 400 Irish heifers. The demand was not very brisk, and prices remained similar to last week, viz., £7 10s to £10 for small wintering heifers, and £12 10s to £14 10s for beasts for stall feeding.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s. d.
6sc. 10 lb. to 9 sc. 10 lb.	2½ in. and under ...	8 9
Under 10 sc.	Not exceeding 2½ in.	8 9
Under 11 sc. 10 lb.	2¾ in.	8 3
Under 12 sc.	3 in.	7 9

C. AND T. HARRIS AND CO., LTD.

Canterbury, Saturday.—Ram tegs from 6 to 8 guineas per head. Ewe tegs 46s to 66s for registered animals. Useful working lambs, 25s to 29s; stronger animals, 30s and upwards. Old sheep, 24s to 44s per head.

Chester, Thursday.—Supplies were smaller, and buyers less numerous. A good class of stock was shown, but sellers were disappointed at the slow trade. Nothing like a clearance was made, though prices were lower. Sheep showed a great reduction in numbers, and here trade was much the same as with cattle. Quotations: Milch cows, £16 to £21; calves, £16 to £18; barrens, £10 to £12; heifers, £9 to £14; stirks, £5 to £9; and bullocks, £11 to £15.

Chichester, Wednesday.—Messrs. Stride and Son held their special sale of about 3,500 sheep and lambs and 300 head of fat, store, and dairy cattle. Sheep met a somewhat slower trade than at the last sale, and although the prices were not quotably lower a clearance

was effected. Fat cattle experienced a slow trade at about late rates, except for the best quality, which were in rather better demand. Dairy stock sold readily at fully late prices. Store cattle met the best trade of the season, and, with the exception of one or two small lots, all were sold. Quotations: Devon steers, 4s 4d to 4s 8d; prime Southdown sheep, 6s 4d to 6s 8d; prime West Country, 5s 8d to 6s; fat ewes, 4s 4d to 4s 8d; veal, 4s 6d to 5s; porkers, 4s 2d to 4s 4d. Stock at the market: Cattle, 810; sheep, 6,239; pigs, 787; calves, 252; horses, 95; total stock, 8,163. Tolls, £47 7s. 9d.

Colchester. Saturday.—Grass beef 4s 4d to 4s 6d per stone; mutton 5s 8d to 6s; and pork 8s 6d to 9s per score. Trade was good in pork and mutton.

Doncaster. Saturday.—Better supply of cattle than last week, but no improvement in trade or prices. Milch beasts, £15 to £22; bullocks, £11 to £15; heifers and drapes, £10 to £14; stirks, £7 to £10; young stores, £4 to £6. Good supply of sheep, but less than usual; trade dull; ewes, 38s to 46s; lambs, 32s to 40s each.

Dorchester. Saturday.—Heavy supplies came to hand at to-day's market, both at Messrs. Duke and Sons's as well as at Messrs. Symonds and Sampson's sales. Milch sold up to their outside values, the best making £16 10s to £20, and others £10 to £15 10s. Barreners still quiet trade, except for good fresh bullocks, which made up to £29 per pair in each case, though a more average figure was £20 to £26; seconds a very dragging trade from £16 to £19 10s. Fat beasts, for really prime heifers, made a trifle more money, or from £16 to £21 (10s 6d to 11s 3d per score); fat cows, £11 to £14 (or 9s to 10s); bulls, £9 to £14 (or 8s to 8s 6d); store bulls, £8 to £13. Very little doing in mutton, which is making late rates, though trade is by no means fast at 7½d to 8d for best wethers, and mutton 6½d to 7d.

Dublin. Thursday.—Numbers in market: Beasts, 3,413; decrease, 436. Sheep, 7,056; decrease, 497. Calves, 39; decrease, 10. A better demand, and rather firmer prices for choicely finished cattle; other sorts, of which the greater number on offer were composed, sold more freely, but quotations show no improvement. Some choice Angus bullocks, fed by Mr. Hone, St. Doulough's Park, were acquired by a Belfast buyer, at about top quotation. Sheep of all classes easier sold, and a better clearance effected at last week's prices. Cattle, live weight (best), 28s to 30s per cwt.; exceptional for Angus crosses, 31s per cwt.; middling and interior sorts, 25s to 27s 6d per cwt. Mutton, dead weight, 5½d to 7½d per lb. Ganly, Sons and Co.

Edinburgh. Wednesday.—Polled bullocks, £11 to £16; horned, £11 10s to £12 15s; stirks, £8 10s to £12 10s. Cows met a quiet trade; shorthorns, £25 5s. Sheep sold fairly well; Cheviots Dinmonts, to 33s; half-bred lambs, to 34s; Cheviot ewes, to 24s 6d.

Exeter. Friday.—330 beasts; very dull trade. Only best quality steers and maiden heifers fetched 11s per score; cows, 9s 6d to 10s per score. 1,358 sheep; indifferent trade, with a tendency for lower prices; choice hoggs and big lambs, 8d; ewes, 6d; very small choice lambs, 9d to 9½d. 104 calves, 7½d.

Glasgow. Wednesday.—Top Scotch cattle, 64s; current, 60s; top Irish 58s per cwt.; top hoggs, 9½d; secondary, 8½d to 9d; top wedders, 8d to 8½d; secondary, 7d to 7½d; lambs, 6d to 9d per lb. Deal meat quiet; Scotch beef, 6d; States, 5½d; Canadians, 5½d per lb.

Gloucester. Saturday.—Messrs. Bruton, Knowles and Co. report their sales as follows:—106 cows and calves, with quiet trade. A large supply of store cattle, best qualities making fair prices.

Hereford. Wednesday. — The trade in beef was hardly ever known to be so bad, the very best maiden heifer and bullock beef making only 6d per lb; cow beef made from 4½d to 5d per lb. The supply was considerably larger than the demand. Calves were a fair supply, with trade brisk, veal making 7d. Good mutton was a small supply; best wethers made 8d and 8½d, and ewes 6d. There was a good call for store ewes. Fat lambs went well at 8½d. Porks made up to 6d, and bacons realised 9s a score; supply and demand were good and well balanced. The store cattle was exceedingly dull, and considering the nearness to the October fair phenomenally so.

Ipswich. Tuesday.—Messrs Robert Bond and Sons report a short supply of fat cattle and a sharp trade for all stall-fed animals, up to 9s 3d per stone. A large entry of grazing cattle, including several choice lots of Cumberland and Westmorland Shorthorns in nice condition. Trade was slow, but there was a slight improvement in the demand as compared with last week. Two-year-olds, £13 2s 6d to £11 17s 6d; eighteen months, £10 to £8 7s 6d; sixteen to twelve months, £8 10s to £5 15s. Several cows and heifers were on offer. The demand was slack, and prices ruled low, except for a few of the best animals. Fat sheep were scarce, and better prices were obtained, the best hoggets making from 57s 6d to 56s. Grazing sheep in fair demand, especially for those forward in condition. Fat swine sold freely, values being well maintained. Stores dear, from 32s to 24s; smaller, 21s to 12s. Numbers at sales and market: 787 cattle, 1,228 sheep, and 1,065 swine.

Leicester. Saturday.—Full consignments of home-bred stock. Choice qualities sold freely, but secondary descriptions were neglected. Choice milch cows, £20; good lots, £16 to £18; inferior, £14 to £15; bullocks, £10 to £15; young stock, £5 to £8; calves, 15s to 25s. Sheep were in moderate supply, and sold freely at very high rates.

Lincoln. Friday.—There was a good show of horned stock, and a fair demand, prices ranging from £10 to £12. The sheep pens were moderately filled, and trade was fair. Drape ewes, 32s to 38s; lambs, 28s to 42s; gimmers, 50s to 60s each.

Lynn. Tuesday.—Larger show of store cattle, slow trade at £6 to £18 each. Fat beasts average supply, making 7s to 7s 9d per stone. Sheep a rather smaller show, and trade firm, stores making 40s to 50s each, and fat sheep 9s to 9s 6d per stone. Store lambs, 30s to 40s each.

Manchester. Friday.—Beef: Firsts, 5d; seconds, 4d to 4½d; thirds, 3d to 3½d; mutton, Cheviots, Scotch, 7½d; others, 7d; seconds, 6d to 6½d; thirds, 5d to 5½d; veal, firsts, 6½d; seconds, 5½d to 6d; thirds, 4½d to 5d; bacon pigs, firsts, 5½d; seconds, 4½d to 5d; thirds, 3½d to 4d; porket pigs, firsts, 7½d; seconds, 6½d to 7d; thirds, 6½d to 6¾d.

Norwich. Saturday.—Fair supply of fat beasts, trade ruling at same prices as previous week, 7s to 7s 6d per 14lb being paid, although in some instances 8s was given for choice beef; values for store cattle, which met with a dragging trade, were unchanged, at £6 to £18 per head. Trade quiet for store sheep and lambs, which were in average supply. Breeding ewes were quoted at 45s to 60s, and Lambs 28s to 36s per head. Fat sheep met with a firm demand at 9s 6d to 10s 6d per stone. Less fat pigs offered, prices ranging from 6s 9d to 7s 3d per stone.

Nottingham. Saturday.—A larger supply of stock than of late, with a slower trade. Some fine in-calf cows were shown, and fetched from £19 to £24; in-calf heifers £14 to £17, two-and-a-half-year-old steers up to £13 10s, and yearling steers and heifers about £6. Calves of the first quality made up to 63s each.

Preston. Wednesday.—There was only a moderate display of cattle, and as buyers were also scarce, a dragging trade passed. The show of sheep and calves was most satisfactory, but they also were in poor demand. Cows and bulls made 4½d to 6d; heifers and bullocks, 6d to 6d; hoggs, 8½d to 8¾d; ewes, 6d to 7d; tups, 5½d to 6d; and calves, 6d to 7d. At market: 210 cattle, 2,170 sheep, and 160 calves.

Retford. Saturday.—Milch cows of excellent quality changed hands at remunerative prices, being worth £16 to £20, but the show was small and business limited; two-year-old heifers and steers, £10 to £12; yearlings, £6 to £8; and calves, about 40s per head.

Romford. Wednesday. Average supply of fat beasts, trade unchanged; best, 4s 2d to 4s 4d; middlings, 3s 10d to 4s per stone. Calves in average supply at 5s 2d to 5s 4d per stone. Sheep scarce, trade dear; best, 6s to 6s 2d; middlings, 5s to 5s 6d; ewes, 4s to 4s 2d per stone. No store beasts offered. Pig trade rather better; small supply.

Shrewsbury. Tuesday.—Good supply, and also a good attendance of buyers. Quotations:—Beef, 5¾d to 6½d per lb.; mutton, 7½d to 9d per lb.; veal, 6½d to 8d per lb.; porket pigs, 9s 9d to 10s 6d per score; bacon pigs, 9s to 10s per score. Cows and calves up to £22. Numbers offered as follows:—747 cattle, sheep and lambs 1,979, calves 93, pigs 449, and horses 23.

Thame. Tuesday. — There was a capital attendance, several fresh buyers being present. Best beef was in good demand, and realised fully 2d per stone more money than last week. Secondary quality was a dragging trade. Sheep continue to sell well, a clearance being effected. An improved trade for veal. Pork dear. Bacon hogs at late rates. Several large buyers being absent, weaning calves (except the very best) were difficult to dispose of. Messrs. Bond and Burrows' sale comprised 84 fat beasts, 167 fat sheep, 145 weaning and fat calves, 85 fat and store pigs. Fat oxen made from £16 to £18; fat heifers, £15 to £19 15s; fat wethers, 55s to 67s; fat ewes, 40s to 48s 6d; fat lambs, 32s to 44s 6d; fat calves, £3 5s to £4 10s; weaning bull calves, 10s to 46s; cow calves, 20s to 70s; bacon hogs, £3 15s to £6; porkers, 26s to 45s.

Truro. Wednesday.—Business fairly brisk, attendance very good. Number in cattle market: Bullocks, 243; calves, 61; sheep, 650; pigs, 256. Fat bullocks, 54s to 58s per cwt.; barreners, 40s to 45s per cwt; store bullocks, 40s to 45s; cows and calves, £10 to £16 each; rearing calves, 16s to 35s; ewes, 40s to 42s; wethers, 7½d per lb; ewes, 5½d; lambs, 7½d; pigs, 10s to 53s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured, 6d to 7½d; cured, 7d to 9d; pork, carcasses, 4½d to 5½d.

Wolverhampton. Wednesday.—Beast trade slow; supply fair. Sheep fair demand. Beef, 5d to 6¾d per lb; mutton, 6½d to 8¾d per lb; lamb, 8½d to 8¾d per lb; veal, 6d to 7d per lb.

Worksop. Wednesday.—Very small supply of fat stock, with trade brisk for sheep and mutton, but slow for beef. Best beef, 6s 9d to 7s; secondary, 6s to 6s 9d per stone; best Southdown wethers and cross-breds, 8½d to 9d; ewes, 6d to 7d; lamb, 9d to 9½d per lb.

Yeovil. Friday.—Milking animals continue in good demand. Heifers and calves sold at from £15 to £19 10s; cows with calves from £12 10s to £18 15s; in-calvers from £11 15s to £14 10s; barreners, £9 5s to £11 5s; store steers, £9 to £10 5s; wether sheep, from 47s 6d to 52s 6d; ewes, 44s to 50s; store lambs, to 35s.

York. Thursday.—A large offer of both English and Irish stores, about 3,600 being penned. Prices ruled very low, and generally trade was bad. The chief inquiry was for three-year-olds, full of flesh and quality. A few good three-year-olds made up to £15 10s, and two-year-olds £10 to £11 10s. Most of the English stores were West Country stirks, which moved slowly, cattle being cheaper than they were a year ago. Prices varied from £7 to £10. A better trade for calving and milch cows, which made about 10s more money in the case of good young animals. One or two fetched up to £22 10s., the general run of prices being from £16 10s to £18 10s. About 21,500 sheep were penned, and there was an improved tone for all classes of sheep. Best North country ewes made 50s., secondary sorts 45s to 48s, a few broken-mouthed ewes making up to 38s, and North country lambs, 26s to 32s. Best twice-crossed shearlings were shown very sparingly, and made 46s to 50s; Masham shearlings, 40s to 46s; twice-crossed lambs, 30s to 34s; one or two exceptional lots making 38s; Masham ewes, 38s to 44s; Masham lambs, 21s to 26s; Cheviot ewes, 27s to 32s; and a few Lincolns, Leicesters, and Down sheep made from 35s to 45s. There was a good show of rams, but only a poor trade. Suffolks and Hampshire rams made £3 to £5 each; North country varied from 56s to £8.

FOREIGN

Yorkhill. Monday.—Small supplies of American and Canadian cattle were on offer at the usual weekly sales, only 455 head being penned in the lairages as compared with 1,100 on the corresponding day of last week, and a fair trade was experienced for beasts of useful weights and sizes the 2s. per cwt. dead weight dropped at last week's sales being recovered, but the anticipation of the short supplies caused prices to advance above 56s per cwt., which has been current for top values for some time, was not realised, although a few animals made a shade higher than the quotations. Secondary, middling, and inferior qualities were a little firmer, and prices showed a tendency to improve. Bullocks of good sorts sold up to 56s per cwt. dead weight, and rough and heavy qualities from 52s to 54s per cwt.; dairy and inferior kinds changing hands at from 52s to 54s per cwt. Bulls were easy at from 42s to 46s per cwt.

COLONIAL DAIRY PRODUCE

London. Friday.—Butter: The demand for Canadian butter has this week shown some improvement. Stocks in London are decreasing, and values here are virtually unchanged. Unsalted Canadian of choicest quality goes rapidly into consumption, but inferior or damaged parcels are difficult to dispose of except at a good reduction in prices. The demand for Australian has not been quite so good as last week, but as the Victoria's butter will not arrive in time for the market next week, prices are firm at 110s to 114s. The Copenhagen official quotation remains unchanged. Cheese: Demand is easier than last week; the advance in prices has probably caused the temporary dulness, but prices remain unchanged. Choicest white brings 56s to 57s per cwt., and coloured 57s to 58s, with an occasional shilling more. Cable offers from Canada indicate a weaker position; exporters are offering more freely, and c.i.f. values are 1s lower on the week.—W. Weddel and Co.

FEEDING STUFFS.

London. Thursday. Linseed: The market is firm in the absence of sellers, but the demand is limited. Oil-cake: London Spot, 7/8 7d, and afloat 7/8 9d, September-October 7/8, April-June 7/8. Hull: Rather better inquiry. La Plata spot 7/8 6d, passage 7/8, October-November 7/8 6d, December-January 7/8, and January-February 7/8 6d. Rapeseed continues firm, but without much activity. Brown Cawnpore, October-November 36s 9d, Brown Calcutta 37s, April-June 38s 3d. Feverseed on 37s. Cottonseed has met with a moderate demand. London Prompt new £5 15s, old £5 10s, prompt new £5 14s 9d, October £5 15s 6d, November-January £5 11s 3d, buyers. Linseed oil: There have been fluctuations during the week, but quotations are not much altered since our last report. Spot and month in pipes 31/6 12s 6d, barrels £19 10s 6d, November-December £17, January-April 32/6 10s. Rape oil very steady; brown oil naked in all positions £21; refined £23 5s in casks; Ravison oil £19 15s, naked nearest value on the spot, and also for forward positions. Oil cakes: Linseed cakes firm; London-made £7 15s to £7 17s 6d; cotton cakes quiet; London made £4 17s 6d. The Produce Brokers Company, Ltd.

Hull. Tuesday.—Linseed: Linseed has ruled firm. A few hundred tons, spot and afloat Plate, changed hands at 34s 9d to 35s 3d, but business in forward positions is practically impossible, Plate shippers bidding for prices considerably above values here. Cottonseed: There has been rather more steadiness in the market since our last, and better prices paying for Egyptian, which made £5 7s 6d old crop on spot, and business done at £5 10s October, and November-January, whereas buyers to-day, Bombay has sold to a moderate extent at £4 14s 6d October-November shipment. Oilseed cakes: Linseed cakes in slightly better demand; prices somewhat firmer. Cotton cakes are rather dearer, with slowly improving demand.—Keighley Maxsted and Co.

Mark Lane. Monday. Linseed cakes: Supplies of foreign continue extremely limited but amply sufficient to meet the demand which is of the smallest possible character, considering the time of year; at the same time, values are well maintained in consequence of there being no pressure from shippers or home manufacturers to force sales. Russian sell slowly at last week's quotations. American offer at 2s 6d per ton more money. East India seed prices unchanged. London-made are in poor request, but without alteration. Cotton cakes: With some quantity of Egyptian available, both in warehouse and afloat, the market is with difficulty held up, although quotations are unaltered. English find only a moderate inquiry, but remain unchanged. Decorticated London-made, being relatively good value, go freely into consumption at £5 17s 6d for cake and meal, and £5 5s for special digestive meal, while American "Open Hand" brand sell at £7, and meal at £6 12s 6d. Rape cakes: East India 2s 6d per ton dearer; Ravison none. Maize germ meal: Some white American in forward positions has changed hands at £5 5s c.i.f., and the market leaves off a shade firmer; English is only sparingly offered at £5 11s 3d to £5 12s 6d; maize gluten meal is nominally quoted at £5 15s per ton. Rice meal: Stocks of Rangoon are quite exhausted, while for shipment sellers ask £4 16s 3d ex ship's terms; broken Rangoon rice in bags is attractively offered at £4 15s per ton. Locust beans remain scarce and dear at £5 5s per ton for whole, and £5 10s per ton for kibbled. Nitrate of soda is unchanged at £10 15s per ton ex quay.

Molassine Feeding Meal, packed in bags of 1 cwt' each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

HAY AND STRAW.

Manchester. Friday.—Hay, 4d to 4¾d; clover, 5½d to 6½d; straw, wheat, 3d to 3½d; ditto oat, 3½d to 4d per stone.

Whitechapel. Saturday.—Consignments were on a good scale, but business proceeded quietly, at recent range of prices. Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 75s; good ditto, 63s to 72s; inferior ditto, 45s to 60s; mixture and sainfoin, 67s to 72s 6d; straw, 27s to 35s per load.

POTATOES.

Southwark (Waterside). Saturday. During the past week the arrivals have been moderate, for which the demand has been steady, with prices well maintained. The following are this day's quotations: Essex, Kent, and Surrey Up-to-dates, 55s to 70s; Essex, Kent, and Surrey Pioneers, 60 to 65s; Essex, Kent, and Surrey B. Queens, 55s to 60s; Lincoln Evergoods, 55s to 60s; Lincoln Up-to-dates, 55s to 70; Blackland Up-to-dates, 55s to 65s; Blackland B. Queens, 50s to 55s.

York. Saturday. An average supply and a fair demand for potatoes free from disease, which sold at 6s per tub of 10 stones.

Judges for Royal Dublin Winter Show.

The following have agreed to officiate as judges at the above show—viz.:—

Special prizes.—James McWilliam, Garbity, Orton, Westmoreland. In fed cattle and groups—Robert Turner, Cairnton of Boyndie, Portsay, N.B. Kerry and Dexter and other small cattle—Thomas Milne, Straffan House, Straffan. Outfed bullocks John Rooth, 53, Victoria Street, Douglas, I.O.M. Outfed cows and heifers—Joseph O'Connor, Mylerstown, Naas. Sheep—F. C. Paine, Crockfaras, Newmarket, Cambs. Swine—P. Clune, Albert Agricultural College, Glasnevin. Butter, cream, and cheese—John Drysdale, Anngibbon, Port of Monteith Station, N.B. Honey—E. B. Drought, Department of Agriculture, Dublin. Maltino Barley J. Salmon Gough, The Limes, Bury St. Edmunds; J. D. Sanders, North Sandsfield, Gainsborough. Grain—J. G. Jameson, Bow Street Distillery, Dublin. Roots—Thomas O'Malley, Woodlands, Raheny; John Robertson, Coollattin Park, Shillelagh.

Applications for entry forms, etc., should be addressed to the agricultural superintendent, Leinster House, Dublin.

Worcestershire Shire Horse Society.

The annual show and sale organised by the above Society was held in Worcester Cattle Market on Wednesday, when nearly two hundred animals were shown, and the high standard of quality was excellent testimony to the work the Society is doing. The class for mares and geldings for town work numbered 70, and the competition was very strong. Mr. T. L. Walker's Quick Step, of Batesford, secured first prize and the champion prize of the show, but was run very close by Mr. Fowler's bay gelding, an umpire having to be called in to decide the merits of the respective animals. At the subsequent sale they fetched 75 gs. and 70 gs. respectively.

There were some very promising animals among the two and three-year-old geldings, and well-known breeders were represented in the shire mare, filly, and foal classes. Mr. C. Howson was winner of the first prize in the two-year-old gelding and filly class, and in the yearling class premier honours went to Mr. C. Heynes, who occupied a similar position in the three-year-old class, where there was exceptionally strong competition. Mr. T. R. Bomford was first in the colt class, and Mr. A. Green was the winner in the filly class. Mr. W. S. Carless secured premier honours with a nice foal by Desford Combination, and Mr. J. Farrar, of Broughton Hackett, was the owner of the successful filly. Lord Coventry gave a prize for foals by his horses, and it went to Mr. G. W. Morris, Clifton Court, and for the best brood mare or filly the first prize went to Mr. Charles Howson. A good many of the animals changed owners at satisfactory prices.

PIGS.

The Duchess of Devonshire's Berkshires.

The Compton herd of Berkshires, the property of Her Grace the Duchess of Devonshire, although started only a couple of years ago, has made a name already in the showyards, 72 prizes or awards being won in 1903, over one hundred in 1904, and again this season it has been most successful. At the sale of a portion of the herd on Thursday there was a small but business-like company, although many of the pigs for sale had only been farrowed late this summer. There was, however, a grand lot of young boars and gilts, many of whom had been prize-winners, especially those by the old boar Cecil Augustus being greatly admired. One of the litters of six, consisting of three boars and three gilts by this boar, and out of Polegate Daydream, the dam of many winners, made £14 2s. each. These were only born in January this year. The sixty head sold, which included many little pigs, averaged £5 15s. 8d. Messrs. Thornton and Co. were the auctioneers. We append a list of the chief lots:—

	Gs.
Sow, Polegate Destiny 10380, f. March 6, 1904; s. Cecil Augustus 7756 ..... Mr. H. S. Woodcock	9
Sow Polegate Dulcemera 10900, f. May 26, 1904; s. Polegate Dragoon 9811 ..... Mr. Toogood Parsons	7½

Sheep Fairs and Sales.

Ashford Ram Sales.

The annual sale of Kent or Romney Marsh at Ashford were held on Tuesday, when the demand was an excellent one all through, but prices did not rule so even in some cases as in the previous sales, particularly in connection with Mr. J. H. Harvey's sale. The most important consignment offered was that from Mr. Arthur Finn's well-known flock at Westbroke, Lydd, Kent. This year's sale was the forty-fourth annual sale of rams from this flock, the result, as given below, being, we believe, one of the best ever recorded. Compared with the same sale last year, the average realised is nearly £2 per head better.

The most noticeable feature in connection with this sale is the level range of prices. There were no high prices to make up the average, 16 gs. to Mr. Lind was the top price, 8 gs. to Mr. Mayhew the lowest. The leading buyers were Messrs. E. Finn, who gave up to 15 gs.; Laurence Hardy, M.P., who paid the same price; H. Rigden, C. File, Strouts, Levett, McDougall, Major Neve, R. Neve, Du Swaffer, Godden, etc. The whole of the sixty-five rams being kept for service in the home flocks, a fact upon which Mr. Finn can look with satisfaction, particularly when his average reaches, for so large a number, £11 18s. 9d. per head.

Mr. J. H. Harvey's consignment, which numbered thirty-five head, were of high merit and quality, included amongst them being some of the best rams seen out this year. Three particular rams were in great request, and, owing to this, the general average of the whole lot reached the satisfactory figure of £10,4s. 3d. per head, with a range of price from 32 gs. to 5 gs. The top priced ram was purchased by Mr. T. Wotton, who also gave 19 gs. for another; in both cases the runner-up was Mr. W. W. Chapman, who purchased for an Argentine client five grand masculine rams at 25 gs., 11½ gs., 10 gs., and two at 8½ gs.; Mr. A Amos being the runner-up for the 25 gs. ram. Messrs. F. de B. Collard, E. C. Lister-Kaye, Tompkins, Clements, Boon, and Strouts were the other leading buyers.

Twenty-five rams from Mr. A. Amos were offered, and sold at from 13 gs. to 5 gs., Mr. G. Scott purchasing at the former price, and Mr. McLean, who was buying for the Argentine, gave from 12 gs.

Mr. G. Buley's consignment, which numbered sixteen, sold well for the second lot; the range of prices here was from 10½ gs., to Mr. Buss, to 5 gs., and the average for the whole lot was £7 1s. 1d. Twenty-three unregistered rams from Mr. A. Sutton were sold at an average of £6 6s. 5d.

At Canterbury, Mr. F. Neame sold his second draft of yearling rams, these numbered twenty-seven. The demand was an excellent one, Mr. J. D. Maxted paying the top price, 15 gs., for a very fine ram; others made 11 gs. to Messrs. Horne, Tanner, and Ledger; others made 10 gs. to Messrs. Spanton, Marchant, Chapman, Ledger, Venison, and the whole averaged out at £9 13s. 9d.

Leicesters.

There were exceptionally large consignments of sheep and rams at the annual October fair held at Leicester on Thursday. Preference was shown for long-wool ewes and rams for breeding, and prices showed a considerable advance. The finest Lincoln longwool rams made 16 gs. to 18 gs., good useful rams 10 gs. to 12 gs., secondary 6 gs. to 9 gs., small rams 4 gs. to 5 gs., Shropshire rams 5 gs. to 11½ gs., Hampshire, Oxford, and Cotteswold 5 gs. to 7 gs., ram lambs 2 gs. to 6 gs., longwool ewes 32s. 6d. to 65s. per head, Shropshire ewes 40s. to 56s. each, Shropshire theaves 48s. to 57s., Lincoln longwool theaves, 49s. to 66s., and lamb hoggs 32s. to 40s. per head.

British Fruit Growers and Foreign Competition.

An important conference on the British fruit-growing industry was held at the Royal Horticultural Hall, Westminster, last week, under the united auspices of the National Fruit-Growers' Federation and the Royal Horticultural Society. "Foreign Competition: How to Meet It," was the subject discussed.

Sir Trevor Lawrence, who was in the chair, remarked that in this country we were prone to have too much animal and too little vegetable and fruit diet. He was not sure that that was not to some extent due to defective methods of preparing vegetables and fruit for the table. But beyond all question the large additions made to the fruit supply of the country during recent years had been of great value to the community. The total value of the fruit imported from abroad in 1904 was £10,237,000, of which £4,538,000 worth could certainly have been grown in this country, the remainder being accounted for by foreign fruit—bananas, and so forth—which could not be grown in this country. When he was a boy he believed it was not possible to buy a pound of muscat grapes for less than 12s. or 15s., whereas now most excellent Muscat grapes could be purchased for 2s. 6d. per pound. That showed how the production of hot-house fruit had grown in this country. The more that could be done to give all possible help to our home industries in that direction the better.

Mr. G. Bunyard believed that fruit could be grown in this country to a very large extent, to counteract the effect of foreign competition. Much might be learnt from the manner in which small growers co-operated abroad and secured that fruit was properly graded and packed. Co-operation placed the small grower on a footing with the large grower. With over fifty years' experience, he expressed the opinion that the small grower had very little chance without organisation. At present it was not possible for the dealer to rely on a regular supply of British-grown fruit. Too many varieties were produced, instead of a smaller number of leading kinds, such as were constantly sent from abroad. He thought the small grower would do better to cater for the local and retail trade instead of, as at present, frequently flooding the London market with fruit which did not produce an adequate return. A great mistake had been made in planting large blocks of fruit of one kind together, as such fruit could not be properly cross-fertilised. As a result, they often found a crop on the outside, but not in the middle of an orchard. To obviate this, other varieties should be worked in.

Mr. Cheal offered some advice on the subject of which variety could be most profitably and most efficiently grown, but impressed the necessity of growing the varieties answering the requirements of the consumer and the salesman. The Government could help the fruit-growing industry by the establishment of experimental stations, the provision of instruction in cultivation, and in the treatment of diseases.

A general discussion followed, during which Mr. Engleheart, of Wiltshire, said that the sharp line between horticulture and agriculture should be broken down, and the Ministry of Agriculture—such as they had (laughter)—should give their horticulturists a helping hand.

Professor Moore, of Dublin University, said that the Irish fruit growers' experience had been that they could dispose of good apples at good prices in unlimited quantities, but they could not get rid of poor apples at any price. He urged very strongly that the best varieties of British fruit should be placed more freely upon the market.

At Wednesday's conference Mr. Cornwallis, president of the Royal Agricultural Society, said he was of opinion that if the compulsory dipping of sheep was enforced on agriculturists, there was no reason why the same principle should not be extended to the spraying of trees for the prevention of insect pests.

Mr. Arthur Griffiths Boscawen, M.P., presided over a discussion on land tenure and rating difficulties. He said the difficulty was so to adjust the interests of landlord and tenant that the latter should be secure in his own improvements and that the landlord should be willing to let his land for fruit.

The conference was concluded on Thursday, when a discussion took place on the subject of railway rates as affecting the carriage of fruit. Several growers complained of the high rates, and urged the Horticultural Society to do everything to obtain lower charges and better conditions. Mr. Boscawen, M.P., said they did not complain so much of high rates as that they apparently were based on no principle whatever. Sir Albert Rollitt, M.P., contended that the time for further legislation on the subject had arrived. Discussion also took place regarding the establishment of an experimental fruit farm by the Board of Agriculture.

Live Stock Record.

THE HORSE AND THE MOTOR.

The motor apparently is not only come to stay, but has become far more attractive for country rides than the slower-going horse carriage to large numbers of the wealthy who can afford to make use of it. The excitement of rapid transit from scene to scene, together with the stimulating atmospheric freshness, exert a peculiarly exhilarating influence which can scarcely fail in making it perpetually popular. But only the rich can afford the luxury of making use of it purely for pleasure, and it will be a long time yet before it drives omnibus and cab horses out of the streets of towns. Still, there cannot but be a considerable displacement of horseflesh, and there are numerous predictions that motors will soon increase sufficiently to render the breeding of carriage horses unprofitable.

No doubt hunters and cavalry mounts will require to be bred as long as chasing the fox continues to be a popular English pastime and the nations of the world keep up their standing armies to their present dimensions, but although not a few farmers rear the former, the latter, by general admission, are unprofitable to breed and keep five years ere sold for the prices the Army agents give for them.

What farmers have most to dread is, perhaps, the substitution of motor power for dray horses in the streets of towns. At present they supply large numbers of heavy geldings for this traffic, for, besides brewers, the railway companies, manufacturers, and merchants are customers for them. Numerous tenant farmers in recent years have become members of stud companies, and embarked in considerable enterprise in heavy horse breeding, and the chief return they have had for it has been the sale of geldings. If this should be taken away from them, the loss will be very considerable, and there will no longer be any inducement for them to improve their team mares or to take the slightest interest in horse-breeding, and the high-class studs which in the past have realised such high prices by the sale of stallions and surplus mares and filies would not be long in feeling the difference.

When, in addition to this, it is found more economical to perform all kinds of cultivating, haulage, and other agricultural work on the farm itself by motor power instead of by horses, equine-breeding will be reduced within very narrow limits. But a generation may possibly pass ere this revolution comes. The change, at any rate, is not yet. The heavy first cost of the motor will most likely prevent many farmers from becoming possessed of it until it can be rendered at less cost. But this would not be likely to influence brewing firms, railway companies, manufacturers, and merchants if they should entertain the conviction that employing a motor is more economical than keeping horses.

Worksop October Fair.—There was a very large attendance at this annual fair, held on Wednesday. Yearling store beasts made £5 to £7, two-year-olds £9 to £12 10s., milch cows to £18, and heifers up to £15. Store lambs were in strong demand, and made 30s. to 46s., gimmers 55s. to 67s., and ewes up to 52s. each. There was a large quantity of ponies and horses on offer, but nothing of any particular note.

STOCK AND SHOW NOTES.

By Herdsman.

At a meeting of the Council of the Yorkshire Agricultural Society, held on Thursday, Mr. G. A. Duncombe, chairman of the Finance Committee, presented the report of that Committee upon the Hull Show. This stated that the attendance of the public was 49,951, being 3,456 less than at Huddersfield in 1904, but 3,720 above the average of the last five years. The total receipts at the turnstiles were £2,782 8s., and at the grand stand £392 14s. 6d., the total receipts being £3,175 2s. 6d., which was £314 11s. less than at Huddersfield, and £82 13s. in excess of the five years' average. The estimated profit on the show was £500, but the expenses in connection with the Hull meeting included £73 for the working dairy, and £128 for the exhibition of cheap cottages. Otherwise they anticipated the profit would have been £700. The timber sales were very satisfactory, the loss being only 30¼ per cent. The satisfactory financial result of the show was to a great extent attributable to the very handsome local fund raised in Hull of £1,841 1s. 1d. gross, to which the Hull Corporation contributed £500. The report was adopted. The sum of £2,000 was allocated towards the prizes for next year, and the Council decided to invite the Royal English Arboricultural Society to hold a forestry exhibition in conjunction with this society at the show at Middlesbrough next year.

The important horse-breeding districts of the East Lincolnshire Marches were recently visited by representatives of the Saxony Heavy Horse Society in the persons of Claus von Drathen, Major von Tago, and Herr Beseler, who purchased for breeding purposes seventeen yearling fillies. The deputation also visited Derbyshire, Yorkshire, and Scotland, but restricted their purchases of fillies entirely to Lincolnshire. Three years ago Claus von Drathen and Major Tago visited the Saltfleet district, and took twelve fillies to Germany. These fillies carried off all the principal prizes in Germany, and proved such excellent breeding mares that the society decided to purchase all the fillies it required this year in the district.

Messrs. W. and B. Hobbs will sell by auction, on Thursday next, the 19th inst., at Newingreen, about 4,000 well-bred Kent sheep, rams, and lambs, comprising 1,344 one, two, and three Kent ewes; 1,800 Kent ewe and wether half-bred tegs; 512 ewe and wether, Kent and half-bred lambs; 44 ram and ram tegs. The animals are from various well-known flocks and of high-class quality. On the following day, at the same place, Messrs. Hobbs will offer 375 excellent home-bred beasts, comprising 136 yearlings; 37 eighteen-months-old steers and heifers; 154 two and three-year-old fatting beasts; 5 barren cows and heifers; 26 cows and heifers in and with calves; 2 bulls; 15 calves. Both sales will commence punctually at ten o'clock. Catalogues may be obtained at the Auction and Estate Offices, Ashford, Kent.

The Red Polled herd belonging to Mr. H. Salvin, of Burn Hall, Durham, having outgrown its accommodation, the owner has instructed Mr. W. Chrystal, of Houghton-le-Spring, R.S.O., to dispose of a portion, and the sale will take place on Wednesday next, the 18th inst., at Herd's House, Burn Hall Parks, three miles from Durham. The herd was established five years ago, and nothing but the best stock bred, so that the animals to be offered on Wednesday are prime beasts fit for any herd. The major part of them are heifers bred and reared at Burn Hall, in a natural condition, thoroughly inured to the rigorous climate of the North-East of Durham and may confidently be expected to thrive and do well wherever they go.

Hereford Herd Book Society.

At the quarterly Council meeting of the Hereford Herd Book Society, held at Hereford on Wednesday, Mr. W. G. C. Britten was elected secretary in succession to his father. A reply was read from the Argentine Rural Society as to their new rule, which came into force on April 13 last, governing the entry of cattle in their herd book. In order to make the matter perfectly clear, two pedigrees had been sent to them by this Society as tests, and from their reply it appears that animals whose pedigrees trace back on the dam's side to any of the first thirteen volumes, and have their sires entered in "any" volume of the English herd book are eligible for entry in the Argentine herd book.

Sir James Rankin, M.P., drew the attention of the Council to the fact that Herefordshire has no Chamber of Agriculture, and is not represented on the Central Chamber in London. On his suggestion a small committee was appointed to consider the question and report. Mr. Rollo Rowlands, Evesbatch Court, Bromyard, was appointed a life member, and Mr. D. E. Strevens, Castlecotte, Roscommon, an annual member.

Contagious Diseases of Animals.

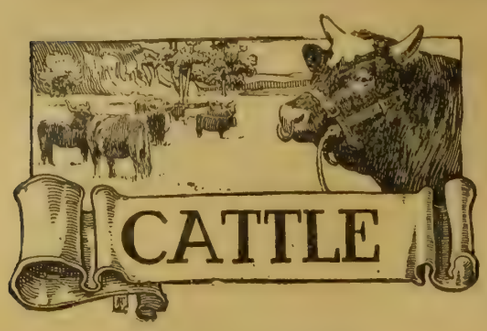
NOTE.—The figures for the current year are approximate only.

Lancaster Horse and Sheep Fair.—The October fair at Lancaster was held on Wednesday, when the supplies were far in excess of those at previous fairs. Horses, as a rule, met with slow trade, and many excellent two-year-olds were not disposed of. Prices ranged from £10 to £30. There was a very keen demand for sheep, which were entirely of the white-faced variety. Ram lambs were the best show, and made £5 to £6 10s.; shearlings, to £6; and aged rams, £3 to £4.

Barnsley October Fair.—At the annual October fair at Barnsley, held on Wednesday, there was a good atendance, but business was not very active. The quality of horses was poor, though a few young heavy horses made full value. There was a fair show of sheep, mostly North country. Ewes sold at 42s. to 50s., and rams from £3 to £3 10s. There was an active inquiry for calving cows, which sold readily at £15 to £20, but business in calves was not so good, prices ranging from £5 10s. to £9.



Notes and Jottings.

The season is now fast drawing on for the fat-stock shows, and, so far as the cattle for these shows are concerned, the much lower temperature than is usual at this time of year that now prevails will be beneficial. A close, muggy temperature is very bad for the finishing off of these highly-fed cattle. The poorer brethren of these monsters that are at present in most cases out in the fields are also having a very favourable time, for though the weather is cold, it is continuing generally remarkably dry, which is all in favour of health. The dryness, however, is being felt terribly in some districts in respect of the water supply and springs; small streams and ponds are alike very low. As winter comes on a little labour should be spared to see that all ditches and drains that supply drinking places are open and clean, so that nothing is wasted in that respect.

The autumn has been quite unusually fruitful of auctions of pedigree cattle of almost every breed, and though we are now at the middle of October, there are still a large number to come off. It must be or ought to be very encouraging to breeders of pedigree cattle of the popular breeds that such good all-round prices continue. Last week was a better week in several instances, the Stonebrook House Herefords making an average of £30 4s. 9d. in seventy-eight lots, which is very satisfactory. The comparatively new breed, so far as the northern part of the country is concerned, the South Hams, also appear to have had a very good time of it at the autumn sale under the Herd Book Society's auspices, thirty and up to forty-three guineas figuring amongst the prices realised, and with a fairly good average.

Shorthorns that are able to pass the tuberculin test, and whose pedigrees are acceptable to the Buenos Ayres breeder, appear to go off well at the auctions on the other side, several heifers, recently shipped by Mr. Robert Taylor, of Pitlivie, ranging from £300 to upwards of £400 each, whilst of bulls shipped by Messrs. Hughes prices ranging up to £474 were realised. Half a dozen bulls imported by Mr. A. Bruce also ran up to the good average of £234 3s. 6d. The extent of territory in South America all round, there is little doubt, will be found an opening for practically an endless supply of pedigree stock from England for many generations to come. The feeding climate and all other conditions appear most favourable to this country as a stock-producing one.

When we look back at the great number of years that first-class cattle of various breeds have been fostered in the British Islands and see the vast number of inferior stock that are continually duced and brought out. Milk breeds, too, there is scarcely a possibility of the pedigree stock market being overdone, provided only that good, healthy cattle of the right class are produced and bought out. Milk breeds, too, there is little doubt will shortly share in the good demand from that country. As the population increases a good deal of dairy produce will be needed locally, besides which there are already many very large dairies of cattle being kept for the production of butter to Great Britain and other countries.

In England the difficulties of labour, both male labour in looking after the animals and female labour in attending to the udder produce, form a very great barrier to the profits of butter-making, whilst to add to these difficulties the continued increase in the quantity of imported butter and its improvement in quality have the effect of keeping prices at such a low ebb that the British producer can scarcely compete at a profit, even under the most favourable conditions. The improvement in the Colonial butter at the recent London Dairy Show was very noticeable. It will be a long time, it is to be feared, before many of our upper classes even will be able to distinguish between first class pure butter and first-class mixtures. Could they but be taught this, the home producer of the best quality of butter would find a ready market.

Attention has previously been called in these notes to the benefits of sending fat cattle to the market at this time of year, perhaps more than any other, in thoroughly ripe and fit condition. Looking through the market reports of last week, I notice one market—Colchester—quotes its beef as follows: Stall-feds, 5s. per stone of 8 lb.; grass beef, 4s. to 4s. 6d. This points very directly to the benefits of the firmer and warmer handling of the stall-fed cattle to that of the outside-fed ones. Though it is rather early yet to find stall-fed cattle in the markets, there is no doubt it pays on tillage farms where the manure counts. On grass farms only a great deal may be done to compensate for the lack of the stalls by giving a little hay every morning and a good feed of meal, cake, and chaff at night.

Markets generally, especially provincial ones, were a little brighter in the ripest classes of stock. This is as had been anticipated, but the class of cattle that come below the average in quality find but few buyers, and these at a very low and disappointing figure, and how many animals there are of the latter class compared with the number of the former? Even in the Metropolitan Market, where, as a rule, we expect to find the choicest of our fat stock and the kind likely to bring the highest quotations of the week, there are not more, on a rough calculation, than 10 per cent. of the number pitched that are up to the highest quality. In that market it occasionally happens, certainly, that a solitary consignment of Highland Scots, or, especially, neat Devons, exceed the quotations.

One branch of the cattle trade has become much more animated of late, and very much brighter to the seller—that is, the store or feeding branch. With a persistent drought lessening both the root and hay crops in the summer, and with only medium prices ruling for the general class of beef, a very flat trade might fairly have been looked for, but where the early winter sales of feeding cattle have taken place, prices have been quite the reverse of this. In the north the best quality lots of blue-grey crones have run from £18 to £24 per head, and younger cattle have also been sought after at good prices, especially where a tinge of quality has prevailed.

The report of the great cattle market at Chicago for the week ending September 26 gives the total of cattle received at the stock yards as 96,318. This enormous total, it is almost needless to say, quite swamped the market. Nevertheless, as stated at home in previous paragraph, the best finished cattle found a fairly satisfactory market. With such a total, it can easily be understood how every avenue would be blocked to repletion, and it appears that salesmen, packers, and all concerned were about at their wit's end, whilst telegraph messages made the wires ring so frequently and rapidly as if they were discharged to shippers (consigners) to hold back further supplies until the yards and slaughter-houses could become a little denuded of this over supply.

Jersey breeders who have been sellers during the past season have been having rather hard times of it until recently. It is, however, a long lane that has no turn in it, says the old proverb, and the combination or collective sale of the breed held at Bletchley last week was quite a red-letter day. In cows and heifers especially animals with but little to recommend them could reach 30 gs. easily, and good ones considerably more. So scarce, it appears, is milk, that these great prices were suddenly sprung upon the public from sheer obligation. Most of the lots were bought for private family use, however, and not for dairymen's work, so that the question of wear and tear will not be of so much consequence.

The readiness with which Jersey cattle come into season during the winter months is one of their greatest recommendations. With Shorthorns there is often very great difficulty in getting them to take the bull during the dead of winter, and so from October to the end of January there is invariably a dearth of milking cows. The Jersey coming in season during this dead time of the year fills up a blank, and those who have good new milched ones to spare at this time are pretty certain to reap great benefit. No matter how severe the weather may be, the newly-calved Jersey, if properly cared for, will take the bull as readily in the winter months as the summer.

Shorthorn Sales in Scotland.

The Collynie and Uppermill Herds.

Messrs. Macdonald, Fraser, and Co.'s annual week of Shorthorn sales in Scotland commenced on Tuesday, when at Tillycairn, near Old Medrum (one of Mr. Duthie's farms), they conducted the well-known animal joint sales of Collynie and Uppermill Shorthorns.

The Uppermill sale of last autumn witnessed the ever-to-be-remembered dispersion of the late Mr. W. S. Marr's splendid herd, but his cousin, Mr. John Marr, Cairnbrogie, who succeeded to the tenancy, has built up a new herd on the old foundation, and he continues with Mr. Duthie the arrangement for a joint-sale of the season's crop of calves, so that the great gathering which has annually assembled from all parts of the country, and which has, ever since the Cruickshank breed came so prominently to the front, attracted many foreign representatives in search of the choicest strains of blood, will be maintained. There were in all 40 animals catalogued, 28 of which were from Collynie, 11 from Uppermill, and one consigned by Mr. J. Duthie Webster. Mr. Duthie's crop of bull calves has this year been smaller than usual, and, as he only offered 16 on this occasion, he made up the number by sending forward a dozen heifer calves, so that breeders had a rare opportunity of enriching their herds with some of the best young female stock that has ever been presented at a public sale. The Collynie bull calves are all sprung from great milking cows, and they are also noted for their fleshy character, while their pedigrees go back sufficiently far to satisfy the most exacting taste for "blue blood." Mr. John Marr made a successful first appearance as an exposer of Shorthorns, and the quality of the bull calves which he offered was such as to reflect credit on his skill as a breeder, and to maintain the high reputation of the Uppermill herd. They were not all of popular colours, but they were well-bred, and were shown in a healthy and robust condition, which indicated sound constitutions.

It was hardly to be expected that the sale would come up to the notable one held last year at

Forthcoming Live Stock Sales.

Date.	Stock.	Owner.	Place of Sale.
October 17	Shorthorn Cattle	Sir W. H. Wills	Coombe Lodge, Blagdon, Somerset.

20	Cattle	Various	Newingreen, Kent.
20	Shorthorn Cattle	Mr. C. H. Joliffe	Goldicote, Stratford-on-Avon.
20	Store Stock	Various	Shrewsbury Smithfield.

Uppermill, when three figures were quite common for calves, and the record price of 620 guineas was obtained for one of the Collynie herd; but trade was very buoyant, there being a brisk inquiry for the best stock by home breeders, and the prices were highly satisfactory. The top figure was 470 guineas, as against 620 guineas paid by an Argentine representative for a Collynie bull calf last year, and the average of £186 8s. 9d. was also under the £226 12s. 6d. of that famous sale; but last week's prices could not but be gratifying to the sellers, and a total of nearly £4,000 for 28 calves is a valuable asset for a stock-breeder. Only two of the bull calves and three of the heifer calves sold at less than 50 guineas, while no fewer than 13 of the animals ran well into three figures. The pick of the sale was Proud Monarch, a magnificent red bull calf of great thickness and wealth of flesh, and with a splendid coat of hair. He is sired by Proud Edward, and is out of the Scottish Champion cow Rose of Stittyton Third. This gem elicited a very brisk competition; he was started at 100 guineas, and after some spirited bidding he was knocked down to Mr. Stephen Mitchell, Boquhan, Stirlingshire, at 470 guineas, the runner-up being Mr. Aimes. The second highest price of the day was given for Royal Choice, a handsome red calf of the Bellona family, and sired by Royal Pride. He was put up at 100 guineas, and drew out several competitors, Mr. Walter Scott, Gloucestershire, prevailing in the end at 420 guineas. Numerous other three-figure prices were realised, as the following sale list will show :—

COLLYNIE HERD.
BULL CALVES.

	Gs.
Master Favourite—Mr. Atkinson, Overthwaite, Carlisle	65
Proud Monarch—Mr. Stephen Mitchell, Boquhan	470
Diamond Star—Mr. Anderson, Saphock	150
Royal Prince—Mr. Reid, of Hillhead, Ellon	100
Golden Chief—Mr. Watson, Bruceland, Elgin	71
Royal Choice—Mr. Walter Scott, Nether Swell Manor, Stow-on-the-Wold, Gloucester	420
Proud Star—Mr. Norrie, Cairnhill, Turriff	34

Joint Sale at Pirriesmill.

The second sale took place on Wednesday at Huntly, the consignments being from the well-known herds of Mr. A. M. Gordon, of Newton; Mr. John Wilson, Pirriesmill; Mr. F. Simmers, Whiteside; and Mr. Alexander T. Gordon, Combscauseway. In all 82 animals were catalogued. The sale was held at Pirriesmill, within a few minutes' walk from the railway station at Huntly, and it drew together a large gathering of breeders and others interested, most of those who were at Tillycairn on the previous day being again in attendance.

Business on the whole was very good, fashionable pedigrees being in demand. Although the splendid prices realised on Tuesday for ten outstanding animals in the Collynie draft were not reached, there was smart competition for the highest class of stock, and in several cases long figures were recorded. The total number disposed of was 71, and they brought an aggregate of £4,392 3s., representing the very satisfactory average of £61 17s. 3d. The highest general average was made by the Combscauseway collection, which worked out at £68 5s. each, the Pirriesmill lot coming very close at £65 5s 3d. For the Whiteside heifers an average of £60 13s. 2d. was realised. To the Pirriesmill herd fell the distinction of gaining the top price of the day, namely 280 guineas for a two-year-old heifer. Several of the best animals were acquired by Professor Campbell, Dublin, on behalf of the Board of Agriculture in Ireland. A list of the chief sales is appended :—

NEWTON HERD.

HEIFER CALVES.—Newton Princess Royal II., Mr. Reid, of Hillhead, Ellon, 56 gs; Pauline V., Mr. Robertson, Coleburn, 31 gs; Newton Jenny Lind, Mr. Smith, of Pittodrie, 42 gs.

BULL CALVES.—Newton Star, Mr. Robertson, Coleburn, 58 gs; Newton Prince, Mr. Coey, Larne, 74 gs; Newton Champion, Mr. Calder, of Ardargie, 105 gs; Newton Crest, Mr. W. T. Malcolm, Dunmore, 41 gs.

PIRRIESMILL HERD.

COWS.—Maria XIV. (5 years),, Mr. J. Duthie Webster, Tarves, 46 gs; Countess VII. (5 years), Mr. George Bruce, Inchfield, 26 gs.

TWO YEAR-OLD HEIFERS.—Lavender Thyme XII, Mr. Wm. Duthie, Collynie, 280 gs.; Waterloo Vine III., the Earl of Moray, Doune Lodge, 160 gs; Crescent IX., Irish Agricultural Department, 115 gs.

YEARLING HEIFERS.—Lavender Thyme XIV., Irish Agricultural Department, 170 gs; Primrose VI., Mr. Raphael, Porter's Park, London, 40 gs; Lavender Thyme, XIII., Lord Calthorpe, Elvetham, 150 gs; Water Lily VI., Mr. Stephen Mitchell, Boquhan, 115 gs; Dinorah II., Irish Agricultural Department, 60 gs.

BULL CALVES.—Jamissary VIII., Sir Alexander Baird of Urie, 24 gs; Prince Charlie, Mr. Robert Anderson, Fingask, 25 gs; Melbourne City, Mr. W. M'Connachie, Ardrone, Keith, 26 gs; Carse o' Gowrie, Mr. George Inglis of Newmore, 110 gs; Master Mason, Mr. Whinnerah, Carnforth, 54 gs; Wandering Willie, Mr. Anderson, Comisty, 43 gs; East Neuk o' Fife, Mr. Anderson, Ballachraggan, 50 gs; Earl of Eglinton, Lord Lilford, 70 gs; Madagascar, Mr. Evans, Natal, 28 gs; Quintin Durward, Mr. Beaton, Monellie, Forgue, 22 gs; Man o 'War, Mr. Rothwell, Preston, 52 gs; Strathbogie Castle, Mr. Snowball, Knapton, Yorks, 72 gs.

WHITESIDE HERD.

TWO-YEAR-OLD HEIFERS.—Lucy's Maid, Provost Fowler, 54 gs; Waterloo Maid, Mr. Lee, of Congleton, 170 gs; Elvira's Rose XXVIII., Mr. T. A. Buttar, Corston, 51 gs. Yearling Heifers.—Lucy's Rose, Mr. A. Haley, Malton, 31 gs; Waterloo Girl, Mr. Lee, of Congleton, 120 gs; Jilt XXXVIII., Mr. T. A. Anderson, Ballachraggan, 37 gs. Heifer Calves.—Jilt XXXIX., Mr. Raphael, London, 37 gs; Lady Tarves XI., Mr. George Harrison, Gainford Hall, 31 gs; Waterloo Princess XXXIX., Mr. J. A. Preece, Thrapston, 130 gs.

COMBSCAUSEWAY HERD.

Huntly.

Immediately after the sale at Pirriesmill an adjournment was made to the premises of the Northern Auction Company, where the crowd taxed the accommodation to its utmost limits. The animals forward consisted of drafts from New Keig, Whitehouse, Middleton, Troup, Banff, Mains of Lessendrum, Huntly, Phingask, Fraserburg, and Burnside, Depple, Fochabers. The big prices by no means daunted the spirits of those in search of good blood, and the prices realised were nearly as good as those got from the Pirriesmill sale, keeping out of view, of course, the big figures obtained at Pirriesmill and at Collynie the previous day. The competition was keen.

Mr. Murray, of the Northern Auction Mart Company, conducted the sale, and there was no time lost in disposing of the large number of consignments. The top price of the sale was reached by Mermaid, a red heifer, the property of Mrs. Law, New Keig, Whitehouse, which fetched 130 guineas. The prices all over reached figures which suggest that cattle breeding is not yet a business that is played out. A roan cow, the property of Mr. Robertson, Phingask, brought 135 guineas, and a one-year-old heifer belonging to Mrs. Law, Keig, reached 130 guineas. Ninety-five guineas was the next lowest figure, and prices ranged from 15 to 130 guineas.

Mr. M'William's and Mr. Watson's.

The third sale of the week took place on Thursday at Stoneytown, Keith, when drafts from the herds of Mr. M'William, Stoneytown, and from Watson, Bruceland, Elgin, were disposed of. Shorthorns have been bred at Stoneytown since 1871, and the stock has always been healthy and vigorous, the bulls used having been selected with an eye to their breeding value. The Bruceland herd, better known by the name of Auchronie, was founded a quarter of a century ago by the purchase of two cows from the herd of Mr. Cruickshank, Sittyton, and additions were afterwards made from the Kinellar and other well-known herds, while sires of exceptional merit were introduced. The number catalogued was 55, but six were not forward, or were withdrawn.

There was not such a large attendance as on the previous days, but the company was essentially a business one, and comprised a good lot of buyers on the outlook for the best stock from herds of such a high reputation. Trade was brisk for the choicest animals, as may be gathered from the fact that a dozen of the animals ran well into three figures, while a top price of £220 10s. for a yearling heifer, and an average of £69 for 49 head, were very satisfactory, even in these days when Shorthorns are being boomed. Nor was the brisk trade caused by a foreign demand, for none of the animals were bought for the Argentine, but the home trade was sufficiently healthy to carry forward the sale on lines which could not, on the whole, fail to prove satisfactory to the exposers. His Majesty the King got a cow and a heifer from the Stoneytown draft at good prices, and Mr. Hedley Smith, who has been attending the series of sales in the interests of the Whittingehame herd, secured a fine breeding cow for the Prime Minister at 150 guineas. Details as to purchasers and prices are appended :—

STONEYTOWN HERD.

COWS.—Flora 2nd, 8 years old, Mr. Buttar, Corston, 42 guineas; her heifer calf, Floral Wreath, Mr. Johnston, Linksfield, Elgin, 27; Ella, 7 years, Sir Jas. Sievwright, Tulliallan, 165; her heifer calf, Ella 4th, Mr. Charles Bruce, for His Majesty the King, 95; Golden Lily, 5 years, Mr. Hedley Smith, for the Prime Minister, 150; her bull calf, Gallant Lad, Colonel Smith Grant of Mintmore, 42; Lady Maud, 5 years, the Earl of Moray, 180; White Rose, 4 years, Mr. Murray, Old Manse, Banff, 46; her bull calf, Avondale, Mr. Robertson, Ballechin, 61; Heather Bloom, roan heifer calf, out of Heather Bell, Mr. Charles Fleming, Keith, 41; Lady Rothes, three years, Mr. Mackenzie, Balnain, Rossshire, 31; Daydream 7th, 3 years, Mr. George Inglis, of Newmore, 48; her heifer calf, Daydream 9th, Mr. Inglis, 22. Two-year-old Heifers.—Sunbeam 10th, Colonel Smith Grant, of Minmore, 100 guineas; Golden Thistle, the Earl of Moray, 150; Proud Countess, Mr. Fleming, Keith, 100 guineas; Lancaster 43rd, Sir Jas. Sievwright, Tulliallan, 150. Yearling Heifers.—Golden Pansy, Mr. Cameron, Balnakyle, 100 guineas; Golden Thorn, Mr. William Duthie, Collynie, 210; Mary Grace 8th, Mr. Law, Mains of Sanquhar, Forres, 130; Floss, Mr. Law, Holl, 25; Carnation, Mr. Raphael, Porter's Park, London, 50; Gem of Spey, Mr. Raphael, 42; Radiant Rosebud, Mr. Torrie, Dorset, 75; Daydream 8th, Mr. Inglis, of Newmore, 30. Sale of Jerseys at Bletchley.

A number of well-known breeders contributed stock to the collective sale of Jerseys held at the Park Hotel, Bletchley, on Wednesday by Messrs. Thornton and Co. Among them may be mentioned the Earl Cadogan, the Bishop of Ipswich, Lady de Rothschild, Mr. J. Carson, and Mr. G.

Murray Smith. There were nearly eighty entries, and a good trade throughout was experienced, the 74 head sold averaging close on £18. Lady de Rothschild's beautiful cow Rainbow, first prize at the Bath and West Show this season, made the highest price—viz., 36 gs., Mr. Weetman being the purchaser. We give below a list of the principal lots with purchasers' names and prices:—

COWS AND HEIFERS

White Rosebud (Mr. Murray Smith's), broken colour, c. July 2, 1899; s., Golden Fern's Lad 6236 Gs.
Colonel Charlesworth 24
Maisonette Frederica (Capt. Gisborne's), nearly whole colour, c. May 1, 1900; s., Baronet 7094
Colonel Charlesworth 29
Burgh's Brenda (the Bishop of Ipswich's), whole colour, c. Oct. 21, 1900; s., Thunder 6726
Mr. C. B. Balfour 22
Mashova (Capt. Gisborne's), whole colour, c. Jan. 19, 1901; s., Advancer 6758 .....Mr. John Tremayne 30

Bingley October Fair.—At this fair, on Tuesday, a large number of sheep were penned, and were sold at satisfactory prices. Lonks made 30s. to 33s., half-bred ewes 40s. to 45s., Scotch ewes 19s. to 22s., half-bred lambs 25s. to 30s., tup lambs 30s. to 36s., and rams 50s. to 65s. For cattle the demand was an average one, milkers and laying-off beasts making £14 to £21 each. Horses were a very middling lot.

Sulphate of Copper in Preserved Peas.—The question of whether preserved peas containing sulphate of copper are injurious to health was submitted to the Ramsey Stipendiary last week in a test prosecution against two tradesmen. A sample of a French brand had been submitted to the analyst, who pronounced it contained 3.22 grains of copper sulphate, and was injurious. This was supported by the Board of Trade Departmental Committee and other authorities, also by two medical men who were called. For the defence several medical men gave a contrary opinion, and declared that copper sulphate was used as a nervous tonic and astringent, and taken in such quatities as found in the sample would be innocuous. Judgment was deferred.

Horse Notes.

The "Bookish theoric" is responsible for some remarkable statements respecting the origin of some of our breeds of horses. Writers about horses seem to have thought that every breed, such as the Cleveland Bay, the Hackney, and others, are the result of an elaborate system of crossing, and it never appears to have struck them that to produce the results they see there must have been much more system than was likely to be adopted in the state of civilisation which prevailed in the times of which they write. I must say, however, that used as I am to reading the elaborate theories of writers on horses, I was astonished when I read that the Suffolk Punch was the result of a cross between the Arab and the English cart mare!

The English cart mare is a mythical animal which serves as a foundation for any powerful breed. When you want to account for the existence of such a breed—a breed, that is, which has power and quality—go to the carting breed for the former and to the thoroughbred for the latter, and there you are. But the English cart horse in his present development is as modern a breed as the thoroughbred, and more modern than the Hackney. The horse used for draught purposes in the Middle Ages was a much smaller and lighter horse than the cart horses of even 150 years ago. He was not used for the plough at all, all that work being done by oxen, and most of the merchandise was conveyed about the country by pack horses or pack mules.

Captain W. A. Kerr, V.C., who had considerable experience of the Suffolk Punch in the Crimean War, always said that they were the hardiest and best transport horses he ever came across, and that they did the most work on the least and roughest of food of any horses that were in his charge. He was a great admirer of the Arab, also, and he used to hold that there must have been an Arab strain somewhere in the Suffolk, and that it was from Eastern blood that he got his stamina.

I am not very familiar with the history of the Suffolk Punch, but it seems to me that the shape of his legs—the roundness of his bone—is opposed to that theory. Wherever Eastern blood is to be found in any quantity, the clean, flat, hard bone is always in evidence, and it is needless to insist upon the fact that in this particular the Suffolk horse fails.

In one thing, however, he does not fail, and that is in pulling. He is admirably built for draught, and he puts his heart into his collar. Indeed, there is no better horse at a dead pull than he is. Lawrence speaks of the old Suffolks as excelling in "drawing," and tells how the Suffolk farmers and landowners used to make big wagers on the capabilities and courage of their horses. "Drawing" seems to have been a somewhat cruel sport. The horses were yoked to some immovable object, as likely as not a tree, and the test of superiority was the horse who would make the greatest number of attempts to move the immovable. Occasionally matches were made between neighbouring parishes, and it is stated that on one occasion fifteen horses from each parish were matched for 1,500 gs. Lawrence tells us that the chief place for these "Punches" was on the sands towards the coast.

What might otherwise be an excellent thing is too frequently spoiled by the over-keenness of individuals. There is no more useful class at any show than that for tradesmen's turn-outs, and, locally, there is no more interesting class. But in many districts they have got entirely spoiled by men showing a class of horse which they would never use for trade purposes at all unless it were for these prizes. In some populous districts it is possible to win several harness prizes with horses that are, in a way, eligible for tradesmen's classes, and even if the amount of money won does not do more than pay expenses, a considerable amount of kudos accrues to the owner, and he makes some profit by the sale of his horses.

It is no pleasant task to judge these classes. A few weeks ago I saw a class judged in which there were three or four horses shown that it was evident, to any man possessed of horse knowledge, had no business in a tradesman's class confined to trade horses. One could not help wondering what the judges would do and feeling amused at the eager, not to say pertinacious manner in which the drivers of these said three or four horses engaged the judges in conversation when opportunity offered. It afterwards transpired that they were endeavouring to impress upon those gentlemen how they were used every day in their respective trades. But the judges refused to listen to the voice of the charmer, and very properly passed over the three best and most valuable horses in the class, and awarded the prizes to horses that looked like the business. The decision roused the ire of the public, who hooted a little—a practice, by the way, which does not hurt the judges, but is highly discreditable to those who indulge in it. And now comes the denouement. The horses in question were all sold to a famous London carriage-horse dealer for big prices! Is it necessary to point out that this gentleman does not deal in "tradesmen's trappers?"

It seems a great pity that when conditions are laid down for a class there are some people who persistently lay themselves out to evade them. Without any active wish to do a dishonourable thing, they sail rather near the wind. It may be objected that it is open to every tradesman to do the same, but that is begging the question. The average tradesman does not buy a high-class London carriage horse to take round his provisions, or his milk, or his dry goods; indeed, the man who shows this class of horse in tradesmen's classes only takes him out in his trap a few times on "the kill a hound and qualify principle." It is for the ordinary tradesman's horse that these classes are intended, but there seems to be only one way to keep the high-class harness horse out of them. It is a simple one. Add a selling clause to the conditions, and make the top selling price £50.

I am glad to see that a branch of the Brood Mare Society has been established in Yorkshire. There is no county in England in which the Brood Mare Society is likely to do so much good. To begin with, almost every Yorkshireman has an instinctive love for a horse, and yet there is no county in which good brood mares have been more recklessly sold. In a letter I had recently from a man of wide experience, he tells me that he remembers high-class Cleveland Bay mares, of a character which it is impossible to replace in these days, being sold to go abroad at 30 gs. each, and that by dozens. Even now, when men have got to know better, they are frequently tempted to sell their good brood mares—hoping, doubtless, in spite of many disappointing experiences, that they may soon find another brood mare as good as the one they are selling. The Brood Mare Society, if it is supported as it ought to be, should be able to stop this sale to foreigners to a very considerable extent.

THE LOOKER ON.

Sale of Dartmoor Ponies.

The annual sale of Dartmoor ponies, cobs, etc., at Okehampton was held on Tuesday, when an unusually large number of animals, most of which were straight from the forest, was offered. Nearly 250 were catalogued, and many others were driven in, bringing the total considerably higher than last year. There was a large attendance, but trade was not so brisk as could have been hoped. The best prices were £15, £12 5s., £12, and £10 down to £3. The suckers sold at various prices, ranging from 20s. to £4.

Sheep Killed by Motor.—On Monday a party of motorists from Sunderland ran into a flock of sheep near the Common House Inn, Haltwhistle, killing four and injuring several others. There are four cross-roads at this point, and the occupants of the car were fortunate in escaping without injury. The flock comprised about sixty sheep, belonging to Mr. Teasdale, Bogg, who was conveying them to an adjoining farm.

Overcrowding in Rural Districts.—A remarkable case of overcrowding has been reported to the Blofield District Council by the medical officer of health, who stated that at South Walsham, in a cottage consisting of a small sitting-room and kitchen on the ground floor and two small bedrooms, the occupants were a man and his wife, five sons, whose ages were 18, 16, 14, 6, and 4 years, and five daughters, aged respectively 12, 9, 7, 2 years, and 5 months. In the sitting-room was a sofa, on which the two eldest sons were said to sleep, but the doctor said that he could not imagine how this could be. One bedroom was occupied by the husband and wife and five daughters, and the small back bedroom by the three younger sons. The house was almost entirely destitute of furniture, and although, remarked the doctor, he could bring up a case of overcrowding at each meeting, this one was so remarkable that he felt obliged to mention it.

Notes and Jottings.

For a considerable time flock-masters have complained of the very heavy losses they have suffered by reason of stray dogs, and other dogs not kept under proper control.

At different times attempts have been made to induce the Government to pass such a measure as will give the occupiers legal right to destroy such pests.

Attempts have also been made to induce the Government to take such steps as are necessary to compel owners of dogs to keep them under proper control.

These efforts have so far been in vain. It is true that certain efforts have been made in Parliament to carry into effect the wishes of the flock-masters, but hitherto without success.

Within the next week or so most of the sheep societies will be holding their autumn meetings, and, as the above subject is of immense importance and urgency, it is hoped that some further efforts will be made to induce the Government to push forward a Bill, that will not only enable the flock-owner to protect himself, by immediately destroying any stray dogs, but also compel all owners of dogs to keep them under control.

The urban inhabitants will think that these suggestions are drastic, but those who have experienced the results of the depredations of stray dogs know full well that nothing within the power of the owners of many of them can repay the heavy losses.

A recent instance came to the notice of the writer, in which a specially selected lot of stud ewes, the value of which at least to the owner was 10 guineas per head, were raced about by two curs from a neighbouring village. Fortunately, the shepherd was at hand: one of the dogs paid the penalty on the spot, and the other, although he managed to get away, will probably not be able to visit the same spot.

Another dog, in the same neighbourhood, was caught in the act of worrying sheep. He was shut up and kept, but no one came to claim him.

Doubtless, throughout the country many other similar instances could have been given, but enough has been said to show that there is need for immediate and prompt action on the part of those who are responsible for the administration of laws affecting dogs.

To the lay mind there appears no real reason why every dog for which a tax has been paid should not wear a label notifying that fact, and identifying its owner. If this simple measure could be made law, then all other dogs without the label should be slaughtered or shot at sight by any who met them.

The trade and navigation returns for the past month must afford great satisfaction to all interested in the sheep industry. It is true that the total number exported, 1,075 head, during that period, is less than the number exported during the same period of the previous year, but the reduction that has taken place in the number exported is more than compensated for by the very much higher average of declared value that the sheep exported in September last have made.

The average declared value of the sheep exported last month works out at £18 7s. 3d. per head, and when it be remembered that this is the average of considerably over one thousand sheep it will at once be apparent how very valuable indeed this demand must be for the flock-masters of this country.

Compared with the previous years, the number of sheep exported is considerably above the average, and the average declared value is, so far as regards the month of September, a record one.

We have before us as we write the records for the past eleven years, and the averages for each month of September during this period range from the average quoted for the exports of last month down to £5 17s. 5d., a very wide range of value, and one that indicates the uncertainty of the method of computation of the value of these exported sheep.

The latter remark is made with the express intention of calling attention to the fact that where as the exported sheep in September 1905 made the highest average of declared value, those exported in September 1904 made the lowest.

Everyone who is connected with the export trade in sheep, and conversant with the prices prevailing for stud sheep during the two months under review, will at once come to the conclusion that some grave error must have been made twelve months ago.

Turning to the export trade of the year, so far as completed, we find that 4,408 sheep have been exported since January 1 last. This number is 23.60 per cent. less than the number exported during the same period of the previous year, but here again compensation has been made to our flock-masters for the smaller number taken by the materially higher average of declared value, i.e., £14 11s. 11d., as against £8 2s. 1d.

The supply of imported sheep during the past month has been the smallest on record for that period during the past eleven years: 9,223 head of the average declared value of £1 11s. 3d. only were imported. Compared with last year, the reduction is 68.49 per cent.

Turning to the figures for the first nine months of the current year, we find that the imported sheep number 155,324. Here again a notable reduction is found as compared with any of the previous years since 1895, and compared with the imports for the year 1904 for the same period there is a reduction of 41.32 per cent.

The mutton supply during the past month was likewise much less than last year, the quantity imported being 299,282 cwts., or 5.68 per cent. less than in September 1904.

During the nine months of the current year there has been an increase of 4.66 per cent. in the quantity of mutton imported, which amounts to 2,930,454 cwts.

It is interesting to note that during the past nine months the Australasian supplies have increased enormously. Twelve months ago the aggregate total for that period was 162,277 cwts., and for this year the quantity imported is 308,868, a very considerable increase indeed. On the other hand, the New Zealand supplies, which at this period of last year amounted to 1,465,360 cwts., only amount to 1,303,924 cwts., a reduction of 11.01 per cent.

The Argentine supplies during the current year show a material increase, i.e., from 1,056,333 cwts. to 1,084,623 cwts., an increase of practically 30,000 cwts.

There has also been a considerable increase of imported mutton during the past nine months from other countries. From this source of supply we have received 69,843 cwts. during the past nine months, as against 9,394 cwts. in the same period of last year.

It has often been said when the Argentine buyers have been purchasing sheep at high prices for stud purposes, "How in the world can it pay these people to pay such a high price for their rams?"

A table that is before us as we write shows that in the first nine months of the year 1895 the value of the imported mutton from that country was £757,190. Ten years subsequently, i.e., 1905, the value of the imported mutton for the same period is £1,861,713, an increase of £1,104,523. This shows how it is that the Argentine buyer can afford to purchase at such high prices the pick of the stud rams of this country. The sum, large as it is, that has been invested in the purchase of stud stock from this country for improving the Argentine flocks has undoubtedly been a good investment. The figures quoted above place this fact beyond dispute.

As to what the future may have in store, no one can tell, but from a close personal intercourse with many of the leading purchasers of stud sheep, the writer is enabled to say that almost without exception their anticipations are that the demand for English stud sheep will be quite as good in the future as it has been in the past, particularly for the higher class sheep, for, say they, "The improvement has only begun with us, not finished.

The only possible cause that would make any alteration in the demand for the Argentine is the stoppage of the trade with that country, and it is on this account that every live stock breeder must, without exception, stand firm against every attempt made to alter the present import regulations of live stock into this country, because once let contagious disease again be imported, the loss and disaster that would follow in its train is beyond computation.

Important Sale of Dorset Down Sheep.

The first ram-breeding flock of Dorset Downs to come under the hammer since the formation of a registered association in Dorset—that of Mr. T. Bartlett, of West Knighton, Dorchester—attracted a very large and representative company on Thursday, which made it clear beyond a shadow of doubt that in taking this step breeders of this class of sheep have done the correct thing, which will undoubtedly greatly enhance the popularity of the sheep and, at the same time, ensure a large accession of members when the many good points of the Dorset Down become better known and more generally recognised. And this is bound to ensue at no distant date, for various reasons, as the best type of a Dorset Down is now understood to be a sheep in size coming between the Hampshire Down and the Southdown, which, for fecundity and early maturity, is the equal of the former, and for hardiness, quality of mutton, and wool closely resembles the latter. And no better illustration could have been afforded of Mr. Bartlett's success in breeding this type of sheep during the last quarter of a century than the keen competition there was for the sheep all through—prices, we consider, that quite establish a record for the breed, and also a record as regards flock sales in the district for some seasons past. This result is, no doubt, very largely due to the advantages of registration and association, and affords one more proof of the benefits of combination, which is bound to do much good to this eminently useful class of sheep. As a proof of the high prices ruling, we may mention that the sixteen ewes made from 63s. to 84s., giving an average of 72s. 8d.; the four-tooths, 63s. to 104s., averaging 78s. 3d.; two-tooths, 66s. to 100s., averaging 79s.; ewe lambs, 50s. to 56s. for the bulk, and two pens 44s. and 44s. 6d., giving an average of 48s. 1d. The sheep went into order by different districts, the chief purchaser being Mr. John Jeorrett, of Puddletown, who has given up his Horns and is in future keeping Dorset Downs, Colonel R. Williams, M.P., Mr. W. H. Chilcott, Mr. Andrews, Mr. T. O. Boatswain, Mr. Hallett (Somerset), etc.

Sheep Fairs and Sales.

Corby.

Corby sheep fair, the most important in South Lincolnshire, was held on Monday last. There was a brisk demand for both sheep and lambs, and exceptionally good prices were realised. Ewes made to 58s., and theaves to 50s. An exceptionally good lot of lambs were sent in, and both half-breds and long wools made up to 46s. Lincoln long wool and Hampshire down rams sold well. The top average was made by Sir John H. Thorold, Syston Park, whose consignment averaged £10 14s., the best price being 12½ gs. Hampshire Downs sent by Mr. Shaw, Peterborough, and Mr. J. Flower, Chilmark, made up to 5 gs.

Malton.

A large number of sheep were sold at the Malton Michaelmas fair held on Wednesday and Thursday last, and some good prices were realised. The biggest price for Leicester ewes was received by Mr. Megginson, with a flock which made to 65s. each. Masham shearlings of quality ruled at 48s. to 50s., secondary 40s. to 44s. Lambs were not very numerous. Good Downs made 38s. to 44s., Leicesters 40s. to 44s., crossed ditto, 25s. to 32s. and common lots from 22s. each. North-country lambs made 18s. to 25s., gimmer shearlings 35s. to 42s. Leicester shearling rams made up to £12, and two-shear rams of the same breed up to £15, whilst Down rams made from £5 to £7.

Sittingbourne.

Mr. F. Austin Bensted's annual sale at Sittingbourne took place on Friday, when the attendance was thoroughly representative, and, for the first time, the Argentine buyer was present. This fact doubtless had a very beneficial effect upon the prices realised by the rams, which sold at very much better prices than we have ever before recorded at this sale for so large numbers.

The ewes sold well, tegs making up to 59s. 6d., one-lamb ewes to 57s., one and two lamb ewes to 45s. Three lamb ewes were in great demand for all that were in good condition, as much as 50s. was paid for the best. Wether tegs went to 47s., wether lambs to 36s., for half-breds, and 32s. for runts.

(*Other Sheep Sales, will be found on page* 450.)

BARLEY AND HOPS AT THE BREWER'S EXHIBITION.

There was a large attendance on Saturday at the Agricultural Hall, Islington, when the twenty-seventh annual Brewers' Exhibition was successfully launched. To agriculturists, the sections that most appeal are the malting barley, hops, and cider. Brewers and distillers are admittedly the best customers for barley that the farmer can have, and they are prepared to pay a better price for it than is obtainable elsewhere; and the primary aim of this competition is to demonstrate to the grower the class of barley most favoured, and that quality is essential. The schedule comprises twenty different classes, and liberal prizes are offered in connection therewith; indeed, it is possible for the champion sample to take six cups, two gold and other medals, several diplomas, and upwards of £100 in cash. This year there have been submitted in competition 263 samples of British barley, 30 Foreign samples, and 2 Colonial samples. Several of the principal awards follow, but a complete list of the winners of the diplomas for seed purposes, etc., will appear next week.

Barley Judges.—Mr. Frank Flinn*, Bishop's Stortford; Mr. James Grant*, Manchester; Mr. Edward R. Hill (Messrs. F. and G. Smith, Ltd., East Dereham); Mr. W. R. Lane, Birmingham; Mr. H. Mackeson, Hythe; Mr. Lewis J. Meakin, Burton-on-Trent; Mr. C. H. Stafford, Hollow Stone, Nottingham; Mr. S. N. Thompson*, Smethwick; Mr. C. Howard Tripp, Burton-on-Trent.

* These gentlemen also act as juriors of seed barley.

PRIZE LIST.

The MARK LANE EXPRESS Champion Challenge Cup, for Seed Barley Grown in the United Kingdom and the Colonies (only). Offered by the proprietors of the MARK LANE EXPRESS to growers only, for the best sample of seed barley exhibited, grown in Great Britain and Ireland and in any of the Colonies of Great Britain.—Mr. C. G. Miles (catalogue number 101).

Class 1.—Chevalier Malting Barley, British Growth.—1, Mr. G. Miles (101); 2, Mr. G. Powell (78); 3, Mr. Charles Wilkinson (62); v.h.c., Mr. George Partridge (123); h.c., Mr. H. R. Posford (149); c., Lord de Ramsey (60).

Class 2.—Goldthorpe Malting Barley, British Growth.—1, Mr. J. Powell (233); 2, Mr. F. B. Barling (205); 3, Mr. T. W. Purser (88); v.h.c., Mr. F. E. James (239); h.c., Mr. F. Gent (197).

Class 3—Colonial Malting Barley.—1 and 2, Messrs. Woodley, Watney, and Richardson.

The Hop Section.

The judges have had a comparatively easy task this year. As the samples submitted to them did not exceed fifty. We are unable this week to criticise the quality of the exhibits, as they were not opened up when we visited the Agricultural Hall on Saturday, we must therefore postpone our remarks to our next issue and limit our present record to the prize list, as under:—

Class 1.—East Kent Goldings for Pale Ales.—1st. C. F. File, Bilting Grange, Ashford. 2nd. H. W. Clements, Boughton Aluph, Ashford. 3rd. W. Lillywhite, Thanington Court, Canterbury.

Class II.—Mid-Kent Goldings for Pale Ales.—1st. W. Rogers, Maplescombe, Farningham. This sample also secured the champion award and gold medal.

Class III.—East and Mid-Kent for Ordinary Beers.—1st. W. Rogers, Maplescombe, Farningham. 2nd. W. Rogers, Maplescombe, Farningham. 3rd. W. Lillywhite, Thanington, Canterbury.

Class IV.—Weald of Kents for Pale Ales.—1st. E. Mannington, Eaglesden, Benenden.

Class V.—Weald of Kents for Ordinary Beers.—1st. G. A. Calcutt, Paynetts, Goudhurst.

Classes VI. and VII.—No awards.

Class VIII.—Worcesters for Pale Ales.—1st. J. A. Thompson, Woolhope, Hereford.

Class IX.—Worcesters for Ordinary Beers.—1st. C. Whittindale, Aylton, Ledbury.

Class X. — Farnhams for Pale Ales. — 1st. J. Bonham Carter, Buriton, Petersfield.

Class XI.—Farnhams for Ordinary Beers.—1st. P. and C. Steward, Weston, Petersfield.

Cider.

Cider, as a health-promoting beverage, is becoming daily more popular, and the sales in licensed houses alone are stated to be more than double what they were a year or two ago. This increasing demand is evidence by the growing success of the cider and perry competitions, which must considerably further the interests of makers. This year the number of entries is nearly doubled, there being a grand total of 156, as against 89 in 1904. Farmers and merchants are taking the keenest interest in these annual contests, and, with the opportunities afforded by this exhibition, cider has undoubtedly a great future before it. The classes now number twenty-one, and medals and cash prizes are offered in connection therewith. To add to the interest of the Cider Section, the Governors and Directors of the National Fruit and Cider Institute, of Long Ashton, Bristol, are sending up to the exhibition samples of their experimental ciders, blends and pure cultivations, made in the autumn of 1904.

British Entries (263) Classed and Grouped Alphabetically in Counties.

CLASS I.—(CHEVALIER).

No.	Grower.	Where grown.	Soil.	Subsoil.	Two preceding Crops 1904.	Two preceding Crops 1903.	Seed sown.	Pecks per acre.	Manure Used.	Date Sown.	Date Cut.	Qty. Gn. Qrs.	Cleaning M'chin'ry

PUBLICATIONS RECEIVED.

We have received a copy of a card containing "Short Instructions for Butter-Making," issued by Messrs. Tisdale and Robinson from the "Dairy World," office, 98 and 99, Fetter Lane, E.C. These instructions are reprinted from "Butter-making on the Farm and at the Creamery," by the same authors, of which a revised and enlarged edition is to be published shortly. The card will be found useful to hang up in dairies for reference, and will be appreciated by beginners, as if hung somewhere near their churn, they constantly refer to it if in doubt as to what to do next. The price is only 1d., or 1½d., post free.

The subject of tuberculosis, both in man and beast, is always receiving such a great deal of attention and discussion, that there is no excuse for the stockbreeder being ignorant on this point. There are, however, always beginners to be thought of, and for them books are provided in goodly numbers. Among these is "Cattle Tuberculosis," by H. Sessions, of which Messrs. Baillière, Tindal, and Cox, 8, Henrietta Street, Strand, have just issued a new and revised edition; price 3s. net. The work deals with the causes, symptoms, and diagnosis of the disease, the tuberculin test, milk and meat inspection, etc., so that the subject is fairly exhaustively dealt with.

A second and revised edition has recently been issued of Leslie S. Wood's well-known work, "The Principles and Practice of Farm Valuations." Since the publication of the first edition, a great advance has been made in the matter of farm valuations by the almost universal adoption by valuers' associations of scales of compensation for feeding stuffs based on manurial values instead of cost price, and it was to meet this change that the new and revised edition of Mr. Wood's work was issued. Among the new features are a series of maps showing the variations of customs throughout England and Wales, and the connection between them; and a chapter on feeding stuffs. As regards the volume itself, this needs little introduction, being so well known, but it may be said that it is written in simple language for the most uninitiated, and it shows the great variations in the customs of the country, their development, and relationship to the present time. Altogether a capital work, well worth the 5s. it is published at. It is issued from the offices of the "Estates Gazette," 6, St. Bride Street, E.C.

A useful, practical, and handy volume on "Dairy Cows and the Dairy," by J. Walker, has just been issued from the office of "Farm and Garden," 148 and 149, Aldersgate Street, London. Within the compass of 150 pages, it deals in a succinct and lucid manner with every phase of dairy cattle and dairy work. All the principal breeds of dairy cattle are described and illustrated, and the important questions of housing, feeding, milking, and management generally, fully and ably dealt with by the author, a practical farmer and cow-keeper of long experience. Moreover, all the common ailments and diseases of dairy cattle are treated with sufficient fulness to render this section of the volume of great service to cow-keepers. Then the author goes on in the second section of the book to describe the construction of an up-to-date dairy and its management; the making, packing, and marketing of butter; manufacture of Cheddar, Stilton, Caerphilly, Dorset, Cheshire, and other cheeses, Devonshire cream, junket, and so on; management of milk and cream; finally winding up with a capital calendar of hints for each month of the year. The work is freely and suitably illustrated, and is remarkably good value for the shilling charged for it.

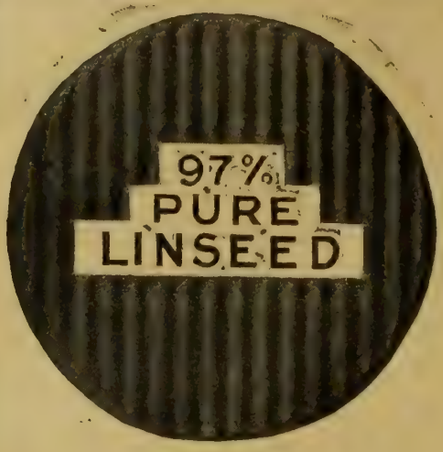
We have received a copy of the Third Annual Report of the Central Seed Testing Laboratory of the Aynsome Agriculture Station, Grange-over-Sands, Lancashire, and it proves that the station is doing good work. It appears that in the season of 1904-5 1,296 samples of seeds were tested, as compared with 1,077 in 1903-4 and 697 in 1902-3. Of these 1,296 samples the largest number have again been red clovers and cow-grasses, white clovers, Italian and perennial rye-grasses, cocksfoots, turnips, swedes, and mangolds. The number of examinationc for dodder have fallen off considerably, and amounted to only thirty-nine samples, as against 137 for the previous year. Of these thirty-nine samples, twenty-six were found free from dodder. Three of the samples, however, were special bad ones. One had 168 dodder seeds in 2 ozs., another had 202 in 1 oz., while the third had 260 in 1½ oz. It is interesting to note that of the 1,296 samples tested no fewer than 1,200 came from seed merchants, so that farmers apparently do not yet realise the value of seed testing.

The summer number of "Bibby's Quarterly" has now been issued, and that its appearance is welcomed by its readers goes without saying; in fact, it is the general regret that the "Quarterly" does not appear at regular and less lengthy intervals, for it is quite a picture gallery, and at the same time a mine of useful and interesting information. Still, as is candidly admitted in editorial remarks, to produce such a journal at the price charged for it, does not admit of a profit on the sale, but a decided loss, and one cannot expect too many numbers under the circumstances. However, schemes are being devised whereby this interesting "Quarterly" may be run without loss, whilst at the same time keeping up to its high standard as a really artistic and instructive journal, and on this point we are promised more information in the next number, but when this will appear is not stated.

"Soil Physics Laboratory Guide," by W. H. Stevenson, A.B., B.S.A., and J. O. Schaub, B.S., is an American work, the writers being respectively Professor and Assistant Professor of Soils at Iowa State College, and the book is the outgrowth of laboratory instruction given by them in that College. The aim of the authors was to present to the instructor and student a carefully outlined series of experiments in soil physics, and they have succeeded admirably, whilst the many illustrations add to the value of the work. The sole agents for Europe are Messrs. Kegan Paul, Trench, Trübner and Co., Dryden House, Gerrard Street, W., and the price is 2s 6d. net.

Ludlow Horse Fair.—The October horse fair at Ludlow was held on Monday, when there was a very large show of animals, and a good number of dealers. Prices were fairly good, but trade slow. Good cart horses realised £30 to £50, hacks and harness horses £25 to £35, cobs £20 to £25, and ponies £10 to £18.

Mr. C. J. Calthorpe, of the well-known firm of auctioneers (Messrs. Briggs and Calthorpe), died at his residence, Horkstow Hall, Barton-on-Humber, recently, at the age of eighty. Mr. Calthorpe's knowledge of farming matters was most extensive, and was acquired not only in the sale room, but as the result of experience, for he worked several large farms in different parts of Lincolnshire.



97 % PURE LINSEED CAKES.

Guaranteed to contain 13% Pure Linseed Oil and under 3/4% of Sand.

This is the Purest and Best Linseed Cake manufactured.

WATERLOO ROUND FEEDING CAKES.

The Most Perfect Mixed Food in the Market for all classes of Stock.

LEGAL NOTICE.

Re WILLIAM RUDDOCK THRIFT, deceased.

Pursuant to the Statute 22nd and 23rd Victoria, cap. 35, intituled "An Act to further amend the law of property and to relieve trustees."

NOTICE is hereby given that all creditors and other persons having any claims or demands against the estate of William Ruddock Thrift, late of Little Hadham, in the county of Hertford, and Boreham, in the county of Essex, Miller, deceased (who died on the 4th day of March, 1905), and whose will was proved in the Principal Registry of the Probate Division of the High Court of Justice, on the 2nd day of May, 1905, by Harry Thomas Hamlet Haylock, of Chelmsford, in the county of Essex, licensed victualler, and William Jackson Hart, of Much Hadham, in the county of Hertford, gentleman, the executors therein named), are hereby required to send the particulars in writing of their claims or demands to us, the undersigned, on or before the 18th day of November, 1905, after which date the said executors will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to the claims and demands of which they shall then have had notice, and they will not be liable for the assets of the said deceased, or any part thereof, to any person or persons of whose claims or demands they shall not then have had notice.

Dated this 9th day of October, 1905.

RICHARDSON, FOXWELL, and HART,
Solicitors for the Executors,
Much Hadham, Herts.

RAILWAY ANNOUNCEMENTS.

GREAT NORTHERN RAILWAY.

SCOTTISH KENNEL CLUB'S 27TH SHOW OF SPORTING AND OTHER DOGS, IN THE WAVERLEY MARKET, EDINBURGH, OCTOBER 25TH, 26TH, AND 27TH, 1905.

The Great Northern Railway Company will convey exhibits for the above Show from Keighley, Halifax, Bradford, Doncaster, Worksop, Retford, Newark, Barton, Derby, Ilkeston, Nottingham, Grantham, Grimsby, Gainsborough, Lincoln, Horncastle, Louth, Alford, Sleaford, Boston, Spalding, Yarmouth, Cromer, Norwich, Sutton Bridge, Wisbech, Peterborough, Huntingdon, Sandy, Cambridge, Hitchin, Dunstable, Luton, Hertford, St. Albans, and other towns on and in connection with their system.

Through vans will be run wherever necessary for the conveyance of exhibits.

Rates for the conveyance of traffic may be obtained on application to any Great Northern Station Master or Agent, and they will be found in no case to exceed the rates in force by any other route.

Special arrangements will be made for the return of exhibits at the close of the Show.

A representative will be in attendance to give all information as to train service, cartage facilities, &c.,

To ensure prompt attention, exhibitors should be careful to mark the address labels "Per Great Northern Railway."

OLIVER BURY,
General Manager.

GREAT NORTHERN RAILWAY.

GREAT NATIONAL POULTRY AND PIGEON SHOW, at the CRYSTAL PALACE, SYDENHAM, NOVEMBER 7th, 8th, 9th, and 10th, 1905.

Intending Exhibitors at this Show are informed that the Great Northern Railway Company make every arrangement for the careful and expeditious transit of exhibits to and from the Crystal Palace.

For the convenience of exhibitors, through vans will be run to the Crystal Palace on Monday, November 6th.

Consignments from branch lines and intermediate stations at which these trains do not stop will be placed in the through vans at the various junctions, thus ensuring direct transit to the Crystal Palace.

Return Traffic.—Arrangements will be made for the return of the traffic at the close of the Show in through vans. Exhibitors wishing to avail themselves of these facilities should consign and direct their exhibits "per Great Northern Railway," and be careful to insert the route on the return, as well as the outward, portion of the address label.

A Great Northern representative will be in attendance at the Show, prepared to give every information to exhibitors, and to facilitate removal at the close of the Show. The removal order should be sent to the Chief Passenger Agent, King's Cross Station, at the commencement of the Show.

Any information as to arrangements for the forward or return journey, &c., may be had on application to the Chief Passenger Agent, Great Northern Railway, King's Cross, London.

OLIVER BURY, General Manager.
London, October, 1905.

GREAT NORTHERN RAILWAY.

GRAND INTERNATIONAL POULTRY, RABBIT, AND PIGEON SHOW at the ALEXANDRA PALACE, LONDON, November 7th, 8th and 9th, 1905.

Exhibitors are informed that the Railway Company have arranged for the transit of exhibits to and from the Alexandra Palace.

Through vans will be run to the Alexandra Palace on Monday, November 6th.

Branch line consignments will be placed in the through vans at the various junctions.

Conveyance rates can be obtained at the various stations on the line.

Arrangements will be made for the return of the traffic at the close of the show in through vans. Exhibitors should consign and direct their exhibits "per Great Northern Railway," and be careful to insert the route on the return, as well as the outward, portion of the address label. A representative will attend the show, to give every information to exhibitors, and to facilitate removal at the close of the show. The removal order should be sent to the Chief Passenger Agent, King's Cross Station, at the commencement of the Show.

All information may be had on application to the Chief Passenger Agent, Great Northern Railway, King's Cross, London.

OLIVER BURY, General Manager.
London, October, 1905.

MIDLAND RAILWAY.

THE SCOTTISH KENNEL CLUB'S SHOW, EDINBURGH, OCTOBER 25th to 27th, 1905.

In connection with the Scottish Kennel Club's Show, to be held at Edinburgh on October 25th, 26th and 27th, the Midland Railway Company will run a 3rd Class Saloon to Edinburgh by the 12.30 p.m. train from Manchester (Victoria) on October 24th, for the convenience of exhibitors from the Lancashire District.

In writing to advertisers readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

THE

"BIBBY" CAKE
V.
LINSEED CAKE.

In out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the "**BIBBY**" **CAKE** to a competitive test.

Consider the saving! At the relative prices the cost of "**BIBBY**" is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on "**BIBBY**" **CAKE**, which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous **DAIRY CAKE** in Cakettes, Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in out well-known **DAIRY CAKE**, **CAKETTES**, and **MEAL.**

Bibby's Quarterly.

The new number of BIBBY'S QUARTERLY, edited by our Mr. JOSEPH BIBBY, is now out, and can be had during this month at all Smith's Bookstalls, price 1/-.

There be those who say that BIBBY'S QUARTERLY is the best periodical which comes into the farmhouse, but there be also gainsayers who affirm that if it dealt more with live stock, and less with high ethics, it would be more acceptable to the average farmer; and we are rather of that opinion ourselves, but the Editor tells us that he edits BIBBY'S QUARTERLY to please himself, and we have to leave it at that; should, however, any reader of BIBBY'S QUARTERLY make a purchase at Smith's Bookstall, and is afterwards doubtful that he has got his shilling's worth, we undertake to make matters straight with him if he apprise us of his dissatisfaction within the present month.

THE FARMERS' CONFERENCE AT DARLINGTON.

The significance of Friday's conference at Darlington is not in anything said thereat, but in the Conference itself taking place. Not a single resolution was proposed which was not the embodiment of ideas urged and reiterated in these columns, at the Central Chamber of Agriculture, and at the annual dinners of agriculturists held in London during Smithfield week. But it would really seem from this big stir in the north as if farmers were at last awaking to the fact that Heaven helps those who help themselves. If, as a result of the Conference's recommendations, farmers ask the candidates at elections for their views on a few leading points of vital interest, the Conference will have marked an entirely new departure. That is to say, if the farmers so asking put a bullet in their gun, and do not, as in the past, confine themselves to platonic aspirations for the candidate's vote when returned. If farmers submit to candidates their needs they must accompany such statement by a specific pledge to vote for the candidate if he gives the required pledge, and to vote against him if he wil lnot give it. Farmers hitherto have not been sufficiently interested in the preservation of what they live by—the national agriculture. It is a good sign that in the north, at all events, they are beginning to see that such preservation is really more important than the licensing or non-licensing of the "Red Lion," the use or disuse of surplices for the village choir. On these latter questions the Order of Good Templars and the Protestant Association are prepared to give their votes. Who are we that we should blame them? But the farmers' interests are at least as vital. Let him fight for them only half as keenly as men fight for temperance or "ritualistic" issues, and the decline of British agriculture will be arrested. No Government, Liberal or Conservative, will attempt to resist the demands of a compact group of a hundred agricultural members and the farming interest if supported by the agricultural labourers is capable of returning two hundred. In our opinion the most valuable speech at Darlington was that of Mr. Bainbridge, of the Stockton Chamber of Agriculture, who urged that farmers should devote themselves to bringing the agricultural labourers into line.

The farmer can speak to his men on matters affecting agriculture as no other person can, and since the labourers' vote cast against the farmer's only results in the neutralisation of agricultural influence, there is the most urgent need for such speaking. With respect to farmers being better represented on local bodies, Mr. Hill's resolution was called for, but the difficulty rests in getting farmers to attend the meetings of the parochial, rural, and county councils if elected. It might be well to attach some honour to such unpaid but most important service. A testimonial to a farmer after three years' service, or a dinner given by his farming neighbours for whom he had spoken and voted, would do much to redeem the attendance at local meetings from being regarded as a casual matter, very well when nothing else was on hand, but of no real consequence. Lord Barnard was perfectly right in his speech when pointing out how the actively pushing classes secured vastly more than their share of representation.

That agricultural rating is a matter needing particular attention was urged on the Conference from Glamorgan, a good sign of western co-operation with northern farmers. The question, indeed, admits of most important political developments, and there are a good many persons coming to think that in the freeing wheat land from local burdens might be found the simplest solution of our present problems of Free Trade and a duty on imported wheat.

The prohibition of preferential railway rates for imports was urged at the Conference, and the Board of Trade undoubtedly need fresh powers for dealing with the difficult problem of "through contracts" for delivery of foreign corn at some inland town. That the adulteration of buttermilk and other agricultural produce is not checked more sternly by the Legislature is a crying scandal, but here the sitting Members of Parliament are to blame. Had the rural Members this last July told their party Whips that from the day the Butter Bill was abandoned they should go home and not attend any more that Session, the Bill would now be law.

We cannot help feeling a little regret at the decision of the Conference to meet next year at Newcastle. A General Conference should be more peripatetic, preaching its gospel to a far wider area than that of North-eastern England. Seeing that delegates were present from Wales and Scotland, Lincoln, and Leicester, a wider radius might reasonably have been looked for in the choice of place. Newcastle has great claims, but is too near Darlington to be the immediate successor to that town.

Hereford October Fair.—By the provision of a commodious and convenient market, the Hereford fairs have been all absorbed in the weekly markets, except the October fair, and there are signs that this ancient institution is beginning to go the way of the others, for at that held last week there was decidedly a shorter number of big cattle, the supply consisting largely of yearlings and two-year-olds, and they were ultimately cleared off at about 10s. per head lower than last year. About 150 yearlings were sold by auction. Yearlings ranged from £9 to £15 5s apiece; two-year-olds from £12 10s. to £15; and bigger cattle up to £18 10s. and £19 10s. Cattle at £14 to £18 appeared to be selling the most readily. Shortness of keep in the Midlands made the trade slow. There was a record horse fair as to numbers, but trade was slow, cart horses selling up to £70 apiece, and Welsh horses up to £22; for nags there was very little demand.

Seasonable Topics.

A Fine October.

Though here and there we hear complaints about scarcity of water, most people are thankful for the delightfully fine October weather which is helping on the winter, and affording opportunities for pushing on with seasonable work. How glorious now are the thousand tints which paint the dying foliage, and though we regret the frost which has cut down the dahlias since our last notes were written, there are still some relics of the summer left. Was there ever a better season for clearing the stubbles? and farmers who are at all backward in this work have only got themselves to blame. We hear some complaints that the land is too dry for seeding, as it may be in some districts, but in others the ground works well, and a good deal of wheat has been got in since Michaelmas. What a time it is, also, for getting up potatoes; but about these there is a dismal tale to tell, for in most places crops are badly diseased. It is difficult to explain why, because we have had no great weight of rain through the growing season, but the disease appeared in the tops very suddenly, and it came just after a succession of warm misty nights. How much those climatic conditions had to do with the present diseased state of the potatoes is a moot point. The harvest is supposed to be over, but since our last notes were written we have seen several fields of oats from very late sowings not yet gathered in. What would their fate have been had the weather been different? As we write, we can hear the musical hum of the threshing machine in the crisp, frosty air, and we know of one farmer who is thankful for another fine day to get this important task finished. Indeed, though we may want rain, it will not be without feelings of regret that we shall meet the end of this glorious autumn weather.

* * *

Back to the Land.

So hackneyed is this phrase that we are reluctant to use it, but we do so in recollection of a time when the flower of British manhood was fighting for the old flag in South Africa, and farmers were at their wits end to know how to get labour for harvest and other work. Even at that critical moment, a friend of ours who had studied the question closely stuck to the opinion (we thought somewhat obstinately) that things would right themselves in time, and that people would come back to the land of their own accord. Are they coming? or would they come if they had the opportunity? are questions worth considering at the present moment, because the tendency seems to point in this direction. One thing is certain, labour on the land is not such a scarce commodity as it was a few seasons ago, but the unfortunate part of it is that many of the people who left the country and went to the towns, but would now come back, are not of as much value for agriculture as they were before they left. The other day a large farmer informed us that a man who left him several years ago to take up more remunerative employment in Birmingham, had written to say that he would come back to the farm for any wages his old employer liked to offer him if the latter would give him a job. Perhaps if this request had been made a couple of years ago, the applicant would have found an opening, but now things are different, and the farmer has as much labour as he requires. These are but solitary instances, but a straw indicates the way the wind blows, and perhaps, the reaction having set in, people will come back to the land of their own accord, without all the tempting and persuading that some people consider necessary. Let them come, by all means, if they are formed of the stuff that is required on the land, but of the thousands of starving unemployed in the towns there are comparatively few that would be of much use in rural capacities.

* * *

The Failure of Boomed Potatoes.

There are few men, if any, who know more about potatoes than Mr. T. A. Scarlett, of Edinburgh, and certain remarks of his which appeared in our last issue are worthy of consideration. It was in reference to some Eldorados of his that Mr. Scarlett observed that they had been grown from roots which had been propagated from shoots, and, though this was the quickest way to increase any variety for which there was a great demand, it was also, as Mr. Scarlett had since learned, the surest way of ruining any variety. Just so, and in the above remark we may find the secret of the unsatisfactory behaviour of more than one boomed variety. When the potato craze was at its height, and speculators were ready to propagate from the smell of a tuber, had such a thing been possible, we ventured to suggest that this unnatural method of increasing varieties might have an injurious effect on their constitutions. The potato fever was too high at the moment for any notice to be taken of the remark, but since they have had time to reflect, many able growers have come to the conclusion that the constitution of more than one variety has been sadly impaired, if not hopelessly ruined, by express propagation. With most people Northern Star has failed lamentably this year, Eldorado has been nearly as disappointing, and other new varieties have not come up to their reputations. Is this the reward of the sin of avarice on the part of those who were anxious to take advantage of the unaccountable boom and make money quickly? Some may argue to the contrary, but when such men as Mr. T. A. Scarlett incline to the opinion, and express themselves so emphatically on the point, you may depend there is something in it. At any rate, it is strange that only the much-boomed novelties have failed in general cultivation, while such potatoes as Sir John Llewelyn, The Factor, and King Edward VII., which were in commerce before the rush began, have acquitted themselves creditably.

* * *

Hops in 1905.

Hopping for the season has been over some time, the people from the East End who journeyed south for the harvest have doubtless worn the Kentish tan from their cheeks by now, and the smut of the Black Country has again settled on the features of the people who lost it for a time in the hop-yards of Worcester and Hereford. And the result of it all is an aggregate crop 413,613 cwt. in excess of that of last year. What a grand thing for the hop-growers! any casual reader of the returns might say; but wait a bit. Hops are used for the sole purpose of brewing, and brewers only require a certain quantity for their needs. In addition to this, hop-growers abroad find a market for their wares in Britain, though it is hardly likely they will get much of an opening this year, and there are ugly whispers to the effect that a lot of beer is brewed nowadays without hops. Perhaps the individual who will benefit to the greatest extent through the heavy crop of hops is the brewer, because he will be able to buy cheaper, and there is not much likelihood of the working man getting his pint of beer for any less. In truth, hop-growing is a speculative business, for when Dame Nature is most kind the law of supply and demand robs the grower of the benefits he should reap from the abundance of his harvest.

* * *

Cotswold Sheep.

In these days of sheep booms and high prices, it is rather surprising that so little is heard of the true white-faced breed that is a native of the hill country after which it is named. The true Cotswold is a large-framed sheep, hard through exposure on the wind-swept hills which are its home, and though its mutton may not be up to tip-top quality, it makes a lot of wool, and that, after all, is what is wanted in the Argentine. Those stone-built mills in the Stroud Valley in Gloucestershire, where unequalled West of England tweeds are still turned out, doubtless owe their origin to the sheep which grazed on the Cotswolds in days gone by. There are a few flock-masters who still keep to the pure white-faced breed, and, though they have faith in its value, they seem to keep up the pure strain more for the sake of old custom than anything else. We have had it from one breeder that the Cotswold sheep only needs booming to make it popular and bring it into demand, and, if this be so, it is a pity that its light should be hid under a bushel, particularly at a time when foreign wool-producers are prepared to pay handsomely for animals of strains that will serve their purpose.

* * *

Brewers' Grains.

On the dairy farms in the Midlands a grain-hole is considered to be almost as great a necessity on a holding as a rickyard or a haybarn, and at wayside railway stations it is a common sight to see lines of trucks filled with this bye-product from the Burton breweries. The time has never been in modern times when the Midland dairy farmer did not make use of grains, and, in the days before the railways came to his aid for purposes of transit, the farmer's team and waggon used to rattle into Burton and return laden with grains. But the traffic in this material at the time when farmers made cheese and butter was little compared to what it is in these days of the milk trade, for now grains are indispensable owing to the aid they render in the all absorbing matter of producing milk. "Have you bought your grains?" is as commonplace a question as "Have you got your hay in?" amongst Midland dairy farmers, and the task of filling the grain-hole is almost as important as that of filling the haybarn. Indeed, since the object of the farmer has been to produce large quantities of milk in the winter, when at one time the cows were mostly dry and the cheese press was idle, the demand for hay has shown a decrease, and that for milk-producing food like grains and cabbage has risen. Speaking of green crops, we know of farmers who were anxious to lay down arable fields to grass some years ago because it did not pay under the plough, that would be glad to make the same fields arable again now for the sake of growing cabbage for the milking cows

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Oct. 14, 1905, together with the quantities imported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905.

Store Cattle and Sheep Sale at Basingstoke.—Messrs. Raynbird and Sons' annual autumn sale of store cattle and sheep was held on Monday last at the auction mart, Basingstoke, when a large and influential attendance of buyers and consignors assembled from all parts to meet an assortment of well-bred cattle, the number on offer being 137 sheep and lambs and 321 store steers and heifers. The trade for the short entry of store sheep was brisk, lambs realising 25s. to 38s. Store heifers of good age and quality met a quick trade, and were easily disposed of at satisfactory prices. The trade for store steers was disappointing, it being difficult, except at a low figure, to dispose of the older beasts. The depression in the fat beef trade no doubt had an adverse effect upon the value of this class of store cattle. Yearling bulls were sold from £7 15s. to £13 5s., yearling home-bred heifers £5 to £6 10s., two-year-old heifers £8 5s. to £11 10s. each, strong Shorthorn steers £10 10s. to £13 15s. each, two-year-old Galloway heifers realised £8 10s. to £10, yearling ditto £7 5s., in-calf heifers £10 10s. to £13 5s.

Clitheroe "Saturday" Fair.—The annual Clitheroe great "Saturday Fair" was held at Clitheroe on Thursday, when the show of horses, cattle, and sheep was a phenomenal one. Thousands of sheep were shown, and there were nearly 2,000 cattle and 1,000 horses in the market. The weather was fine and the attendance approached a record, but trade, taken all round, was not good. Prices were buoyant till late in the day, when a slight decline was noticeable. Heavy horses made £21 to £60, agricultural horses £15 to £50, light horses £15 to 60 gs., cobs £10 to £35, ponies £3 10s. to £12, young horses over one year £14 to £27, ditto under one year old £5 to £12 each. In cattle newly-calved cows sold at £13 10s. to £21, present calvers £12 10s. to £19 10s., lying-off cattle £9 10s. to £17 10s., geld cattle £7 10s. to £13 10s., bulls £8 to £15, bullocks to £14, young stock £3 10s. to £11, Irish and Scotch feeding cattle £4 to £9 10s. In sheep Scotch ewes made 21s. to 29s., half-breds 35s. to 45s., Cheviots 25s. to 32s., pure-bred Leicester rams £3 to £6 6s., other rams £2 10s. to £5, store lambs 17s. to 32s. each.

Agricultural Politics.

BY A LOBBYIST.

If portents go for aught, the Local Government Board, in the much-heralded and much-vaunted forthcoming Liberal Ministry, will have a considerable moment. Who, then, will be its President? Two men in the Liberal party have specially signalised themselves by a disciplined and scientific study of the local government problem. Strangely enough, too, both men have distinguished themselves in the realm of foreign affairs, and both have a considerable weight in the Chancelleries of Europe. These statesmen are, of course, Lord Edmond Fitzmaurice and Sir Charles Dilke. If Sir Charles Dilke be given a portfolio, a fact which is a good deal dependable on the attitude of British Nonconformity, I should opine it will not be that of the Local Government Board. As a fact, too, he has of late rather abandoned the unpicturesque and prosaic meads of local government for the immediate and romantic fields of Army reform and foreign affairs. Lord Edmond, though by no means divorcing himself from international problems, has ever maintained a close, intimate, and sympathetic association with the more domestic question. His long connection with the Wiltshire County Council, a connection dating back to the actual supersession of the quarter-sessional administration, has given him a practical insight into the modern developments of county government—because that connection has had ever allied with its sagacious sympathy and a natural genius for rural administrative details—such as few men in affairs possess. He has been progressive without being demagogic, he has been economical without being parsimonious, he has been abreast of the public conscience without seeking to be exuberantly ahead of it.

• • •

If Lord Edmond Fitzmaurice be appointed to this position, it would be an assurance that while the Local Government Board is to be under the new régime moved by progressive ideals, it is not to respond immediately to the experimental verbosities and suggestions of the gentlemen who would at once make it a vehicle for ushering in a new heaven and a new earth, at the expense of the rates, for the persons who need the paterfamilian aid of our poor-law system. Lord Edmond is a clear-eyed man who, if he sees visions, seeks to discover whether they are will-o'-the-wisps, ere pretending to realise them.

• • •

I did not apparently do full justice to the significance of the Barkston Ash election. As a fact, in the attitude which the rival candidates adopted towards rural problems, it provided the most distinctive evidence we have yet received of the reawakened intelligent interest of rural constituencies in matters affecting their own weal. Barkston Ash was not content with turgid phillippics antagonistic to or sympathetic with Chinese labour, with appeals to religious and denominational sentiment anent the Education Act or with the dry remainder biscuit of the half-exhausted Free-Trade-cum-Protectionist controversy. It wanted information as to how far the candidates were willing to utilise the resources of the State in re-establishing the yeoman-class on the land; it wanted to know how far they would utilise the same means to enable the small-holding tenant to become the small-holding owner, and to improve the equipment of his small farm; it wanted to know the nature of the further powers which the candidates would extend to local authorities to enable the erection of desirable cottages; it wanted in its audacity to know to what extent the candidates would throw the general cost of education (and not merely of secondary education) on the Imperial Exchequer; and in its hardihood it even wanted to know how far the candidates would practicalise that education, and bring it more into harmony with the labour-needs and labour-economy of the district. With an effrontery which is almost unparalleled, but which must fill the hearts of the men who desire the establishment of an Agricultural Group at St. Stephen's with hope, certain farmers actually wanted to know how far the candidates would disassociate themselves from the mere convenience of partisanism on questions affecting tenure, compensation for improvements, and compensation for disturbance.

• • •

It is not necessary to distinguish between the attitude of the two gladiators of the fight. What is of real moment is the evidence of the rebirth of a wisely-selfish zeal in the personal interest. Some of us would have had an even more assertive attitude adopted. But, we should remember that, in Carlylean phrase, "the goal of yesterday will be the starting-point of to-morrow." Let the opportunity be wisely handled, and the foolish spirit of Laodiceanism may yet be successfully combated.

• • •

I fear me that the Rev. Wilson Carlile, the chief of the Church Army, does not yet comprehend the real moment and kernel of the objections to his emigration policy. To provide work for the would-be workers who are compelled to a life of distasteful laziness is excellent; but the antagonists of his purpose hold that if the same amount of philanthropic enterprise, backed, as he hopes his effort will be, by a considerable State aid, were devoted to seeking an acceptable livelihood under healthy conditions for these men at home, an equally desirable result even for the poor fellows themselves would be accomplished, as may be achieved by banishing them over-seas. Moreover, it is claimed that Mr. Carlile's purpose would notbelimited to the despatch of 5;000 men to the colonies. This would be simply the inception of a continuous policy of exportation. What would this mean? It would mean not merely the deepened impoverishment of England, the deepened impoverishment of a land many of whose wide areas are thirsting for nutritious labour—for, mind you, only the best of these enforced idlers are good enough for these colonising philanthropists—but it would render the rural labour problem, which has now assumed so ominous a guise in the eyes of statecraft, a more piteous and insoluble one by reason of the very fact that the refuse of the army of present-day idlers would alone be left at home. These men left at home—lazy loafers, with a section possessed by criminal instincts—would mean the existence of a festering social sore, to the perturbation of our statecraft and our philanthropy.

• • •

Everybody with a heart must sympathise with the splendidly-inspired and humane desire of Mr. Carlile to discover a future for the deserving men whose prospect now is only horizoned by gloom. Utilise the same generous philanthropy, seek the same State aid, be as lucid and as practical in seeking for them this hope in the land of their birth, the land, too, which needs their muscle, and our country-side might receive the promise of rescue from the threatened labour famine. We have much waste land; we have cultivable land menaced with waste for the need of labour. Why send desirable labour abroad when we should, and could, utilise it here at home? What is more, retain this labour at home under the conditions Mr. Fels and others have suggested, and you might create a perennial source of labour supply for the villages. You might create an appetite for work under rural conditions. You might eventually have done something—this is a very roseate anticipation, I confess—towards restoring that million and a quarter of labourers whom the soil has lost in fifty years! To invoke philanthropy and the State to combine to send muscular labourers from a land needing labour is to me an appalling blunder. There are difficulties in the way of establishing home colonies; but confront them in the same spirit as the emigration difficulties have been confronted, and they would have a much less ill omened and forbidding appearance.

• • •

The point which which Mr. A. H. Clough, the architect, who is known, of course, to have been responsible for the construction of many rural dwellings, makes in the *Times*, in reply to Earl Carrington's optimistic assurance that it is possible to erect cottages for £150 at a remunerative rent, should associate a greater activity with the movement whose purpose is to induce the Local Government Board to evolve a series of bye-laws which should be generally applicable to rural areas. Mr. Clough declares that if the bye-laws existent in certain districts had been enforced at that remarkable Wiltshire colony of Winterslow, and had behind them the same invincible unsympathy which makes that enforcement, not one of the present excellent and cheap cottages could have been built. Here is the necessity for the movement put in a nutshell. Of course, the bye-laws should not be of an absolutely mathematical and invincibly inflexible character. They should take into consideration that neither humanity nor areas are made after one rigid pattern. They should, however, be as sufficiently definite in their outline as to prevent what I will describe as parochial concert and self-assertion baulking the necessities of the district. Mr. Clough's Winterslow illustration is a justification for the coercion of the Local Government Board. The Land Law Reform Association doubtless knows its business best; but it seems to me that the series of conferences which it is holding throughout England with a view to commending its programme of agrarian reform present, in their chief personalities, very much the appearance of a stage army. I am saying not a word against the Association's policy of State aid to farmers, of an extended compensation for improvements, and of specific aid to small holders; there is much in its programme which is commendatory. One can say this without accepting the arguments with which the policy is buttressed, or accepting the occasional excursions of the more enthusiastic members into the economy of land nationalisation. But, as a fact, you can be almost certain of the men who will commend this programme. I am saying not a word against those men, but they possess too defined a political hue, they are harnessed too tightly (and that with their own ready consent) to the chariot of party. A dispassionate farmer, in reviewing these personalities, might well be pardoned the fear, no doubt the unjust fear, that the anxiety is to use him as a pawn in the political game. We now know that there be Conservative agrarian reformers as well as Liberal land reformers. Have any of the politicians—men like Sir John Dorington and Sir John Kennaway—who backed Mr. Jesse Collings' Bill for the voluntary dispossesion of landlords and the re-establishment, by means of State financial aid, of yeomen on the land, been invited to any of these proceedings? Yet this Bill marked the most conspicuous advance in the agrarian economy of Conservatism and landlordism of the last twenty years. I admit that if these conferences are intended to be mere clangorous denunciations of landlordism and all its works, these men would be out of place. Would it not, however, be well to a little subdue what I will describe as the Fred-Horne note? It has now been played incessantly; and it had a full diapasonic expression at Lincoln within the last few days.

Sir Conan Doyle, addressing the annual meeting of the Northern Tariff Reform Federation at Newcastle on Wednesday, declared that the adherence to Free Trade had ruined agriculture, and had done much towards national physical deterioration. He was perfectly sure preferential tariffs and tariff reform would come to us, just as surely as to-morrow's sun would rise.

Hawick Tryst.—This old-established market for the sale of agricultural and other horses was held at Hawick on Wednesday, when there was a good attendance of farmers and others, but the display of horses was not quite so good as in former years. Mr. Foster, Carlisle, had forward ten colts, which were bought at £34 to £45; Mr. Rush, Carlisle, had a fine lot of two-year-old colts and fillies, which made £28 to £50; Mr. W. Elliot, Middles, had forward fourteen two-and-a-half-year-olds, which he sold at £26 to £40, and up to £60 for a five-year-old.

NORTHERN NOTES.

The most encouraging feature in the agricultural market is the high price of sheep. Mutton now commands what is relatively to beef a very high price, and breeding sheep and store sheep are equally high in value. The result of the sale of breeding ewes and gimmers has been very satisfactory from the vendor's standpoint, and there is every reason to think that the present rates will continue to prevail for some time. Various reasons have been assigned for the increase in value—some think the public taste for mutton is developing and the relish for beef declining, others think that the public have at last realised the superior quality of home-fed sheep, but the principal cause is the depletion of the sheep stock on the generality of farms. The recent agricultural returns prove the reality of this depletion, and the enhanced prices obtained for wool during the summer have not only drawn the attention of farmers to the necessity for bringing up their flocks to their normal strength, but have also led some to endeavour to increase their flocks. There was an abnormal consumption of fat lamb this year, and many occupiers who used generally to dispose of a fair quantity of stores during the autumn have marketed all their animals with the butchers. It does not seem probable that next year's returns will show any very large increase in sheep stocks, and the probability is that the demand will overbalance the supply.

The cattle trade is very discouraging to the grazier and the breeder, for although the markets have not yet been swollen by any great influx of Irish cattle, the supplies have been in excess of the demand. The rates for stores were very high last spring, and several lots of promising animals have recently been disposed of at practically the same prices as were given for them six months ago. There seems no reason why there should be any immediate rally, because it is believed the bulk of the cattle, which always come over from Ireland in the autumn, have been held back in view of the poor demand and the great supply of herbage available.

Some persons wonder how it is that, seeing the relative difference between the values of cattle and sheep, farmers requiring further supplies of stock do not purchase more cattle and fewer sheep. Light-land farmers—who are the chief purchasers of store sheep and lambs at the present time—have crops of turnips which are not superabundant, and some of them have very poor crops of roots, and they realise that it is essential to the success of their next crops that the land should be well trodden with sheep. Further, they know that in nineteen seasons out of twenty, they get some degree of profit from wintering sheep, while the proportion of seasons in which a profit is obtained from the winter fattening of cattle is just about reversed. It is true that the necessity of converting straw into dung must be met, but the supply of oat-straw—an article very greatly required for store cattle in winter on these farms—is very scanty, while the supplies of other straws are not great.

It must not be forgotten that the proportion of farmers who can, and do, market a part of their crops of straw is very much larger than a few years ago, and that in consequence of the increased sales off the farms there is in some cases a decided diminution in the quantity of horned stock kept during winter. There are some light and medium land farmers who sell all the straw they can, but devote a larger area than ever to roots, and consume the roots more or less entirely with sheep. All these causes tend for the time being to depress the cattle trade, and to prevent any prospect of a speedy rally in prices.

One result of an increased sale of straw and of the decreased production on the holding is, of course, that the condition of the land will be impaired unless extraneous manures are imported. There are few arable farmers who do not now purchase artificial manures and feeding stuffs pretty freely, and in this way maintain the condition of their land. Very wisely, the purchase of "patent" manures is now generally avoided, and the farmer procures either simple fertilisers, or such as are naturally complex, and eschews artificially-compounded fertilisers. But the principal manurial value of feeding stuffs is in respect of the nitrogenous or ammoniacal residue, and the phosphates purchased supply phosphoric acid only, except where bones are used in some form or other, and then a further supply of nitrogen is obtained. But the supply of the potassic element is too often neglected, and it should be remembered that in the past potash has been supplied in the dung, and that with the decreased supply of dung there is a corresponding diminution in the supply of potash.

Most clay soils have a good natural supply of potash which is rendered available by efficient mechanical cultivation, but even on clay soils a dressing of 1 to 2 cwt. sulphate of potash per acre to land for roots or in view of clover is sometimes very advantageous. It is imperatively necessary to give further supplies of potash to light and sandy lands where much straw is sold; and here from 3 to 5 cwt. of kainit may be properly used. The best application is in view of a root crop, and, as potassic applications are retained in the soil, there is practically no real waste even if the dressing be unnecessarily ample. M. Y.

October 20, 1905.

An Agricultural Party: Mr. Jesse Collings' Views.

A correspondent who endeavoured to secure the opinion of several public men on the projected schemes for co-ordinating the various agricultural organisations with the view of forming ultimately a separate agricultural party in the House of Commons, has received a long letter on the subject from Mr. Jesse Collings, M.P., in the course of which the hon. member says:—

The notion of having a separate agricultural party is good, but everything hangs on what you mean by an "agricultural party." Do you include the labourers, without whom I am inclined to think the objects in view will never be really obtained? It is difficult to generalise on this subject, because there is every variety of class interest in the great industry of agriculture. For instance, we have in England the best farmers in the world, but it would be altogether a mistake to suppose that they represent all the farmers, or anything beyond the minority. Again, we have land cultivated in the highest state of efficiency. But if you take the bulk of the farmers and the bulk of the land these remarks do not apply. We have also farmers who recognise that labourers with small holdings of land with spare time on their hands, are the most useful class to help the farmer.

This is the view taken by the farmers throughout the Continent. On the other hand we have farmers who think the labourers must be a distinct class, with no other view than that of being and remaining weekly wage earners. On the Continent, where a peasant proprietary exists, the farmer and labourer (who is also a landowner) row in the same boat, and pull in the same direction. This is not so in England, and it is difficult for it to become so so long as our present system of land tenure remains—that is, a system of landlord, farmer, and labourer. That system exists in no other country in Europe, and not even in the United Kingdom because Ireland has escaped from it.

Further, it may be denied, but it is, nevertheless, a fact, that under our system the interests of one class are opposed to those of others. The object of an association should be to improve the condition of the cultivators of the soil, to demand that Governments, which have hitherto so neglected agriculture, should give attention to it. It is difficult to see, however, how that can be brought about under our present land tenure. Suppose, for instance, that by legislation, the position of the tenant farmer was materially and visibly improved, what would happen then is that which has happened invariably in the history of agriculture—the rents would be raised.

My proposal is that the tenant farmer, by the aid of the State, should be the possessor of his holding. That once accomplished, the demand could be fairly made on the State for any amount of aid to the cultivating owner, because such aid would go direct from the State into the land, and increase its cultivation. The community at large, the taxpayers, would agree to this, while they will never agree to any substantial aid given to the tenant farmer, which they argue, rightly or wrongly, would more or less go into the pockets of the landlord. . . . I fear, however, that the English farmer has been so long in the position of tenant that he will be slow to realise the advantages which occupying ownership will be to him.

The fact is our agricultural associations, whether Chambers of Agriculture or Agricultural Shows, are for the most part top heavy, governed by the ideas of the few, and in which the great mass of the ordinary farmers of the country are but little interested. I have no great hope of any substantial improvement through the agency of associations of the kind you name, that is, if they are based on the usual principles.

I wish success to any attempt in the direction of the improvement of agriculture. One suggestion I would venture to make is that the proposed association should be confined strictly to cultivators. It might be useful and advisable to have landlords, land agents, members of Parliament, and other non-cultivators as members of the association, but they should have no voting power or control in any form, nor should any one of their number hold office of any kind.

Midland Notes.

The old saw to the effect that there "are always nineteen fine days in October" has already nearly justified itself this year, for, barring the heavy downpour of last Sunday and a trifle more rain yesterday, it is little wet indeed that we have had lately, and farmers of the heavier lands could well do with more. But if they have been fine days, they have also been bitterly cold, with a touch of north always in the wind, and nipping frosts at night that have already made all the difference to the country aspect, bringing down lingering autumn leaves in showers and demolishing the hardy flowers which were still making gardens bright and cheerful a few days ago. Nor is it only vegetation that shows the effects of this foretaste of winter. The swarms of autumn-hatching insects are thinned, so that, deprived of their accustomed food supplies, the latest of the swallows and martins must be gone over sea, and the bats to the winter quarters where they hibernate. The brigand wasps of the broken-up colonies are also dying fast, and one finds their crushed bodies on the paths where they have crawled too enfeebled to escape from danger.

The mention of insects is a reminder that two notorious pests have been somewhat unpleasantly in evidence lately—the celery-fly and the gooseberry and currant sawfly. Many of the latter have been plucked from the bushes by hand, but that is a long process, and, however careful the picker may be, many more of the larvæ will escape observation and reach the ground, where they remain through the winter. It is there that they are most effectively attacked, and where they are seen the fatal dressings of quicklime or gaslime should never be omitted. The celery-fly remains during the winter in pieces of leaf and stalk as well as on the earth, which makes it absolutely necessary that after an infested crop has been dug every particle of foliage and stem should be collected and burned.

One hears of fair sales of seed-wheat, but to all appearance the wheat acreage in Warwickshire will be a good deal reduced this autumn, and the same may be said of adjoining counties. Unfortunately, there is no certainty of other cereals turning out any more profitably. The oat crop this season has been a sad disappointment alike in Warwick, Stafford, Notts, and Derby, and there is only a poor market for barley yet. There is no great area of beans in this part of the country, but where they are grown, they seem generally to have done pretty well, and it would not be surprising to see a few extra fields planted. As to the roots, the local produce competitions which are now being held show that they are turning out better than expected.

More new combinations in the milk trade. On the one hand, the milk vendors of Birmingham have been forming another trade alliance—there was one before—which is intended to fix and regulate standard prices to the public, and to prevent under-selling; on the other, farmers of the Burton and Ashbourne districts are realising that they too must combine if they are to secure anything like reasonable rates from the retailers. No doubt we shall see a Derbyshire milk factory started like that which is now being organised for Uttoxeter, where, by the way, the shares, we hear, are being very readily taken up. The current prices—something like 9½d. and 7½d. per imperial gallon, out of which rail carriage must be paid—compare badly indeed with the rates paid willingly to the retailers, and one must pile up the costs of distribution very high indeed before accounting for the disparity.

Nor is it only in the matter of price that the milk trade is troubled. The minds of Staffordshire and other producers seem now to be much exercised over the question of the standard also. Is it to be wondered at when they find themselves required to deliver milk containing "not less than 3¼ to 3½ per cent. fat," while at the same time dealers are moving to induce the Board of Agriculture to lower the present standard of 3 per cent? One would like to be a little more assured that all this rich milk which the town buyers bargain for reaches the public in the same state. There must be a great temptation to retailers to extract some of the superfluous cream, and, indeed, we know from cases which have been before the courts that it is sometimes done. Moreover, there is grave doubt whether the law as it now stands makes it an offence.

October 20, 1905.

EAST ANGLIAN NOTES.

Some remarkable changes in the weather have been experienced during the past week, and quite a transformation scene has come over our landscape. Even Londoners are able to notice how brief has been the flush and fall of autumn leaves, but they could hardly realise that on the 14th inst. Mr. G. Richmond, of Blofield, Norfolk, gathered a nice quantity of ripe raspberries, and they were very fair fruit; and three days afterwards, at Great Yarmouth, there was a fall of snow, and the whole of East Anglia was held in the grip of frost, the keenest known in October for many years. The result is seen by the thin covering of leaves the trees now bear, while as you walk beneath them your feet almost slip upon the brilliant carpet of fallen leaves which grow thicker even as you pass.

Work in the fields is in a satisfactorily forward state, and the land has been cleaned and made clear of weeds under most favourable conditions without excessive expense. At the different markets more farmers are to be seen in attendance, but they are reluctant to part with the wheat at the present low level of prices, although the inquiry is unabated, and so we see all round an increase in the sales of barley.

The Earl of Scarborough is co-operating with his North Lincolnshire tenants in a scheme embracing motor-carriage for their agricultural produce to Lincoln and Gainsborough. Police-traps are an innovation due to this modern method of transmission, and should it be the desire to catch a train when the motor-carriage is behind time, some police-traps may be laid in Lincolnshire. These, however, must not be confounded with the ancient man-trap that has just been found at Alford, which measures 76 in. in length and its formidable jaws with teeth protruding 2 in. will open fully 2 ft. 2 in. by 18 in. Although the police-trap has a much wider jaw, no doubt the motor-carriage will be of sufficient weight as to only travel at a reasonable rate.

As our Board of Agriculture has had tacked on to its title "and Fisheries" recently, for the Government imagine these industries are akin to one another, no doubt on account of "Fish Manure," the following fact must be of interest to farmers. In this case Mr. Percy Hall was by the side of the river Yare at Reedham where he noticed a seal in the water swimming very rapidly towards Norwich, and seeing that it was impossible to catch the animal alive shot it and brought it to shore, when it was found that the seal measured 3 ft. 6 in. and weighed 60 lb.

The quarterly meeting of the Suffolk Executive Committee under the Diseases of Animals Act, 1894, was held on Tuesday at the County Hall, Ipswich, under the presidency of Mr. C. D. Johnson, while Captain Gerald Spencer, an Inspector of the Board of Agriculture, attended for the purpose of giving to the meeting the Board's wish that the counties of Essex, Norfolk, and Suffolk should combine so as to form a scheduled area under the Swine Fever (Regulation of Movement) Order of 1903. Captain Spencer explained that the Board were anxious to keep the promise they made that when swine fever abated, or the number of outbreaks was reduced in these counties, they would remove the irritating restrictions which had interfered with the trade and movement of swine between the counties. There was already a voluntary arrangement between Norfolk and Suffolk for the removal of swine, and it was now proposed to extend the area to include Essex. The committee, after a lengthy discussion, came to the conclusion that the Board's restrictions would be more onerous than their own, and they decided to open up negotiations with Essex and Cambridgeshire, with a view of making similar arrangements as existed with Norfolk.

The annual "fungus foray" or cryptogamic meeting of the Essex Field Club was held in Epping Forest on Saturday last, and, owing to the fineness of the day, the whole expedition proved most enjoyable. The first party started from Chingford in the morning, and a second party started from Theydon Bois in the afternoon. Headquarters were established at the King's Oak Hotel, and here at the close of the day an enormous quantity of fungi was deposited for the inspection of the referees, who were Mr. G. Massee, F.L.S., Dr. Scott, F.R.S., Mr. A. Lister, F.R.S., Professor Silvanus Thompson, F.R.S., and Mr. G. M. Holmes, Curator Pharmaceutical Society. This was the twenty-sixth annual meeting of this nature, and the rambles have produced over 600 different forms of fungus. Naturally, of late years the number of fresh forms discovered has diminished; nevertheless, even last year eleven fresh specimens were procured and carefully classified in the Epping Forest Museum. After tea demonstrations were given of the objects collected, their origin and functions, and an address on "Diseases of Fruit" was also given by Mr. G. Massee.

On Tuesday the funeral of Mr. Henry Colman took place in the parish churchyard, Great Ellingham, Norfolk, amid many manifestations of respect. The deceased was one of the old-fashioned school of Norfolk farmers, who, in spite of bad times, farmed on his own lines, and managed with his knowledge to make farming pay. He was well and widely known as a keen agriculturist, and his fields were reputed to be kept in as "good" heart as any in his district. He was at Norwich market on the 7th of the present month, being a regular attendant at same although 84 years of age, but he was seized with an illness on the following Wednesday, which terminated fatally early on the morning of the 14th.—Oct. 20th, 1905.

NOTES AND NEWS

Messrs. English Bros., Ltd., timber merchants and creosoters, of Wisbech and Peterborough, have issued a nicely-got-up catalogue of their various manufactures, which include the famous creosoted wood fences, field gates, etc., which for durability should be hard to beat, for it is stated that creosoted fencing that has been in use over forty years is still practically as good as when first erected. The process of creosoting is described and illustrated in the booklet, a copy of which should be in the hands of all users of fencing, gates, etc.

Ayr Hiring Fair.—The October hiring fair for the district of Ayr took place on Tuesday in fine weather, and was very largely attended by servants, especially married ploughmen, and many engagements were made at wages ranging from 19s. to 21s. a week, with benefits. Single ploughmen, of whom there was not so many engaged, got from £14 to £16 in the half-year; and halflins from £9 to £11. Dairymaids were being engaged at from £12 to £13, and kitchen and byre girls at from £9 to £11. These rates of wages are somewhat similar to the rates of this time last year.

Anthrax in North Shropshire.—A serious outbreak of anthrax has occurred in North Shropshire, in the district of Market Drayton. A three-year-old heifer belonging to Mr. Sargeant, of Audley Brow, showed symptoms of illness, and the beast was accordingly slaughtered and dressed. While the operation was in progress, however, Mr. Sargeant became suspicious as to the nature of the illness, and accordingly sent for the police, who, in turn, called in Mr. T. K. Ramsey, the veterinary inspector of Market Drayton. Mr. Ramsey at once pronounced it to be a case of anthrax, and accordingly steps were taken to cremate the carcase, and put into force every measure to check the spread of the disease.

British Millers in Paris.—Two hundred members of the National Association of British and Irish Millers visited Paris last week on the occasion of the International Congress of the French milling trade, and including in the proceedings a general meeting at the Grand Hotel under the presidency of Mr. W. E. Nicholls, of Cardiff, supported by Mr. H. J. Sanderson, secretary, of London. Mr. Nicholls gave an address to his colleagues, in which he set forth the state of British milling, drawing particular attention to the fresh competition the industry would shortly have to cope with in consequence of an improved crop in the United States. He urged that efforts should be made to obtain the delivery of Indian corn in a purer state—that is to say, not containing more than 2 per cent. of foreign matter. In conclusion, he expressed the hope that there would be an understanding with the London Corn Trade Association for a revision of contracts.

Earl Cadogan entertained about 400 employees and cottage tenants on his Culford estate, at the annual harvest home, and, in replying to the toast of the health of Lord and Lady Cadogan, he said he thought that they could look with gratitude and satisfaction to the position in which they stood at the end of their agricultural year. They had secured quite an average harvest—perhaps more than an average one—and in many respects they had much upon which to congratulate themselves. They had had two moderate crops. Hay had been bad this year, and barley had not been very good, but the wheat crop had been good, and, what in one sense was more important, it was well and quickly got in, to the advantage of both farmer and labourer. The fact that wheat stood at 3s. 4d. below the price of last year was not so satisfactory, but, still, they must be thankful for what they had got, and at a time of depression for agriculture they had, on the whole, very little to complain of.

THE FARMERS' CLUB.

Rate-Aided Education.

At the meeting of the Farmers' Club held today, a paper on "Rate-aided Education" was read by Mr James Crouch, Ridgmont, Beds, and from an advanced proof we take the following extracts:

I think it will be universally allowed that the education, or bringing up of the young, is primarily the duty and privilege of the parents; but experience has shown us that at a certain age of the child it is beneficial for the State to lay down certain rules to be observed by all parents, just as in all civilised communities all adults are called on to obey laws which the wisdom of bygone ages has laid down as salutary.

What should be the aim of all education? Surely the only education of real value is that which will enable the child to fill satisfactorily its position in after-life. It is of no use to teach the masses what can only be of practical use to the few, it would obviously be ridiculous to train all boys to be jockeys, just as no sane man would think of training all horses to race; at the same time, it is advisable to teach every horse that man is his master, and to teach every boy to read, write, and cypher; but after this, just as the training of the cart horse and race horse will differ, so the after education of the boy should depend on what position in life he is to fill; and while a boy who is to live by his brain power should be kept at school till he passes to the University, and finally into a learned profession, so the boy who is to get his living by manual labour should begin early to exercise his muscles, the use of which is to provide his maintenance.

"From 1834, when I believe the first State From 1834, when I believe the first State recently, all grants depended on examinations, principally *viva voce*, and in many instances the salaries of the head teachers depended on the amount earned as grant. This, undoubtedly, led to a wide-spread system of cram. The pupil, from having to learn so much in so short a time, simply temporarily acquired a very superficial knowledge of many subjects, which he promptly forgot as soon as he left school. And, as the pupils in the higher standards earned the biggest grants, it was to the interest of the head teachers to keep the sharpest children as long as possible, and to cram them to their uttermost capacity, to the detriment of the less intelligent children, who, of course, from an educational point of view, required more attention than the cleverest children.

On leaving school these extra crammed children, having been flattered by their teachers and possibly by the inspectors too, often fancied themselves superior to their surroundings and relations, and, instead of turning to work, turned their attention to getting a soft job in a town. Very often a boy had no difficulty in getting a job as errand boy, or some similar job, at about six or seven shillings per week; but after a year's employment it was not so easy to get another soft job at more money in town, as most of the town boys knew quite as much as himself. Of course, he never thought of returning to his village, and would have been of very little use had he done so. I am sure, to make a really good agricultural labourer requires as long an apprenticeship as any calling. We very often hear the agricultural labourer classed as an unskilled labourer; and often, I am sorry to say, it is too true that he is unskilled. But we all know that a really good specimen of the class is by no means unskilled, but, on the contrary, is highly skilled and skilful. Therefore, if by the time a man is full grown he is to be capable of taking a first-rate labourer's place, he must begin to learn his trade at an early age; and, as physical perfection is so essential, he must, as a youth, live an outdoor life, and develop his muscles by manual employment. It follows that the superfluous man in a town is not capable of taking a place as even a second or third rate agricultural labourer. Therefore, if trade in the town happens to be bad, or from any cause there happens to be a superabundance of unskilled labour, the country-bred young man in the town must either join the ranks of the unemployed or enlist as a short-service soldier, and on his discharge probably become unemployed. On the other hand, a boy going on to a farm young will always be able to get increased wages till he reaches the maximum wage paid in the district, and nowadays that is not the starvation wage so often talked about by people knowing nothing about it.

In the case of the country-bred town boy, he will probably stay at school till he is fifteen, and then begin in town at about 6s. per week; while a boy going on a farm at twelve will begin at a wage of about 4s. per week, with an annual rise of one or two shillings per week, so that by the time he is fifteen he will be earning as much, or more, than the town boy at the same age. And whereas the farm labourer's wage is certain to rise to the maximum, it is very doubtful if a well-paid soft job awaits the other boy.

All experience shows that the longer a boy is

kept at school the less likely is he to be of any use on the land.

It used to be the cry of certain educational faddists, 'Oh! you just do not keep the boy under tuition long enough. Granted that a boy beginning to work on a farm at twelve is more likely to make a good labourer than the one starting paid farm work at fifteen; still, if you would keep the boy at school till he is seventeen, giving him partly school work and partly practical and technical agricultural training for the last two years, he would then be a far better labourer than the one beginning at twelve.'

This has been tried in Bedfordshire, and I believe that hardly any boy, the son of an agricultural labourer, who stayed for two years at the Ridgmont Farm School is now on a farm; although most, if not all of them, are filling menial positions, not as well paid as really first-class labourers are.

The scarcity of skilled agricultural labourers, and the very large number of unemployed in our great towns, are both evidence that there has not resulted from the expenditure of the very large sums of money from the taxes and rates in the past what educationalists expected, namely, a happy, contented peasantry, filling more intelligently than their ancestors their various positions in life."

Dealing with the question: Can any part of the cost of education be equitably charged on the rates? Mr. Crouch said:—It is admitted by all political parties, and by every individual possessing the most elementary knowledge of the subject, that for many years past, and at present, many charges on the funds raised by local rates cannot be considered as fairly chargeable on rateable property alone; and I must once again say that local taxation reform is urgently required. But while fully realising the necessity for such reform, I think that possibly elementary education may have a fair claim for some aid from the rates.

It appears that the annual income of persons in the United Kingdom derived from sources other than real property is certainly more than twice, and probably as much as three times, the amount of the income derived from real property; and the proportion of children not paupers, and whose parents are able to pay something towards their children's instruction, is quite as great. Under these circumstances, considering that every ratepayer also contributes as a taxpayer, I think that at least two-thirds, or possibly as much as three-fourths, of the cost of elementary education should be paid out of the National Exchequer.

I think the Board of Education should pay a fixed grant per child, and that the Managing Committee should issue precepts on the overseers for the amounts required beyond the grants to carry on the schools in their district to the satisfaction of the Board of Education inspector.

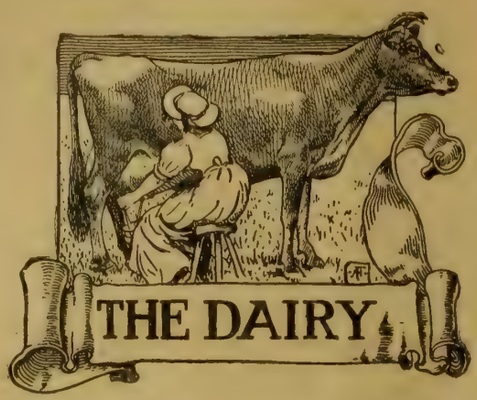
I have no doubt that personal attention to details on the part of a popularly-elected committee invested with full responsibility as the education authority for a small area, would frequently result in a reduction in the cost without any diminution in the efficiency of the schools.

I think every school staff should include a certificated teacher, and, in the case of large schools, possibly at least one for every hundred children in the school; but, as to the rest of the staff and other details of management, I think the managers should have a free hand, so long as they could show satisfactory results.

Rural Depopulation in the 13th Century.

The majority of people are of the opinion that the important question of rural depopulation is one that has arisen only in the past and present century, but such is not the case, as is pointed out by a correspondent of the *Birmingham Post*, who points out that Professor Taranger, of the Christiania University, has in his "History of Norwegian Law," Vol. II., published this year, printed some documents dating from the thirteenth century, which show how old is the question of rural depopulation. "In one of them," he says, reporting the meeting of the estates of the realm in 1260, we read the following utterances of King Haakon the Fourth to his lieges in Bergen assembled:—

"It is known to us that nothing is more detrimental to the welfare of our kingdom than the difficulty to get labourers in the rural districts, for all the men will go travelling and trading, and no one will work for the farmers; and therefore we absolutely forbid that anybody goes trading who does not own three mark (about £18). And this shall be valid from Easter to Michaelmas; but from Michaelmas and during all the winter anybody may travel in peace with what God has given unto him." This order was renewed by the following King, Magnus the Law-Mender, in 1274.



The Troubles of Dairy Farmers.

An interesting case to dairy farmers was heard in the Bristol County Court on Tuesday by his Honour Judge Austin, the plaintiff being Henry Ambrose Blacker, dairyman, of Zetland Road, who sued William Wills, of Duckett Farm, Horfield, to recover £37, damages for breach of warranty.

For the plaintiff it was stated that on March 3 of the present year the parties to the action entered into a contract under which the defendant was to supply the plaintiff with milk for twelve months from March 25. Under the contract there was a continuous warranty whereby defendant guaranteed that every churn of milk supplied should be pure new milk, unadulterated and up to the standard required by law. If there were any failure in this respect, then the plaintiff would have the right to terminate the contract, and be at liberty to bring any action that he might deem to be necessary. The defendant commenced to deliver milk on March 25, and on the 27th a sample of the milk was taken by the inspector under the Food and Drugs Act, and it was found to be deficient in butter fat to the extent of 6 per cent. That was followed by a sample of defendant's milk being taken and analysed, and that was found to be all right.

The inference he should ask his Honour to draw from this was that the defendant, hearing that a sample of plaintiff's milk had been taken, took particular care that his own should be up to the standard required by law. Following this, plaintiff took steps to daily ascertain what was the quality of the milk he was receiving, and on May 29 he found it was again falling below the standard. This led him to send a sample to the public analyst of Paddington, who certified that it was deficient in butter fat. On the 30th another sample was taken, and divided into three parts, and the one sent to Paddington was certified to be deficient in butter fat to the extent of 10 per cent. That led to a further sample being taken by the inspector from defendant, and that was also found to be deficient. Plaintiff was summoned to the Bristol Police Court, but the case was dismissed because the magistrates considered he had sold the milk in the same condition as he had received it. Plaintiff suffered considerable damage in consequence of this; he had to pay heavy legal costs, and he also had to find a further supply of milk. He therefore broke his contract, as he was at liberty to do under its terms, the milk not being up to the standard required by law. These were the circumstances under which the action was brought. A counter claim for £21 0s. 2d. for milk supplied was not disputed.

There was a great deal of cross-examination, during which Counsel for the defendant called attention to the discrepancies in the certificates given by three analysts to whom samples were sent of the milk which led to plaintiff being prosecuted. According to Mr. C. J. Waterfall, the solids not fat were 8.14 per cent., milk-fat 3.35 per cent., and added water 5 per cent. Mr. F. W. Stoddart certified the solids not milk-fat to be 9.15 per cent., and milk-fat 2.68; deficiency in milk-fat 11 per cent. The certificate from Somerset House read: Solids not milk-fat 8.84 per cent., loss through sample being kept 0.18—total, 9.02 per cent.; milk-fat, 2.60—a deficiency of 13 per cent. There was no evidence of added water. Under these circumstances he was sorry for the poor farmers. Defendant had delivered the milk as taken from the cow. It was not adulterated—it was not alleged that it was—and there had been no abstraction of butter fat. There could be no abstraction because it was impossible to abstract butter fat from warm new milk without the aid of a separator, and the defendant never possessed such a thing. Under the agreement defendant only contracted to supply milk warm, pure and unadulterated, and with nothing abstracted therefrom. It was the only construction to put upon the agreement. If upon the top of that contract terms were imposed by the plaintiff that the defendant should deliver at certain hours, and if the plaintiff knew that delivering at those hours must materially affect the percentage of butter fat in the morning's milk, then he could not complain. He had imposed his own terms, which must result in better milk in the afternoon and worse milk in the morning.

His Honour said that, after listening to the evidence, he had come to the conclusion that the milk was unadulterated—nothing had been abstracted from it and nothing had been added to it. Mr. Wills had acted in a perfectly straightforward manner and in good faith. He had been absolutely honest throughout the transaction. He could not, however, put upon the contract the construction which had been urged upon him on behalf of the defendant. He therefore gave judgment for the plaintiff for £20, with costs. The counter-claim was admitted, and there would be judgment for defendant upon that for £21 0s. 2d. without costs.

Upon the application of Mr. Wansbrough (counsel for defendant), stay of execution was granted for 14 days.

Chester Dairy Show.

There was a very fine show of cheese at the twenty-fourth annual exhibition of the Cheshire Dairy Farmers' Association held at Chester last week, something like 90 tons being staged, representing all the principal makers on the great estates of Cheshire and the adjacent counties. Competition increases annually in keenness, as, apart from the considerable monetary value of the prizes offered, the reputation gained by a successful exhibitor at this great show affects both the demand and price of all his cheese for the remainder of the season. In such a large show one could naturally pick out a selection of all grades from fine to mediocre, but the best of each class were exceptionally fine lots, and competition was very keen; in fact, the judges were unanimous that a finer lot of high-quality cheese had never been exhibited at Chester. The premier trophy—the Association's gold medal for the best lot of Cheshire cheese in the show—was won by Mr. J. Williams, Hollin Green, Sound, who has achieved so many successes of late that the remark of a well-known farmer and factor, that he has won more money than any man in the county, is probably justified. The cheese which gained for Mr. Williams his present distinction were of fine, silky texture, and clean and finished in flavour, while the condition and get-up were all that could be desired. Alluding to their silky texture, one of the judges remarked that crumbly cheese are not so much in favour now. Those of silky texture are more sought, and especially to compete with Cheddar. The same judge expressed the opinion that the present tendency in the cheese trade is to get rid of cheese of acid character.

The first class was for twelve cheese made by farmers whose occupations exceeds 150 acres, and contained no fewer than 56 entries, representing some of the best-known dairies in the county. The first three lots stood out many points ahead of the others. First prize went to Mr. J. Dutton, Swanley, Nantwich—who also was awarded silver medal, so that Nantwich district carried off both gold and silver trophies—second prize to Mr. E. Cockson, Poulton, and third to a neighbour of the latter's—Mr. H. Denson, Poulton. Several lots appeared to have been affected by the frost of the night before, but the judges made allowance for their stiffness on that account. Some lots unfortunately showed a little discolouration, and that put them out of court entirely. In class 2 for farmers whose holdings are from 100 to 150 acres, there were again about half a dozen dairies standing out from the others. Mrs. Mossford, Frog Hall, Tattenhall, was the winner of first prize, and Mr. J. A. Jackson, Bolesworth, and Mrs. Denson, Green Looms, Hargrave, were respectively second and third. Apart from the best six or seven lots, the others in the class were not quite as fine as the bulk of the exhibits in some of the other classes. Class 3, for farmers whose holdings are from 50 to 100 acres, had the distinction of supplying the championship lot. Mr. Williams took first in the class, Mr. J. Craddock, Ebnal Hall, Malpas, was second, and Mr. R. Johnson, Tarvin Sands, third.

The fourth class, for farmers whose holdings do not exceed 50 acres, contained only sixteen entries, but two very big classes came next in the "four coloured" and "four uncoloured" classes. There were nearly seventy entries in the coloured, and they included some very fine cheese, and competition was very close. Mr. F. Heath, Ferny Lees, Tarporley, who won first in the Cheshire class at the London Show, was first, Mr. S. Dutton, Burleydam, second, and Mr. R. Mullock, Waverton, third. There were a number of cards awarded, and there would have been more only that a number of cheese, owing probably to newness, had hacked round the edges.

In the uncoloured class the entries were between 50 and 60, and there were prime lots shown. A

Shropshire exhibitor, Mr. F. Jeffries, Penley, Ellesmere, was the first prizewinner here, and second was secured by Mr. G. H. Willis, Stoak, and third by Mr. J. Hobson, Coole Pilate, Nantwich. Class 7, for farmers who had not won a first or second since 1899, had a strong entry, and Mr. Proudlove, Broxton, was awarded first prize. In the long-keeping class the exhibits were to comprise lots of three Cheshire cheese made prior to July, 1905. The lots generally were of excellent quality and keeping properties, and the winning lot shown by Messrs. Dale Bros., Brassey Green, Tarporley, was said to be, notwithstanding its age, nearly the equal in flavour of any cheese in the show.

There were two "no barbed wire" classes, £30 of the prize money for which was given by the Duke of Westminster. In Class 9, some of the cheese were on the young side, but the class as a whole was a good one, and about half the lots were of even quality. Class 10 was an exceptionally strong one, there being perhaps not a bad lot in it. The prize winning lots, however, stood out, and the judges had no difficulty in making their awards. Mr. J. Williams, of Hollin Green, Sound, added to his other successes by again winning first prize here, and Mr. J. Taylor, of Lees Farm, Malpas, was second. The prizes for the heaviest weights of cheese sent to Chester cheese fairs between October 10, 1904, and October 10, 1905, were won by Mrs. Johnson, Wood Farm, Stanney (10 tons 17 cwt. 2 qr. and 5 lb.); Mr. S. Jones, Meadow Farm, Pulford (8 tons 9 cwt. 3 qr. and 19 lb.); and J. T. Mayers, Stoak (3 tons 18 cwt. 16 lb.).

The butter exhibits showed an improvement in quality compared with last year, and competition was keen in every class. In the Channel Islands class it was particularly close, and the judges had considerable difficulty in arriving at their awards. All the lots in this class were of good flavour, make-up, and colour. With regard to the butter exhibits generally, which were up to a high standard, the judges dropped a hint that more attention ought to be paid by makers to the straining of the milk. The ornamental butter exhibits were on a limited scale, but were pleasing to the eye, and met with admiration.

Prize Distribution.

On the second day of the show the Marchioness of Cholmondeley distributed the awards. Mr. A. Hornby Lewis (the High Sheriff of the county) presided, and was supported by Mr. George Barbour (Chairman of the Council), Mr. Henry Tollemache, M.P., Colonel Cotton-Jodrell, and the Sheriff of Chester.

Mr. Barbour commented on the fact that this was the first time that a comparatively small holder had won the blue ribbon of the show. Mr. Williams's success showed that the smaller holders stood an equal chance of gaining awards with those who dealt with larger quantities of milk.

The High Sheriff said it was a most extraordinary thing that it was difficult to obtain Cheshire cheese not only in the county but out of it. One very seldom went into a club or an hotel and found good Cheshire cheese. Another extraordinary thing was that though he lived in the heart of Cheshire he had to send to Glasgow for his butter. For the sake of the historic name of Cheshire cheese he hoped that farmers would send less milk to the neighbouring large towns and make more cheese. He was glad to hear from one of the largest London shopkeepers that Cheshire cream cheese had cut out the celebrated Devonshire cream cheese.

Mr. John Emberton, of Crewe, one of the judges, said that there had been a great improvement in the quality of Cheshire cheese during the past twenty years, and the improvement was largely due to the instruction given at the County Council Dairy Institute at Worleston. He had been informed that day by the representative of one of the largest importers of American cheese that this year customers who had previously used imported Canadian cheese had been using Cheshire cheese more freely than ever before. It was one of the worst features of modern agriculture that people were tempted, for perhaps some advantage in the relief of labour, to cease to manufacture cheese, but he thought all practical agriculturists were of opinion that the most substantial and profitable form of dairy farming still was to turn the product of the cow into good cheese.

Mr. R. Challinor (the secretary) said he did not think that in the future they would have the same competition from America that they had had in bygone days.

The Cheese Fair.

The gold and silver medal and prize cheese was sold in the open market on Wednesday, and brought good competition, Mr. Williams's gold medal cheese realising the very high figure of 120s. per cwt. The first prize cheese realised 80s. to 90s.; second prize, 75s.; and cheese honourably mentioned at 68s. to 70s. per cwt. There was the keenest demand among dealers to secure cheese bearing the judge's cards. the ordinary monthly market farmers brought from 50 to 55 tons, and with a large attendance of buyers from the North and Midlands, the demand was good, and prices showed an improvement all round. Fine Cheshire was quoted at 65s. to 70s.; medium qualities, 58s. to 64s.; and common, 55s. and upwards per cwt. So strong was the requirement from the manufacturing districts that the entire supply shown 150 tons was absorbed by dealers during the afternoon.

Moles and Potatoes.

SIR,—Under head of "Seasonable Topics" in MARK LANE EXPRESS this week you refer to damage to potatoes by moles. Two years ago I suffered through their depredations. There was not the least doubt in the matter in my case, as they tunnelled under the rows for a good distance, and the teeth marks were smaller than those of a rat; their dungs were very noticeable. They evidently fed there regularly, but made little show, except in the centre of the rows.

J. B. HARDING.

South Hill Farm, Staple Fitzpaine,
Taunton, October 13, 1905.

Hants and Wilts Outlook.

SIR,—The dry winter of 1904 and 1905 was very advantageous to the wheat crop, which turned out the best we have had for many years, but the rough, wet weather in July seriously damaged much of the heaviest crops, fields in Wilts of two tons of straw to the acre costing 20s. to cut yielding only nine sacks of second quality, and in the same parish a crop of 1 ton of straw, yielding eleven sacks of the finest possible quality, and cut at a minimum cost by the machine. The spring barley and oats were below average, but the winter varieties were good.

The turnip crop is not satisfactory, but has improved lately, consequently sheep have risen in value and are now selling freely at about the price of last year.

Owing to the dry summer in Ireland and our Midland counties, hay and grass were scarce, and cattle a very bad trade, many worth little more this autumn than they cost in the spring. Fat and store cattle are very low in price and difficult to sell.—Yours truly, J. STRATTON.

October 19, 1905.

Crops and Local Taxation in Mid-Cornwall.

SIR,—The exceptionally dry weather is beginning to affect the root crops, and they seem to make no further progress, and the leaves are turning off and the bulbs beginning to ripen.

The price of wool is not quite so good as it has been, but it is thought that the value has not receded so much as that the buyers for market purposes are holding off.

This county is not an exception to the rule that local rates are very much higher and are still increasing; with the heavy burden of local and Imperial taxation the spending power of the public is much contracted. There has been considerable outcry that the County Council is a spendthrift body, but it must be recognised that more is expected of these authorities than in olden days.

Perhaps one of the most serious matters is the enormous increase of local debt, the interest on which has to be paid, and it will be useless to cry out against increased rates as long as there is such a tendency to pile up debt. G. G. B.

October 17, 1905.

Favourable Prospects in Hampshire.

SIR,—The prospects as regards agriculture in this district are certainly more favourable than the last few years. The wheat is yielding extraordinarily well; oats fairly on the strong land. Very little barley is grown in these parts. Sheep, which are the mainstay of the farmer, are very healthy, and the last lambing season prolific, and prices are very good indeed.

The worst crop of the year is roots, on account of the dry summer, and now the long spell of drought is very serious, as the aftermath in the meadows is very short. Cattle are healthy.

October 19, 1905.

Prospects in Somerset (Cheddar). Pure Bred Stock.

SIR,—The very fine weather we have been favoured with this autumn has been very good for cleaning the stubbles and burning the couch, which is of considerable importance to those desirous of keeping their land in good condition on light soils as the practical agriculturist is well aware, on such soils to plough such weeds under the furrow means a considerable addition of the pest to be encountered the following year.

The more expeditiously mangolds which are a good crop under the present state of the weather (frost every night) are carted and secured the better, otherwise the crop will become frost-bitten, which will be of considerable importance this year, as the crop of turnips in many instances will be a light one, and the present cold weather has checked the flow of milk, and put a stop to the growth of grass in the pastures, and although the hay stacks, which are usually stacked in the fields in which the hay grew here, are smaller than usual, yet it would lengthen the time of there being a good flow of milk in the dairy herd, considering the present cold weather, if a morsel of hay was given to the cows when being milked.

I have noticed in the Press of late that some writers on agricultural subjects have been addressing or suggesting to agriculturists the supposed advantages of their breeding of crossbred or mongrel animals on their farms, which, I contend, is a great error in judgment; a fact well known to all practical men who attend the markets and fairs throughout this country, who know perfectly well that the great majority of animals are mongrels. I am convinced that if breeders of such bad mongrels as are often seen, particularly in dairy districts, were to breed pure-bred animals—or, if they could not see their way to do that at first, at all events breed from pure-bred sires to begin with—they would soon find from experience the great advantage of so doing.

October 20, 1905. A. L. C.

Monmouthshire Prospects.

SIR,—Nothing could be more satisfactory than the weather of the last few weeks, enabling farmers to clean stubbles, thresh corn, and get their work into good place for the winter. Roots have done fairly well, and are an average crop.

Potatoes got up under favourable conditions. Grass continues sufficient, and stock of all kinds have done and are doing well. Hay is abundant, and stock should winter well. Beef trade is slow and prices low, but mutton and store sheep make good prices. R. S.

Essex Prospects.

SIR,—We have been having splendid weather for cleaning the land and for preparing to sow and sowing winter oats and wheat. There has also been good keep in the meadows, and the prospects for crops and stock could not be better, if only fair prices could be obtained, when produce is ready for market.

Unfortunately, markets are ruined by the so-called "free trade," and many a good man in the farming way will go under this winter, and many more find they are living on their capital.

October 13, 1905. E. R. C.

Hampshire Outlook.

SIR,—The agricultural prospect in this part of Hampshire is generally good. Hay an average crop, got up with little expense owing to the brilliant weather. Wheat, rye, and winter oats good, above the average of the past few years, especially winter oats. Vetches bad yield, but good sample, and selling well. Spring oats bad yield, under average. Barley, plenty of straw, but what has been thrashed yields badly. The root crop under average owing to fly and dry weather. Sheep have done well, with good fall of lambs, and sold well, also the wool cheque was an agreeable surprise. Store cattle are very healthy and doing well, but low in price.

The autumn-sown corn is coming up well; rain is badly wanted. J. H. R.

October 21, 1905.

Thorne October Fair.—At this fair on Wednesday more stock was offered than for several years, and the attendance was also large. Store cattle were priced at £6 to £9. Horses were numerous, the top price in the Shire section being £35, and this was exceptional; heavy horses and nags, from £15: carting foals, £10 to £15.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—There was only a poor attendance, and consumers bought sparingly of all articles. English wheats were steady, while foreign sorts ruled firm; No. 1 Northern Manitoba quoted at 34s ex ship. Maize continues firm, with values occasionally on a higher level; mixed American landed quoted at 25s and La Plata at 24s 4½d; both grades ex ship were obtainable at 6d under these prices. Barley firmly held; Odessa Nicolaieff landed has buyers at 19s 3d, while 18s 9d is wanted for ex ship and 18s 6d for American. Flour steady but quiet at 21s for Iron Duke ex store. Oats show no change; 38lb. Russian offered at 15s 9d to 16s.

Mark Lane, Friday.—The attendance was moderate, but a generally quiet tone prevailed. English wheats ruled firm at last prices, while foreign grades, especially American, have a tendency in buyers' favour, although quotations mark no change; No. 1 Northern Manitoba ex ship offered at 34s. Maize firm and unchanged; La Plata ex quay offered at 24s 4½d, and American at 25s. Flour quiet but steady. Barley firm, but only in poor request; for Odessa Nicolaieff 18s 9d to 19s 3d is wanted. Oats quietly steady; white South Russian offered at 15s 9d. to 16s.

COUNTRY.

Ashford, Tuesday.—Trade for English wheat dull, with a small attendance of buyers; new sample made 27s to 30s. Maize was quoted quite 1s dearer on the week, the top price being 28s per qr. New peas made 29s to 30s. Foreign grinding barley, 21s to 22s; English malting barley, 26s to 28s. New Mazagan beans, 28s to 29s; new tick beans, 31s to 33s. Oats, 16s to 20s. Flour unchanged.

Banbury, Thursday.—Wheat, red (new), 27s to 28s per quarter; barley, 23s to 30s per quarter; beans (new), 22s to 30s per quarter; (old), 32s to 34s per quarter; oats, 17s to 20s per quarter; (old), 19s 6d to 24s per quarter.

Berwick, Saturday.—Fair attendance, with large supplies of barley. Oats and wheats scarce. Fine barleys maintained last week's prices. Barley, 23s to 29s; wheat, 27s 6d to 30s; oats, 18s to 20s 6d.

Birmingham, Thursday.—Trade was rather quiet on account of sellers asking advanced prices, which buyers were loth to give. Foreign wheat advanced from 3d to 6d per qr. on the week. English wheat remains at 10s 6d to 11s per bag (18lb). English oats quiet at from 18s 3d to 18s 6d per quarter (312lb.); beans, 12s 6d per bag; Plate maize was offered at from 24s to 24s 3d per quarter (480lb.) at Sharpness; whilst for flat ditto 24s 6d at Bristol was asked. Grinding barley was 6d dearer on the week at 20s per 400lb., Sharpness.

Bristol, Thursday.—English wheat in good supply, making an advance of from 3d to 6d per qr, prices varying from 28s to 29s, according to quality. Foreign very firm, showing 6d rise on the week for all varieties. Maize 6d dearer. Barley also 6d dearer. Oats steady at unchanged rates. Flour very firm and a fair trade doing. Prices, however, have not advanced in sympathy with wheat.

Bury St. Edmunds, Wednesday.—Wheat was only offered sparingly, and the trade is distinctly firmer, at about 6d per quarter more money. Reds, 28s to 29s; whites, 28s to 29s per 504lb. The barley trade was firm, without change on the week. There remains a healthy inquiry for the finer Barton samples at prices running from 32s to 36s per quarter; useful medium runs also meet a fair demand at 28s to 31s per quarter; the most difficult samples to move are those running under 28s per quarter; foreign grinding barley, 6d to 1s per quarter dearer. Oats very firm, at 18s to 20s per quarter. Maize 6d dearer, at 25s 6d delivered. Other feeding corns, also cakes and offals, firm on the week.

Canterbury, Saturday. — Millers' wheat very firm, from 30s to 32s; an improved inquiry for seed at from 32s to 36s; barley rather slower, from 26s to 30s for average samples, and choicest up to 34s; best black winter seed oats are quoted up to 22s and spring corn to 19s.

Carlisle, Saturday.—Very small supply of oats in our market to-day; good demand at 6d per qr. advance; 18s 6d to 19s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—English grain of good quality commanded the quotations of last week. Oat samples are very variable this season, the weather damage being very noticeable. Indian corn a little dearer. Quotations: Wheat, white, 4s 3d to 4s 5d; red, 4s 2d to 4s 6d per 75lb.; barley, grinding, 3s to 3s 2d per 64lb.; beans, old, 6s 9d to 6s per 80lb.; oats, new, 2s 2d to 2s 5d; old, 3s 2d to 3s 4d per 46lb.; Indian corn, 13s 3d to 13s 9d per 240lb.

Chichester, Wednesday. — Small quantity on offer; trade firm. Threshing barley is now taking the place of threshing wheat. New white wheat, 29s to 30s; new red ditto, 29s to 29s 6d; barley, 26s to 33s; grinding ditto, 19s 9d to 20s; oats, English, 15s 6d to 20s; peas, 23s to 30s; beans, 32s to 35s; tares, 6s to 7s 6d; maize, 24s 6d to 25s.

Colchester, Saturday.—Small supply of wheat. The market was very firm, and fully 6d per qr. advance was obtainable. Barley: Fair supply, and all descriptions sold readily at the full prices of last week. Beans, peas, and oats firm.—JOSEPH WILES AND SON, LTD.

Coventry, Friday.—A fair attendance and moderate trade doing at principally the following quotations: Old wheat, 11s to 11s 6d; new wheat, 10s 3d to 10s 9d per 186lb.; barley, 29s to 33s per 448lb.; old oats, 23s to 25s; new oats, 19s to 24s per 352lb.; old beans, 12s 6d to 13s; new beans, 11s 6d to 12s; peas, 11s 6d to 14s per 196lb.

Derby, Friday.—Wheat was firm, and was sold at 6d to 1s advance; no change to report in the value of spring corn. Wheat, new white, 29s to 30s; new red, 28s to 29s; malting barley, 26s to 28s; beans, old, 33s to 34s; new, 30s to 31s; oats, old, 23s to 24s; new, 17s to 19s.

Derby, Friday.—New hay, 73s to 80s per ton; best 70s per ton; pressed straw, 56s to 55s per ton; oat straw, [illegible] 60s to 67s per ton; all [illegible] in demand at unchanged prices. Wheat in moderate demand and rather more disposition to buy 15,665 24s 9d. J. ARTHUR MILLS.

Devizes, Thursday.—There was a good supply of corn. Prices show no alteration, but oats are very firm. The following were the quotations: Best old wheat, 16s to 17s 6d; secondary ditto, 13s to 14s; new wheat, 14s 6d to 15s 6d; best barley, 26s to 32s; secondary, 24s to 24s; rye, 22s to 24s; old black oats, 21s to 23s; white ditto, 20s to 22s; malting barley, 26s to 32s; beans, 14s to 15s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday.—Fair supply of English wheat, and a firm market at an advance of 6d per quarter, the top price being 11s 3d per load. Foreign was in good demand and was 6d per quarter dearer on the week. Oats advanced 3d to 6d per quarter. Grinding barley was 3d per quarter dearer, and malting barley quiet at late rates. Beans firm.

Dorchester, Saturday.—Good supplies came to hand again to-day, with about the usual attendance of buyers. Colder weather gave a firmer tone to business all round, and prices generally had a slightly hardening tendency, wheat being against buyers, as holders showed an indifference about selling unless their demands were conceded, which, in some cases, meant a rise of 3d to 6d per qr. Barley, both malting and grinding, held for highest rates; and oats may also be quoted as 3d to 6d against buyers. Beans and peas unaltered, but with a greater inclination to do business in face of the colder weather, factors, as a rule, had in most cases to meet the holder.

Dublin, Friday. Wheat, 16s 3d to 17s 6d; malting barley, 14s 6d to 15s; grinding ditto, 12s 9d to 14s; malt, 18s 6d to 20s; oats, 10s to 11s 6d; oatmeal, extra pinhead, 11s to 14s 6d; flour, 11s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter, Friday. — Trade somewhat slow. English wheat firm; foreign unchanged. English barley rather dearer; grinding 3d dearer. Maize unaltered. Oats very firm. Flour made rather more money. English wheat, 3s 6d to 3s 9d; English barley, 3s 3d to 4s; superfine flour, 25s to 28s; fine, 23s to 25s.

Glasgow, Wednesday. There was the usual attendance at the corn exchange. Wheat and flour were held for 3d advance, with a fair trade doing. Maize 3d dearer for American, and 1½d dearer for Plate—per 280 lb. Barley firm, and the turn in sellers' favour. Oats steady. Beans and peas dull. Oatmeal unaltered. GIBSON AND CLARK.

Gloucester, Saturday. — English wheat less freely offered; red last week's prices are fully maintained, reds making 3s 6d to 3s 7d, and whites 3s 8d to 3s 9d per bushel. Foreign in fair demand at 6d advance. Feeders continue strong, with grinding barley 6d and maize and oats 3d dearer.—WAIT, JAMES AND CO.

Grantham, Saturday. — Large attendance, and trade brisk. Wheat found numerous inquiries, and made an advance of 6d at 28s 6d to 29s per quarter. Barley was a very slow trade, but recent rates were fully maintained. Beans, peas, and oats were firm at unchanged prices.

Hereford, Wednesday. There was a good attendance, but business generally difficult. Wheats are unchanged on the week, barleys variable, oats firm, and beans in rather less demand. Wholesale quotations: Wheat, 3s 4d to 3s 6d per 62lb.; barley, 2s 9d to 3s 9d per 56lb.; oats, old, 2s 6d to 3s; new, 2s to 2s 6d per 40lb.; beans, old, 4s to 4s 6d; new, 3s 8d to 3s 10d per 65½lb.; vetches, 5s 6d to 6s 6d per 65½lb.
